THE Commissioners for Encouraging and Promoting the Fine Arts in connection with the Re-building of the Houses of Parliament have just published their Tenth Report, with Appendices. The Report itself briefly sets forth the progress which has been made in the various works of decoration which it has been determined to undertake within the walls of the vast and magnificent pile, and the particulars of which have been described in previous reports. Among the most important of these are the eight fresco-paintings in the upper Waiting-hall, which are now completed. The room, it is remarked, is "scantily lighted," an impediment, in some respects to the successful display of works of art, but the Commissioners consider that the circumstance, on the other hand, might be of use experimentally, by suggesting to the artist a bold and distinct method of treatment, with judicious distribution of light and shade in masses, as that best adapted to such conditions. With these facts stated, it will be matter of curious study with the spectator to observe how far the artists have been successful in this mode of treatment rendered inevitable by the disadvantages of local position. Of Mr. Dyce's frescoes illustrative of the legend of King Arthur, intended for her Majesty's Robing room, four have been completed, and the artist is now devoting his whole time to the completion of the remainder. Mr. J. R. Herbert, R.A., has been commissioned to prepare designs for a series of frescoes, to be executed in the Peers' Robing-room, not yet built. Mr. Ward, A.R.A., is commissioned to execute the historical pictures, in oils, for the Commons' Corridor; and Mr. C. W. Cope, R.A., those for the Peers' Corridor; and it is proposed to commission Mr Maclise, R.A., to paint in fresco, in the Painted Chamber, or Conference Hall, the subject of the "Marriage of Strongbow and Eva," adapted from the oil picture on the same subject, recently executed by the artist on his own account, and exhibited during the past season at the Royal Academy. It is noteworthy to add that, since the publication of their seventh Report, wherein they recommended illustrations from the works of six British poets—Chaucer, Spenser, Shakespeare, Milton, Dryden, and Pope—for the Upper Waiting-hall, the Commissioners have determined upon extending the list of poets, so to be recorded, by two—viz., Scott and Byron; the death of Marmion being the subject selected from the works of the former, and the death of Lara those of the latter: the artists respectively being E. Armitage, and C. W. Cope, R.A.

With respect to money matters, the Commissioners state that the Treasury having since 1850 consented to propose to Parliament an annual expenditure of £4000 to defray the cost of works recommended by them, they have, since that period, continued to submit an annual estimate accordingly; but they delicately hint that "the limitation of the expenditure, as stated, may be regarded as a cause of delay in the prosecution of some of the works."

The Appendices comprise a letter on the employment of a solution of starch in fresco painting, by Mr. Dyce, R.A.; and some observations on "Silica and some of its Applications to the Arts," being the substance of a lecture delivered at the Royal Institution, in April last, by the Rev. J. Barlow, M.A. The latter promises to be a subject of considerable importance in the practice of art. The peculiar quality of silica, as displayed in objects in nature, as felspar, quartz, &c, and in the manufactured object, glass, is well understood. The common forms of insoluble glass are produced by the union of silica with more than one base; but it appears that, when combined with an alkaline base only, silica forms a sort of soluble glass, capable, when dissolved in water, of being applied as a varnish to walls, &c. This soluble glass may be produced in various ways—for instance, fifteen parts of fine sand thoroughly incorporated with eight parts of carbonate of soda, or with ten parts of carbonate of potass, and one of charcoal, being fused in a furnace, the result will be a silicated alkali, soluble in boiling water. Besides the more obvious application of this water-glass for protecting building-stones from decay—the success of which, by the way, does not appear as yet to have been completely established—is that in stereochrome painting, where it has been tried with remarkable and satisfactory results in Germany; the process being thus described:—

Clean, washed quartz sand is mixed with the smallest quantity of lime, which will enable the plasterer to place it on the wall. The surface is then taken off with an iron scraper, in order to remove the layer formed in contact with the atmosphere, the wall being still moist during this operation. The wall is then allowed to dry; after drying it is just in the state in which it could be rubbed off by the finger. The wall has now to be fixed, *i. e.*, moistened with water-glass. (An important point is not to use too much water-glass in moistening the wall.) This operation is usually performed with a brush. The wall must be left in such a condition as to be capable of receiving colours when afterwards applied. If, as frequently happens, the wall has been too strongly fixed, the surface has to be removed with pumice and to be fixed again. Being fixed in this manner the wall is left to dry. Before the painter begins, he moistens the part on which he purposes to work with distilled water, squirted on by a syringe. He then paints; if he wishes to repaint any part, he moistens again. As soon as the picture is finished, it is syringed over with water-glass. After the wall is dry, the syringing is continued as long as a wet sponge can remove any of the colour. An efflorescence of carbonate of soda sometimes appears on the picture during the first completion. This may be removed, either by syringing with water, or may be left to the action of the atmosphere.

Besides the very obvious advantage presented by this process, that it permits of retouching the surface, which is not the case with fresco, it appears that it afterwards protects the picture from damp, and other atmospheric influences so fatal to the last-named method. The Report, upon the authority of Mr. G. Bunsen, states the case of a picture painted according to the stereochromic process, which was suspended during twelve months in the open air, under the principal chimney of the new Museum at Berlin, "exposed to sunshine, mist, and rain," and which, nevertheless, "retained its full brilliancy of colour."

THE THEATRES.

HAYMARKET.—The celebrated Irish comedian, Mr. Hudson, having won fresh laurels in the New World, re-appeared among us on Monday, in the part of *Sir Patrick O'Plenipo*, in Kenny's lively drama of "The Irish Ambassador." This was one of the late Mr. Power's best characters; and it is highly to Mr. Hudson's credit that he suffers so little by comparison with his illustrious predecessor. We think that he has much improved as an actor since his departure—he is more vigorous and decided in his style; more easy and elegant in his attitudes; he certainly individualises the impersonation better, and hits off the Hibernian abstraction with more complete effect. The audience welcomed him, on his introduction, as an old friend whom they were glad to see again; and, on the fall of the curtain, recalled him to receive a renewed greeting. His success was complete.

ADELPHI.—The audience were exceedingly gratified on Monday by the re-appearance, after seventeen years' retirement, of Mr. Morris Barnett on the stage, in his old character of *Monsieur Jacques*. It was the first production of this piece at St. James's, other actors have gained celebrity by impersonating this admirably-pathetic character—Mr. Wigan among the number—but none have excelled his original representative. Others, however good, have always appeared to act the character; but Mr. Barnett is the man himself. The poor, aged Frenchman, true to his first love, and for twenty years expecting the recovery of a lost wife—suffering privation—yet cultivating his art of music—hoping against hope—buried in his dealings with others, yet verging on insanity in relation to those profound emotions around which gather the memories of a life; and finally destined to clasp in his at last blessed embrace his daughter for her mother. All these feelings and situations were not only imagined and elaborated by Mr. Barnett, but they were realised. The tears of the audience were the tribute they paid to the actor's truthfulness; and, on his recall before the curtain, he was further rewarded with plaudits that were universal. The house was crowded.

LYCEUM THEATRE.—Mr. Henry Russell's Entertainment, with new songs, has proved very attractive at this theatre.

THREE AUSTRIAN FRIGATES IN THE THAMES.—The river-travelling public have recently had their curiosity somewhat excited by the presence of three foreign vessels of war in the Thames. They are the *Novarre* screw steam-frigate, thirty-six guns; the *Radetzky*, also a screw steam-frigate, carrying the same number of guns; and the *Elizabeth* paddle-wheel steamer. The *Novarre* has been lying off Greenhithe for the last month or so. She visited the Thames for the purpose of manning the other two vessels, the *Radetzky* and *Elizabeth*; both of which were built for the Austrian Government by Mr Wigram, of Blackwall. The *Radetzky* frigate was towed down to Greenhithe on Monday; the *Elizabeth* remains off Blackwall, with her pennant flying. The three are expected to sail in a few days.

NOTES OF A RAMBLER.—No. V.

MONTROSE AND DUNDEE.

SOME difficulty is always experienced in travelling, when we desire to see much, and have only a limited time at our disposal, more especially is this felt when we are altogether dependent on the whim or caprice of antagonistic railway directors, who, instead of playing pleasantly into each other's hands and making their arrangements so that harmony shall prevail and the least possible inconvenience be suffered by the travelling excursionist, seem to place every obstacle in the way of our progress. Unfortunately, this crying evil prevails everywhere—in England even more than in Scotland. The strong arm of the Legislature seems to be the only power likely to lay down rules and regulations calculated to meet the emergency of the case. Directors are but men, and self-interest overshadows their boasted patriotism. In suing for their Act of Parliament—which is intended to confer certain rights and privileges of an exclusive nature—the well-being of the public, the advantage of the public, the convenience of the public, form the strings on which an endless variety of tunes are played. Corporate profits and individual hoped-for gains are only whispered, never spoken aloud. But no sooner is the right obtained, than the general is absorbed by the particular, and the good of the public is lost in the anticipated gain of the individual.

Having an appointment in Perth, and desiring, if possible, to have a peep at Dundee, we called to our aid the mild-eyed waiter of the hotel, who very unceremoniously pronounced "Bradshaw" a person without reputation or character, in Scotland. The worthy person of that name, who had assumed the powers of an Autocrat, and presumed to regulate the destinies of all travellers by railway, had, in this part of the kingdom been proved a sham—had been deposed long ago, and the Regent "Murray" had usurped the power—had seized the sceptre, and jumped into the vacant throne; and was, from his very audacity, duly respected and obeyed by all his Scottish subjects. A benighted Southerner might occasionally exhibit his inferiority of intellect by consulting a "Bradshaw" north of the Tweed—no Northerner would be found so weak. So, of course, "Bradshaw" was ordered to stand aside and make room for the northern light, "Murray." It was soon settled that no difficulty whatever could be interposed, and that all the desires of our heart would be comfortably accomplished. In a few minutes we were on the platform of the new station, close to the harbour, and had barely time to note the excellent judgment manifested in bringing the sea traffic and the land traffic to link their hands in friendship, mutually supporting each other, when off we whistled. The whole coast is deeply indented by numerous small bays, worn out by the ceaseless action of the North Sea. Bathed in the soft light of the early morning, a slightly humid atmosphere prevailing, and scarcely a breath of air to ruffle the surface of the ocean, it seemed so mighty in its perfect quiet, as to suggest a doubt whether or not it were possible for even the tornado to disturb its repose. A few clouds to the north-east slightly dappled the otherwise glassy brightness of the water. Landward, the eye rested on a fairly-cultivated, but evidently unfruitful soil. The distant Grampians lifted their lofty heads above the clouds of intervening mist, and shone like burnished gold.

Before pulling up at Stonehaven, we had a short glimpse of Dunottar Castle, celebrated as the place where the Regalia of Scotland was long preserved. The spirited manner in which the siege of the thing signified; and certain it is that the good people of the north believed that the loss of their Regalia would be tantamount to the loss of their liberty, and they guarded it well accordingly. When, during the wars of the Commonwealth, there was danger of its being discovered and seized by the besieging army, the ready wit of the wife of the minister of the parish—who courageously secreted the Crown under her apron, while the servant carried the Sceptre in a bundle of flax—secured the prize, and thus released from danger the paraphernalia which they reverenced; and for many years it lay concealed under a slab near the pulpit in the parish church.

Stonehaven is snugly placed on the sea-shore, surrounded by high cliffs, and now looks the home of peace; but, when the wild winds of the winter rouse into fury the terrible sea, we can hardly conceive a place bleaker, lonelier, or less attractive. Here, as in several other places of this district, we find several burying-grounds unconnected with churches. Occasionally we observe a few heaps of loose stones, which the imagination might magnify, so as to make them appear to the mind's eye ruins of religious edifices. But they can hardly be so, for they generally appear close to the cliff, and without any appearance of there ever having existed near them a population likely to form a congregation.

The road and district continues without interest until we reach Montrose, where we are interested chiefly from the fact of its being the native place of Joseph Hume, that sturdy apostle of Liberal opinions, who—in season, and out of season—by a steady adherence to principle, has converted foes into friends, and made his name synonymous with independence and honesty, and given a character to the deliberations of the House of Commons. No place can be more prosaic and dull than Montrose appears, as seen from the railway. But for an old lady, who seemingly knows everybody, the tedious delay at the station would be very unbearable. There she is, with the weight of some seventy winters pressing on her shoulders, moving about with a briskness and lightness truly astonishing. A bundle of vegetables, a basket of fruits, and something in a red-and-white cotton handkerchief, are the objects of her solicitude. The guard is consulted, and given as many instructions as would regulate the landing of the combined forces on the shores of the Crimea. Her ticket is demanded; and, in the hurry and uncertainty of its whereabouts, she forgets her bundle, which falls heavily, with a crash, and the platform is swimming with the contents of a cherished bottle of whisky. Was it an anathema, or only a slight murmur of regret that fell from her pallid lips? We know not; but her spirit was gone, and she looked, for the rest of her journey, downcast and dejected.

The picturesque ruins of the Abbey of Arbroath, and the legend of the Bell Rock, give a poetical and historical interest to this thriving seaport; and, as we wind along the shore on our course towards Dundee, the opposite coast of Fife, with the learned city of St Andrews nestling quietly under its thin canopy of smoke, pierced by the few spires of colleges or churches, produces a charming effect. The naturally level ground, roughed by drifted sand, forms a fine area for the interesting and peculiarly Scottish game of golf. We chants and others from Dundee find here ample room to enjoy their favourite sport on the afternoon of every Saturday. Red-coat-and-black-collared, like lady-birds or twopenny postmen, they absolutely swarm along the links. "Grand game that, Sir; and a grand place to play it;" solemnly observed our hitherto-silent companion. "Fine thing the railway, Sir. Until it opened we had nae place to play on worth onything; and now, Sir, ye'll see here in an hour hundreds o' red coats." "Why do they wear red coats?" we inquired. "I'm no that sure; but ye see red is the Royal livery; and this, I can assure you, is a Royal game." On inquiry, we found that the game, though not unlike hockey, is different in the manner of playing it, and also in its results. Instead of contending forces each struggling to drive a ball to the opposite goal, the game of golf consists in playing a ball from near a hole of some five inches in diameter, up to, and into a similar hole some three or four hundred yards off; and he who can do this with the fewest strokes of the club—and the ball must be touched by the club only—wins the game. A golf club was established by Royal charter, at Blackheath, by James VI., to give amusement to his nobility, who, tired of the pleasures of Court routine, longed for their native hills, and still, during the sea on in London, Peers, Members of Parliament, and merchants of the metropolis, vigorously contend for the honours of their favourite game, which, whether as regards interest or exercise, they hold to be by no means inferior to cricket.

Having, as we believed, a bare hour to peep at the externals of Dundee, we ordered a cab, and drove to the various places of interest, which are not numerous. St. Andrew's church arch erected to welcome the Queen, tablet of the public spirit, if it says little for the taste, of the authorities. Triumphal arches, as a rule, are failures; and where, as in Paris, you drive round, and not under, the celebrated arch of Napoleon, the thing is simply absurd. The Dundee arch is not quite so bad, but it is altogether out of keeping where it now stands, and reminds us of the square stone structures intended for gate posts, standing in the middle of fields in Ireland, where neither fence nor gate appears in the neighbourhood; originally, they were doubtless attached to walls or hedges, but by laying field to field the fences have been removed, the huge stone work remaining as a monument of Irish idleness. Arrived at the station, we rushed into the office for our tickets, proving in our nature a striking contrast to the clerk, who amusingly dosed on a three-legged stool. To our annoyance, we found that the train which we were told started daily at one o'clock for Perth, did not start until near three o'clock on Saturdays. So, relying on the judgment of our wee waiter at Aberdeen, all our plans were overthrown, and we had to kick our heels in Dundee until the time when we were due at Perth; and booked by coach for Dunkeld. The telegraph was brought into requisition, and, judging from the difficulty in getting an officer to communicate our message, we concluded that the wires were not often tingled by any profitable work. However, we at last found one, and transferred our places from the three to the four o'clock coach.

Few roads in Scotland are equal to the short one from Dundee to Perth, along the Carse of Gowrie. The highly-cultivated and exceedingly productive soil, waving with enormous crops of every kind of grain almost ready for the sickle—the fine sweep of the noble Tay, as it winds its way to the ocean—the bold front of the precipitous Hill of Kinnoul—the rounded outlines of the distant mountains, make a picture not easily forgotten; while the many castles and country seats give interest and variety to the scene.

Arrived at Perth—where we had previously spent a day—we shouted for a cab, but no cab was there. There was an omnibus, but neither driver nor conductor was visible. The clock was striking four, and we were in despair. Half disposed to become our own Jehu, we hurried to the vehicle, opened the door, and there we found the driver and conductor stretched on the seats fast asleep. They were up in an instant, and a treble fare induced unwonted speed. "Yes-se, Sir, if we gang the regular way, we'll maist likely miss the coach, for time is up; but I'll drive round the litter way, and we'll maybe meet it by the North Inch Gate." And so it happened. Just as we emerged from the narrow street, we met the coach at full gallop, on its way to Dunkeld, and at least a quarter of a mile from the hotel where our luggage was waiting our arrival. A hasty explanation and a crown restored to equanimity the slightly-ruffled temper of our excellent coachman. We dashed to the hotel door, and in ten minutes were seated on the box seat and off on our way to the north. But before proceeding, we must take a glance at the fair city of Perth, which we must reserve for the next chapter of

A RAMBLER.

IRISH WATERING-PLACES.—YOUGHAL.

A MELETTUDE of tourists habitually visit the Irish shores, in quest of some of the less known but attractive summer haunts of the Sister Isles. They are found on every part of her shores, and all are more or less beautiful. From Port Stewart in the north to Youghal and Queenstown in the south, and from Howth and the aristocratic Kingstown in the east to the wild Atlantic-washed Kilkie in the west, the Irish Watering-places abound. Far behind, for the most part, our own marine resorts in luxurious accommodation, they excel us in the depth and purity of their waters; while their beaches, instead of having a surface of rough heavy shingle, stretch themselves away in firm smooth sands, unbroken for many miles.

Youghal is the second town in the west county of Cork—the Yorkshire of Ireland. It is situated at the embouchure of the river, commemorated in the "Faerie Queene" as

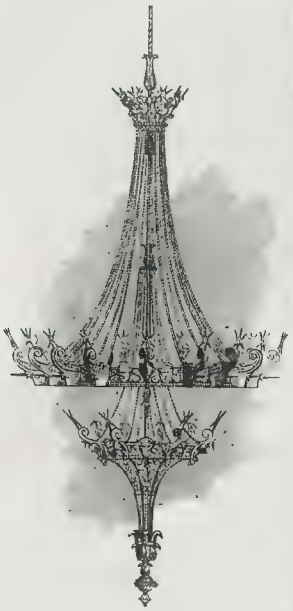
> Swift Awndiff, which of the English man,
> Is cal'de Blacke water;

the latter name being the English rendering of the original native appellation—i.e., *Avnkon*, river or water, and *dubh*, black. Its scenic attractions have led to the Blackwater being designated "the Irish Rhine." The town founded at its mouth is of remotest antiquity. It was called *Eo-chaille* (Anglicised into Youghal), or the Yew Wood, from its position at the base of a low range of hills, once clad with indigenous forests of yew trees. About a thousand years ago (in 853), a large fleet of Norwegians, commanded by Amlavus, Ivorus, and Sitricus, three brothers of the Royal line of Norway, landed in Ireland. Dublin was seized and fortified by Amlavus; Limerick fell to the share of Ivorus, and Sitricus built the city of Waterford. A detachment of the troops of the Waterford Viking intrenched themselves at Eo-chaille, on the Blackwater, where they built a fortress, and laid the foundations of a commercial sea-port. The "Annals of the Four Masters" record a great battle here, in 854, between the natives and the foreign intruders. In this year a victory was gained over the fleet of Eo chaille by the Deisi, and the fortress was destroyed. The Scandinavian Jarls were not, however, to be so easily dispossessed. A fine harbour and navigable river were too valuable prizes to be abandoned. Reinforcements of the Northmen poured in, and the native Deisi were, after a struggle, once more expelled. The town quickly grew into importance, and the highway it became famous among the ancient roads of Munster. In the division of territory, which succeeded the Anglo-Norman invasion of 1169, Youghal (or Okylle, as it was now written) was made the seaboundary of the properties granted on the Waterford side to Robert le Poer, and on the Cork side to Robert Fitz-Stephen and Miles de Cogan. From Fitz-Stephen the town passed into the hands of the Geraldines, who held it until the attainder and extinction of the house of Desmond, in the reign of Elizabeth. Youghal was then granted to Sir Walter Raleigh, whose brief tenure of it has invested it with deep, romantic interest; and from him it was conveyed to the great Earl of Cork, who is now represented here by the Duke of Devonshire.

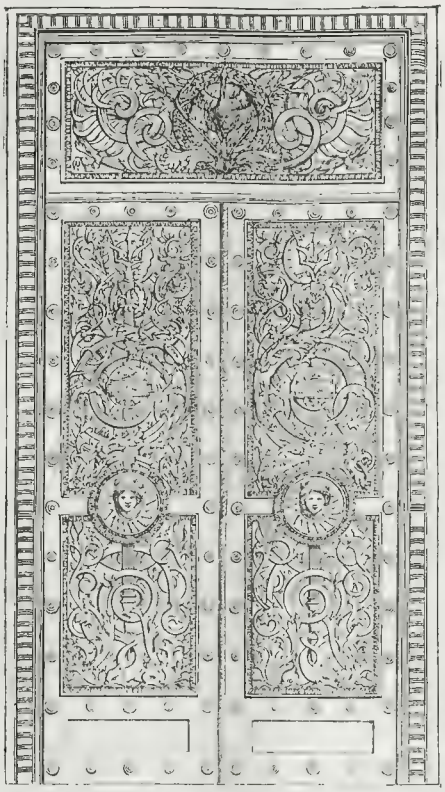
Youghal was first incorporated by King John, in 1209, and had charters, or letters of privileges, from many successive Monarchs. The religious houses founded here were numerous. A friary for Franciscans, being the first of the kind in Ireland, was erected at the south end of the town, in 1224, by Maurice Fitzgerald, son of Gerald, Baron Ophaley, and grandson of the Maurice Fitzgerald, who was FitzStephen's companion at the conquest of Waterford. At the Dissolution, the South Abbey was granted to George Isham, by letters patent, dated 16th June, 1597; and was subsequently purchased by the first Earl of Cork. A friary for Dominicans was founded, in 1268, by Thomas Fitzmaurice Fitzgerald, called *na Appagh* (the Ape); and continued to flourish until 1581, when it was dissolved; and, with six gardens within the liberties of Youghal, the tithes excepted, was granted to William Walsh; from whom it passed to John Thickpenny, and from him to Sir Walter Raleigh. The Monastery of St. John the Evangelist, in the High-street, was founded about the middle of the fourteenth century, by another member of the Geraldine family; and, 27th December, 1464, "Our Lady's College of Youghal," was founded by Thomas, eighth Earl of Desmond, a great benefactor to the town. The latter establishment consisted of a Warden, eight fellows, and eight choristers, who had a common table and all other necessaries allowed them, with yearly stipends, amounting to £609 per annum, a very considerable sum in those days.

But the glory of Youghal is the noble Collegiate Church of St. Mary's, one of the finest structures of the kind in Ireland. It forms a Latin cross; and consists of a nave with aisle, north transept with aisle at west side, a south transept, and a choir or chancel. In the angle of the nave and north transept stands a massive square tower, sixty-three feet high. In the surrounding angles, at the south side, stood a chantry chapel, now removed; and at the west-end of the south aisle was a similar chapel, which also has perished. The prevailing style of the church is the Early English of the 13th century; but there are traces of a Norman edifice antecedent to the present building, and now incorporated with it. The tombs are numerous, and of great interest. The antiquary will find several stone coffin-lids, Norman and Early English sepulchral arches, altar-tombs, recumbent and kneeling effigies, and many interesting efforts of the sculptor's art belonging to our own times.

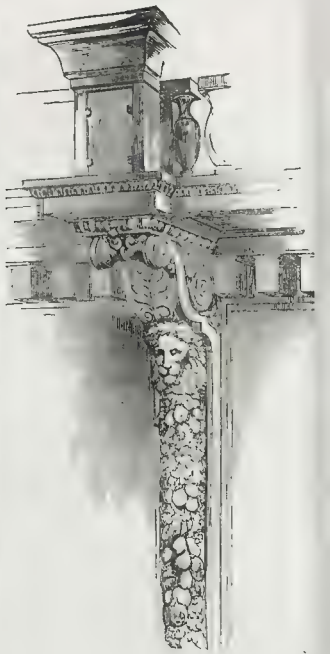
The population of Youghal, by the Census of 1851, was found to be 9211, and the number of houses 1260.



GASELIER IN ST. GEORGE'S HALL, LIVERPOOL.



BRASS GATES OF ST. GEORGE'S HALL, LIVERPOOL.



TRUSS SUPPORTING THE GALLERY, ST. GEORGE'S HALL, LIVERPOOL.

ST. GEORGE'S HALL, LIVERPOOL.

These Engravings will illustrate the artistic character of the leading details of this magnificent Hall.

First is the specimen of one of the elaborate brass Gaseliers, by Messenger, of Birmingham. They are suspended on each side, from the keystones of the arches, which are in the form of the prows of vessels. The jets of gas issue from the points of stars.

At the three entrances on each side of the Hall, are six pairs of massive brass doors, and frames glazed on the outside. Each pair of doors is about twelve feet eight inches high, by six feet four inches wide. The frames are very bold, of a reed form, with a rich leafage moulding, terminating against the marble jambs, with a bold ovolo moulding. The doors are hung to the frames with gun-metal joints, with steel centres; they are two and a half inches thick, but not of solid brass; they have a hollow core, with a covering of sheet brass; the core is compressed metal of one and a half square metal, which is put together in a form to prevent cracking. Each door has a disc in the centre, with a head of Mercury, surrounded by a glory. The panels above and below the disc, are extremely beautiful; the trident, forming a centre, around and about which a rich scroll ornament plays, intermixed with oak and laurel-leaves. The upper panel, or fanlight, is equally rich, the Liver, the symbol of Liverpool, forming the centre, around which is a wreath of oak; from the centre, below this, springs a handsome spiral ornament, blended with flat rush-leaves, oak, and laurel. The design of these doors is by C. R. Cockerell, Esq., R.A., and the execution has been well carried out by Messrs. Potter, of South Molton-street, London.

Besides these doors there is a screen of the same design, dividing the Assize Court from the Hall. Each pair of doors weigh 43 cwt. The total cost will be about £6000.

We engrave likewise one of the really chaste trusses which support the galleries. They are of stone, very elaborately carved. The pendants from the lion's head are not alike—some having a long cluster of oak leaves, kept together by crossed bands; others having fruit and flowers, as represented above.

IRISH WATERING-PLACES.—YOUGHAL, COUNTY CORK.—(SEE PRECEDING PAGE.)

WESTMINSTER IMPROVEMENTS.—NEW HOUSES IN THE BROAD SANCTUARY.

WESTMINSTER IMPROVEMENTS.

THIS picturesque pile of houses has been erected in the Broad Sanctuary, Westminster, under the provision of certain Acts for the improvement of Westminster, and in consequence of the clearing away of several small and mean streets which, till within the last few years, encumbered the space westward of the Abbey. The Act which provided for their clearance also required that the houses to be built on the improved site should be in such a style as to suit a position in close proximity to the Abbey. The erection is paid for out of the funds obtained for the compulsory sale of other property required for the improvements of Westminster. The architect is Mr. G. G. Scott, R.S.A.

The mass of building consists of eight houses, one of which forms the Gate Tower to Dean's-yard. The houses are, in every way, suited to the convenience and requirements of modern residence, and possess a very considerable amount of accommodation. One of the aims of the architect, indeed, has been to show how perfectly consistent the style is with every requirement of the present day. Had they not been in such close contact with the Abbey, he would, probably, have ventured upon rather a more free treatment of the style, and a less rigid adherence to ancient character; though he has not scrupled to introduce some novelties where convenience seemed to demand them.

The bold Gatehouse in the centre gives the whole at first sight somewhat of the appearance of a public building; but the architect has attempted to obviate this by endeavouring to make the subdivision into individual houses as evident as possible; and by giving considerable variety of feature to the different parts. The houses on the west side of the Gateway are, as will be seen, altogether different in appearance from those on the other side. This has been objected to, but was deemed by the architect almost essential to taking off the appearance of the whole forming a single building rather than a group of houses. The corner oriel commanding a view down four streets, is a novelty in English street-architecture.

THE NEW STRAWBERRY, "SIR HARRY."

THE NEW STRAWBERRY, "SIR HARRY."

(From a Correspondent.)

I AM induced to send you these remarks on the origin, propogation, and cultivation of the Strawberry, in compliance with the numerous applications I have had to do so, in consequence of the success of my new seedling Strawberry, "Sir Harry," which has made its own way without any effort on my part, other than exhibiting it this season.

The Strawberry (*Fragaria*) is indigenous to Britain; and in its wild state is chiefly found in woods and on shrubby banks: it is very small in size. It grows also in great abundance in the mountains of Norway.

Till within the last thirty years, but little attention was paid to the cultivation of the Strawberry, and there were not above five or six sorts known. The largest of these was the Hautboy, so called from being originally found in the *haut bois*, or woods, of Bohemia. By crossing, change of climate and situation, there are now many hundreds of sorts; for, they can be multiplied infinitely by skilful inoculation of the varieties. Till lately, Keen's seedling ranked first as an early Strawberry, both for bearing and flavour; and Myatt's British Queen, as a later crop. To the cultivation of these two sorts, I have, for many years (as an amateur grower) bestowed much care and attention; and with such success as always to take the first prize at our local exhibitions. Of course, I have grown many other sorts; but on testing their qualities I have at once removed them from my garden.

My mode of cultivation is to fix on a place of ground entirely free from shade. About the beginning of July, I commence preparing it by manuring thoroughly; and, if the soil be light, I add some marl, as most Strawberries thrive in a stiff loamy soil, for the latter tends to throw them into bearing instead of leaf. When the ground is dug, and the plants are ready, tread it well where they are to be planted; choose runners with short roots; indeed, those that have scarcely tasted the soil are preferable, as they more readily shoot into the ground. There will be nothing afterwards to check their progress, though care should be taken to plant them a little below the surface, pressing the soil firmly to the roots: still the heart must not be covered with earth; and if the weather be not rainy, they will require water. The second, third, and fourth runners, or even runners from either of them, will bear equal to the first runner.

The great object is early planting, so as to get your plants well and deeply rooted before frost sets in; otherwise, the frost by raising the soil, would raise the plants with it; then comes the thaw, when the soil sinks and leaves the plants more than freshly transplanted, nay, almost out of the ground. Again, by early planting you obtain the finest and largest fruit the first year, and the greatest crop the second. Then directly root up your plants, and on no account keep them for a third year; indeed, for quality alone, an annual cultivation is the best.

It rarely happens in a prolific sort, by this early mode of cultivation, that two plants out of 100 miss fruiting; but, should they fail doing so the first year, the finer their fruit will be the next; though, some persons entertain the absurd idea they are barren, and throw them away as worthless. To strengthen the young plants, they should be deprived of all their autumnal runners as they make their appearance, for they necessarily weaken the parent.

Strawberry-beds should always be kept entirely free from weeds, and the roots as distinct as when first planted out; but April is the best time for removing the old leaves and refuse; for, if cleared earlier in the spring, a severe frost, such as sometimes occurs in March, cuts off the tender shooting leaves, which otherwise would be sheltered and protected in the autumn. Having taken a sufficient number of runners for your new plantations, clear the old roots of all that remain. When the beds are cleared in the spring, some rotten manure should be put over the surface; from which great advantage will arise, as the rains will wash the goodness of the manure to the fibrous roots; or, you may give some weak liquid manure. Guano will be found to be, perhaps, best; but this must be used sparingly: few persons apply it with a sufficiently light hand.

Strawberry-beds must never be dug or forked amongst; for by doing so you destroy a number of fibrous roots, which the plant requires to mature fine fruit; under which the soil is so loosened that in the fruiting season the hot sun more easily penetrates to the roots (which require to be kept cool), to the great injury of the fruit. When the fruit commences setting, and until the first berries begin to change colour slightly, you may apply to the roots any quantity of water—perhaps, the more the better; but when that change takes place, the beds cannot be kept too dry. If this be not attended to the flavour of the fruit will be impaired. One great object in giving plenty of water is, that in dry weather land will crack, and such roots of the plants as cross the opening are broken, or so much stained and injured as to be of little or no service afterwards; whereas, the watering will prevent this dividing of the ground. When the berry is about half grown commence putting some loose straw between the plants in the row, and then spread some clean wheat straw between the rows, about an inch thick, or you may take the cleanest of stable litter, well shaken, for both purposes. This will prevent your fruit from being damaged by the grit and soil which would be washed up with heavy rains; it will also keep the ground cool, and tend to ensure cleanliness, neatness, and order, without which a good article loses half its value. If the strawing be delayed till the berry is getting ripe, you may chance to bruise it; and a ripe Strawberry bruised, or handled, never recovers its beauty: it is, perhaps, the most perishable and tender of all ripe fruits.

The methods practised by many persons of putting the mowings of their grass plots round their plants should be avoided, as decidedly bad, for it is better to have the fruit damaged by grit than spoiled by mould. Even the name of the plant suggests the use of the straw. The proper distance for planting the best and larger sorts is two feet each way.

Frogs and toads should be encouraged; they seek the beds for shade, and subsist upon snails, blackbats, and other insects that so frequently disfigure and destroy the finest fruit. If a Strawberry grower will observe a frog or toad gape (without doing so himself) he will be convinced at once, by the formation of the reptile's mouth, that it was not

"THE WHITTINGTON STONE."—(SEE NEXT PAGE.)

formed by nature to injure or feed on fruit; for more harmless and useful creatures do not exist in a garden.

I finish with this advice to all growers of Strawberries: get rid of old prejudices in planting and growing, and time, produce, and flavour will show the widely superior advantage of the above method of cultivation, though I do not pledge myself that any one, even by following my plans, will produce a fruit that will equal the "Sir Harry."

I am, &c.,
RICHARD UNDERHILL.

Sept., 1854. Sir HARRY'S-road, Edgbaston, Birmingham.

THE WHITYNGTON STONE.

ALTHOUGH the inquiring spirit of the present age has shorn of its reality the nursery history of Sir Richard Whityngton, the most memorable name in the annals of the city of London, it is gratifying to find that some thirsters still exists for the renewed discovery and revival of the records of the eventful history of the "thrice Lord Mayor." This was, surely, a proper case for the Whittington Club, who, by the way, possess a memorial picture of the poor apprentice listening to Bow bells: it was painted a few years since, and generously presented by the founder of the Club, one of whose sons sat to the artist for Whittington.

"The Whityngton Stone" stood upon the west side of the road, at Upper Holloway, near the sub-station, on each side of the Hgate, upon the spot where Whityngton is traditionally stated to have sat ruminating on his hard fortune, when he heard the prophetic peal of Bow bells, sounding

Turn again, Whittington,
Thrice Lord Mayor of London.

Within the present year the stone has been removed: its disappearance naturally raised the ire of an industrious correspondent of *Notes and Queries*, who, in the Number for April 29, 1854, writes to the Editor:

"It is well that there is a *N. and Q.* for the purpose of the removal and disappearance of noted objects and relics of antiquity, as one after another disappears before the destroying hand of Time, and more ruthless and relentless spirit of enterprise. I have to ask you, on the present occasion, to record the removal of the Whittington Stone from Highgate Hill. I discovered it as I strolled up the Hill a few days since. I was informed that it was removed about a fortnight since, and a public-house is now being built where it stood." It was soon ascertained that the Stone had been taken to a mason's yard, for the purpose of repairation.

The inquiry produced from another correspondent of *Notes and Queries* an interesting proof that the above Stone is, at least, the *third* of the Stones which have successively stood upon the spot long since the days of Whittington. In the *Gentleman's Magazine*, December, 1829, in a paper by an antiquary, well versed in the history of the northern suburbs, it is shown that, in all probability, the site in question was once occupied by a wayside cross, bel-ging to the formerly adjacent house and chapel of St. Anthony, founding of 1772 represents a small obelisk standing upon a square base, and surmounted by an apparently iron cross. The Stone popularly regarde' as the original was removed in 1795, by the Surveyor of the Roads. Having been broken, or as another account states, sawn in two, the halves were placed as curbstones against the posts on each side of Queen's-Head-lane, in the Lower-street —(Nelson's "History of Islington," 1811, p. 102; *Gent. Mag.*, Sept. and Oct., 1824, pp. 206, 290; Lewis's "History of Islington," 1841, p. 266.) A portion of this Stone is said to form the threshold of the present Queen's Head tavern.

Shortly after the removal of this supposed "original," a new memorial was erected, with the inscription, "Whittington's Stone." This was, for some cause, removed by the orders of the Churchwardens of Islington (in which parish the site is included), in May, 1821. In his second edition, 1828, Nelson says:—"The present Stone was set up in 1821, by the trustees of the parish ways. This l-te Stone removed last spring. Nearly upon the same spot the parish authorities of Islington have just erected the plain Stone here engraved; on one of the faces of which have been chiselled the following data:

Whityngton Stone. Sir R. Whityngton, thrice Lord Mayor of London. 1397, Richard II. 1406, Henry IV. 1419, Henry V. Sheriff, 1395.

IT MAY reasonably be questioned if this Stone will gratify the archæological taste of those persons who first recorded the disappearance of the memorial; but it is, in some degree, satisfactory to have obtained this renewed record of one of London's greatest worthies.

MINING SCHOOLS IN CORNWALL.—An important public meeting of gentlemen interested in the establishment of mining schools for the county of Cornwall, was held last week in the Town Council Hall, at Truro: Mr. T. J. A. Robartes, M.P., presided. The subscriptions were reported to amount to £1682.

KING'S LYNN ELECTION.—Mr. J. H. Gurney was elected member for this borough on Saturday, in the room of the late Lord Jocelyn. There was no opposition.

THE monster concert *al fresco* in the Thiergarten, at Berlin, has brought in at least 16,000 thalers to the funds for the relief of the sufferers in Silesia. The Prince of Prussia has subscribed 1000, various private individuals have subscribed 800 and 1000 thalers. The Fire and Life Assurance Office has made a donation of 10,000 thalers. The provinces of Silesia, however, contains 3,000,000 of inhabitants, and though not all are ruined, there are not many who are not materially damaged by the floods.

RAILWAY CAPITAL AND LOANS.—From a Parliamentary paper recently printed, it appears that the total capital and loans which the various railway companies of the United Kingdom were authorised by Acts of Parliament to raise up to the 31st of December last amounted to no less than £366,769,789 18s. Of this, £276,369,932 17s. 4d. was by capital, and £90,399,789 17s. 8d. by loan. The total amount actually raised by the various companies up to the 31st of December last was £278,324,516 5s. 9d.; of which £65,072,988 12s. 11d. was by loan, and £208,251,557 13s. 10d. by share capital. Of this last, £164,724,177 18s. 10d. neither received nor was entitled to receive preferential dividend or interest. The railway companies still retained power at the end of 1853 to raise £31,289,840 17s., either by existing powers or by loans. The total length of railway open for traffic at the end of 1853 was 7636 miles 45½ chains, of which 5697 miles 22¾ chains were as double lines, and 1639 miles 22¾ chains as single lines; 886 miles 60 chains of single constructed at that time; and 4079 miles 49¾ chains had been author.sed, but had not been commenced.

AN HEIR TO AUSTRIA.—The *Augsburg Gazette* has learned from Munich that the Duchess MAX will accompany the Empress Elizabeth, her daughter, from Ischl to Vienna, where she will remain "until an expected happy event has taken place."

A PARTY, consisting of 108 women and 118 children, belonging to the 68th and other regiments now at the seat of war in the East arrived at Chatham on Saturday; and Major Smith, barrack-master, provided them with accomodation in St. Mary's Barracks, where they will remain until they can be forwarded to their respective homes. They are to be sent home by the Paymaster of invalids at the public expense.

RAILWAY TUNNEL ACCIDENT.—Owing to a slip in the Bramhope tunnel of the North Leeds Railway on Tuesday afternoon, operations took place about midway in the tunnel, by which a number of persons were seriously injured. Fortunately, no lives were lost.

CHOLERA STATISTICS.—Sir Benjamin Hall has taken a step in the right direction. He has invited every qualified practitioner in the United Kingdom to send in an accurate report of every case of cholera with which he has to deal. Every circumstance is to be noted—the condition of the atmosphere, the nature of the drinking water, the progress, and termination of the disease. The returns, thus collected, will be examined by a Medical Council, consisting of thirteen of the most eminent scientific men in the metropolis; and it is hoped that we may thus obtain some general results on a subject which has hitherto baffled medical science.

QUARTER DAY.—A change in the official quarter day has been decided by the Lords of the Treasury, who, by a minute dated the 2nd of August last, have directed that "the payment of salaries which has hitherto been made for the quarters ending the 5th of January, 5th of April, 5th of July, and 10th of October in each year, should hereafter be made for the quarters ending the 20th of June, 20th of September, 31st of December, and 31st of March." This change has already taken place in the Post-office, and is to be carried into effect in the Customs and Inland Revenue Departments not later than the 31st of March next, on which day their Lordships propose to alter the terminations of the quarters for the financial year.

BOLDRE CHURCH, HANTS.—A committee has just been formed for the purpose of restoring the ancient Church of St. John, at Boldre, as near as may be to its original design. It is supposed to have been built in the beginning of the twelfth century. The first record of its existence is to be found in the document mentioned in Domesday book, which gave it as a prebend to Christchurch Priory, eleven miles from Boldre. It is a large, irregular pile, built at different periods. Some of the pillars are composed of black marble, now hidden by many coats of whitewash. The prevailing style of architecture is Norman. The church stands on an eminence, surrounded by lofty and ancient elms. In this beautifully sequestered spot rest the earthly remains of Gilpin, the Vicar of Boldre, whose labours in the parish extended over a period of thirty years. Few literary strangers visit the neighbouring town of Lymington without making a pilgrimage to the tomb of Gilpin, the knowledge of whose piety, character, and works, have extended far beyond the local boundaries of the parish and diocese in which he lived, in which he so earnestly laboured, and in which he died. The cost of rebuilding the chancel and the proposed restorations (now absolutely necessary), will be £800, towards which the committee solicit subscriptions.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The amount of money business doing in the Consol Market this week has been very variously given, prices have had an upward tendency. On the arrival of news to the effect that the Allied Army had landed in the Crimea, the Three per Cents advanced to 86½ ⅜; but sellers having come forward, a reaction has subsequently taken place. It cannot be denied that the present value of Consols is very low, considering the peculiary sacrifices we are making on account of the war with Russia; yet we have the best possible reasons for believing that the expenses have as yet been well met, and that a fresh loan will not be necessary for some time. Certain it is that the Chancellor of the Exchequer will keep out of the market for a loan as long as possible, in order that the value of the Funded Debt may be maintained and that he is in a position to meet the payment of the hal. yearly dividends with very little aid on the part of the Bank.

There has been a good demand for money by the large commercial houses. The rates of discount have varied from 4½ to 5 per cent, for first class acceptances. The imports of bullion, since we last wrote, have been nearly £1,000 000 sterling. Several parcels of gold from Australia have been disposed of at the Bank; but we learn that the demand on Continental account has been limited. The same parcels have changed hands for France. The addition to our metallic stock is not likely, therefore, to be large. The shipments have exceeded £120,000 to the Continent, and £137,000 to India, China, &c. The last advices from China shew that the export of silver from this country is proving very profitable. There are now about £2,000 000 in gold on passage from Australia. In that amount is included 400,000 sovereigns, which were shipped from this country in the early part of 1852.

The last accounts of the Bank of France shew a further increase in the supply of gold of 1,192,306 francs, and the stock nearly £20,000,000 sterling. The discount accommodation has fallen off, but the Treasury balance has increased.

On Monday the Consol Market was flat, and prices showed a tendency to decline. The Three per Cents, for Money, were done at 86¼ ⅜, and for Time, 86¼ ⅝. India Bonds realised 8s.; and Exchequer Bills, 6s. to 9s. prem. Exchequer Bonds were firm. The business done on Tuesday was trifling, owing to an increased supply of money stock. The Three per Cents were 86¼ ⅜ ¼; and for the Account, 85¾ ⅛. Annuities of Thirty Years, expiring in 1885, 14¾. Exchequer Bonds, 1859, 99¾. Exchequer Bills were firm, at 6s. to 9s. prem. There was a moderate business doing on Wednesday, and prices were tolerably firm. The Three per Cents realised 86¼ ⅜ for Money; and 86¼ up to 86 for the account. Bank Stock for Account, 212½ to 214; Long Annuities, 1859, 14 9-16; India Bonds, 7s.; Exchequer Bills, 6s. to 9s. prem. Exchequer Bonds, 1858 were 99¾ ⅞. Exchequer Bills were done at 6s. to 9s. India Bonds, 7s. prem. Exchequer Bills, 1858, 99¾ ⅞.

On the whole, the Foreign House has been tolerably firm; but without leading to much speculative business. Brazilian Five per Cents have sold at 101¾; Ditto, for the Account 102½; Chilian Three per Cents, 75; Sardinian Five per Cents, 88¾; Spanish Three per Cents, New Deferred, 18¾; Ditto, Three per Cents Passive, 4; Turkish Scrip, 3¾ premium, ex new. Dutch Two and a Half per Cents, 63¾; Dutch Four per Cents, 95; Mexican Three per Cents, for the Account, 24½; Portuguese Four per Cents, 42; Russian Five and-a-Half per Cents, 89¾. The second Instalment of 15 per cent on the first issue of £2,000,000 of the Turkish Loan has fallen due this week. The future value of this security will, as a matter of course, greatly depend upon the nature of our progress in the Crimea. A successful blow at Sebastopol will most likely be followed by a rapid advance in the premium, especially as the Security is almost generally looked upon as a good and profitable investment.

It is stated that the gold lately received from California contains a much larger proportion of silver than that from Australia.

There has been only a limited business doing in Joint Stock Bank Shares; nevertheless, prices have been well supported. Australasia have marked 84¾; London and Country, 24¾; Oriental, 43; Union of Australia, 68. Miscellaneous Securities have undergone very little alteration:—Berlin Waterworks, 3; Canada Six per Cent Bonds, 110¾; Crystal Palace, 2¾; Electric Telegraph, 17¾; Peel River Land and Mineral, 4; Phœnix Gas, 3¾; Hungerford Bridge, 12 ·. Waterloo, 4¾; Ditto, Old Annuities of £8, 8¾; Ditto, New of £7, 7s; Vauxhall, 2¼; East and West India Docks, 121; London, 109. Canal Shares have been dull:—Ashton Canal realised 1; Birmingham and Liverpool, 94½; Coventry, 209; Derby, 80; Grand Surrey, 48; Leicester, 68; Loughborough, 57¾; Neath, 150; Oxford, 110, Regents, 16; Rochdale, 60; Trent and Mersey, 227½; Warwick and Birmingham, 93; Warwick and Birmingham, 27½; Worcestsr and Birmingham, 32. East London Waterworks, New, have realised 2¾ prem.; Grand Junction, 72½; Kent, New, 15 Annuities, 97; New Annuities of Lowing 2082), 55; Southwark and Vauxhall, 83¾; West Middlesex, 100; Ditto, New, 15. Gaslight and Coke Companies' Shares have been tolerably firm:—British Provincial, 14; Hamilton, 15; Equitable, 26; Great Central, 12; Imperial, 83¾ ex div. and new; Ratcliffe, 70; United General, 20; Westminster Chartered, 36½; Ditto New, 6¾. Insurance Companies' Shares have been in moderate request:—Alliance Argus, 22; City of London, 24½; Clerical, Medical, and General Life, 20¾ ex div.; County, 125; Crown, 18; General, 6¾; Globe, 127¾; Guardian, 25; Imperial Fire, 115; Imperial Life, 48; Law Life, 28½; Law, London, 29¾; Pelican, 46; Phœnix, 183; Rock Life, 7¾; Sun Fire, 208; United Kingdom, 43 ex div.

The Railway Share Market has been very flat. In the general quotations, however, no material change has taken place. The following are the official closing prices on Thursday:—

ORDINARY Stocks.—Aberdeen, 21¾; Chester and Holyhead, 15; Dublin and Belfast Junction, 43; Eastern Counties, 12, East Lancashire, 76¾; Edinburgh, Perth, and Dundee, 72¾; Great Northern, 88¾; Great Southern and Western (Ireland), 48; Great Western, 72¾; Lancashire and Yorkhire, 73¾ ex div.; London and Brighton, 104¾; London and North-Western, 103¾; Ditto, 4½ shares, 1¼; London and South Western, 84; Manchester Sheffield, and Lincolnshire, 26; Midland, 71¾; North British, 33¾; North Eastern, Berwick, 69¾; Ditto, Extension, 14¾; Ditto, G. N. E. Purchase, 9¾; Ditto, Leeds, 15; Ditto, York, 29¾; Scottish Midland, 83, South-Eastern, 88¾ ex div.; South Wales, 33¾.

LINES LEASED AND FIXED RENTALS.—East Lincolnshire, 141; London, Thbury, and Southend, 11¾; Lowestoft, 89½; Northern and Eastern, 68¾.

PREFERENCE SHARES.—Caledonia, 99; Great Northern Five per Cents, 114, Ditto, Redeemable at 10 per cent prem, 106; Ditto, Four-and-a-Half per Cent, 100; London and Brighton Five per Cent, 115; Manchester, Sheffield, and Lincolnshire, New A Shares, 11¾; North British, 106¾; North Eastern, Berwick, Four per Cent, 97¾; South Eastern, 2½ ex div.

FOREIGN.—Antwerp and Rotterdam, 7¼; Eastern of France, 8½; Ditto, New, 16; Great Luxembourg, 2¼; Paris and Lyons, 3¾; Royal Swedish, 1¾.

Mining Shares have been very dull, and almost nominal in price.

Friday Evening.

The Consol Market opened steadily to-day, at 86¼ ⅜ for Money, and 86 for Account. The business doing having been trifling, the price has since given way to 86¼ ⅜. India Bonds realised 8s. Exchequer Bills, 6s. and Exchequer Bills, 9s. 6s. prem. Foreign Bonds and Railway Shares have continued dull.

THE MARKETS.

CORN EXCHANGE, Friday.—The present week's arrival of English wheat up to our market, coastwise, has been very limited. The supply from the interior has been small. The few samples on the stands met a fair demand; and, in some instances, prices were the turn higher than on Monday; but the business doing was by no means extensive. We had a moderate inquiry for foreign wheat, at full quotations. The imports are only 9450 quarters. Floating cargoes of grain continue very inactive. Barley moved off steadily, and late rates were well supported. The malt trade was dull, on former terms. Oats—the show of which was small—sold steadily, and prices had a downward tendency. Beans, peas, and flour were steady. The top price of flour was 55s. per 280 lb.

ARRIVALS.—English: wheat, 1730; barley, 260; malt, 1110; oats, 470; flour, 730. Irish: oats, 520. Foreign: wheat, 9450; barley, 970; oats, 3150; flour, 600 sacks 580 barrels.

English.—Wheat, Essex and Kent, red, 52s. to 53s.; ditto, white, 57s. to 70s.; Norfolk and Suffolk, red, 52s. to 56s.; ditto, white, 57s. to 70s.; rye, 36s.; barley, 32s. to 34s.; distilling ditto, —s. to —s.; malting, ditto, 35s. to 38s.; Lincoln and Norfolk malt, 62s to 70s.; brown ditto, 57s. to 62s.; Kingston and Ware, 68s. to 70s.; Chevalier, 68s. to 70s.; Scotch and Lincolnshire feed oats, 21s. to 26s.; potato ditto, 25s. to 28s.; Youghal and Cork, black, 18s. to 20s.; ditto, white, 21s. to 23s.; Limerick, 21s. to 23s.; Galway, 21s. to 23s.; maple, 35s. to 40s.; white, 41s. to 43s.; boilers, 42s. to 47s. per quarter. Town-made flour, 50s. to 55s.; Suffolk, Essex and Yorkshire, 45s. to 48s. per 280 lbs.

Seeds.—Winter tares and rapeseed have been in fair request, at a slight improvement in the quotations. In other articles little has been doing.

Linseed, English, sowing, 60s. to —s.; Baltic, crushing, 56s. to 60s.; Mediterranean and Odessa, 52s. to 56s.; hempseed, 40s. to 44s. per quarter. Coriander, —s. to —s. per cwt. Brown mustard-seed, —s. to —s.; white ditto, 7s. to 8s. 6d. per bushel. Rapeseed, English, 36l. to 37l. per last of ten quarters. Linseed cakes, English, 12l. 10s. to 13l. 5s. ditto, foreign, 12l. 10s. to 13l. 10s. per thousand. Rape cake, 6l. to 6l. 5s. per ton. Canary, 40s. to 50s. per quarter. English clover seed, white, —s. to —s.; ditto, red, —s. to —s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8d. to 9d. of household; and 7d. to 8d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 52s. 3d.; barley, 32s. 2d.; oats, 21s. 11d.; rye, 36s. 10d.; beans, 34s. 10d.; peas, 36s. 10d.

The Six Weeks' Average.—Wheat, 50s. 8d.; barley, 32s. 4d.; oats, 22s. 9d.; rye, 39s. 5d.; beans 37s. 0d.; peas, 38s. 0d.

Duties on Foreign Corn.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Quantities of Grain sold last week.—Wheat 70,137; barley, 3986; oats, 743·, rye, 637; beans 613 peas, 626 quarters.

Flour.—There has been rather more business doing in our market this week, and several large speculative purchases of common sound corngoe, have been made at 19½d. per lb.

Sugar.—The transactions in this article have been by no means extensive. In prices we have no alteration to notice. Barbadoes has sold at from 31s. to 39s.; and Mauritius, 36s. to 45s. 6d. per cwt. Benared goods have been quoted at 47s. 6d. for brown lumps, and 43s. to 48s. for grocery. Floating cargoes of foreign sugar have realised full quotations.

Coffee.—Our market has a firm appearance, and good ord. native has readily produced 43s. per cwt.

Rice.—A good business is doing in all kinds, at fully the late advance in the quotations.

Provisions.—Irish butter is in fair request, and late rates are fairly supported. We have a good inquiry for fine qu alities. Friesland, 86s. is selling at 100s. to 104s. per cwt. English butter supports last week's currency. Bacon is dull, and is. lower. Waterford, 72s. to 73s. per cwt. Most other kinds of provisions are dull.

Tallow. This article is very dull, and lower, P.Y.C. on the spot is quoted at 63s. for new. To-day's tallow, 62s. net cash.

Oils.—Linseed oil is heavy, at 32s. 3d. to 33s. 6d. per cwt. on the spot. Rape is firm, and has realised 39s. per cwt. Other oils show a steady inquiry. Turpentine is dull, at 40s. for British, and 41s. for Archangel.

Spirits.—Rum is very firm, at 3s. to 3s. 6d. for proof Leewards; and 1s 11d to 1s. 11½d. for East India. The brandy market is lifeless. Cognac Vieux—Parcels of 1840 are worth 10s 9d to 10s. 10d.; other, 10s. 6d to 10s. per gallon. British-made spirit is steady. In Geneva very little is doing.

Hay and Straw.—Old meadow hay, £3 10s. to £4 10s.; clover, £3 5s. to £5; and straw, £1 15s. to £2 5s. per load.

Wool.—English wools move off steadily, at extreme rates. In English and foreign qual ies very little is doing.

Potatoes.—The supplies are large, and in excellent condition. A good business is doing in them at from 70s. to 90s. per ton.

Hops (Friday).—Our market continues firm for all kinds of hops, and the late advance in the quotations is well supported. Duty, 450,000 to 456 000. New hops are selling at from £18 to £36 per cwt. The imports continue on a very moderate scale, the gross amount of to 1853 being 1,000 bales. Sussex, 145 from Aylesford, 125 from Canterbury, and 120 from New York. Mid and East Kent pockets, 1 s.s, £13 12s. to £18 6s.; Weald of Kent, £13 6s. to £15 15s.; Sussex, £13 0s. to £16 5s.; Farnham, £4 4s. to £6 6s.

Cheese (Friday).—Pushing, 32s. 6d.; Mammoth, 34s.; Kelloe 32s.; South Hartlepool, 32s.; South Durham, 30s.; Stewart, 32s. 6d.; Sherwood, 32s. 6d. per cwt.

Smithfield (Friday).—The show of beasts here on-day was very moderate, and such out of condition. Scarcely a single new prime breeds on offer, and the trade steady, at full prices. However, the beef realised about as last week. We were also fully supplied with sheep. On the whole the mutton trade ruled firm, and, in some instances, 2d. per 8lbs. higher than on Monday. Calves—the supply of which was small—sold steadily, at an improvement in value of 2d. per 8lbs. Pigs were dull, but not cheaper. Hitch cows, with their small calf, were selling at £4 to £19 each.

Per 8 lbs. to sink the offals: Coarse and inf.-rior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime large oxen, 3s. 10d. to 4s.; prime small ditto, 4s. to 4s. 2d.; prime coarse and inferior sheep, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 0d.; prime coarse-woolled sheep, 4s. 0d. to 4s. 4d.; prime Scots, &c., 4s. 6d. to 4s. 8d.; prime Southdown ditto, 4s. 8d. to 5s.; large coarse calves, 3s. 0d. to 3s. 8d.; prime small ditto, 3s. 10d. to 4s. 2d.; large hogs, 3s. 0d. to 3s. 2d.; neat small porkers, 4s. 4d. to 4s. 6d.; suckling calves, 21s. to 28s.; and quarter-old store pigs, 20s. to 27s. each. Total supply: beasts, 3,040; cows, 132; sheep, 19,000; calves, 397; pigs, 270.

Newgate and Leadenhall (Friday).—There was rather more firmness in the demand, as follows:—

Beef, 3s. to 4s.; mutton, 3s. 4d. to 4s. 6d.; veal, 3s. 8d. to 4s.; pork, 3s. 4d. to 4s. 6d.

Per 8 lbs. by the carcass.—Inferior beef, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 4d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 8d. to 4s. 0d.; inferior mutton, 3s. 8d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 10d to 4s. 0d.; small pork, 4s. 2d. to 4s. 8d.

Smiths' Show Room, 151, Regent-street, opposite Sackville-street, London.

DR. DE JONGH'S
LIGHT BROWN COD-LIVER OIL, prepared for Medicinal Use in the Loffoden Isles, Norway, and sold in the last of chemical analysis. The most effectual remedy for CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, CHRONIC RHEUMATISM, and all SCROFULOUS DISEASES.
Approved of and recommended by BERZELIUS, LIEBIG, WOHLER, JONATHAN PEREIRA FERGUSON, and numerous other distinguished scientific medical men; prescribed by the most eminent medical men, and supplied to the leading hospitals of Europe—effecting a cure, or alleviating symptoms, much more rapidly than any other kind.
Extract from the "LANCET," July 29, 1854.
"After a careful examination of the different kinds of Cod-liver Oil, Dr. De Jongh gives the preference to the Light Brown Oil over the Pale Oil, which examination scarcely any volatile fat by acid, a smaller quantity of iodine, phosphoric acid, and the elements of bile, and upon the strengthening the efficacy of Cod-liver Oil, no doubt, partly exposes. some of the deficiencies of the Pale Oil are attributable to the absence of its proportion and character to its formation through charcoal. In the preference of the Light Brown over the Pale Oil we fully agree."
"We have carefully tested a specimen of the Light Brown Cod-liver Oil, prepared for medical use under the direction of Dr. De Jongh, and obtained from the wholesale agents, Messrs. Ansar, Harford, and Co., 77, Strand. We find it to be genuine, and rich in iod ne at the elements of bile.
Sold in capsulated retail, in bottles labelled with Dr. de Jongh's stamp and signature by
ANSAR, HARFORD, and CO., 77, Strand, London.
Sole Consignees and Agents for the United Kingdom and the British Possessions at the following prices

BULGARIAN CHILDREN.

BALTSCHIK BAY, Black Sea,
July 24th, 1854.

IT will be in the recollection of the public that towards the end of March the Russians had crossed the Danube at several points, and that the Cossacks had pushed on as far as Kustendjeh and Trajan's Wall. The Turks retreated, and, as usual, the rascally straggling Bashi-bozouks committed every atrocity—harmless against the enemy, but terrible against their friends. The approach of friend and foe drove most of the poor terrified inhabitants of Kustendjeh out of their town; and those who remained in the vain hope of preserving some of their property were cruelly maltreated by these savages. On the 29th of March H.M.S. *Firebrand* visited the place, and took on board several of the poor wounded townspeople, most of whom were ultimately landed at Baltschik. Among the number were two poor little wounded children, found in a boat on the beach. Their father, mother, and uncle had been shot, and the two little brothers had been each badly wounded with slugs in their left arms—the elder (about four years old) while clinging to his mother and the infant, either while in her arms, or when vainly endeavouring to suck her breast after death.

The savages had held the muzzles of the pistols so close to the poor children's arms as to scorch them. The late gallant and deeply-deplored Captain Hyde Parker at once and gladly took charge of them—there being no known relation anywhere. The young one was supported by the milk of a goat which was specially procured. The elder one was long dangerously ill; but, owing to the unremitting care and attention of Dr. O'Hagan and Mr. M'Sorley, has now recovered, but has for ever lost the use of his left arm. The little fellows are great pets with all the ship's company, but are specially looked after by the sailor-boy George Silcock (see sketch), who makes a first-rate nursery-maid. The elder boy at first spoke Bulgarian, but has now lost it, and speaks English only. When asked his name, he says, "Johnny Firebrand." Where do you come from?—"Kustendjeh near Trajan's Wall." Who was Trajan?—"A respectable greengrocer of the City of London—a most responsible party." With such playful nonsense do these kindly sailors while away many a tedious hour at sea. Johnny Firebrand is sketched in his little Jack-Tar dress. Georgy Firebrand, his little brother, is not yet old enough for such distinction. I have indicated the scar made by the slugs on his left arm. When the whole, including the goat, were sent on shore at Sinope for an airing, after six weeks' confinement on board the ship, they attracted very great attention among the poor native Greek and Turkish women, who had so recently experienced all the horrors of war. They made a small collection (fifty piastres) for the children; and one woman even wished to adopt them. When found, each of them wore a small silver cross suspended round his neck and under his shirt. They are in perfect health at present, and will be sent to England whenever a good opportunity occurs.

It was in contemplation to get up a public (as well as a fleet) subscription for these poor children; but the brother of the lamented Captain Parker and a very exalted person have undertaken the entire charge of the children. Happening to be on a visit to the fleet, I undertook to make the accompanying Sketch of them, with a view of aiding them; but now there is no necessity for such a step. Still the deep regret universally felt for the premature death of this gallant officer, and the interest about all Eastern matters, may make this interesting.

Yours, &c., R. TROOPING, late Capt. 53rd Regt.

BULGARIAN CHILDREN, WOUNDED AT KUSTENDJEH.

BALTSCHIK AND KAVARNA.

THE town of Baltschik, of which we gave a View on the 19th ult., from a sketch taken by Lieutenant O'Reilly, of H.M.S. *Retribution*, will be connected in history with the Crimea expedition, as the place of rendezvous for the Allied fleets. According to one report, the whole of the French and Turkish fleets were riding at anchor at Kavarna, in the neighbourhood of Baltschik, on the 3rd inst., and the English fleet was hourly looked for. This must have been a misstatement, however, as a letter from Varna, of the 4th September, speaks of the Turkish fleet as having sailed from thence on the 3rd. The *Constitutionnel* publishes a letter from Baltschik of the 3rd, containing some interesting details relative to the expedition. The correspondent of that journal writes:—"We shall put to sea to-morrow, or after to-morrow most probably. Each fleet will advance in two columns, the French to the south of the English, and the Turks in the rear. We shall arrive on the coast in four lines, and cast anchor within 400 yards of the shore. The lines will only be separated from each other by two cables' length. The first French line will consist of 14 ships ready for action; the second, of 13 frigates or steamers; the third, of 8 vessels; and the fourth, of 6, and next to the transports of the Ottoman squadron. The united fleets will reckon 30 sail of the line—15 French, 12 English, and 5 Turkish. The ships, frigates, and transports, with troops on board, will be towed by steamers. The *Vengeance* and *Retribution* are cruising off Sebastopol. Marshal de St. Arnaud arrived on the 2nd at Baltschik from Varna in the *Berthollet*, and immediately repaired on board the *Ville de Paris*. The embarkation of the troops at Varna took place in the best possible order and with extraordinary celerity. The aspect of the roads was truly beautiful in the evening on the 1st. It was a Friday, and a holyday kept by the Mussulmans. Their squadron was illuminated. Lights were placed at the top of every mast. The night was magnificent. The white cliffs, which line the roads, presented by moonlight the appearance of gigantic ramparts, and all the ships fired salutes. Everybody is happy and proud of participating in so momentous an enterprise."

THE AUSTRIANS ENTERING BUCHAREST.—Everything on and about the soldiers was clean and neat, as if they were just issuing from garrison instead of being at the close of a two months' march. Their white coats were stainless, their shakos apparently not in the least the worse for the wear; their arms, belts, and accoutrements brilliant as on a field-day at Vienna, the artillery horses were fresh looking and sleek, and the baggage-waggons and harness in perfect order. The Chaussé was in a state of great commotion—crowds of people on foot were hurrying along the walks at each side of the main avenue; Wallach officers were galloping joyously to the scene of action, as gaudy and as haughty as if they were heroes of a hundred fights; white dresses and gay bonnets were glancing in the sunlight amongst the trees; peasants in the background looked on in wonder, hat in hand, and head bent; and every minute bursts of Austrian music came wafted on the breeze from the plain outside; Turkish Cossacks flew hither and thither, *ventre à terre*, as if the fate of empires depended on their speed; and now and then an Austrian dragoon rode towards the town in good steady German trot. On reaching the further end of the Chaussé, I found large masses of troops in the open ground at each side of the road, filing off to the left to give themselves room to deploy, an operation which was somewhat impeded by the great sense of several ditches, which once formed the boundary of vineyards. This occupied nearly an hour, the bands all the while playing the finest airs, and generals and aides-de-camp flying about apparently in a state of frantic excitement. At last they all got formed in three lines, the cavalry and artillery in the rear. I then found there were twelve battalions of 900 men each, two batteries of field artillery, and a regiment of light cavalry. Two of these battalions were Italian, one Croat, two Hungarian, and the rest *omnium gatherum mixtum compositum* from all the provinces of the Empire. I remarked, first, that the men were small; secondly, that they were well dressed, well equipped, and very clean; thirdly, that the line they formed was crooked and indented, and in this respect contrasted strangely with the magnificent accuracy of English troops on similar occasions; fourthly, that the light cavalry are mounted on capital little horses, remarkable for their speed and endurance, so a great friend of Austria informed me on the ground, that when the riders ran away in the wars of Napoleon, the French could never catch them in the pursuit.—*Letter from Bucharest.*

THE RUSSIAN STYLE OF FORTIFICATION.—The belief that the fortifications of Sebastopol are merely cased with granite, and not solid, is very general; but this notion appears to be founded on the supposition that, in a country of corruption among the agents of the Government, like Russia, that the State may have been cheated at Sebastopol in corroboration of this, a distinguished Polish General relates the following circumstance:—During the war in Circassia, a reinforcement was sent off to a spot where a new and important fortress was said to have been erected and the guns for arming it were to be taken by the expedition. When the General in command arrived he pitched his camp, and had huts constructed for the winter quarters. Sickness broke out in the camp from the want of good shelter, and he reported the fact to the Government. The Minister of War sent word that he was to lodge the men in the barracks. "What barracks?" said the General to the officer who brought the despatch. "The barracks of the fortress" replied the officer. "Use your eyes," said the General, "there are no barracks, and there is no fortress." And none indeed were to be seen. The money for building the fortress had been regularly drawn for, but not a stone had been laid.

KAVARNA BAY, AND TOWN OF BALTSCHIK.

HER MAJESTY'S DESPATCH GUN-BOATS.

LYNX. BEAGLE. ARROW VIPER

HER MAJESTY'S DESPATCH GUN-BOATS, "LYNX," "BEAGLE," "ARROW," AND "VIPER"

In the ILLUSTRATED LONDON NEWS of the 19th of August we gave a lengthened account of these vessels, accompanied with a view of the *Wrangler* gun-boat, now on her way to join the Baltic fleet. We this week engrave portraits of four more of the completed vessels—*Arrow*, *Beagle*, *Lynx*, and *Viper*. The first three have left England for the Black Sea; the *Viper* will be ready in a few days, and the remaining vessel of this class, the *Snake*, is now having her engines put in, at Messrs. Penn's, of Deptford. The boats composing this little fleet may be looked upon as by far the most perfect and effective class of vessels ever furnished for the purposes for which they are intended.

These boats have been built jointly by the eminent firms of Messrs Green and Messrs Mare, of Blackwall; and in their construction the builders have most conscientiously carried out the excellent designs furnished by the Admiralty. The greatest attention has been paid to ventilation, and, both in appearance and speed, they have exceeded the fullest anticipations—the *Beagle* (built by Messrs. Mare, with machinery by Humphreys) having attained, in her passage round to Devonport, a speed of upwards of fourteen knots per hour; and the long and effective range of the new Lancaster oval guns with which they are armed has been proved by the performances of the *Arrow*, at the Isle of Wight; where a shell, weighing 100 lb, was fired a distance of 5000 yards.

The dimensions, power, and armament of these vessels are as follows:—Length, 145 feet, beam, 26 feet, 160 horse power, armament, two Lancaster oval guns (10 feet long, and weighing 95 cwt each), throwing shells of 100 lb, and four 12 pounder howitzers.

The six light draught high pressure gun-boats are also in a forward state, and will be dispatched to the Baltic in the ensuing spring.

OPERATIONS IN THE BALTIC.

THE Aland Islands are now left to their own resources; and the inhabitants, after vainly entreating for a garrison, or even a few ships to protect them, seem inclined to emigrate to Sweden, being under the perhaps well grounded impression, that, during the winter, they will be visited by a Russian body of troops across the ice, and marched off to Siberia, as a recompense for the sympathy they showed for the French and English, or, at least, for their apathy in not resisting their landing. The Swedish papers state the campaign is not yet finished; that there is something in the wind; and we may yet hear of an important stroke before the fleets are finally withdrawn for the season, which is not to take place till the middle of October. The *Aftonbladet* asserts that Sveaborg is threatened with an attack on the land side, and that Ramno and Nystad, small towns on the coast of Finland, in the Gulf of Bothnia, have been totally burned down. It appears to be pretty certain that a landing has been effected at Ulricasborg, situated on the southern extremity of the promontory on which Helsingfors stands, and that the Allies erected batteries there, attacked and destroyed a large division of Russian gun-boats, and set fire to the town. It says further that the inhabitants of the district of Ulcaborg have received, from the Russian Government, "notice to quit"—i.e. to hold themselves in readiness to remove, with all their goods and chattels, into the interior of the country at a moment's warning.

The *Vulture* left the British fleet at Ledsund on the 13th, and arrived at Dantzic on the 17th. The new fortifications at Bomarsund were being destroyed by the engineers. The fleet was remarkably healthy. The *Royal George* is ordered home.

According to the advices of the 6th, received by the *Presse* from St Petersburg, the inhabitants of that capital were much surprised that the Russian fleet had not attempted to make a diversion in favour of Bomarsund. The fall of that fortress has caused great depression, as even the non-military part of the nation is well aware that the Aland Islands formed a link in the chain of fortifications by means of which the Baltic was to have been made as much a *mare clausum* as the Black Sea. The plan seems to have been, that after the fortifications of Bomarsund were completed, a second Russian fleet was to have been formed, and at the first suitable opportunity the island of Gothland taken from Sweden, and that of Bornholm from Denmark.

The fortifications at Bomarsund are indebted for their erection to a plan formed by the present Emperor when Grand Duke. He proposed to himself to place an impregnable fortress so as to command the narrowest strait in the Aland archipelago that admits of navigation at all by vessels of any size. Bomar signifies a bolt or bar. It was not till after the works were completed, according to the original plan, that their faultiness was discovered; inasmuch as they were easily assailable from the land side, and commanded by the neighbouring heights. At the time of the capture by the Allies, an additional barrack was found in process of erection, the foundation of two other fortifications was laid, as well as for a fourth tower, the walls of which were already run up to about three feet above the level of the ground. The extreme assiduity with which the three first buildings had been carried on up to the last moment was evidenced by the mason having left his chisel and mallet, and the bricklayer his trowel, at the place they had been working; the footsteps of the labourers were

still fresh on the surface of the ground. The keystone of a bomb-proof granite vault was found half sunk into its bed; and on one pile of bricks a bricklayer's labourer had left his wallet, with a lump of black bread and his colleague's bottle in it.

Her Majesty's cruisers having towed the French ships and British transports, with the troops on board, on their way back to France out of the Baltic, returned to their cruising ground immediately In the Gulfs of Finland and Bothnia, a number of Dutch vessels sought to enter the blockaded ports; they were, however, speedily intercepted: and her Majesty's ship *Archer* sent one, the *Minerva*, into Memel: she is laden with hollands cheese, and miscellaneous produce, and, with her cargo, will be sent home to England for condemnation

The following appears in the *Moniteur*:— "The *Austerlitz* screw steam-ship, of 500 horse power, commanded by Captain Laurencin, and which is at anchor at Warkholme, near Stockholm, was honoured on the 2nd inst. by a visit from his Royal Highness Prince Oscar of Sweden, accompanied by the Minister of the Marine and two admirals. His Royal Highness, after a minute inspection, offered his congratulations to Captain Laurencin, on the beauty of his ship and the excellent bearing of his crew. He then invited Captain Laurencin to the Castle of Haga, where the Royal family is at present residing—an invitation which he readily accepted. On the 6th the Ministers of France, England, Spain, and Portugal visited the *Austerlitz*."

FAILURE OF THE HARVEST IN THE UNITED STATES.

WHILE the grain crops in these islands are ascertained to be most abundant in the yield and most excellent in quality, the American newspapers received by the last packet, speak very despondingly of the Harvest in the United States. The intimate and extensive commercial relations between the two countries, render a calamity in the one a disaster in the other; for so closely is the connection between them now established, that, in reference to trade, the interests of both are almost identical. The declared value of our exports to the United States and California, in 1852, amounted to £16,184,897, and in 1853 they swelled to the enormous sum of £23,508,427—being nearly one quarter of our total exports, which reached the high figure of £98,933,781. This, alone, proves that the prosperity of England is the prosperity of the United States, measured in the power of purchasing and selling, into which all trade resolves itself. Under these views, as affecting international trade for the ensuing year, we propose to string together the substance of the several reports received from America—not as alarmists, but because it is wise to know the truth, that we may prepare for contingencies.

From Maine we learn that the drought still continues very severely, although the extreme heat of the weather had abated. The accounts from New Hampshire state that few drier seasons have been experienced. The streams are very low, the corn begins to roll, while other kinds of vegetation indicate that they cannot long hold out. It is feared the potato crop will be entirely ruined. From Vermont, a writer says, under date 19th August, "during the last week we travelled through most of the towns of Orange county, and found the same testimonials of suffering by the drought in every place we visited. Large fields are already grey with barrenness, and no traces of vegetable life are to be seen Corn-fields have been suffering greatly the last ten days; and some fields that appeared promising two weeks before are already pronounced worthless, except for fodder." The indications are now that there will not be a bushel to spare from the State this year. In Northern Rhode Island, and the neighbouring towns of Massachusetts, the drought is more severe. No rain of any consequence had fallen for four weeks, and the corn was "filling out" The mills propelled by water-power were only running half time From all parts of Maryland and Virginia similar accounts come of the unprecedented drought. In the district of Columbia the crop will be a total failure; and, in some of the lower parts of the streams, the cattle were suffering from the want of good pasture. The *Richmond Inquirer* states:—" We learn from persons recently from Wythe and Grayson county, Virginia, that in many parts of that and the adjoining counties, the entire growing corn crop has been nearly destroyed by drought; so much so, that many of the farmers are beginning to talk of buying corn for their own use the ensuing year. Fields that have heretofore yielded, in a good season, thousands of bushels, will not yield this season hundreds." The *Hillsborough News*, one of the Ohio newspapers, reports that the drought has there continued for two months, and that there will not be one fourth of an average crop for that county; and considers that there will be a similar deficiency in the Wabash Valley, the great corn region of Indiana. However, the *Northwestern Argus*, of Putnam county, in Ohio, considers that the wheat will be there an average crop. From Green county, the *Bedford Standard* affirms that the crop is "scalded," and at the best will not make half a crop. The *Spirit of the West*, published at Columbus, calculates the yield at not more than a third of an average. The *Rockville Republican*, published in Park county, quoting the opinion of the farmers, while it speaks favourably of oats and hay, pronounces the corn crop as so much burnt up that no fall of rain can now produce more than half a crop, that; there had been only two slight showers in six weeks. The *Marshall Ilinonan* says:—" The corn crop of this county may be regarded as a total failure. In some fields the stalks look as though a firebrand would set the whole mass in a blaze; while in many others they are so small as to be valueless for fodder." The *Chicago Democratic Press* makes the following remarks:—" From all that we can learn through private correspondence, verbal communications, and our exchanges, we think the we may safely say that in three-fourths of Illinois, nearly all Missouri, a large portion of Indiana, Ohio, Kentucky, and Tennessee, the corn crop for the present season will be below the half of an average yield." According to the corn census of those six States in 1850, their aggregate produce was 216,853,393 bushels; so that the estimate for the present year is only one-half of that quantity. The States are the principal grazing, stock-growing, and hog-producing States of the Union, and the failure of the corn crop is fatal to those several branches of industry. The writer says that "the estimate of one hundred millions of dollars for the United States will not nearly cover the loss in the six States named in this list." The view taken by the *Cincinnati Columbian* is equally gloomy. "In the year 1853," it says, "we had an average crop of wheat. In consequence of the scarcity in Europe, we exported, in flour and wheat, about 25,000,000 barrels. The result is, our markets are bare and the prices high." The writer arrives at the conclusion that Ohio will be deficient to the extent of 43,007,101 bushels, and must therefore import, instead of export. The *Boston Mail* of the 24th August has some valuable remarks on this subject. The drought has been very fatal to the crop of Indian corn, on which the entire pork trade depends; and the writer in the *Mail* observes, that "as Indian corn, necessary to the consumption of Beaumont and other counties will be five to ten per cent as much nutritious matter as wheat, any diminution of it will have nearly as much influence on the price of food as a corresponding failure in the wheat crop." He considers that the crop of the whole Union in 1853 was 800,000,000 bushels and, at the outside, computes that of 1854 at 400,000,000; which makes a deficiency of sixteen bushels to every man, woman, and child in the United States.

Under these circumstances we would warn the people of these Islands not to be too confident of very low range of prices at home in bread, although our own crops have been very abundant. During last year we imported in wheat and flour 6,329,850 quarters; of which 3,799,676 were obtained from the United States, Prussia, and Russia, in the following proportions:—From the United States, 1,582,641; from Prussia, 1,145,845; and from Russia, 1,071,178 quarters. From what has been stated we can expect no supplies from the United States, and the war shuts us out from Russia. Taking our consumption at six bushels per head annually—which seems a safer calculation than one quarter per head, though we are aware that was the old estimate—we require annually eighteen million quarters and a half; but, unfortunately, we have four mouths more to feed, though they have been promised. In consequence of this defect in our system, we know not, with any accuracy, the annual acreage under wheat culture or the total yield; and it is this uncertainty which lends to much gambling in the corn-markets. That we have an ample supply for our own wants from the present harvest is beyond doubt, but what has yet to be determined is the future *price* of the quarters loaf. From calculations made over the years from 1845 to 1853, both inclusive, it would appear that, with a fair average harvest, an importation of five million quarters reduces our average price to about 40s. per quarter. For the reasons assigned, we have no means of determining the quantity raised, but we may be pretty certain that there will be no very large exports during the present year, for, though Prussia may send us grain we cannot expect any from the United States or Russia Therefore, it seems very probable that prices will be maintained at an equable rate but not the extreme we have witnessed during the last seven years previous to the present year.

CHESS.

TO CORRESPONDENTS.

M. ne "L. Arnold.—Thanks The Games reached us duly, and are very acceptable.

AN AMATEUR, Manchester.—Problem 549, and its Solution, are perfectly correct; but you miss the very point of the stratagem Look at the Diagram again, and you may see that if Black checks, as you suppose, the adversary interposes his King's Bishop, discovering check again.

G. B. F., Dublin.—It shall have a place shortly.

J. K. B., and Others.—Problem No. 551 can be solved in four moves, by 1. R to E 8th; P takes R, &c

AGRO.—Both Game and Problems shall be examined.

A. E., Norfolk.—You will no doubt find the subject thoroughly investigated in the forthcoming series by Sir Frederic Madden and Mr Staunton In the meantime, refer to the grocery papers

THE RUSSIAN REPLY TO AUSTRIA.

The *Gazette du Weser* publishes the text of the despatch sent by Count Nesselrode, in reply to the Austrian Note supporting the four guarantees required by the Western Powers:—

TO PRINCE GORTSCHAKOFF, AT VIENNA.

St. Petersburg, Aug. 13 (26).

I have received and submitted to his Majesty the Emperor the communications which the Austrian Cabinet addressed to us on the 16th of August (new style.)

In acceding to the desire which Austria has expressed to us, not to press further our military operations in Turkey, and to recall our troops from the Principalities of the Danube, we had exclusively in view the Austrian and German interests, in the name of which this desire was addressed to us. The concession required entailed the most important consequences upon us. As we have already remarked to the Austrian Government, it took away from us the only military point by which could be established in our favour an equilibrium of positions upon the immense theatre of operations in this war. More than this, it exposed us, irremediably, to the danger of seeing thrown, *en masse*, upon our coasts in Asia and Europe, in the Black Sea, the military forces of England, France, and Turkey.

Notwithstanding these inconveniences, and notwithstanding these evident dangers, we, keeping in view the interests of Austria and Germany declared ourselves ready to retire voluntarily and completely from the Principalities of the Danube. We even renounced every condition of reciprocity on the part of our adversaries. We demanded absolutely nothing from them. We confined ourselves to expressing to Austria our desire to be informed by her what were the guarantees of security which she was individually in a condition to offer us; and, in fact, foreseeing that it was not in her power to assure us an armistice, we desired to know, if at least, after the evacuation should be completed, and that, consequently, the engagements contracted by her with the Western Powers would be fulfilled, we might reckon upon Austria ceasing to make common cause with those Powers with the object, publicly avowed, of bringing about the moral and material abasement of Russia.

At the same time, and in order to afford proof of our pacific intentions, we declared ourselves ready to adhere beforehand to the principles laid down in the protocol of the 9th April.

In this mode of replying directly to these questions, which were addressed to her directly, Austria thought it her duty forthwith to submit the business to the Western Powers, and to make her subsequent resolutions dependent upon them—a resolution which we expressly blame alone

It was evident that the sacrifice which we were ready to make, keeping in view her particular interests, and the interests of the whole of Germany, could not have any value in the eyes of France and England; and that those two Courts, whose object it is to humiliate Russia by prolonging the war, would not show themselves disposed to enter upon a conciliatory course.

This, unhappily, is proved by the communication which Count Esterhazy has made to us.

In point of fact, the Austrian Cabinet now transmits to us, as the result of its conference with the Courts of Paris and London, new bases for peace, which, so far as form is concerned, have been prepared in a manner the least likely to secure an honourable adoption. And as to the meaning of them we cannot be deceived, seeing that, according to the avowal of the French Government, as it was unreservedly made by the official publicist on of its reply to the Cabinet of Vienna, "the interest of the European equilibrium is made to signify nothing less than the abrogation of all our anterior treaties, and the destruction of all our maritime establishments, which, it is said by reason of the absence of all counterpoise, are a perpetual menace against the Ottoman Empire, and the restriction of the power of Russia."

Such [illegible] would be the conditions to which we could resign ourselves, and which we could recommend to our ally, though it exposes us to the danger of seeing that ally reserve to herself the right to modify them at the proper time, according to the chances of the war. According to this, our acceptation of these bases would not suffice to afford any very certain prospect of the cessation of hostilities. The Austrian Government does not stop further. It declares to us that, in its opinion, these bases result from the principles of the protocol, and that they are the necessary conditions of a solid and durable peace; and, consequently, that it completely unites itself to them, and has even entered into formal engagements with the Western Powers, not to treat with us upon any other basis.

Under these circumstances, it is useless for us to examine conditions which, we repeat, could before us, are declared to be elastic and variable—conditions which, moreover, [illegible] in a way that have been actually submitted to us suppose Austria to be already enfeebled by the exhaustion of a long war, and which, if the force of circumstances forced us ever to submit to them, so far from assuring to Europe a solid, and especially durable peace, such as the Austrian Government proposes to obtain, would only expose that peace to complications without end. In accordance as has done to the principles laid down in the protocol, the Emperor certainly had not any intention of attributing to them the signification on which has been here offered.

For the rest, as [illegible] we were recently to make to the private interests of Austria and Germany, without receiving any compensation on the part of Austria, what is the latter [illegible] of perceiving in this the means of assuaging itself from contributions incurred by it, hitherto having, on the contrary, fed it to here? Is it to here? Is it to unite with the Powers enemies by yet stronger an [illegible] extensive engagements, we deeply regret that we are not able [illegible] last communications. We consider that, in our present position [illegible] any new [illegible] of concession compatible with our honour; and we [illegible] intentions of having been misled, [illegible] we [illegible] energetically, the course which has been traced out for us by our adversaries themselves—that is to say, to leave, like them, the chances of war to decide between those pretensions.

The Austrian Government is already informed that motives arising solely from strategic necessities have engaged the Emperor to order his troops to withdraw behind the Pruth. Having thus retired within our own frontier, and standing now upon the defensive, we expect, from this position, that equitable overture will permit us to concur in the desire for the re-establishment of peace, on terms consistent with our dignity and political interests, by deliberate proposals, avoiding all provocation to an increase of complications; but, at the same time, we are determined to defend, with resolution, our territory against all foreign attack from whatever quarter they may proceed.

Your Excellency will have the goodness to bring this despatch to the knowledge of Count Buol.—Accept, &c.

(Signed) NESSELRODE.

THE CRIMEA EXPEDITION.

THIS long threatened enterprise—one of the most gigantic military movements ever undertaken—has, at last, been effected, so far as regards the embarkation of troops and artillery, under the most favourable circumstances. For several days the troops kept marching into the town of Varna, and marching out of it to go on board the vessels. The belt of sand and marsh which runs between the lake and the head of the Bay of Varna was alive with waggons laden with stores, and with carts and horses going to and fro between Varna and these camps, and close to the town, by the side of the belt, was a fringe of boats, of horse-boats, and of pontoons in incessant motion, while the beach swarmed with thousands of men embarking in the transports.

On the afternoon of Monday the 4th inst., the bustle was nearly over. Admiral Dundas, who was then at Baltschik, had telegraphed to the English fleet at Varna to prepare for sailing forthwith to Baltschik, where it joined the French and Turkish fleets. There had been a strong breeze for several days previously, and there was a good deal of surf on the beach; but all had been managed with the greatest order and celerity, owing to the admirable arrangements which had been made. The only accident was the upsetting of a flat-bottomed boat, by which eight Zouaves lost their lives. As the wind was rather adverse, the expedition went along the coast with the intention to rendezvous at the Island of Serpents, where the Allied fleets are said to have arrived on the 8 h inst.

The arrangements for the conveyance of the troops to their destination are of the largest and most perfect character; and when all the transports have united, they will display to the gaze of the enemy an armada of no less than 600 vessels, covered and protected on every side by a fleet, with a battery of 3000 pieces of artillery, and manned by 60,000 of the bravest seamen in the world. The instructions to the troops, which we have given in to-day's publication, are of the most minute and precise description. According to these it is assumed, in the first place, that the whole fleet, consisting of sailing-ships of war, steamers of war, and transports has accomplished the passage of that portion of the Black Sea which lies between Baltschik and the coast of the Crimea without accident, and without any material departure from the order of sailing, for the place of every boat in each division of the fleet is accurately determined, and it is intended that the division should advance with the regularity of an army in the field. It is probable that the troops will chiefly be conveyed in the transports, leaving a sufficient number of line-of-battle ships to cover and defend the enormous convoy, in the event of any Russian fleet attempting to molest the expedition. But the whole naval armament will actively assist with its boats and crews in the landing. The boats will form and receive the men on board on the off-[illegible] side of each ship—party to file under the shelter of the vessel, in case the enemy should open his fire from the shore, and party to leave each vessel at liberty to open her own fire on the land. This circumstance denotes that it is expected the troops will embark at a short distance from the shore; and one account states that this distance will not exceed 400 yards. The men are to enter the boats with their arms and knapsacks, but the arms not loaded, and the knapsacks not buckled on. They will have eaten a good meal before starting, and officers as well as men will carry with them three days' bread and salt meat, besides water in their canteens. All the boats of the fleet having thus been filled with men, they will form in three grand divisions—the first consisting of all the launches and pinnaces in the service of the fleet, in which the *Britannia*'s boats will occupy the post of honour, on the extreme right of the line; the second division will consist of the paddle-box boats of the war-steamers, towed by their own cutters, and these will occupy the extreme left; the central, or third division, will contain all the boats of the transport service, and will, consequently, be by far the most numerous.

The line of the Light Division parallel to that of the tugs, will advance in the following order, from left to right:—Transport No. 50, the *Courier*, with the 19th Regiment on board; transport No. 78, the *Orient*, with 88th Regiment on board (horses and men); steamer *Victoria*, with the 7th and 33rd Regiments on board. Next No. 21 transport, *Pride of the Ocean*, with the reserve ammunition; No. 7, steamer with the 77th Regiment; No. 43, No. 42, the *Andes*, with 33rd Regiment; No. 89, with Royal Horse Artillery; No. 98, with the same force; her Majesty's steamer *Fury*. No. 39, No. 60, the *Emperor* conveying Brigadier Codrington and staff, Captain Macdonell, Aide-de-Camp to Sir George Brown, &c. On looking at the above arrangements for the Light Division, it will be observed that the line of the Light Division consists of fifteen vessels. Of these five are composed of steamers which are sailing vessels. In proceeding towards their destination, the line will, however, be at right angles to the beach, each steamer taking two transports in tow. Thus, for example, on leaving Baltschik, the *Victoria* steamer towed transports 50 and 78, and then cast off to the *Megara*, following No. 78, towed the transports 21 and 44; following No. 44, the *Andes* dragged after her Nos. 43 and 42. After No. 42, the *Fury* towed No. 89 and No. 98; and the *Emperor* brought up the rear with No. 39 and No. 60 transports after her.

After the Light Division comes the line of the First Division, under his Royal Highness the Duke of Cambridge, as follows:—Transports, No. 4, No. 29, with 79th Highlanders; the *Emu*, with the 42nd Highlanders on board. No. 19, No. 14, the *Kangaroo*, with Scotch Fusilier Guards. No. 10, No. 7, the *Sea Nymph*, with Coldstream Guards. No. 4, No. 3, No. 65, the *Tonnang*, with the Duke's staff. Next come the Second Division, commanded by Lieutenant-General Sir D. L. Evans, No. 32, with reserve ammunition; No. 31; the *Falcon*, with Brigadier-General Pennefather and staff, and the 30th Regiment on board. No. 35, No. 22, the *Hydaspes*, with Brigadier Adams and staff and 49th Regiment; No. 31, No. 24, the *Melbourne*, with part of 41st Regiment and 47th Regiment on board, and medical officers; No. 22, No. 71; and the *City of London* steamer, with Lieut.-General Evans, Colonel Wilbraham, Deputy Adjutant-General, Captain Lane Fox, Deputy Quartermaster-General, and the rest of the staff. Richmond, &c., on board. Next comes the Third Division, commanded by Sir R. England. Troop ship *Apollo*, with 28th Regiment on board; Her Majesty's ship *Highflyer*. No. 6, and No. 28, with grand reserve of ammunition; the siege train on board the *Medway*. No. 97, No. 86, the *Canada*, 50th Regiment; No. 93, No. 55, with staff and 1st Royals; the *Cottingham* The *Tynemouth*, 44th Regiment; No. 53, 28th Regiment; her Majesty's steamer *Cyclops*. These three divisions will form one vast continuous line, keeping a distance of twenty feet between the oars of each boat. Upon the signal being given from the *Agamemnon*, the whole line will row steadily and steadily towards the shore, the men in perfect stillness and silence, no boat being allowed to advance before or to fall behind the others. Such a line, from the enormous multitude of boats engaged, must extend to between two and three miles in length, irrespective of the French forces, which are not referred to in these instructions; the landing must, therefore, be intended to take place on a lengthened expanse of the coast. The Light Division of the British army and the artillery, conveyed in the British transports will be the first to land, and four companies of the second battalion of the Rifle Brigade will be attached to each brigade of General Brown's division, and will form the advance. Upon these companies, therefore, will devolve the glory of first setting foot on the Crimea, and of opening their fire upon the enemy. The larger boats will all be provided with grapnels and small anchors, and the oars will be slung so as to be dropped over the side on reaching land. Upon landing, each regiment will form in continuous columns at quarter distance, and the batteries will in every case land with the divisions to which they are attached, as well as the proper detachment of Sappers, with their tools, to throw up field intrenchments, if required, with the utmost rapidity.

The line of the Fourth Division, under Sir George Cathcart, will be disposed as follows:—Steamer stores on board a transport. The [illegible] steamers, with Horses. No. 81, the *Golden Fleece*, with [illegible] No. 61 and No. 87, with reserve ammunition on board, the [illegible] Regiment. No. 58 and No. 48, with reserve ammunition, the *Columbo*, with 20th Regiment on board. No. [illegible] Admiralty [illegible] steamer, with a battalion of Rifle Brigade. The Fifth or Cavalry Division, commanded by the Earl of Lucan, will be thus disposed:—No. 59 and No. 36, with Engineer stores; the *Jason*, with 14th Light Dragoons. No. 2, with Engineer stores; No. 85, with Royal Horse Artillery; the *Trent*, with Heavy Cavalry—4th Dragoons, &c.; No. 61, with Royal Horse Artillery; No. 40, with Royal Horse Artillery. The *Himalaya*, with the greater portion of the 17th Lancers and of the 8th Hussars. Lord Cardigan, Major-General Commanding the Brigade of Light Cavalry, and staff, on board No. 34. No. 1, with Royal Horse Artillery. And the *Simla*, with 4th Light Dragoons on board. Last of all comes the siege-train, as follows:—No. 49 and No. 54, the *Sidney*, with battering guns, &c.; No. 8 and No. 45, with the grand reserve magazines; and the *Australian*, with the siege train. A vast number of Commissariat vessels and store-ships will follow. The Fourth and Fifth Divisions of the Army will follow in their order, the boats returning to the ships to take them; but the cavalry will not land until specially ordered to do so. The artillery will be landed on "flats," as they are termed—consisting of pairs of boats with portable decks fitted to convey guns and horses—which only require to be put together by a party of shipwrights, when the guns come for using them; these flats will then be towed in by steamers, and each of them will be attended by two pinnaces from the fleet, and, if possible, a cutter, for the purpose of assisting them, if requisite.

The arrangement and distinguishing marks of each division of the transports is as follows:—First, there is the fleet of the Light Division; distinguishing flag, chequered or rendezvous flag at the fore; commanding, W. Boys, R.N.; in his absence, Lieutenant Otho, R.N., on board No. 39 transport. Steam-vessels, the *Emperor*, the *Victoria*, the *Andes*. Transports, Nos. 21, 39, 42, 43, 44, 50, 60, 78, 89, 98.—First Division, blue triangular flag at the fore; Commander Rawstorne, R.N. Steam-vessels, the *Tonnang*, the *Kangaroo*, the *Emu*. Transports, Nos. 3, 4, 7, 10, 19, 28, 47.—Second Division, white triangular flag at the fore; Commander Franklin, R.N.; or, in his absence, Lieutenant Boyce, R.N., in No. 21 transport. Steam-vessels the *City of London*, the *Melbourne*, the *Hydaspes*. Transports, Nos. 31, 32, 51, 71, 82, 88, 90, and 91.—Third Division, red triangular flag at the fore; Commander W. Hosseason, R.N. Steam-vessels, *Apollo*, *Highflyer*, *Medway*, *Cambria*, *Cottingham*, *Tynemouth*, and *Cyclops*. Transports, Nos. 6, 28, 97, 86, 93, 53.—Fourth Division, pink flag, with white fly at the fore. Steamers, *Orrosa*, *Colombo*, *Avon*, *Golden Fleece*. Transports, Nos. 9, 20, 37, 48, 56, 57, 58, 80, 81, and 83.—Fifth Division, blue, with red fly triangular at the fore; Lieutenant Dicken, R.N., commanding. Steam-vessels, the *Himalaya*, *Simla*, *Jason*, *Trent*. Transports, Nos. 1, 34, 40, 61, 85, 2, 36, and 59. Each of these divisions will have a detachment of the fleet to protect it; but there is but little chance of any attempt being made against it.

It was calculated that the expedition would be at least four days effecting the passage to the eastern coast of the Crimea, where the landing will take place. Everything seems to indicate that the landing will be effected at the mouth of the river Kandja, about twenty miles from Sebastopol, under the protection of the guns of the combined squadrons. The pontoons, floats, and flat-boats, that have been sent from the arsenal of Constantinople, have been constructed in such a manner as to land two pieces of artillery, with the horses, at once, with all that is required for immediate service. After having established an intrenched camp on the borders of the stream, and secured themselves against the approach of whatever Russian force may be in the vicinity, the first and principal task of the forces will probably be to gain possession of a fork which is situate on a height about three or four miles distant from the principal port of Sebastopol, and which it is said completely to command. When once they have got possession of this height, the heavy artillery, which the army carries with it, and amongst which are some guns of an unprecedented extent of range, will be employed for the destruction of the great seat of Russian power in the Black Sea, and the fleet that is sheltered within its walls. Amongst the desperate means of defence resorted to, it is said that the Russians have undermined all the ground in the vicinity of the outworks, and even at many points on the Chersonese coast, where a landing is thought likely or possible.

In the expectation of great sacrifices and severe contests that must attend the attack upon Sebastopol, which is certain to make a most obstinate resistance, the commanders of the expedition have made every arrangement for the wounded, and orders have been sent to Constantinople to keep the hospitals in readiness for the reception of 10,000 men.

It is rumoured in Vienna that the fleet will proceed from Serpents Island to the Embouchure of Perekop, [illegible] without [illegible] but it is not likely, although the Austrians have themselves expressed their astonishment that so little notice has been taken of a point which is so vulnerable. No good object could now be obtained by attacking Perekop, as the troops intended for the defence of the Crimea are already ready to meet the invaders, and every week must improve before reinforcements from Kherson and the Upper Taurida can reach Sebastopol. No civilian who saw the expedition start was inclined to doubt that it would be successful. New fieldworks have been constructed on the heights around Sebastopol, and the Russians in Odessa do not seem to feel any alarm for the fate of that fortress.

The troops are hurrying out of Moldavia with such breathless haste that it is evident reinforcements are to be sent to the Crimea immediately. Armed marauders, without a single day's rest, are rumoured to an army; and, even if the greatest expedition is used, none of the troops now crossing the Pruth can reach the Isthmus of Perekop in less than three weeks or a month. One of the versions in circulation relative to the intended operations of the Allies is that Kherson, a great naval fortified place, with docks for ship-building, is to be destroyed; but the person who conceived this idea can have no knowledge whatever of the situation of Kherson. Before the Allies could get to the place in question, they must be at the embouchure of the Dniester. They would have to take the fortresses of Otzakoff and Kinburn. The Russian Marshal Munich passed by way of Aleschki from Kherson to Perekop when he conquered the Crimea; but he had not to run the gaunt et of the above-mentioned fortresses, which command the entrance to the Dniester.

According to reports from St. Petersburg, vid Berlin, the following reinforcements have been marched off with all possible expedition to the Crimea:—A second brigade of the second division (second division), 6th corps and 6th Rifles, nine battalions; the first brigade, fourteenth division (second division), 5th corps, eight battalions; with the fourteenth Artillery brigade (4th corps), consisting of four batteries with forty field-pieces nominally. It is added that the remainder of the 6th corps, of which one division is in Asia, and tough near Kars, is ordered to the Crimea, with all the disposable cavalry from the colonies. The infantry are forwarded, as much as possible, in waggons.

What our troops and sailors are probably at this moment hotly engaged in the Crimea, every exertion is being made at home to keep them well supplied with reinforcements, with comforts for themselves and materials for effectively discussing matters with the enemy. The Admiralty, in addition to a large quantity of heavy shot and shell, ammunition, &c., will take out 600 marines for service in the Black Sea fleet. The *Dauntless*, 38, was peremptorily required to be ready for sea again by Saturday (to-day). The steam-transport *Vimeda* has been laden from the Royal Clarence yard, Gosport, with several hundred tons of provisions for the service of the British army in the East; and on Monday night she shipped from the same establishment 300 dozen of port wine of the first quality for the sick in the same expedition. The Clarence yard is worked night and day, but even this unprecedented press of labour fails to supply the wants of the service at home and abroad, and a large quantity of biscuits for the Navy is being baked at a private establishment at Portsmouth for the Government. Mr. Davies, R.N., Master-Attendant, and Mr. Pinhorn, Storekeeper, of the Clarence Victualling Establishment, together with Captain-Superintendent Courtenay, are indefatigable in their attention and supervision to get off the daily supplies of provisions from their admirably-worked storehouses. The splendid screw steam-ship *Prince*, of 2700 tons, one of the screw steam-ships which proceeded with French troops to the Baltic, arrived at the Royal Arsenal, Woolwich, on Tuesday afternoon. The *Prince* appeared to have a number of troops on board, and it is said she has come up to Woolwich in the first instance to discharge about 250 tons of shot and shell brought home from the Baltic. It is probable these shot and shell will be at once transferred to the *Salamander*, for conveyance to Malta and the Black Sea, as it was understood that the *Salamander* had come to the Royal Arsenal to take on board about 250 or 300 tons of shot and shell for service in the war in the East.

INSTRUCTIONS TO THE [illegible].

The following are the "Instructions" issued to our troops on leaving Varna. They are dated Sept. —:—

1. The invasion of the Crimea [illegible] determined upon, the troops will embark in such ships as [illegible] provided for their conveyance, and will disembark at Eupatoria [illegible] proceed with the combined fleets to their destination.

2. In an operation of so much difficulty it is essential that the arrangements made should be attended to with the most thorough understood by the officers who are responsible for their execution, and should be strictly carried out without any alteration or the exercise of discretion by any subordinate officer. Otherwise confusion would ensue, and the worst consequences might be apprehended.

3. When the troops are directed to land, they are to enter the boats in the order in which they stand in the ranks.

4. They are to sit or stand, according as they may be desired, and when once placed are to remain *perfectly still*, as well as *silent*.

5. They are to take their knapsacks with them, but not on them, and on leaving the boats they will either put them on, or place them on the beach in the order in which they stand, according as they may be ordered.

6. Each [illegible] will, in the first instance, be left on board, folded, and [illegible] regimental number of each soldier.

7. The regiments will form in contiguous columns, at quarter distance.

KAFFA BAY.

THE coast of the Crimea, as the scene of the operations of the Anglo-French troops, is at this moment a country of paramount interest. The Bay of Kaffa is one of the places [illegible] for landing. A low sandy shore forms part of [illegible] the town of Theodosia or Kaff[illegible] of the last mountain of the southern coast of [illegible]. A reef of rocks runs out from Cape Theodosia [illegible] of the [illegible] and town of Theodosia lie to the westward of this. Vessels in pratique anchor [illegible] two cable's-lengths from the town, in about nine fathoms water, within a point of land on which are some store-houses; but those performing quarantine, anchor before the lazaretto, in four-and-a-five fathoms water, at about a cable's length from the shore. The shore may be approached much nearer, if you go into a little bay to the westward of this point. The bottom holds well; and is everywhere of stiff mud. The road of Theodosia is sheltered on all sides productive; and is deemed to be the best in all Southern Russia. The low shore to the northward may be approached pretty closely, if you are obliged to work in or out of the harbour, as the water continues deep.

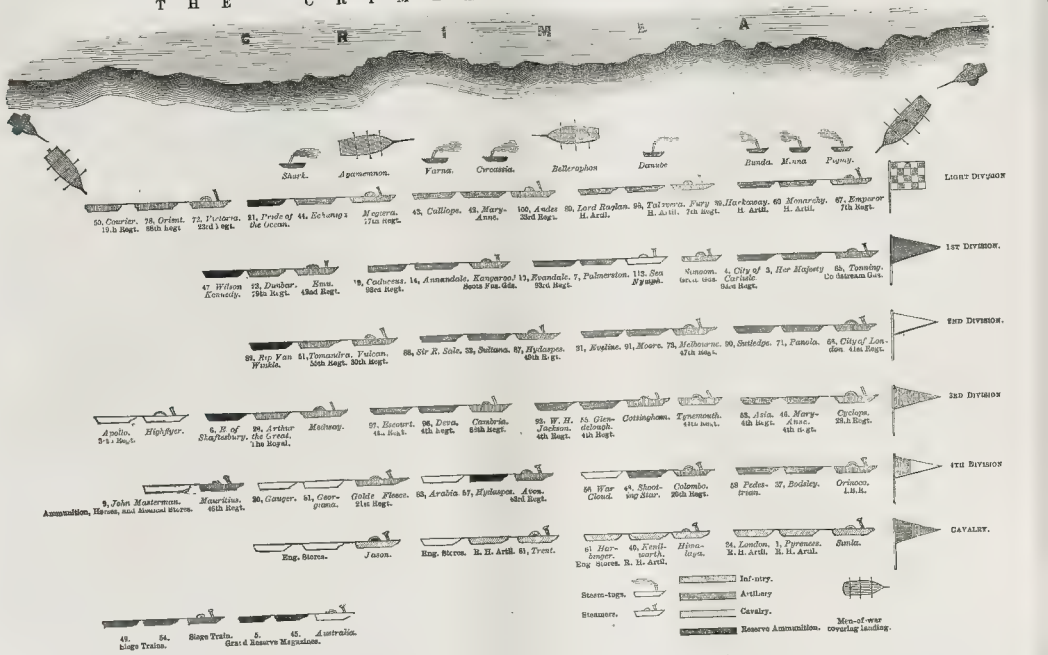
Theodosia, known more recently under the name of Kaffa, is one of the oldest towns of the Crimea.

The neighbouring country is said to have been formerly rich, fertile, and beautiful; at present it is dreary and desolate to be seen. The surrounding mountains might, with attention, be rendered productive.

Big[illegible] Crimea, published in 1836, says, "The [illegible] Theodosia is capable of giving shelter to a vast [illegible] directions save [illegible] the wind is in that quarter, partial security [illegible] at the entrance of the Gu[illegible]"

The accompanying Illustration is from a sketch by Lieut. C. E. Gordon, R.E.

THE CRIMEA EXPEDITION.



THE OFFICIAL ARRANGEMENT OF THE BRITISH DIVISION OFF THE COAST OF THE CRIMEA.

8. They will not load until they have landed, and not then until they are order d.

9. The spare ammunition (first reserve) will be disposed of as directed in the accompanying memorandum, and will be in charge of an officer of the field train department.

10. The horses provided for the service will be landed after the troops have disembarked.

11. Three days' bread and three days' salt meat, ready cooked, are to be carried both by officers and men, and the men will have their canteens filled with water.

12. The water-bags will also be landed, and placed with the reserve ammunition; and the horses appointed for them, if they can be taken—of which there is at present some doubt—will be got on shore as soon as possible.

13. It is necessary that officers should take on shore, in the first instance, such articles only as they can carry themselves.

14. The servants of officers are not only, on all occasions of service, to be present under arms with the regiments to which they belong, but they are to carry no more than any other soldier, and they are to mount all picquets and guards with their masters.

15. Mounted officers alone will be entitled to batmen.

16. The medical staff attached to the divisions and brigades will land with them.

17. The batteries will land with the divisions to which they are attached, as well as the Sappers similarly situated; and the latter will bring with them a due proportion of intrenching tools.

18. The Light Division will land first. Four companies of the 2nd battalion Rifle Brigade will be attached to each of its brigades, and will form the advance.

19. The First Division will follow, then the Second, the Third, and the Fourth.

20. The cavalry will be ready to land; but will not disembark until they receive special directions to do so. They will take with them three days' corn and forage.

22. Provision will be made by the naval authorities for the disembarkation of a due proportion of the horses of the officers of the staff, and these officers are recommended to take upon their horses three days' corn and forage.

THE ORDER OF LANDING.

When the troops are in the boats they will form on the off-shore side of the ships from which they disembark, ready to form the line abreast, on the signal being made from the *Agamemnon*.

The boats are to keep a space of 20 feet clear of the oars of each other; care to be taken to observe the signals, that "to form" may not be mistaken for "advance." All officers of boats will distinctly understand, that they are to be on the look-out for orders and signals from the respective commanding officers of their divisions, following each other, and never proceeding in execution of the signal until it be hauled down by the senior officer.

The form of advance will be in line, abreast; and the greatest care will be taken to preserve the line, that no boat advance beyond it, or fall into the rear; but all will pull in to the shore steadily and steadily, preserving the strictest silence. All boats towed to land on the port side of the boat towing them.

The divisions, as in the general regulations, will be as follows, viz.:—

First Division.—All launches and Turkish pinnaces from the sailing ships of the fleet, commencing with the *Britannia's* boats on the extreme right, and ending with the *Diamond's* troop boats, on the left of the division.

Second Division.—All paddle-box boats of the war-steamers towed by their own cutters, commencing with the *Furious* on the right of the division, and terminating with the *Fury* on the left.

Third Division.—All boats of the transport service, commencing with the boats of the *Emperor* on the right of the division, and ending with the *Gertrude* on the left; excepting the ships *Monarchy*, No 60; *Harkaway*, 98; *Talavera* 98; *Mary Ann*, 48; *Calliope*, 43; *Echunga*, 44; which are not to send boats until they are cleared of their artillery, that land with the Light Division; after which their boats will proceed to the ships pointed out to them.

The First Division will take the right.

The Third Division the centre.

The Second Division on the left of the line.

Britannia's first boat on the right, *Diamond's* the last boat on the left.

The *Emperor's* boat next to *Diamond's*, the first boat on the right, and the *Gertrude's*, No. 54, the last boat on the left.

The *Furious* the first boat on the right, next to *Gertrude's*, and the *Fury's* the last boat on the left.

ARRANGEMENTS

To be carried out for the assembling at first rendezvous; anchoring off the enemy's territory, and disembarking the army and *matériel*.

1. The whole fleet, containing the army, to assemble at Baltschik, anchored by divisions as they are now told off, with the steamers appointed to take ships in tow, to seaward of the ships to be towed.

2. The squadron of ships of war immediately attached to, and directing the expedition, to be anchored together, on the right or left, as the Admiral may decide, excepting those war-steamers appointed to tow transports, which are to be in their places as above

3. That the main body of the fleet be apart from (to the right or left of) the division of transports, as the Admiral shall decide; but on the opposite side to that on which are the ships immediately conducting the expedition.

4. That one steamer-of-war be attached to each division, for the purpose of rendering any required assistance whilst at sea, and that the *Triton* and *Spitfire* be told off to anchor as points of enclosure, for the Light Division, and a general guide to the others

5. That the towing-steamers only, of each division, carry at their mizens, during the night, the number of lights, vertical, corresponding to their divisions, the Light Division carrying two lights horizontal.

6. That all ships of war, carrying pairs of boats, for which portable decks are fitted for guns and horses, have a party of shipwrights told off to them, well instructed as to the quickest mode of putting them together, and, when ready for service, a crew of six seamen be appointed to each.

7. That all boats of the pinnace size and upwards, including flats and paddle-box boats, be provided with grapnels, or small anchors, and their cables; that all masts, sails, awnings, and superfluous gear be taken out, and that all the oars be slung, so that they may be thrown out over the side of the boat as she approaches the beach. That every boat be provided with at least four breakers of water.

8. The small steam tugs to be in tow of larger vessels, in twos or threes, with moderate steam up in each, to prevent collision.

9. Launches and paddle-box boats to have crews; pinnaces and cutters to be fully manned. The small cutters to be attached to the paddle-box boats, one to each, for towing and assisting, if requisite.

Niger's to attend *Spitfire's*.
Tribune's to attend *Triton's*.
Highflyer's to attend *Cyclops'*.

Two pinnaces to be told off to each large flat landing the artillery, and one to each small flat. Each launch to be attended by a cutter from the same ship, for towing and rendering any required assistance.

10. That the boats of the fleet to land infantry be classed in divisions—her paddle-box boats and cutters; a midshipman in each boat, where possible, or an intelligent petty officer; and a Lieutenant in each launch, and a Lieutenant in charge of pinnaces.

11. That a Lieutenant be sent from each steamer of war, in charge of her paddle-box boats and cutters; a midshipman in each boat, where possible, or an intelligent petty officer; and a Lieutenant in each launch, and a Lieutenant in charge of pinnaces.

12. All officers to have written copies of these instructions.

13. All boats' crews to carry their day's provisions in their haversacks and their day's spirits in a small breaker.

14. Each ship, as she is clear, to haul down her distinguishing flag, to prevent the possibility of boats returning to an empty vessel; and when artillery ships haul down their distinguishing flag, which intimates that they are clear, the artillery ships of the next division to be cleared are to haul their ensigns down from the gaff and hoist them at the mizen, in order that the steam-tugs towing artillery flats may have no difficulty in finding the vessels.

surgeon should be accompanied by two men, to assist in putting the men carefully in the waggon; these men should accompany the waggon, and assist in like manner in taking the wounded out. These men should likewise carry canteens full of water, and there should be a skin of water, as a reserve, in the waggon, with a drinking cup.

6. The site selected by the staff surgeon of brigade for the reception of the wounded from the field, should be as sheltered as possible; and if not easily distinguished, a flag should be put up; and if any houses be near, calculated for the reception of wounded men, they should be taken possession of at once, and an abundant supply of water, and, if possible, straw provided.

7. Should the action prove decisive, tents can be pitched for the temporary accommodation of the wounded; but should the army advance, the surgeon, and one assistant at least, should accompany their regiments, leaving one or two assistants, according to the number of wounded, to aid the divisional staff, who will pitch the reserve marquees, and make all necessary preparation for the comfort and accommodation of the wounded, by having tea, broth, or essence of beef (which is readily made into broth by adding hot water), wine, and brandy, &c., ready. Should the army unfortunately meet with a reverse, all available transport must be pressed for the removal of the wounded to the rear, and they must be sent off as speedily as possible; but neither here nor on the field of battle should any one be carried whose horse are so slight as to admit of his walking. Nor should commanding officers of regiments, when wounded, be allowed to take medical officers of their own corps to the rear with them, or officers of any grade be permitted to appropriate the spring waggons for the special conveyance of themselves and their luggage; and positive orders should be given to prevent bandsmen, drummers, or pioneers, specially told off to assist the wounded, from being left in charge of officers' horses and effects.

8. Should the army have to effect a landing on an enemy's coast, with an opposing force to meet it, the men should eat a good meal before leaving the ships, and should cook whatever provisions it is deemed necessary to serve out to them before they start. Pork is better than beef for this purpose, as it warms up more readily with any vegetable the men may find on shore. The medical officers should land with the last boats of their regiments, and should carry with them their haversacks, dressings, and canvas bearers, if the landing be opposed, so as to be able to bring the wounded at once to the boats for conveyance to the ships set apart for their reception; care should be taken that each boat employed in this service contains a supply of water and a drinking-horn.

9. Should a landing be effected, and any horses be disembarked, the surgeon's pack-horse and panniers should be among the first.

10. As soon after an action as possible, medical officers in charge of corps will make out, and transmit to the Inspector-General of Hospitals, for the information of the General Commanding-in Chief, returns of casualties.

JOHN HALL, M.D., Inspector-General of Hospitals.

THE AMBULANCE.

THE Hospital Cart or Ambulance accompanying our troops for service in Turkey, is built after a plan recommended by Dr. Guthrie, and is much superior to anything of a similar nature used in the last war. It has two wheels; and the uneasy motion is in a great measure prevented by the cart being supported on strong springs. The wounded can lie at length in it; those who are slightly hurt, sit in front and rear, and on the sides; and slung from the top is a stretcher, in which one who is very severely wounded can be placed. The back-board lets down, for cases which require amputation; and underneath are lashed the hospital chests. The Ambulance is drawn by two horses; and, although firmly made, is very light, its weight being but 10 cwt.

NEW AMBULANCE WITH THE ARMY IN THE EAST.

MAP OF THE CRIMEA.

IN to-day's publication we have given a Map of the Crimea, that portion of the Czar's dominions which has by this time become the scene of most momentous warlike operations. Although forming but a mere speck in the vast expanse of Russian territory, the Crimea is by far the most important portion of that great empire, especially in a strategical point of view. Hence the interest attached to the present expedition.

The population of the Crimea falls somewhat short of 300,000. More than two-thirds of its inhabitants are a mixture of Mongols and Turks, and are called Tartars. Those who live on the plain show in their features their Tartar origin; but those in the northern valleys display a strong mixture of Turk ish blood, especially the nob'emen, in whom the Tartar features are entirely obliterated. Besides the Tartars, different other nations are found—Russians and Germans, who have been transplanted in modern times as colonists; and Greeks, who always seem to have formed a portion of the population, but have considerably increased in latter times.

In the interior, at the northern extremity of the hilly country, is the town of Simferopol, or Akmeshed, the capital, not far from the sources of the river Salghyr, with 8000 inhabitants; and that of Karosubazar, with 8760 inhabitants, and some manufactures of morocco and leather. In the mountains is the city of Baktchissarai, the ancient residence of the Khans.

The most frequented harbours are on the south-western coast. Koslow or Eupatoria—with 4000 inhabitants, mostly Tartars and Jews, and a fine mosque—exports corn to Constantinople and Turkey. Sebastopol, formerly Akhiar, has been converted, within the last twenty years, into one of the strongest fortresses in the world. On the south-eastern coast is Balaklava, with a fine harbour, between high mountains, which, however, is not much used by the Russians. On the straits of Yenikale is Kertch, a thriving place, which has also been fortified. It exports salt, salted fish, and caviare. In its neighbourhood are the extensive ruins of the ancient town of Panticapæum, once the residence of Mithridates. Yenikale, at the entrance of the strait, is a small fortress, with 600 inhabitants. The fortress of Perecop on the isthmus, has 800 inhabitants.

It is stated in letters from the Black Sea that, during the late reconnoisance, it was made out that an army might be landed either at Cape Loukoul, which is fifteen miles to the northward of Sebastopol, or at the Katscha river, which is not more than six miles therefrom. At each of these points there is a break in the red perpendicular cliff which forms the coast line, and is about sixty feet high. The land immediately inside of this is flat, and almost unbroken, from Cape Loukoul, were its breadth may be about seven miles, down to the northern shore of the harbour, where it is not more than four miles. About midway between the two there is the little winding valley made by the Katscha river, and the two harbour there are trees scattered here and there. On this flat ground the army would get plenty of water from the Katscha, and their advance could be materially assisted by the steamers, which could go within a quarter of a mile of the shore, and might keep up a terrific fire on anything on the plain within the range of their guns. The country inland beyond this plain does not rise very steeply until near the harbour; but there seems to be other more elevated plateaux. The fact on the northern shore of the port, about a mile from the entrance, is the only difficulty for the troops; for that once carried, the artillery could destroy the ships and town on the southern shore without difficulty. This important fortress seems regularly built, has guns mounted, and a ditch surrounding it. The forts at the entrance to the harbour are most formidable. The land near Cape Kherson is so low, and the ground between it and the town, inside the bays, so easy for troops to march over, that the Russians have seen the necessity of placing no less than four encampments there to prevent an attack in that quarter. The number of troops under canvas must be full 25,000, and is, in fact, the only large body of troops visible. The fortifications of the town appear unimportant. There is a wall running round it which is loop holed, but has no ditch; and it seems to have only one round battery on it. There is a good part of the hill on which the town stands unoccupied; and, if this were gained, the arsenal, forts, ships of war, &c., below, would be easily destroyed.

Major General Mackintosh thinks that a landing should be effected at a spot which affords good anchor for men-of war and transports. "Kezlof, or Eupatoria, on the Odessa side of the Crimea, has a harbour and good roads, leading towards Symferopol, the seat of Government, as well as to Sebastopol. But this landing place is too liable to risk, from its proximity to the mainland, and the roads pass over open steppes, where an enemy, the strongest in cavalry, would have great fy the advantage. I think, therefore, that Aktiar—sometimes called Theodosia—is preferable for a disembarkation. It is an excellent and capacious harbour, and stands at the entry of a minor peninsula, in which a body of troops of due strength might, after a short struggle, establish itself, particularly if a simultaneous descent were to be made at Kerch." The Major-General's advice, as to Anapa, is at this moment being carried into effect. "As a most important preliminary step, it appears to me that Anapa, on the nearest part of the Circassian coast, should be taken and garrisoned, and in order fairly to liberate the tribes of that country, that any forts on the coast, which may still be in Russian possession, should be forthwith reduced. The Circassians, who are very efficient irregular horse, and all other tribes of the Caucasus who could co-operate, should be invited to hasten to Anapa, and as the strait leading into the Sea of Azof is there narrow and shallow, the men and their horses could be passed over by means of rafts or lighters, of which there are many at Yeni-Kalleh and other adjacent places, and the native horses could even be swum across a distance of several miles astern of the boats, so as to pour into the Crimea a counterveiling force to the Cossack and other cavalry of the Russians."

BOMBARDMENT OF ANAPA.

A REPORT, for which we are indebted to the Telegraph, has been forwarded from Vienna, announcing that "Anapa has been bombarded since the 7th, by the squadron under Admiral Lyons." What truth there may be in the report will be learned in a day or two. Anapa, as most of our readers are aware, is a seaport town and fortress of Circassia, on the Black Sea, and has a Russian garrison. It is meanly built, and has a bad harbour. The accompanying Illustration is from a Sketch by Lieut. O. E. Gordon, R.E. When the Russians, last spring, destroyed that chain of forts along the Circassian coast by which they had for a number of years held the country in a grasp of iron, they thought proper to spare Anapa, Soujuk Kaleh, and Novorossik. Of these three forts, Anapa is said to be the most formidable; and, as it is the nearest to Sebastopol, it is not unlikely that its destruction may have formed a portion of the plan laid down by the commanders of the present campaign.

DESPATCHES FROM THE CRIMEA.—Scientific military men have been at some pains to find out how soon it is possible to have news of the arrival of the expedition at Sebastopol, and the following is the result of their calculations. Arrangements have been made that fast steamers shall convey the news to Kustendjeh, where Tatars will be kept in waiting to convey the despatch by way of Czernavods, Slobosia, and Fokjeschi, to Kronstadt. The intelligence will then be telegraphed on to Vienna. Sebastopol may be some 250 English miles from Kustendjeh, and a fast steamer might accomplish the distance in twenty-four hours. The distance between Kustendjeh and Kronstadt may be about 200 long inch miles, and as the Tatars ride at the rate of about nine English miles an hour, the land journey might very well be accomplished within twenty-one or thirty hours. Supposing these calculations to be correct, we ought to have news from Sebastopol in about three or four days at most.

A BAD LOOK-OUT IN THE BLACK SEA.—A private letter, dated "Bay of Varna, Sept. 4," has been published, containing the following ugly statement:—"About four days since, a Russ an steamer came off the place under false colours, lowered out a boat, which ran amid our ships, and saw all that was going on, and then returned to the steamer. The fact became known by a master of one of our steamers—a trader—having recognised in the boat, as it passed, an old Russian Captain with whom he was acquainted at St. Petersburg. The affair caused great consternation. Two French steamers were immediately sent in pursuit, but, strangely enough, were soon recalled. Our General dined with the Admiral yesterday, and when he returned to the transport he said, 'There seems to be some truth about the Russian steamer and boat.' There has been no effectual blockade in the Black Sea, and there is general dissatisfaction about Dundas and his fleet.

THE WRONG MAZZINI.—The Swiss police is unsuccessful in its attempts to lay hands on Mazzini. The Federal Council received positive information "from abroad" (Austria probably is meant) that Mazzini was in Switzerland; orders were immediately issued to the police of all the Cantons to arrest Joseph Mazzini, who was in possession of three passports—the one, American, was in the name of "M. B. Philip," the other two, English, were for persons supposed to bear the names of Lorenzi and Mar ucelli. As an exact description of Mazzini's person was also given, a person who was supposed to be the Italian agitator was arrested at Basle, but, as it was soon proved that he was not the individua. wanted, he was liberated.

The Danubian Steam Company has announced that the communications between Vienna and Braila would recommence on Monday, the 18th of S[illegible].

THE NEW RACE-COURSE AND HIPPODROME AT LONGCHAMPS, NEAR PARIS—ITS INAUGURATION.

CERTAINLY, if horse-racing, and some analogous field-sports are not indigenous in France, our neighbours spare no pains to naturalise them, and make them the vogue. They could not be expected to jump to perfection at once; but, in the matter of horse-racing—thanks to the efforts of the Jockey Club, and more especially to the patronage and example of the Emperor—they have made great strides.

Hitherto the races and steeplechases of Paris have been held in the Champ de Mars; but, in future, they will take place in a new and more extensive arena. Our readers are already tolerably well acquainted with the general character of the improvements and embellishments effected by the Emperor in the Bois de Boulogne. As an additional attraction to the spot, and a further inducement to the Parisians to adopt the habit of seeking their summer amusements outside Paris, he has recently, in co-operation with the municipal authorities of Paris and Neuilly, caused to be laid out an immense Race-course and Hippodrome—one at least of the largest, if not the largest, in the world. It is situated immediately outside the Bois de Boulogne, at the point where it abuts on the commune of Neuilly; and it occupies a considerable portion of what is known as the plain of Longchamps.

An immense tract of land has here been enclosed in palisades, and divided in the interior like an English race-course; but with more various objects, because here it is intended, ultimately, not only to have races and steeplechases, but also regattas (for which the Seine affords the facility), a large swimming-school, foot-races, and other sports of a similar character—such as were in former days the ordinary pastimes of the people. At present, the arrangements are only complete for races, but they are on a gigantic scale, and very perfect in their way. The situation of the course is picturesque, with on one side the Bois de Boulogne; in front, the beautiful valley of the Seine, with its rich verdure, its villas and gardens; and in the distance Mont Valerien. The course itself is so laid out that, for steeplechases and other long courses, a ride of about three English miles in length is obtained; and within this distance there are no fewer than five-and-twenty obstacles—hedges, ditches, hurdles, ascents and descents, &c., &c., to be surmounted by those who contend for the prizes. A fine view of the whole course is obtained from the pavilions, or, as we should call them, the "stands," which, with their beak to the Bois de Boulogne, face Mont Valerien and the valley of the Seine. In the centre of the line of tribunes, where there is sitting and sheltered accommodation for many thousand persons, are the starting and winning-post, and the *place d'honneur* of the directors of the sports Nearly opposite these pavilions, on the other side of the course, is another, a smaller "stand," from which some of the races are started.

This ground is so arranged as to afford three distinct courses—one, of about three English miles, for steeplechases; another of about a mile and a half for ordinary even runnings; and another, of somewhat less than a mile, for two-year-olds. All these could, if necessary, be made use of at the same time, without one interfering with the other. The pavilions, or "stands," are decorated with much taste, but necessarily without much splendour, as they are so exposed to the atmosphere; yet they present a very gay and imposing aspect. Underneath them, and entered from behind, is a place for betters, a betting box, a place to walk the horses, stables, and that indispensable addition to every French amusement, a café. The prices of admission are high, the best places being only procurable at an expenditure of twenty francs; and all but the lowest and least desirable costing five francs and upwards. Notwithstanding these charges, which for France are enormous, this course appears likely to be fashionable, at least if one may judge from the immense concourse of people, and the mass of carriages which occupied the reserved place within the lines on Sunday last, the first day of the sports.

In this country it is difficult to understand the principle on which rested a preliminary proceeding that took place on Thursday week. This was nothing less than a solemn benediction of the Hippodrome by the clergy of the district. An altar had been erected in front of the centre of the pavilions, and the Vicar of Neuilly, attended by the choristers of his parish, offered up prayers, accompanied by chants from an organ. After the religious ceremony a banquet was given to the Parisian press, to which, unconnected with the press, were invited but few guests. Of these a number were of the official personages of Boulogne (the commune), of Neuilly, and the leading representatives of the French newspapers. Lieut.-Colonel le Comte de Tocqueville presided, with the aid of M. Bardey, who proposed "The Press" as the first toast. To this the Marquis d'Urbin responded. After many other toasts, Monsieur l'Abbé Prudent Naudet made a speech on the part which the Church had taken in pronouncing a benediction on the Course, which he explained on the ground, that in the first place the cause of charity would be served by the funds set apart for the poor; and that the health of the mind, the heart, and the body was promoted by such exercises as those which would be held in this Hippodrome. The speaker, moreover, undertook to promise that the enterprise should be successful.

Notwithstanding the torrents of rain, an immense number of spectators attended, and the reserved space was well lined with carriages, filled with persons, who thus escaped the rain, and yet witnessed the sports. The pavilions, or "stands" were crowded in all those parts which were covered, and the ladies braved the rain with real magnanimity, considering the beauty and costliness of their toilets. There was much of the motley character of our English race-course, and our own countrymen, from the lord and the *fashionable* down to the jockey and the groom, abounded in great numbers. Frantic efforts at betting spite of the torrents of rain, were sustained with true English pluck; greatly astounding the Frenchmen, who, sheltered, looked on, and shuddered.

By three o'clock all was ready. The gay jackets of the jockeys might be seen studding the murky crowd and overtopping the umbrellas of the enthusiastic. The first race was to be an even running, distance one mile a mile and a half for three-year olds foaled in France, stake £100. Seven horses were entered for the race: Nettle, four years old, owner the Duke of Fitzjames; Palatine, four years old, owned by C. Leclerq, and ridden by Wakefield; Gagne-Petit, three years old, owner Mons. d'Hedouville, ridden by Chaney; Goleonde, three years old, by Lloublon, owner Mons. Tels ire, ridden by Baldrick; Fraternity, five years old, by Inlerrior, owner Mons. Marc de Beauvau, ridden by Fontaine; Fontainebleau, four years old, by Mr. Wagg, same owner; and Goodfesse, four years old, owner Mons. Fasquel, and ridden by Pantal.

This race was between Nettle, and Gagne-Petit; the former winning after a severe struggle.

Then came a steeplechase, as it is here called, for a stake of 5000 francs (£200) given by the Société des Sports, for horses of all ages and countries. The distance to be run was about three miles English, and there were about twenty-five obstacles of various kinds to be overcome. Four horses were entered for the race: Franc-Picard, by Royal Oak or Nantilus, out of Niobe, owner Mons. de la Motte, rider Lampeugh; Bedford, same owner, rider Planner; Hercule, owner James Reilly, rider not named; and Sir Philip, by Faugh-a-Ballagh, who we are happy to say, escaped with a bruised knee. All this while Franc Picard, with his English rider, was quietly making up to Bedford and Hercule, but Lampleugh took it so coolly, and left so great a distance between himself and them, that it was supposed in style, till they came to the wide ditch. Here Franc Picard fell, throwing his rider (Lamplugh), and giving the lead to Bedford. But Lamplugh soon recovered and remounted. Bedford was far ahead. Hercule following, and Sir Philip nowhere (having received in the ditch with the rider), who we are happy to say, escaped with a bruised knee. All this while Franc Picard, with his English rider, was quietly making up to Bedford and Hercule, but Lampl

POPULAR EDUCATIONAL WORKS,
PUBLISHED AT
MILFORD HOUSE, MILFORD-LANE, STRAND, LONDON.

Fifth Edition.
WEBSTER'S DICTIONARY of the ENGLISH LANGUAGE, exhibiting the Origin, Orthography, Pronunciation, and Definition of Words; containing also a Key to the Classical Pronunciation of Greek, Latin, and Scripture Proper Names. A New Edition, revised and enlarged by C. A. GOODRICH, D.D., Professor in Yale College. With to a distinct of a Vocabulary of Modern Geographical Names, and the Pronunciation. To the new words that have been added amount to a very thousands, and the Dictionary now contains 47,000 words more than "Todd's Ed tion of Johnson." The Work is handsomely printed upon a fine paper, in a clear readable type, in double columns. Royal 8vo, extra cloth, 1260 pages, 16s.; Strongly bound in sheep, with marble edges, 21s.; Half calf, gilt, 24s.; Half morocco, 24s.; Calf, gilt edges, 24s.; Half calf, gilt, 24s.; Russia, gilt edges, 24s.; Half russia, 24s.; Calf, gilt edges, 24s.; Half calf

NEW RACE-COURSE AND HIPPODROME, AT LONGCHAMPS.

(*Continued from page 290.*)

men the justice to say that they greeted the victor with enthusiasm. The shouts were deafening, and, as Lamplugh was paraded up and down opposite the pavilions, the ladies waved their handkerchiefs and the gentlemen offered him a real ovation—an honour worth all the more, considering that every one not under shelter must have been drenched to the skin. One good-natured old *militaire*, decorated, and evidently, from the attention paid him, a man of distinction, exc ted immense good-humour by crying out, at the top of his lungs, "Vive perfide Albion! Vive perfide Albion!"—a cry which was, in fact, an additional compliment to the winner.

The sports concluded with a hurdle-race, length of course nearly two miles English, with eight hedges, or hurdles, to leap. Seven horses were entered for this race: the Monk, ridden by Lamplugh (the winner of the steeplechase); Saint Thibault (rider not named); Deceitful, ridden by Rackley, and owned by Viscour. de Talon. Miss Burns, ridden by the Viscount de Perregaux; Edwa d of York, Phrygia, and Roncont. The state of the ground, in consequence of the heavy and continuous fall of water, rendered the race uninteresting. It was a contest between Deceitful and the Monk—the former winning.

These sports will be continued up to the 1st of November.

THE DONCASTER WINNERS.

ST. LEGER.—THE "KNIGHT OF SAINT GEORGE."

THE Knight of Saint George is a bay horse, low sized, under fifteen hands one inch, and is perfect in point of shape. His sire is Irish Birdcatcher, own brother to Faugh-a-Ballagh, who won the Saint Leger in 1844. His dam was by Hetman Platoff.

Both sire and dam are now in possession of the breeder, Mr. W Disney, of Lark-lodge, Carragh of Kildare, Ireland. Birdcatcher is now the sire of two winners of the Saint Leger—viz, the Baron and the Knight of Saint George, of one winner of the Derby, Daniel O'Rourke; and of one winner of the Oaks, Songstress.

The Knight of Saint George commenced his career at the Curragh, his native place, where, after being a victor, he succumbed, when two years old, to Early Bird. At the end of the racing season of last year, he came into the possession of Mr. Morris, the present owner, who started him for the Derby and other races, without success. he at length, with the assistance of Mr. W Stebbing, resolved to throw in his chance for the Great Northern prize. Notwithstanding the array of horses against him, "the nag of Hambelton," where he was trained, was strongly backed by his admirers. The victory, though achieved by a head over Ivan—a horse the property of Lord Zetland—was hailed with hearty cheers, on account of Mr. Morris's very meritorious and straightforward conduct in always running his horses to win.

The Knight of Saint George is the third Irish horse which has won, within the last few years, the Great Saint Leger Stakes. The first was Faugh-a-Ballagh—the second, The Baron. The Knight was ridden by Basham, a young jockey, with great judgment and determination.

THE DONCASTER CUP.—"VIRAGO."

This is one of the most extraordinary three-year-olds that has appeared for some time. Her colour is chestnut; she is a fine wiry mare. Virago is the property of Mr. Henry Padwick, whose turf *nom de guerre* is Mr. Howard, and who, by the way, is, with Mr. Gully, in part proprietorship of Andover, the winner of the Derby. Virago is by Pyrrhus the First; her dam being Virginia, by Rowton. She this year commenced her performances by winning both the Suburban and Metropolitan Handicaps, thereby throwing enormous stakes into the pockets of the owner and trainer—the latter being the famous John Day. Virago afterwards won the Goodwood Cup, another important stake; and finished by winning the Doncaster Cup, in a canter, by twenty lengths. This celebrated mare was bred by Mr. Jacques, of Easby Hall, Yorkshire.

THE ILLUSTRATED LONDON NEWS

No. 704.—VOL. XXV.] SATURDAY, SEPTEMBER 30, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE WANTS OF LONDON.

THOUGH London is the richest and greatest, and, perhaps, the healthiest city in the world, it is by no means the finest or the most convenient. Its wealth, its population, and its extent are rapidly increasing; but its salubrity and its amenity are neglected and impaired. The larger it grows, the more unwholesome it becomes. The more numerous its population, the more pestiferous is the noble river that ebbs and flows through it. The more active and enterprising its traders and merchants, the more inconvenient are its streets. Wealth is certainly not wanting to render the metropolis as beautiful as it is ugly, and as convenient for locomotion and intercommunication as it is notoriously the reverse. Neither is there any deficiency of willingness on the part of the great mass of the people to aid in the work of improvement. Every one feels and deplores the evils of the congestion under which the olden portions of the metropolis—and more especially the City—that great heart and centre of all—suffer for want of adaptation to the necessities of its enormous traffic, and to the health and comfort of its crowded millions. But no one has sufficient authority to undertake the needful reforms. The new London of Belgravia and Tyburnia may stand comparison for beauty and splendour with any city in the world; but old London and Westminster, with their outlying boroughs of Southwark, Lambeth, the Tower Hamlets, and Finsbury, have positively nothing to recommend them but wealth, extent, and populousness. The wealth is not applied to sanitary improvement or to architectural adornment; while the extent and the populousness are but aggravations of a pre-existing and very serious mischief.

The most urgent wants of London may be classified under four heads:—First,—the want of municipal unity; second,—the want of a system of drainage and sewerage to carry off the refuse of two millions and a half of people without poisoning the Thames, and making it a stream of death, instead of a river of life and beauty; third,—the want of bridges from shore to shore; and, fourth,—the want of a sufficient number of main arterial streets to accommodate the traffic of the greatest commerce the world ever saw. To supply all these wants is doubtless a matter of difficulty. Yet the difficulty is not insurmountable. The first is simply a question for Legislative decision, and might be settled by any Government that had energy enough to insist upon it. The three others are questions of expense alone, and should not affright a people that has invested so many millions in railways and in steam-ships; and that, out of its plethora of capital, finds money to lend to any State or Government that may be in want of it—that helps to make the canals and railroads of America—that opens up the interior o. India—that even made the railways of France to a far greater extent than the French themselves—that buys up Highland hills and Irish bogs—and that will embark in any project, sane or insane, which promises a return of four or five per cent upon the investment.

It is needless to dwell upon the inconveniences that result from the want of municipal unity, or even of municipal federalism, in the government of so mighty a city. Even amid the bustle and excitement of war, should the calamity unfortunately endure for another twelvemonth, time will be found by the Legislature to attend to the recommendations of the late Commission of Inquiry. The old Corporation of London is doomed. Affecting, and affected by, the whole metropolis, the City can no longer be considered as a thing apart. The "Belly" must be taught that its interests are identical with those of the "Members." The great civic "Body" must be one in Government, as it is in fact. The head at Westminster—the hands at Marylebone and Finsbury—and the feet at Southwark and Lambeth, must know themselves to be parts of one whole, and that what is of service to one is beneficial to all; and that the dirt, discomfort, and disease that prevail in one locality are nuisances and dangers to every other. Any Government that shall undertake and accomplish this great work will entitle itself both to fame and to gratitude. Such a victory of peace would not be incompatible with the more uproarious and engrossing victories of war. The people are impatiently anticipating the one, let the present Government attempt the other also. If it will, there is but little reason to fear that it will not succeed in it.

The purification of the Thames, which we have classed as the second of the great wants of the metropolis, has become a matter of absolute necessity. The ravages of the cholera prove, in a fearful manner, the deadly mischief which it either produces or aggravates. It is only a question of expense whether the Thames shall not be as limpid and wholesome at Blackfriars-bridge as it is at Chertsey or Maidenhead; and whether there shall not be embanked terraces from Whitehall to Billingsgate, and from Lambeth Palace to the railway termini at Southwark, as imposing in appearance, and as convenient for the traffic, both of business and recreation, as the magnificent *quais* of Paris. Sooner or later these improvements will be effected, and, while the purification of the river will be a direct benefit to the health and comfort of every dweller in the metropolis—and, as such, beyond all price—the embankment and terracement of the Thames will, in all probability, yield a fair percentage of profit to those who may be induced to invest their money in them.

The want of new main streets, and of lines of communication between the main streets already in existence, is a positive disgrace to a community that claims to be at the head of civilisation, and that can justly boast of so many wealthy, enlightened, and public-spirited members. New Cannon-street—for which the Corporation of London deserves high credit—diminishes, but does not remove, the evil. Ludgate-hill and Fleet-street are more inconveniently crowded than ever they were; while the Strand—one of the most important streets in Europe, and a main thoroughfare—has no direct communication with the parallel thoroughfare of Oxford-street and Holborn. The only available means of communication between Fleet-street and Holborn is Chancery-lane, which is too narrow at one end to admit of the passage of two vehicles abreast, and where a vast amount of traffic is often brought to a stand-still by a costermonger's cart, or by a laundress's wheel-barrow. Two wide streets between the

NEW ROUTE TO BELGIUM.—"THE AQUILA" STEAM-SHIP LEAVING ANTWERP.—(SEE NEXT PAGE.)

Strand and Holborn, and two others between Fleet-street and Holborn; and two, if not three, still wider streets running in parallel lines, so as to relieve Cheapside, Ludgate-hill, Fleet-street, the Strand, and Holborn, are absolutely essential as conduits to and from the City to the northern and western extremities. We believe it is not the want of money, but the want of authority and jurisdiction, that have so long impeded these improvements. The City, and its government, have nothing to do with Westminster and its requirements, and Westminster has nothing to do with the City. Thus a state of things is continued, with daily-increasing aggravations of mischief, which would not be tolerated by the municipality of any third-rate town that had the power and jurisdiction to provide a remedy.

The bridge communication of London is even more defective. Two out of the six metropolitan bridges are subject to a toll; and look almost as lonely and as melancholy, even in the hey-day of the nineteenth century, as London-bridge, in the prophetic eye of Mr. Macaulay, when he sketched the fancy portrait of that famous New Zealander, who is to meditate and moralise over the ruins of St. Paul's. A third is only a foot-bridge; and a fourth and a fifth are so ricketty and rotten as to require more funds to patch them up from year to year, and almost from day to day, than it would take to build new ones. Thus, five-sixths of the whole traffic of the largest city in the civil and world pours over one bridge—with what dangerous and annoying results every person who has crossed it in carriage, cab, or omnibus, can bear witness. The number of bridges between London and Vauxhall ought, at the very least, to be doubled, and every one of them ought to be toll free. If funds could not otherwise be procured, the whole of London and Middlesex ought to be taxed for the purpose, and a liberal grant of public money should relieve the citizens of some portion of the cost. The whole country is interested, and would be benefited, and should, therefore, aid in the completion of public works of so much magnitude and importance.

Were the reforms thus briefly indicated fully and fairly carried out, London would become, what it ought to be, the most beautiful and convenient, as it is already the greatest and most influential, city of the world.

STEAM COMMUNICATION WITH ANTWERP.

THE North of Europe Steam Navigation Company, encouraged by the success which has attended their efforts to establish a regular system of communication with the countries north of the Scheldt, viâ Hull and Lowestoft, and further stimulated by the recent extension of the Eastern Counties branch railway to Harwich, determined on making an attempt to provide equal facilities at that port for the traffic between London on the one hand, and Antwerp on the other. At present the greater portion of this traffic is conveyed by steamers, which traverse the Thames and the Scheldt; the entire journey being performed by water, and usually occupying from eighteen to twenty hours. By adopting the Harwich route, the North of Europe Steam Navigation Company proposed to realise the following results:—First, the avoidance of the long and tedious passage up and down the Thames; second, the increase and development of the local traffic between the Eastern Counties and Belgium; third, the accomplishment of the journey in twelve hours; thus effecting a saving in the distance, measured by time, of some eight or ten hours; and, lastly, the establishment of the new service as essential y a "day" service.

The first trip on this service was taken, in the nature of an experiment, on Saturday week last, the ship selected being the Company's new steamer the *Aquila*, from the building-yard of Messrs. Glasgow, and fitted with engines of 120-horse power, constructed upon the oscillating principle, by M'Nab, of Greenock. Her length is 200 feet, breadth of beam one-tenth of her length, or 20 feet, and her burd-n about 300 tons. Her engines, for such work with such ease, whilst the unpleasant vibration we so often experience, even in crack steamers, is scarcely perceptible. Both out and home she gave the greatest satisfaction to all on board, and averaged a speed of thirteen knots per hour; and in returning, on the following afternoon, at the entrance of the mouth of the Scheldt at eight o'clock in the evening, steamed gallantly through a tremendous sea, and arrived safely at Harwich at half-past two the next morning, accomplishing the distance from the Scheldt buther in exactly six hours and a half. In this part of the voyage the sea-going qualities of the *Aquila*, under the severest stress of weather, were capitally brought out.

The conclusions to which this experimental trip lead us, are these:—For the purpose of the traffic between London and Antwerp, and certainly all the local traffic, the Harwich route has no real competitor in any of the other existing routes; that during the summer months the day service may be conducted with punctuality both way, provided the railway arrangements are made compatible with the demands of the service, and, above all, that the Belgian Government can be induced to maintain additional lights, and erect a few more landmarks, in the Scheldt; that, in the existing state of the navigation of that river it presents insuperable obstacles to the project of ascending it at high-water in the evenings of the short winter days; and that until these difficulties are removed the steam-packet company have acted wisely in determining to dispatch their boat from Harwich, on the arrival of the night mail from London, so as to reach Antwerp early on the following morning.

POLICE REFORM IN PARIS.—The *Moniteur* of Tuesday contains a decree for the organisation of the police of Paris on the same footing as that of London, which the Minister of the Interior, in the report to the Emperor on which this decree is founded, says is admirable. The report states that the present police force of Paris consists of only 740 *sergens de ville*, of whom 200 are employed on special duty, so that the number available for the security of the public at large is only 450. The Minister proposes, and the decree orders, that the number shall be increased to 2000, who shall do duty night and day, by turns, just as is done in London. The annual cost of this new police, which is to be organised and in full activity before the opening of the Exhibition in May next, will be 2,000,000 francs (about £224,000 sterling); but this (says the Minister) is 3,000,000 of francs less than the cost of the police in London. This may very well be, for London is twice the size of Paris. The new Paris police will have two chiefs, who are to be called Commissaires; but their duties will be very similar to those of the London Commissioners. The difference will be chiefly in the salaries. The Chief Commissary is to have only 10,000 francs a year, and the second Commissary 8000 francs. They will have about sixty subordinates of different grades, with salaries varying from 3000 to 1400 francs.

THE GERMAN DIET.—When the Diet meets *in pleno* there will be three well-defined parties. There will be Austria, with two or three of the second-rate States; Prussia, with her allies, Anhalt-Cothen, Anhalt-Dessau, Schwarzburg-Sondershausen, Schwarzburg-Rudolstadt, Reuss-Schaumburg, Lippe, &c.; and lastly, Bavaria, Saxony, and Wurtemberg, with the other States which attended the Bamberg Conference. Austria, with a population of 38,000,000, and an army of about 650,000 men, has four votes in the *Plenum*, and Prussia, Bavaria, Saxony, Hanover, and Wurtemberg have each as many. Baden, Hesse-Cassel, Hesse-Darmstadt, Holstein, and Luxembourg have three votes each. Brunswick, Mecklenburg-Schwerin, and, Nassau have two votes; and the other States, with the Four Free Cities one each. Austria, whose contingent to the Bund is 94,822 men, with 192 guns, is on the same level with Saxony, which supplies only 13,000 men and no artillery, and she only has four times as many votes as Lichtenstein, whose contingent is 55 men!—*Letter from Vienna.*

CHOLERA.—We are happy to learn that the cholera has totally disappeared from the neighbourhood of Compton-street, Soho, and that the measures taken to arrest its progress have been eminently successful, not only in this district, but also in the adjoining (Golden-square), so recently visited by this fearful epidemic.

THE IRISH RAILWAY OUTRAGE.—Government has issued a proclamation offering a reward of £200 for the apprehension of the persons who maliciously placed several large stones on the line of railway between Enniskillen and Derry, near Trillick station.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The sudden return of the Emperor to his first intention of leaving Paris on the 19th, caused a mis-statement in our last week's Letter, for which we have to apologise to our readers. His Majesty, finding it impossible to have news from the Expedition to the Crimea as soon as he had hoped, resolved to go at once to conduct the Empress back to Paris, and to return there sooner than he had at first proposed. Their Majesties arrived on the 20th, in perfect health. On Friday they appeared at the Gymnase; and were—especially the Empress, whom during the representation of the first piece, the Emperor placed fully in view, remaining himself nearly concealed from the audience—received with loud acclamation. Her Majesty—who was looking remarkably well, though a little sunburnt,—seemed much gratified by her reception, and appeared in excellent spirits. Various reports are afloat respecting the plans of the Emperor and Empress for the autumn: one of these asserts that they purpose proceeding from Boulogne to the Isle of Wight, on a visit to the Queen; another, that the Emperor will go alone to London, to have an interview with her Majesty. The fact of the Empress having proceeded to join the Emperor, at Boulogne, instead of passing the period of his absence at Compiegne, as it was expected she would do, seems to give some slight colour to the former rumour. A third *on dit* is, that Prince Albert is to accompany Napoleon III., next month, to Cherbourg, to review the Baltic fleet. It is said that their Imperial Majesties intend inhabiting the Palace of the Elysée the greater part of the winter, in order to have the Tuileries entirely restored and arranged, so as to be in harmony with the new buildings of the Louvre. All the winter receptions are, we believe, to take place at the Elysée, excepting that of New-year's-day, which will be held, as usual, at the Tuileries. It is expected that the gigantic works in progress in this latter quarter, as well as all the others connected with the public buildings of the capital, will be completed by the 1st of May.

There is a talk of arranging a grand banquet of five thousand persons, at twenty francs a head, for the opening of the great Industrial Exhibition. A plan also exists, for establishing a sort of Travellers' Club for the same occasion, and for demanding permission to play therein: but there seems very little reason to believe that the authorisation will be accorded.

We mentioned, some months since, that Mdlle. Georges, the celebrated tragedian of the Empire had petitioned for the privilege of the *bureau de cannes*, at the Palais de l'Industrie. This concession the Minister of State has accorded her, selecting her from an immense number of competitors. It is computed that this privilege is worth about 100,000 francs (£4000).

On Saturday evening, an alarm of fire at the Imperial stables at Monceaux, excited much sensation, and attracted crowds to the spot. By dint of considerable exertion, the fire, which commenced in the magazine of forage, was extinguished without extending to the stables and coach houses. The cause of the accident has not been discovered.

The appearance of cholera at Dieppe, which for the last two months has been literally swarming with Parisians, is rapidly dispersing the crowd; and the bathers, *flâneurs*, and idlers—who have been seeking health, amusement, and occasions to display themselves and a succession of *toilettes* only fit for *dejeuners dansantes*, in the dirty streets, and on the shingly beach of a little seaport town—are hurrying back to Paris with considerable precipitation. The chilly weather, which within the last few days has begun to replace the summer heats which have without interruption reigned since the middle of July, also tends to call back the wandering portion of the population.

The Legitimist journal *La Mode* has been suspended for two months, in consequence, it is believed, of a violent attack on Lord Palmerston. The sentiments of the party to which the paper belongs are far from being those of the Government and of France in general, as relates to the union of that nation with England: the set—" *qui n'ont rien appris ni rien oublié*"—scruple not—individually, if not collectively—to declare vehemently against any approach to the *entente cordiale*; and, with a persistence which does more honour to their constancy than to their enlightenment or to their patriotism, proclaim the existence in their breasts of all the old jealousies, hatreds, and prejudices which time, experience, and the march of progress and intelligence have for ever destroyed in those of the really right-thinking and sensible Frenchmen of the day.

A most necessary and important measure has just been announced as about to be carried into execution. This is the establishment in Paris of a system of police, on the model of our English one. It is extraordinary that this institution of protective police should have been so long allowed to remain in its present most defective condition. Hitherto all the attention of successive Governments has been directed to the organisation of a plan of *espionnage*—the abuses of which have been becoming daily more and more intolerable; and, while the liberty of the subject has been in constant jeopardy, his safety has been wholly neglected, as the system of nightly patrols, passing through the streets at certain times and long intervals, has afforded every possible facility to malefactors of all descriptions to pursue their designs on the unfortunate passers-by—a facility of which they naturally failed not to avail themselves. Now, at least, one abuse is being corrected; when shall we see the other done away with?

The Odéon is about to bring out a piece adapted by Alexander Dumas, from one of his novels, "Conscience"—a work which, notwithstanding certain defects of improbability, contains beauties of style and description, and a tenderness, freshness, and purity of detail that do honour to the heart and mind of the author, and cannot fail to strike home to those of the reader. This theatre is at present giving an adaptation of the "Vicar of Wakefield," with but indifferent success. The Ambigu has a *mimo-drame*, entitled "La Prise de Somarsund." Most of the principal theatres are opening with *reprises*, keeping the new pieces for the commencement of the season.

THE OVERLAND MAIL.

The steamer *Bombay* arrived at Trieste on Wednesday morning at eight o'clock, in 111 hours from Alexandria, bringing the following intelligence, dated Alexandria, Sept. 22:—

The India mail leaves this day with advices from Calcutta to the 19th August; Madras, 24th August; Bombay, 28th August; Shanghai, 24th July; Amoy, 29th July; Canton, 5th August; Hong-Kong, 6th August; Singapore, 13th August; Sydney, 21st July; Melbourne, 25th July; and Adelaide, 29th July.

Trade in India was dull. Exchange at Calcutta, 1s. 11¼d. Canton was in a state of siege. All business was suspended, and in a few days the place would be in the hands of the rebels. No tea was brought to market. Whampoa and Futshan were still in possession of the rebels. Sir John Bowring was still in the north.

The letters by the India mail will not arrive in London before Monday.

POLES IN THE RUSSIAN SERVICE.—Three Poles, brought from Somarsund by the *Fulton* to Havre are lodged in the Rue Beauverger, awaiting the orders of the Minister of War. These men were in the service of Russia, and four days before the bombardment they contrived to escape, and gained the head-quarters of the French General. After the surrender they were of use as interpreters. The garrison of Somarsund was composed partly of Russian soldiers and partly of Poles. All the artillerymen were Poles, and it is said that they served the pieces most unwillingly.

THE CRIMEA EXPEDITION.

The first authentic despatch relating to the disembarkation of the Allied forces in the Crimea, was received from Lord Raglan late on Sunday night, by the Duke of Newcastle, and immediately sent to the whole of the morning papers. Instead of landing at Eupatoria, as the Vienna despatch of last week had stated, it appears that the landing took place only thirty miles north of Sebastopol. The following is the despatch sent to the daily papers by the Minister of War:—

The Allied armies arrived at the place of disembarkation near the Old Fort, in lat. 45, at break of day upon the 14th, and before night they had succeeded in landing nearly all their infantry and part of the artillery.

On the 15th the swell upon the shore considerably impeded operations, but some progress was made, and the exertions of the fleet under the immediate command of Rear-Admiral Sir Edmund Lyons, excited the admiration of the army, and were, in fact, above all praise.

The surf continued on the 16th (the date of the despatch); nevertheless, the disembarkation of the horses and baggage was proceeding with the utmost rapidity.

A despatch from Marshal de St. Arnaud to the French Minister of War, dated from the Bivouac at Old Fort, the 16th inst., confirmed the disembarkation of the horses and *matériel*. The operation was said to have been very laborious, but the troops were full of ardour, and worked together in the most satisfactory manner. The Tartar population was described in the same despatch as being very friendly to the Allies.

The *Constitutionnel* gives the following description of the country through which the Allies were about to march:—

Old Fort, where the landing was effected, is, according to the best maps, 45 kilometres (28¼ English miles) north of Sebastopol, and 23 kilometres (14⅜ English miles) to the south of Eupatoria, a little above the river Boulganack. This position is indicated in some maps by the name of Prakur. It will be seen that the troops had advanced immediately by the roads of Simferopol and Bagtchesrai; but, perhaps, nothing is meant but bodies of troops intended to observe the enemy. The part of the expeditionary army which proceeds along the coast will meet with four streams of water before they arrive at the little arm of the sea which is at the north of Sebastopol. The country is wooded and mountainous, circumstances that inconvenience is compensated for by the facility of having wood and water, which would be difficult to find in advancing further into the country. The streams of water are Boulganack, the Alma, the Katcha, and the Belbek. This last river being passed, the northern fort, and the Fort Constantine, are right in front. The northern fort is a regular work, which it will be necessary to attack by land, and probably according to all the rules of the military art. As to Fort Constantine, the example given at Somarsund leads us to believe that it may be reduced by an attack from the fleet. Once masters of these two points, Sebastopol is ours. With an enemy able to defend the ground foot by foot, the distance between the landing point and Sebastopol might be difficult; but, to judge by the language of Marshal de St. Arnaud and Lord Raglan to Omer Pacha, the Generals-in-Chief do not appear to expect any great resistance before arriving at the end of their march.

From other accounts we learn that the country which the army has to pass through in skirting the coast, is a dry and stony soil, intersected here and there by sandy patches and rising grounds of no great elevation. There are several roads parallel to the sea, which the Tartars pass over every day with carts drawn by two dromedaries. But during the dry season in the Crimea, vehicles can follow every kind of path, or even go across the fields. If any obstacles present themselves to the passage of the artillery, the pioneers and the shovel soon make a practicable passage. The Allied armies cannot have less than 100 field guns, for we know that our own division has thirty-six or forty, the French have probably rather more, and the artillery of the Turkish corps is the youngest part of that army. This number of guns would imply about 600 gun-carriages, ammunition waggons, &c., drawn by four horses each. The amount has been computed at 1800 horses for draught, by an eminent French contemporary, but that number must be rather below the mark. As soon as the Allies have made good their position in the country, they will, doubtless, find means to procure horses and dromedaries, which are extremely abundant in the pastures of the Crimea. The Allied army naturally divides itself into three corps—the French, the British, and the Turkish, forming a centre and two wings—and in its march to the south it must cover a considerable breadth of country; for the subsistence of the troops and of the animals requires that the line should be extended as much as is consistent with the safety and efficiency of the troops in presence of the enemy. Fortunately the country is so open and so easily traversed in this season of the year that it is immaterial what track is followed; and, although the Russians appear to have taken some measures to break up the roads and bridges, there are no serious natural obstacles to the advance of the expedition.

Prince Menschikoff is said to have advanced at the head of a considerable body of the Russian troops, to the position of Burluk, on the river Alma. Should this prove to be correct, it may be inferred that this stream will be the first line defended by the enemy, since he has allowed the Allied armies to land without opposition. Burluk is a village on the right bank of the Alma, distant about three miles from the sea, twelve miles from the landing-place of the Anglo-French forces, and the same distance from Bagtchesrai, which was supposed to be occupied by one of the Russian divisions in the Crimea. The road or track which runs parallel with the coast crosses the Alma at this point, and the Russian forces would naturally hold, and in the event of a retreat destroy, the bridge. It is questionable, however, whether any of the streams—the Alma, the Katcha, and the Belbek—contain water, at this season of the year to interrupt for a moment the progress of the army. They are very probably dried up altogether at the termination of a long and hot summer, before the autumnal rains have commenced. But they are said to flow through ravines, which afford good military positions upon their wooded and precipitous sides. The disposition of the Russian forces would seem to indicate that, as far as Prince Menschikoff's army is concerned, he has abandoned the idea of defending the interior of the country, and that his base of operations is Sebastopol itself. In this point of view his position on the Alma is more comprehensible, and Boriluk, which is just fifteen miles to the north of Sebastopol, may be considered the first outwork of the place, at which some resistance may be made. If this be all that is meant by this movement, the Russians will probably be driven back without much difficulty until they reach the outer lines and deadworks which they have raised along the heights about Sebastopol, and there the real contest will begin. According to this hypothesis, Prince Menschikoff is aware that the forces under his command are not sufficient to dispute the possession of the country and defend the fortress; he therefore falls back on the latter and more important part of his duty, and leaves General Osten-Sacken, who is appointed to the command of the forces in the north of the peninsula and the government of Cherson, to do what he can for the relief of that place.

Various rumours of the complete defeat of the Russian army, under Prince Menschikoff, have been circulated; but no reliable information on the subject has been received. A Vienna despatch, of Wednesday evening, mentions that the Russian Embassy there had received a despatch of the 22nd from the Crimea, but the contents had not transpired. "All that is known is, that it contains news unfavourable to the Russians."

The embarkation of the reserve at Varna took place on the 18th, and it was thought that the 15,000 men of which it consisted would be able to join the army in the Crimea on the 20th or 21st, by which time it was expected that an engagement would take place.

THE RUSSIAN FLEET AT SEBASTOPOL.

Among other wonderful despatches, per telegraph, this week, it has been stated, in one from Berlin, viâ St. Petersburg, that the Russian fleet had sailed from Sebastopol to intercept the passage of the reserve from Varna. From such a source, little reliance can be placed on the intelligence. Should it prove true, the Allied fleets will, no doubt, be able to give a good account of the Russians. The *Moniteur de la Flotte* gives the following account of the Sebastopol fleet:—

Ships of the Line.—The *Twelve Apostles*, 120 guns; the *Paris*, 120; the *Three Saints*, 120; the *Grand Duke Constantine*, 120; the *Vladimir*, 120; the *Sviatoslaw*, 84; the *Iwatslaw*, 84; the *Selaphel*, 84; the *Three Hierarchies*, 84; the *Tro-Sviatitaita*, 84; the *Varna*, 84; the *Gabriel*, 84; the *Empress Maria*, 84; and the *Tschesma*, 80.

Frigates.—The *Cagul*, 60 guns; the *Koulefet*, 60; the *Kawarna*, 60 the *Medea*, 60.

Corvettes and Brigs.—The *Calypso*, 18 guns; the *Pylade*, 18; the *Ptolemy*, 20; the *Thesseus*, 20; the *Eneas*, 20.

Smaller Vessels.—The *Nearch*, *Strelka*, *Orlanda*, *Drolik*, *Ziabiaka*, *Lastotyca*, *Smaglago*, 11 transports, and 64 gun-boats.

Steamers 12, six large and six small. Among the first are the *Vladimir*, *Bessarabia*, and *Gromnostela*, which are remarkable for their power and the range of their guns.

The above enumeration presents a total of 17 ships of the line, 4 frigates, 5 corvettes or brigs, 82 vessels of inferior size, and 12 steamers—in all 108 sail, mounting 2200 guns of every description. This certainly is

imposing force. It is well commanded. The crews are expert at nery, and, gifted with that passive courage peculiar to Russian diers, who die at their post. Nevertheless, in no respect can the sian naval force be compared with the combined squadrons in the ack Sea.

The squadron which will blockade and attack Sebastopol consists of ght English ships, eight French, eight Turk sh, and as many steamers rse are said to have arrived before Sebastopol on the 16th or 19th it. On the 9th several steamers left the Island of Serpents, to cruise the Sea of Azof, and stop the passage of Russian troops and stores o the Crimea. A letter from Constantinople states that some five or ix gunboats, laden with Russian troops and stores, have been lost ring a storm in the Sea of Azof, on their way from Taganrog to the imes.

A DIVERSION IN BESSARABIA.

No sooner had the Allied forces made good their landing in the imes, than a despatch was forwarded to Omer Pacha with the welcome telligence. The Turkish Commander was, at the same time, re ested to make "a diversion in Bessarabia," which he will lose no time making, as General Liders will soon find, to his cost. The advanced ard of the Turkish army is already on its way to the Pruth, the ssage of which Omer Pacha will no doubt force, should the Russians empt to resist him.

A despatch from Jassy of the 17th announce the departure of Prince rtschakoff from Kalarasch, in Bessarabia, for Bender. Before left, the Prince received despatches from Odessa, in which General wenstern informed him of the dangers with which that town is reatened. It was thought that Prince Gortschakoff would, therefore, ntinue his journey from Bender to Odessa. The Russian advanced sts on the right side of the Pruth have orders to stop any one empting to cross that river, and to send them to head-quarters. ery will perhaps find some little difficulty in fulfilling this order, ce the Russian army in that quarter has been reinforced. A letter m Galatz, of the 16th, states that the Russians seemed about to cuate Jassy. The principal forces in Bessarabia were concentrating emselves at Ismail, under General Liders.

THE WAR IN ASIA.

The news from Asia Minor, so far as the telegraph may be relied on, is highly favourable to Turkey. Two engagements are said to ve taken place in Georgia, between Wrangel's division and Daniel ey (Schamyl's lieutenant), in both of which the Russians were beaten Poles are stated to have gone over to the enemy en masse with two ns. The latest report was, that Schamyl and Daniel Bey were about combine their forces and attack Tiflis.

The Turkish army occupied the Russian camp at Kars, where they ve been waiting the arrival of Ismael, the conqueror at Kalafat, who had : Silistria, and was everywhere received with the greatest enthusiasm the Ottoman troops.

The Russian Commander has sent to St. Petersburg, demanding in- nt succour; but it is doubtful whether the Czar can give him much istance in time for the crisis which seems to be impending in that arter. *Spectator's Journal* says, under the head of St. Petersburg, the h, that the whole Russian *corps d'armée*, 40,000 strong, and stationed the Volga, has received orders to march against the troops of amyl, in the Caucasus; but the best military authorities represent Russian corps on the Volga as not more than 20 000 strong; one f which consists of invalides. Whether any of that force can be ured for Georgia is very doubtful.

THE BALTIC.—PREPARATIONS FOR AN ATTACK UPON REVEL.

The belief that something is to be done in the Baltic before the fine s into winter quarters, is confirmed by the latest intelligence. The ew-steamer *Holyrood* which left Revel Bay on the 12th inst., brings s of something being done there, which looks rather alarming the Czar. When the steamer came away, the squadron in Revel ly, under Admiral Plumridge, consisted of the *St George*, *Royal rge*, *Neptune Cressy*, *Cæsar*, *Monarch*, *Nile*, *Princess Royal*, *Dragon* French ship *Duguay*, and another French line-of-battle ship. Admiral mridge was on board the *Neptune*, with his flag. The boats of the s had been engaged in laying down buoys, taking bearings and dis- ces, preparatory to an attack being made on Revel. They were only for Sir Charles Napier took out with him a large supply of mortar- ds of all the tantest ships for the gallant Admiral with his squadron. ich was hourly expected. The *Cressy* was anchored within two les of Revel, inside Nargen Island. The fleet was anchored in line e miles distant from the forts at Revel, waiting for the advanced ship shot range of the guns of the fleet. The Nargen Islanders re- rted that there were 70,000 infantry and 3000 cavalry encamped in and ut Revel, to prove it the place. About three weeks since the whole ny was reviewed by the Emperor himself, who, according to the rgen Islanders, addressed them himself, urging them to keep the emy from their shores, or perish in the attempt to do so. The Nargen anders, it is reported, do all they possibly dare do in barter with the ts, and are very faithful in all their transactions.

The Russian fleet in the Baltic comprises the following sailing ships, ether with three steamers of 400-horse power, mounting eight guns ch; two steamers of 120-horse power, mounting four guns each; and e steam corvette, of 20 guns and 450-horse power. They are stationed Helsingfors and Cronstadt, in the following proportion:

AT HELSINGFORS, 9: *Russia*, 120; *St. George the Conqueror*, 112; *Pul- va*, 84; *Prochor*, 84; *Vladimir*, 84; *Brisnea*, 74; *Arzei*, 74; *Rezkoi*, 74; *drew*, 74. AT CRONSTADT:—*Emperor Peter I.*, 120; * * *, 112; *Ros- ssia*, 84; *Kramoe*, 84; *Gamale*, 84; *Volga*, 84; *Empress Alexandra*, 84; *rona*, 74; *Borodina*, 74; *Horadino*, 74; *Smolensko*, 74; *Wladimi*, 74; *Kutu- ph*, 74; *Impermanland* 74; *Cuim*, 74; *Vsevolod*, 74, *Sisoe the Great*, *Pilitzyah*, 74; *Natron-monga*, 74; *Jaroslawitz*, 74; *Mukolai*, 74 ; 25—30 sailing ships, with an aggregate armament of 2464 guns, and steamers, mounting collectively 56 gun

That portion of the Russian fleet which is in the harbour of Helsing- s has commenced preparations for the winter season. The ships have ben their sails and struck their topmasts. In a month from the sent time they will be frozen in.

THE WHITE SEA SQUADRON.

few weeks ago we gave an account of the proceedings of the squadron the White Sea, including the bombardment of Solovetskoi, and the ning of Novitska. By the arrival of the *Miranda*, screw, 16 guns, Sheerness, on Saturday last, we have intelligence of certain subse- nt operations in that remote region. That vessel left Cross Island on e 4th September, leaving behind her the *Eurydice* and *Brisk*, together th one French frigate and brig.

Twelve days after the affair at Solovetskoi, the British forces destroyed public buildings on a place called Shayley Island; and about a onth afterwards, on the 23rd of August, having quitted the internal ters of the White Sea, they proceeded to attack the town of Kola, e chief place in Russian Lapland, situated in the highest latitude of rope, about 69 degrees, and a few miles to the east of the Norwegian ntier and the North Cape. Kola is described by the Gazetteers as a ce of about 1000 inhabitants; but it nevertheless possessed a d a depôt of Government stores. The officers of the *Miranda* trived, with uncommon skill and intredidity, to buoy a passage for a y considerable distance up an almost unknown river to Kola, and to the admiration of 260 yards of the battery. The Governor having re- sed to surrender the place, or to listen to terms, the *Miranda* opened a mendous fire, which speedily annihilated the enemy's batteries; and a ry, headed by the First Lieutenant, landed sword in hand, and car- d everything before them. The Government stores were all destroyed, d the whole town seems to have shared the same fate—a catastrophe ich the Governor might have avoided by surrendering to an enemy om he had not the power to resist.

THE ENGLISH AND FRENCH FLEET AT THE SANDWICH ISLANDS.

The Honolulu papers of the 29th July state that the combined fleets England and France, consisting of the *Virago*, frigate *President* aphelia), *Vaque la Forte*, and *D'Kartelina*, corvette *L'Artemise*, and g *L'Obligado*, had all reached Honolulu. The *Polynesian* says:— This fine squadron is from Callao, viâ Nukuhiva, one of the Mar- ese Islands, and was but fourteen days in making the passage from e latter port. They are, of course, looking for the enemy; but the ussians are somewhere else just now, and they must be hunted up if sible, when warm work will of course take place."

AMERICA.

The steam-ship *Baltic*, which left New York on the 16th, arrived at verpool on Wednesday night.

The *New York Herald* supplies the following information, on the thority of its Washington correspondent:—"It is said that informa- tion has reached the Government from our Minister at Madrid, to the effect that the new *regime* of Spain has agreed upon terms for the sale of Cuba; and, also, that both France and England acquiesce in the transfer. If this be true, the particulars will doubtless soon be made public. The ratification of the Reciprocity Treaty with the British North American provinces were exchanged on Saturday last. The time for the sitting of the Mixed Commission, at London, for the settlement of claims of citizens of Great Britain and the United States upon those Governments, has been extended four months from the 15th inst."

The Supreme Court of Philadelphia, on the 7th instant, issued a decree which put an end to the late railroad war at Erie; in which the authorities and inhabitants of that city are sustained, and of course justified, in their proceedings, and the railroad company is required to take up the track in the streets of Erie and Harbour Creek township.

Mr. B. Sickles, of the United States Legation, in London, having, through a New York paper, charged Mr. Peabody, the American banker in London, with insulting the head of the United States, by drinking her Majesty's health before that of the President, on the occasion of a banquet given by

SISTERS OF CHARITY (ST. BENOIT), IN THE NEW HOSPITAL, AT PERA.

Dunnideer. The train swept rapidly on past the village of Insch, Dunnideer, the hill of Christ's Kirk (the latter regarded by some as the locale of King James's poem), Wardhouse, the grounds of Leith Hall, the house of which is well seen from the train; and stopped a short time at the station. In the surrounding district, Craig, Knockespock, Drumminor, and Craighall estates and mansion houses, the village of Rhynie, and "the "Tap o' North," are "objects of interest." Speeding along the valley of the Bogie, the Gartley Station was shortly reached, and passed without a pause.

After crossing the Bogie, which is spanned by a beautiful bridge of great height, the town of Huntly came in view. The Bat'-hill, Cairnhill, and the Battle-hill, Huntly lodge and grounds were prominent, and some of them attractive, objects in the scenery around Huntly, which we now approached. The journey from Aberdeen to Huntly occupied two hours, and the scenery along the line, though not entitled to be called striking is yet very pleasing. The district is fertile and remarkably well cultivated, its resources being very extensive. On this account high expectations are formed of a large traffic by the line.

A movement had been got up by leading men of the town and district to entertain the Directors to a banquet. The influential and willing presence of his Grace the Duke of Richmond had been secured as chairman.

Sir James Elphinstone proposed "the Health of the Duke of Richmond," and passed a high encomium on the liberality displayed by his Grace, to which the successful completion of the line owed so much. The toast was drunk with three times three, and all the honours. Several other toasts and speeches followed; and at five the company broke up, as the train was then about to return to Aberdeen.

THE SISTERS OF CHARITY (ST. BENOIT), AT PERA.

AMONG the remedial arrangements for the war, at Pera, the suburb of Constantinople, is the arrival from France of twenty-four of the devoted Sisters of St. Benoit, to fill the places of those who have already sunk under their arduous duties. There is, in Galata, a convent inhabited by these "ministering angels;" and our Artist, in a recent visit to the French Hospital just erected here, met, in the wards, three of the Sisters, from whom he obtained some interesting particulars of their mode of life.

Except the house they live in, they possess absolutely nothing—they are as poor as beggars—have no sort of fixed revenue or endowment in any way; yet, by perseverance, almost miraculous resignation, and the help of a few charities from the Catholic population, they have founded two schools (one in their own house alone contains 100 girls—one of whom is a Turkish one, which they mentioned exultingly).

They are almost ubiquitous; in fact, except when employed on the business of their schools, they are always moving from house to house, visiting the poor of every sect. When they go to Stamboul, the people show them every mark of respect. The Turks call them *médécins*; they cannot understand their disinterestness, yet they highly praise them: they are sensible of the good they do. Rich people very often send for them, until the medical men at Pera grew jealous; and now the Sisters refuse attendance, when they know that the ladies who apply to them can pay, recommending some European doctor. The Sisters not only go, at any time, day or night, miles off, to attend the sick on the Turkish side, they also attend the prisons, &c., carrying to the prisoners money and clothes. So much are they known and cherished there, that when, in consequence of so much occupation, some time has elapsed without their being seen there, some poor sufferer, or some one on the eve of execution, would send for them. "I have been very often," said one of the Sisters, "called in the middle of the night, by a *cawass* or *gendarme*, who rang the bell of the convent, before sunrise, begging me to come to the gaol and attend to a dying prisoner."

In the hospital at Pera, there are four of the Sisters, who as soon as they heard that cholera had set in, offered their services. They have been distributed amongst the different corps of the army for the Crimea expedition, following the troops everywhere, sleeping under canvas: two died lately from the cholera, at Varna, and one at Gallipoli, where the malady has nearly disappeared. Now that there is no danger, they are afraid lest they should be turned out of the hospitals, and parted from their *chers malades*. The hospital in which the Sisters are thus engaged is a building erected near the Champ des Morts: it commands a magnificent view of the Bosphorus and the Sea of Marmora. It was intended for a school of medicine. It is a quadrangular building, and the largest, and certainly the best situated, and the finest of its kind in Europe. It is not quite finished; but in the hands of French officers, this will soon be completed. Already 2000 men may be received in the magnificent wards, that have been, within four months, provided with everything necessary—bedding, woollen clothes, shirts, &c., having been contracted for and made in Pera. The corridors are so large, and so well lighted, that comfortable wards could be made of them, if required, and then 2000 more might be accommodated. Ground has been bought in Galata for the erection of an English hospital, on a very large scale—a permanent one, too!

OPENING OF THE GREAT NORTH OF SCOTLAND RAILWAY.—THE HUNTLY STATION.

THE CHANTREY MEMORIAL, NORTON, NEAR SHEFFIELD.—(SEE NEXT PAGE.)

SOMERSETSHIRE ARCHÆOLOGICAL AND NATURAL HISTORY SOCIETY.

The Sixth Annual Meeting of this Society was held at Taunton on the 12th instant.

The Right Hon. Henry Labouchere, M.P., was elected Chairman, and gave, on the morning of meeting, an eloquent address on the ancient glories of Somersetshire, referring prominently to the mystic names of Athelney and Glastonbury. The Rev. H. M. Scarth, of Bath, followed

HALSEY COURT, SOMERSET.

with a paper on Stone Coffins found in Combedon, in Bath. The Rev. W. Warre then read Mr. Strading's paper on a Young Turf-parer's find in the Turbaries. After which, the Rev. A. Jones, on the Application of Philology to Archæological Investigation. This paper was one of great interest, and the derivation of the many Celtic, Saxon, and Norman names in Somersetshire yet extant, were very cleverly elucidated.

Mr. Warre concluded the Morning Meeting by reading Mr. E. A. Freeman's excellent paper on an Analogy between the Churches of East Anglia and those of Somersetshire, and which was illustrated profusely by pen-and-ink sketches of all the examples cited, made by Mr. Freeman.

There was an Evening Meeting; and several papers, chiefly on Natural History, were read by Mr. Andrew Crosse, Mr. Payne, Mr. Moore, and the Rev. W. R. Crotch.

On Wednesday the Bailiffs of the borough of Taunton received their guests at the Castle Inn, and entertained them with a sumptuous breakfast; and, after brief appropriate addresses by the worthy Bailiffs and the President, the Right Hon. Henry Labouchere, M.P., the body of excursionists drove off for Kingston, which was originally appropriated to the priory of St. Peter and St. Paul, in Taunton. The tower of this church is one of the many beautiful Perpendicular edifices of Somerset; and the interior happily possesses, as in so many other instances, an abundance of richly-carved bench ends. Bicconfield Church was next reached. Here the same rich display of Mediæval carving, both in the benches, and in the simple, yet elegant roof, pleased all. Mr Andrew Crosse, of Fyne-court, received the members, and gave them one of his well-known scientific discourses, and an excellent luncheon. The journey lay over the breezy downs to Cotherstone Beacon, and on again to Willesnack—both prominent points of the Quantock range, where rose-coloured heather and emerald mosses flourish in profusion. Crowcombe was soon reached, in the churchyard of which a beautiful fragment of a cross yet remains, niched and figured. The Court-house was thrown open, and its valuable library and paintings exposed to view. On again to Halsey Court, originally the retreat of Cardinal Beaufort, and situated most charmingly at the foot of the Quantock range. The accompanying Sketch shows its beauty as a domestic building.

The return journey embraced Cotherstone Manor-house, the seat of the ancient Stawels, of the Norman Conqueror's time. Here gateways, monumental effigies, siege or harlocoopes, and an eminently picturesque well, formed objects of much interest.

Bickenhall and Ashill Churches were inspected on the second journey: the latter possesses much decaying Norman work, much mutilated. It would be well for this Society to act in the capacity of a warder of the fast-disappearing ancient work in ancient Somersetshire. It has done but little yet to effect so desirable an object.

We also engrave the Stone Coffins found at Bath in 1852, in excavating the road at the top of Russell-street. They were discovered with the heads lying to the N.E. One (the smallest) had no lid; the others were covered. They were disposed in pairs: the upper ones nearly parallel, side by side, about two feet apart; the lower pair about a yard distant. Lying immediately above these was a skeleton. In the first coffin was found a skeleton of large size; in the next, two skulls, with various bones; the small coffin contained no skull, but loose bones. One of the coffins was covered with a regularly adjusted lid, not with a plain slab (as was the case with the others), the coffin being bevelled off at the foot, to allow the cover to fit more closely; the upper end of the lid seemed to have been slightly lifted up. The cover was of superior workmanship. The coffin was full of a soft clayey earth, with two human vertebræ lying on it. The earth being removed, a perfect skeleton, supposed to be that of a female, was found. The remaining contents of the coffin were—part of an infant's jaw; a metal pin, nearly two inches in length, but much corroded, together with the head of a smaller one; portions of two small animals, and a considerable quantity of a peculiar bituminous substance. In the neighbourhood of the coffin were discovered some fragments of an earthen vessel, a coin of Constantine, several pieces of glass of a beautiful purple-green hue, with various bones of graminivorous animals. As far as could be made out by examination of the human bones, they form part of eight skeletons—three being those of children of about the ages of two, six, and ten or twelve; the remaining five skeletons are those of adults. A fifth coffin was discovered in a line with those already referred to. It contained the perfect skeleton of, apparently, a larger body than any of those found in the other coffins, and a small urn of dark pottery, which was placed on the right side of the skeleton, near the ribs. The contents of the urn were yellowish earth. In addition to the above-mentioned urn, some interesting fragments of Roman pottery were found at the excavations. A sixth stone coffin was discovered, containing the skeletons of two children, about eight or nine years of age.

STONE COFFINS, FOUND AT BATH

THE NEW WATER-WEED.

Although the obstructions caused in rivers by this remarkable plant have but of late attracted general notice, by their increased extent, they appear to have been first noticed two years since. In a letter to the *Cambridge Independent Press*, dated Ely, August 11, 1852, Mr. William Marshall states:—

A remarkable plant has recently made its appearance in the rivers Ouse and Cam; and already abounds to such a degree as not only to impede navigation, but, what is of far more importance in this fen country, threatens to injure our drainage.

It occurs in dense, tangled, submerged masses, of considerable extent, and is so heavy, that when cut, instead of rising to the surface, and floating down to the sea, like other weeds, it sinks to the bottom. It is this property which is likely to make it injurious to drainage. The intruder is so unlike any other water-plant, that it may be at once recognised by its leaves growing *in threes*, round a slender stringy stem. The watermen on the river have already named it "Water-thyme," from a faint general resemblance which it bears to that plant.

That it is new to our rivers here is certain; watermen and fishermen pronounce it to be (as I heard one of them call it the other day) "a furreigner."

In a second communication, Mr. Marshall describes the Weed as the *Anacharis alsinastrum* of Mr. C. C. Babington, who so named it in 1848. It was first found in this country in 1842, by Dr. George Johnston, of Berwick-on-Tweed, in the lake of Dunse Castle, which is situated upon a tributary of the White Adder River, which flows into the Tweed. The discovery was lost sight of, and the interest in it ceased, until the autumn of 1847, when it was again discovered by Miss Kirby, of Laubenham Lodge, in reservoirs adjoining the Foxton Locks, on the canal near Market Harborough, in Leicestershire. The plants were all females, and were found in considerable abundance, growing "closely matted

THE NEW WATER-WEED (ANACHARIS ALSINASTRUM).

together." Miss Kirby had not observed it there before, and the reservoirs had been cleaned out two years previously. Mr. Babington next described the plant in the *Annals of Natural History*, for February, 1848, when Dr. Johnston at once recognised it as the plant he had found in the loch at Dunse Castle, and in the following autumn found the plant in two stations in the White Adder River.

The same season, but later, it was found by Mr. James Mitchel, in Nottinghamshire, in the Lene (a tributary of the Trent) near Nottingham, "growing in great profusion for about a quarter of a mile in extent." In November, of the same year it was found in Northamptonshire, in the Watford Locks, by Mr. Kirk, "very abundant." The Watford Locks are on the same line of canal as the Foxton reservoirs. Mr. Kirk observed that when water was drawn from either of the locks, the force of the current detached small sprigs of the Anacharis, which were carried into the body of the canal. Mr. Kirk considered it to be an introduced plant. His plants were also all females. Subsequently, Mr. Kirk changed his views, and regarded the plant, "from its simultaneous discovery in so many other localities," as a true native. He also described it as growing in such dense masses, that it was with difficulty good-sized specimens could be detached, owing to its extreme brittleness.

In August, 1849, it was found in Derbyshire and Staffordshire, by Mr. Edwin Brown, growing "in profusion," in the Trent, near Burton-on-Trent, and also in the canal there. Mr. Brown was convinced that the plant was new to that locality. He describes it as forming "very large submerged masses, of a striking appearance." All the flowers were females. In Christmas, 1850, it was found by Mr. Kirk in Warwickshire, near Rugby, "in the greatest abundance;" and in July, 1851, by the same gentleman, in the Oxford Canal, near Wyken Colliery.

The Rev. W. M. Hind, writing from Burton-on-Trent, in July, 1851, describes the plant as occupying a much larger portion of the river than when first noticed, eighteen months before, and adds: "In fact, it bids fair in a short time to block up one of the two streams into which the Trent here divides.

In 1851 the Anacharis was noticed by Mr. Marshall and others in the river at Ely, but not in great quantities. Next year it had increased so much that the river might be said to be full of it.

The colour of the plant is deep green; the leaves are about half an inch long, by an eighth wide, egg-shaped at the point, and *beset with minute teeth, which cause them to cling*. The stems are *very brittle*, so that whenever the plant is disturbed fragments are broken off. Its powers of increase are prodigious, as every fragment is capable of becoming an independent plant, producing

rocts and stems, and extending itself indefinitely in every direction. Most of our water plants require, in order to their increase, to be rooted in the bottom or sides of the river or drain in which they are found; but *thus* is independent altogether of that condition, and *actually grows as it travels* slowly down the stream, *after being cut*. The specific gravity of it is so nearly that of water, that it is more disposed to sink than float, and the cut masses may be seen under water, either on or near the bottom, rolling over and over like woolpacks, clinging to everything they meet with, and collecting in great quantities at locks and bridges (hugging the piers of the latter), and grounding in shoal water. Its mode of growth may be seen in still and narrow waters (such as the streams above the mills at Cambridge), where it seems to spring first from the two sides and bottom, meeting at length in the middle, and completely filling up the watercourse, almost to the exclusion of the water. Except in very quiet places it is not likely to be found in flower. Mr. Marshall met with it at Boswell-hill Pits, below Ely. Mr. Marshall then enters into a statement of the localities in which this weed has been found, and therefrom deduces the opinion that it is an importation from North America. Mr. Marshall's Letters have been reprinted in a pamphlet published by Pamplin, 45, Frith street, Soho-square.

THE CHANTREY MEMORIAL.

Of the many sites in England which, from having given birth to eminent persons, have become charmed ground, the pleasant village of Norton, about four miles south of Sheffield, is not the least famous. Here Francis Legatt Chantrey was born, on the 7th of April, 1781. His parents' rank in life was humble; and that young Chantrey at one period carried milk from Newton to Sheffield is certain, though it has been added, he not only lingered on the road to form grotesque figures of the yellow clay, but moulded his mother's butter on churning-days into resemblances of various objects, to the great admiration of the dairymaid. John Raphael Smith, the mezzotinto-engraver and portrait-painter, was the first to perceive and appreciate Chantrey's devotion to the study and practice of drawing, and modelling, when he was an apprentice to a carver and gilder, at Sheffield. How Chantrey came to London in 1802, and then began to labour at sculpture, in which he never had an hour's instruction from any example now Chantrey laboured for eight years without making £5 in his profession; yet how he got £12 000 worth of commissions from his plaster model bus: of Horne Tooke, which he sent to the Exhibition of the Royal Academy, but which neither he nor Horne Tooke could afford to make in marble, the sent ter himself has left on record. Commissions flowed in; Chantrey raised his price from eighty guineas to two hundred guineas for a bust; and his marble progeny of statues people our cathedrals and public institutions with the truthful works of his genius; ties long line closing with the statues of Bishop Bathurst and Bishop Ryder, for their respective Cathedrals of Norwich and Lichfield, the last he lived to adorn. Chantrey returned to London from erecting the statue at Norwich the day before his sudden death, November 26, 1841. The sculptor has willed that his mortal remains should be laid in his native village of Norton; and here he had built himself a vault at the south-west end of the church, in 1840. The influential persons of the neighbourhood came to do honour to his funeral; and in the funeral procession were the Master Cutler of Sheffield, and the members of the Company, the Town Trustees, and other authorities.

Years rolled on; and England was justly proud of Chantrey, who, in the expressive words of Allan Cunningham, "formed his taste on no style but that of nature, and no work of any age or country but his own can claim back any inspiration which they have lent him." It was fitting that such purely English genius should be commemorated, and where so appropriately as in this picturesque place of burial, the village churchyard of Norton? Accordingly, an Obelisk has been raised upon Norton-Green, a short distance from the church: the obelisk is twenty-two feet in height, consisting of one block, three feet square at its base; its weight is nine tons, exclusive of the foundation. The material is grey granite, "fine axed," from the quarries of Mr. G. Tregelles, Cheesewring, Cornwall. The design is by Mr. Philip Hardwick, R.A., and is one of characteristic simplicity: the only inscription it bears is the name CHANTREY. The obelisk has been erected under the superintendence of Mr. Edwin Smith, of the Sheffield Marble Works.

We need scarcely add that the object of this Memorial is to mark the place of Chantrey's birth; and it has been well observed by a contemporary, that "the inhabitants of Norton and the friends of Sir Francis Chantrey, consider that they could not do less than raise this modest memorial to a man who elevated himself from the condition of a milk-boy to wealth and fame, and who has left the whole of his large property as a legacy to his country." England possesses a greater number of memorials of this class than any other country in the world; and they are individual testimonies of the means by which England has attained her national greatness.

An interesting anecdote of Chantrey was related, at a recent meeting at the Architectural Museum, by Mr. A. B. Beresford Hope, who presided in the chair. His father, Mr. Thomas Hope, was distinguished by his munificence to artists, and he was the early patron of Chantrey and Thorwaldsen. Mr. Hope, moreover, delighted to receive at his artistic mansion in Duchess-street, sculptors, painters, architects, and men of letters. One evening, when Chantrey was present at one of these parties, he specially noticed a piece of carved furniture. On being asked the reason, he replied, "That was my first work."

CIVIC ENTERTAINMENT TO LORD JOHN RUSSELL AT BRISTOL.—The banquet will, it is understood, be on a scale of great magnificence. The entertainment will take place on the 27th or 28th of October; and as neither the council-chamber nor the banqueting-hall of the Society of Merchants is sufficiently capacious, the dinner will be held at the Victoria Rooms.

PROPOSED UNIFORM METEOROLOGICAL OBSERVATIONS AT SEA.—The Board of Trade, in addition to the inducements offered by other Governments to masters of merchant vessels to co-operate in the proposed attempt to make meteorological observations at sea, offer the necessary instruments to masters desiring to have them, on their giving sufficient proof of their attainments.

CIVIL PENSION-LIST FOR 1852-53.—The following were the new pensions granted:—To Mr. J. N. Hind (astronomy), £200; to Dr. Mantell (geology), £100; to Mary Boultby (literature), £50; to Colonel Taylor's widow, £100; to Mr. Ronalds (electricity), £75; to Miss Costello (literature), £75; to Dr. Richardson (literature), £75; to Mr. Pugin's widow (art), £100; to General Colby (engineering, trigonometrical survey), £100; to Mr. Jerdan (literature), £100; to Professor Dunbar's widow and daughters (literature), £75. That is to say, literature received £525; science, £275; art, £100; and a soldier's widow, £100.

THE EMPRESS EUGENIE IN BOULOGNE.—The Empress, who is much improved in health, arrived at Boulogne on Monday evening, at five o'clock, accompanied by her ladies of honour and a suite of domestics. The road from the railway terminus to the Royal château, at Pont-de-Brique, was lined on both sides by the Imperial Guard, and all the brilliancy of a great military display was brought into action in order to give eclat to her Majesty's visit. On the arrival of the train, the Empress was greeted by a salute of twenty-one guns, and was received by the Emperor, who was in waiting at the station, surrounded by his staff of officers, and attended by that magnificent regiment the Cent-Gardes. The Boisardes, or fishwomen, of Boulogne were dressed out on the occasion in their best holiday clothes; and, having formed themselves into procession, walked to the railway station, and there awaited the arrival of her Majesty, to pay their respects to their Imperial mistress. Each of them carried a beautiful bouquet of flowers in her right hand; and the bright scarlet petticoats with which they were all clothed, lent the scene one of an extremely gay and picturesque character. The Empress having graciously acknowledged the favours tendered for her, was handed into an open carriage by her husband. The Emperor having then mounted his horse, the splendid cortège proceeded slowly to the château, amid the cheers which were given for the Royal party, and the cries of "Vivent l'Empereur et l'Impératrice!" Amongst the distinguished persons present on the occasion was Marshal Baraguay d'Hilliers, who attracted considerable attention. He sat alone in an open carriage, and was attired in the splendid uniform of his high military rank. In the early part of the day the Emperor went to the Camp, and afterwards drove a small two-horse open carriage through the town.

PAYMENT OF CUSTOMS DUTIES BY CHEQUES.—Government has made arrangements which will in future enable merchants to pay all their Customs duties by their own cheques upon their bankers, and which, while it renders the public more directly responsible, will be equally available to all traders alike, will remove all the objections of the existing system, and effect a further very large economy in the circulation of the country. The new system will come into operation on the 31st of October. It is to be confined, in the first instance, to London. The sum annually collected in the port of London for Customs duties is about £13,000,000.

FOUR THOUSAND MILES IN SIXTEEN DAYS.—There is now in the London docks, just arrived from Canton, a splendid clipper ship, called the *Romance of the Sea*, 1761 tons register, which has made one of the quickest voyages on record. After leaving Java Head, on her way home from China, she made the passage to the Lizard, a distance of 13,172 miles, in sixteen days, average 823 miles per day.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 1.—16th Sunday after Trinity. Pheasant shooting begins.
MONDAY, 2.—London University opened, 1828.
TUESDAY, 3.—King's College opened, 1831.
WEDNESDAY, 4.—Sir John Rennie died, 1821.
THURSDAY, 5. Horace Walpole, Earl of Orford, born, 1717.
FRIDAY, 6.—Louis Philippe, late King of the French, born, 1773.
SATURDAY, 7.—Christophe, Emperor of Hayti, died, 1820.

TIMES OF HIGH WATER AT LONDON-BRIDGE

THE VOLUMES OF THE ILLUSTRATED LONDON NEWS.

COMPLETE SETS of the VOLUMES of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, bound in paper or cloth. Price of the Complete Set (24 Vols.), in cloth, £22 12s.; £16 17s. in paper.

Any of the Volumes, in paper or cloth, can be had separate.

Price of each Volume in cloth:—Vol. I. 21s.; II. to XVII. 18s. each XVIII., 21s.; XIX., 25s., XX., 18s.; XXI. to XXIV., 21s. each.

Price of each Volume in paper, 5s. per volume less.

OFFICE, 198, STRAND.

TO CORRESPONDENTS.

MARK-LANE.—We are quite familiar with the practice in the United States, of distinguishing between the "Indian corn crop" and the "wheat crop:" the former usually exceeding the latter by about one-third. In quoting from the *Chicago Democratic Press*, we followed the American nomenclature; and stated the deficiency of one half in the six States referred to would be highly injurious, *because* they were the principal "grazing, stock-growing, and hog producing States of the Union;" and, as hogs are not fed on wheat, we could not anticipate that, in this part of our remark, wheat would be mistaken for Indian corn. Our extracts from the *Cincinnati Columbian*, of Aug. 21, related to wheat, not to Indian corn, and the term wheat is used in our article. That journal belongs to Ohio; and, in speaking of the deficiency which would lead to the necessity of importation, we expressly confined ourselves to the State of Ohio. If, then, our Correspondent will do us the favour to refer once more to our columns, he will perceive that we actually made the distinction between Indian corn and wheat, which he thinks we have confounded; we spoke of the former when quoting from Chicago, of the latter when referring to Ohio.

A CORRESPONDENT.—We have not room for the long extract on the propriety of placing Bewick's Cartoons of the Prophets and Sibyls of Michael Angelo, in the Crystal Palace, at Sydenham. We do not doubt it. ARMS.—Arms of Radcyffe, Earl of Derwentwater. Arg. a bend engr. Crest. A bull's head erased sa. ducally gorged and chained az. Motto "Cam. Cresce, Calais."

A SUBSCRIBER FROM THE COMMENCEMENT.—A married man would, on all occasions, bear his wife's arms impaled with his own, unless the wife be an heiress; and then he must carry them on an escutcheon of pretence.

S. P. Q.—The usage of arms does not constitute an Esquire. See the question, "Who is an Esq.?" fully discussed in "The Patrician."

We this Week, in a half-sheet Supplement, present to our readers Specimens of Drawings and Engravings by English Artists. In a spirit of friendly rivalry, the French Artists and Engravers are producing in Paris a similar Supplement for the ILLUSTRATED LONDON NEWS; which they expect will favourably compare with the present Specimens of English Art.

The History of the First Campaign in the Russian War will be completed in a future Number of the ILLUSTRATED LONDON NEWS, with the Account of the ATTACK on SEBASTOPOL; on which occasion we shall give A SPLENDID LARGE PRINT, from the Best Authorities.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPT. 30, 1854.

THE telegraphic despatch which arrived last week, and announced the debarkation of our troops, was somewhat premature and incorrect. They were neither all landed on the day stated, nor were they landed at Eupatoria. These little errors in a new instrument, which some individuals may have an interest in discrediting, are, however, easily forgiven when the real fact is at least as important and gratifying as the misstatement. Lord Raglan's official communication informs us "that the Allied armies arrived at the place of disembarkation, near the Old Fort (about thirty miles north of Sebastopol, and twenty south of Eupatoria), in latitude forty-five degrees, at the break of day on the 14th, and before night succeeded in landing nearly all their infantry, and part of their artillery. On the 15th the swell on the shore considerably impeded operations, and the exertions of the fleet, under the immediate command of Sir Edmund Lyons, excited admiration. The surf continued on the 16th; nevertheless, the disembarkation of the horses and baggage was proceeding with the utmost rapidity." On the 17th, according to another despatch, the whole of the army, the munitions of war, and the artillery were landed; and the troops, in the highest spirits, were moving on Sebastopol. The place where they have actually landed is nearer Sebastopol than the spot first announced; it is equally provided with a good road to the fortress; and we may, therefore, expect every hour to hear important intelligence. It has been stated that Sebastopol was likely to be attacked on the 20th; it has also been stated that Prince Menschikoff was to oppose the advance of the Allies. Neither of these statements has been confirmed; but it is said that the Russian Embassy at Vienna has information from the Crimea to the 22nd, which is unfavourable. We wait patiently for the correct and official information, trusting that it will be all that we can wish; and will hazard no conjecture, either as to what the Russians will do or what will be the exact date of our success. It is, however, very satisfactory to know that the Tartar population of the Crimea welcomes the Allied troops as deliverers, supplies them with provisions, and assists the undertaking. We last week reminded our readers that Russia could not confide in the population of the Crimea. In fact, the Government of the Czar,—being one altogether founded on coercion and restraint, domineering over serfs at home, and, by their instrumentality, conquering other people—is nowhere supported by voluntary zeal and exertion; and wherever the fear of its power is removed, it will find itself surrounded by enemies. Now that its territory is invaded, we may look, we believe, for a more complete assortment of the horrors of despotism than, at the beginning of the contest, was expected. Omer Pacha is to contribute to the success in the Crimea by pressing forward into Bessarabia.

In the Baltic, the Czar is to be alarmed for Revel, where is threatened with an attack; and the continued presence in that sea of our fleet will compel him to detain many of his forces in the neighbourhood of his capital. The rumour of Sir Charles Napier's return was premature; and at present there are hopes that something more will yet be achieved in the Baltic before the ice and the storms of that freshwater sea render it an unsafe place for our ships.

What we stated of Prussia a fortnight ago is now fully confirmed. A circular note, dated the 3rd inst., from that Power, though the meaning be wrapped up in more than the usual quantity of diplomatic verbiage—plainly announces his Prussian Majesty's intention not to support Austria in her opposition to Russia, and his intention to appeal to his German Confederates to take the same course as he has adopted. Austria, on her part, has also published a circular, dated the 14th inst., in which the differences with Prussia are distinctly avowed, though Austria shrinks from making them the subject of discussion before the Diet. She declares again that "she cannot depart from the conditions agreed to with the Allied Powers, to which hopes of peace and future security are now solely linked," and she expresses a "hope that the period may not be distant when Russia will not hold herself back from negotiations now rejected on the point." Austria may still, possibly, rely on Prussia to co-operate with her, should Russia attack Austria; though the emphatic manner in which she reminds Prussia of her engagement to do so, implies a suspicion to the contrary. But it is clear that she cannot, nor does any person, rely on Prussia, to aid her in inducing the Czar to negotiate, and establish such a peace as will secure the repose of Europe. To the Western Powers, however, the obvious disagreement between Austria and Prussia, mainly arising from the jealousy of the latter, can be of no importance. From Prussia they have expected no assistance; and Austria is too deeply pledged to them to depart from that course of *quasi* hostility to the Czar, of which they have already approved.

THE British Association is this year rather remarkable for the practical nature of its inquiries, and for their bearings on the condition of the people. We notice, for example, that the President, in his opening address, referred to such a homely but necessary subject of investigation as the number of crimes committed in different communities; and to the fact, equally strange and important when duly considered, that the civilised nations of Europe, having in the main one science, one religion, and one civilisation—for they all go forward in conjunction, if not exactly *pari passu*—have different classifications for crimes, and punish the same actions in very different manners. Hence immediately arises a question of almost infinite importance to national jurisprudence: "Which of all the nations of Europe takes just and correct views of crime, or are they all in error?" The noble President adverted to another extremely important but equally homely topic, viz., how to navigate ships swiftly and safely. So many of our relations now go across the ocean, that this is a subject deeply interesting to us all. Not now for the first time have seamen taken a note of the set of currents in the ocean, and of prevalent winds; but of late, Lieutenant Maury, of the United States, has paid great attention to the matter, and, by collecting observations from many quarters, as to the prevailing winds and currents, has improved navigation, and shortened voyages very considerably. He has organised a plan to collect observations of a similar character, and in a similar form, over every part of the ocean, and by every ship which goes to sea. Our Board of Trade has appointed a department to promote this good work; and the Chairman gave to the Association a good deal of information as to what has already been done, and is now doing. Pursuing similar useful objects, the Association has been studying and discussing the variations discovered of late in the compasses on board ship, which led, probably, to the melancholy loss of the *Tayleur*, and may have contributed to many other disastrous losses. It has also had under its consideration reports of the increase of crimes and of the best means of punishing and preventing them; a paper on the late strike at Preston, and in the manufacturing districts, and on the causes and cures of such sad aberrations from order and prudence; and a very elaborate paper on the progress of banking in England, on a remarkable diminution which has taken place in the bank-notes issued, and on the effects on our circulation of the Act of 1844, for regulating the currency. Then, papers have been read on the best form for ships; and on a variety of subjects of a similarly useful, social, and moral character, to those we have described. These pursuits of the Association are nothing new; they are things to which, more or less, it has at all times attended; but the great quantity of time it has now devoted to them, and the prominent place they have assumed in the investigations, demonstrate how absorbing these subjects, treated of day after day in almost all the journals, are now becoming for all scientific men. They engage too, the attention of novelists, who take them up with great zeal, and carry important social truths into minds to which newspapers and scientific deductions have no access. We are not disposed to say that the Association will much hasten the discovery of truth on these important questions. They have an interest for the bulk of the community; they are discussed, more or less, by every man in it; they form the staple of most of the discussions in the daily and weekly journals; to them, the members of the Association, who constitute but a small part of the multitude engaged in the inquiry, contribute their mites of information, and they will be promoted much more by the general discussion in the press than by what is brought forward by the Association. Nevertheless, as an index to the growing and absorbing interest of moral and social questions, the direction which the discussions of the Association are taking is worthy of notice. All great discoveries have been the consequence of many successive small discoveries, and of many minds having been engaged at the same time in similar pursuits. We infer, therefore, from the present concentration of the national intellect on moral and social questions, that some great improvements are coming into day. We have had of late great discoveries in chemistry, electricity, and in all the arts of creature wealth; the probability, therefore, seems to be that the next great discoveries will tend to raise the moral condition of man, now evidently depressed relatively to a level with his physical acquirements.

LATEST INTELLIGENCE.

THE CRIMEA.

We have received the following (by Submarine and European Telegraph), dated Constantinople, Sept. 20 —

The despatch-boat, the *Ajaccio*, which left the Crimea yesterday, reports that the army was to march on that day against a Russian force of 25,000 men, to anticipate the arrival of 15,000 more, who were expected.

The inhabitants, who knew nothing of the war, had not removed their crops from the fields. They voluntarily brought provisions to the army, and were to be furnished with arms, in order to act as auxiliaries.

During the disembarkation, a very serviceable and skilful diversion was made against Katcha by eight steamers.

At Eupatoria, 400 Russians surrendered at the first summons.

The weather was magnificent—almost hot.

BATTLE IN THE CRIMEA.

It was confidently stated in Paris on Thursday "that on the 19th the Allies and Russians met, and an engagement ensued. A French division were the first in action. The English soon came up, and the Russians fell back with much loss." These statements were received by telegraph through Vienna.

TURKEY.

Telegraphic despatches from Constantinople, of the 18th, bring the following important items relative to the intended reforms in Turkey:—Fuad Effendi has been elected a member of the commission for the reform of the Haratsch, or Poll-tax, which is to be abolished. A reform is also to take place in the jurisdiction of the Greek patriarchs. All rayahs are to be included in the general military conscription. The administrative system is to be re-organised. All non-Mahomedans, subjects of the Porte, are to enjoy equal political rights. Negotiations with Greece are prolonged for a month. The Sultan has reviewed 5000 troops.

GREECE.

ATHENS, Sept. 22.—Mavrocordato is still opposed to the proposal of quartering 2560 French troops at Athens this winter.

THE ARCTIC EXPEDITION.—A telegraphic despatch from Queenstown, dated Thursday, announces the arrival of H.M.S. *Phœnix*, from the Arctic regions, with the crews of the *Resistance*, *Resolute*, and *Investigator*—the last-named being the vessel in which Cap. an M'Clure made the long-sought discovery of the existence of a North-West Passage.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS.

TAKEN DURING THE WEEK ENDING THURSDAY, SEPTEMBER 28

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day	Departure of Temperature from Average	Degree of Humidity.	Direction of Wind	Rain in Inches

Note.—The sign — denotes below the average, and the sign + above the average. The mean of the seventh column are calculated on the supposition that the instruments are the air represented by 100

The reading of the barometer (corrected) decreased from 30.31 inches at the beginning of the week, to 29.96 inches by the afternoon of the 24th; increased to 30.34 inches by the 26th, and decreased to 30.23 inches by the afternoon of the same day; increased to 30.51 inches by the 27th; and decreased to 30.04 inches by the end of the week. The mean for the week at the height of 82 feet was 30.205 inches.

The mean temperature of the week was 54.8°, being 0.3° above the average of 25 years.

The range of temperature during the week was 33.4°, being the difference between the lowest reading of the thermometer on the 26th, and the highest on the 28 h.

The mean daily range of temperature during the week was 22.2°. The least was 13.4°, on the 23rd, and the greatest 32.6°, on the 27th.

Rain fell slightly on three days during the week.

The weather during the week has been fine, particularly on the last two days, when the sky was almost cloudless.

I am, Sir, your obedient servant,

Lewisham, September 29, 1854. JAMES GLAISHER.

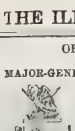
HEALTH OF LONDON.—The number of births registered within the metropolitan districts, within the week ending September 23rd, was 1628, of which 833 were boys, and 795 girls. The number of deaths within the same period was 1204; of which 1104 were males and 1310 females. The deaths at three different periods of life were as follows:—Children under fifteen years of age, 1009, exceeding the corrected average by 462; at ages between fifteen and sixty, there were 1068 deaths, exceeding the corrected average by 467; and at ages exceeding 60 years there were 436 deaths, exceeding the corrected average by 280. The number of deaths caused by diarrhœa and dysentery was 195, being less than in the preceding week by 44, and less than in the week ending September 16th by 89; the disease is, therefore, upon the decline. The number of deaths caused by cholera was 1284, a number less than in the preceding week by 265, and less than in the week ending September 16th by 768; thus showing a further decrease of cholera. Out of a population of 376,427 in 1851, in the West Metropolitan districts, there were 380 deaths—of those 216 were caused by cholera; in the North districts, out of a population of 490,326 in 1851, the deaths were 262, and 70 were caused by cholera; in the Central districts (population in 1851 was 392,350), the deaths were 240, and cholera carried off 77; in the East districts (population in 1851 was 485,222), the number of deaths was 475, the number referred to cholera was 187; and, in the South districts, out of a population of 616,631 in 1851, there were 1306 deaths, and 724 were referred to cholera. The total number of deaths by cholera in these districts, up to September 23rd, is 8885. Of these, 1774 have occurred in the west; 646 in the north; 495 in the central; 1370 in the east; and 4869 in the south districts. In the west districts one death has taken place out of 216 inhabitants; in the north, 1 out of 760; in the central, 1 out of 800 nearly; in the east districts 1 out of 350; and in the south, the comparative large proportion of 1 out of 130 inhabitants.

SWEARING IN OF THE NEW SHERIFFS.—A Court of Aldermen was held on Thursday, at the Guildhall, for the purpose of the induction of the recently elected Sheriffs for the City of London and Middlesex, Henry Muggeridge, Esq., citizen and innholder, Alderman of Castle Baynard Ward, and Charles D. Crossley, Esq., citizen and poulterer, into the office of Sheriff of London and Sheriff of the county of Middlesex, and the administration of the oaths required to be taken by the statute, for the due performance of such office for the year ensuing. Previous to the holding of the Court, the Sheriffs elect were entertained at the Mansion House by the Assistants of the Innholders' Company, the Deputy and Common-council of the Ward of Castle Baynard, the Sheriffs (Alderman Wire and G. A. Wallis, Esq.), and a numerous circle of mutual friends, to a splendid breakfast at the Albion Tavern, Alder-gate-street. Shortly before two o'clock, the Lord Mayor, attended by several members of the Court of Aldermen, the Recorder, the Chamberlain (Alderman Wire and G. A. Wallis, Esq.), the Sheriffs elect (Alderman Muggeridge and Charles D. Crossley, Esq.), their Under Sheriffs (Alexander Crosley, Esq., and Fred Farrer, Esq.), and other Corporate officers, proceeded to the Inn in the Guildhall, to attend the Common Hall of the Livery. The Lord Mayor having taken the chair, and the usual preliminaries having been gone through, he oaths were administered by Mr. Sergeant Merewether, the Town Clerk, to, and subscribed by both the sheriffs-elect and also by Alex. Crosley, Esq., as Senior Under Sheriff. The chains of office having been placed over the shoulders of the Sheriffs, the ceremony closed. The Sheriffs briefly addressed the Livery, and the Lord Mayor Aldermen, and Sheriffs returned to the Court of Aldermen.

ST. MAGNUS CHURCH, London-bridge, has just been re-opened having been thoroughly repaired. It has one of Sir Christopher Wren's finest interiors; and the beautifully-carved altar-piece has been freed from its covering of paint, and brought out in its original oak.

OBITUARY OF EMINENT PERSONS.

MAJOR-GENERAL SIR GEORGE ARTHUR, BART., K.C.H., D.C.L.



SIR GEORGE ARTHUR died on the 19th inst., after a lengthened illness. He was born 21st June, 1784, the fourth son of the late John Arthur, Esq., of Plymouth, by Catherine, his wife, daughter of Thomas Cornish, Esq., of Portsmouth. He entered the army as Ensign, 91st Regiment, in 1804; and, in 1806, served in Sir James Craig's expedition to Italy. The next year he proceeded to Egypt, and was severely wounded at Rosetta. He went shortly after, on duty, to Sicily, under Sir James Kempt; and, in 1809, commanded the Light Company of his regiment in the Walcheren Expedition; being employed in the attack on Flushing, and being again wounded. For his gallantry he was thanked in General Orders, and appointed Deputy Assistant-Adjutant-General. When the Duke of Manchester was Governor of Jamaica, he selected Captain Arthur to be Lieutenant-Governor of Honduras. In 1823 he was nominated Lieutenant-Governor of Van Diemen's Land, and remained twelve years in that Colony. In 1837 he was chosen to proceed to Upper Canada as Lieutenant-Governor, and remained there until the union of the Upper and Lower Provinces. In 1841 he was created a Baronet; and from 1842 to 1846 filled the important station of Governor of Bombay. In 1846 he attained the rank of Major-General; and in 1853 received the Colonelcy of the 50th Foot.

Sir George Arthur married, in 1814, Eliza-Ord-Ussher, second daughter of the late Lieutenant-General Sir John Frederick Sigismund Smith, R.A., K.C.B., and leaves a large family; of which the eldest surviving son is now Sir Frederick Leopold Arthur, second Baronet; and the eldest daughter, Isabella Maria, is wife of Compton Domville, Esq., eldest son of Sir Compton Domville, Bart.

LIEUT.-COLONEL THE HON. ROBERT EDWARD BOYLE, M.P., OF THE COLDSTREAM GUARDS.

THE death of this gallant officer took place at Varna on the 3rd inst., when he was on the point of accompanying his regiment to the Crimea. By this much lamented event, the representation of Frome, the office of Groom in Waiting to her Majesty, and a company in the Coldstream Guards become vacant.

Colonel Boyle was born in March, 1809, the third son of the present venerable Earl of Cork, by Isabella Henrietta his wife, third daughter of William Poyntz, Esq., of Midgham, Berkshire. He married, 23rd October, 1844, Georgiana, youngest daughter of Abraham Wildey Roberts, Esq., of Hill-street, Berkeley-square, and leaves two sons and as many daughters. Colonel Boyle was formerly Secretary of the Order of St. Patrick, but resigned the appointment as incompatible with his election to Parliament. For some time he was State Steward to the Lord-Lieutenant of Ireland. He obtained the rank of Major in the Army in 1846, and was made Lieutenant-Colonel of the Coldstream Guards in 1847.

THOMAS, LORD DENMAN.

THIS distinguished and accomplished lawyer, who acted for many years so prominent a part on the political arena, and presided with such dignity and ability over the Court of Queen's Bench as Lord Chief Justice from 1832 to 1850, died at Stoke Albany, Northamptonshire, on the 22nd inst., from an attack of apoplexy.

Lord Denman, the descendant of a respectable family long settled in the counties of Nottingham and Derby, was born 23rd Feb., 1779, the only son of Thomas Denman, M.D., an eminent physician of London, by Elizabeth Brodie, his wife, aunt of the present Sir Benjamin Brodie, Bart. He received his education at Eton, and at St. John's College, Cambridge; was called to the Bar by the Hon. Society of Lincoln's Inn, in 1806; became Solicitor-General to the Queen in 1820; was chosen Common Sergeant of the City of London in 1822; and in 1826 received a Patent of Precedence, as Queen's Counsel. From 1830 to 1832 he filled, under Lord Grey's Government, the office of Attorney-General; and in the latter year succeeded Lord Tenterden, as Lord Chief Justice of the Court of King's Bench. In 1841 his Lordship presided as Lord High Steward at the trial of the Earl of Cardigan. Previous to his elevation to the Bench and Peerage, he sat in the House of Commons for the town of Nottingham.

Lord Denman was distinguished by an undeviating rectitude of principle, a manly and simple eloquence, and a high independence of character. The most memorable epochs of his life were the periods of Queen Caroline's trial; of struggles for Reform; and the contests for religious liberty. Lord Denman married, 18th October, 1804, Theodosia-Anne, eldest daughter of the late Rev. Richard Vevers, Rector of Saxby, county Leicester, by Theodosia-Dorothy, his wife, daughter of Sir Edmund Anderson, Bart., of Lea; and by her (who died 28th June, 1852) had five sons and six daughters. Of the former, the eldest, Thomas, now second Lord Denman, was born 20th July, 1805; and married, 12th August, 1829, Georgiana, eldest daughter of the late Rev. Thomas Roe.

A Bust of Lord DENMAN, by Moore, an admirable likeness, is engraved in No. 605 of the ILLUSTRATED LONDON NEWS.

MR. W. H. BARTLETT.

MR. W. H. BARTLETT, whose premature death has just been announced, was favourably known by his historical and illustrated works. His "Forty Days in the Desert," "Nile Boat," "Walks about Jerusalem," and other works of Biblical and Classic interest, have passed through several editions, and acquired a steady popularity both in England and America. "The Pilgrim Fathers," his last published work, like its predecessors of the series, is beautifully illustrated.

Mr. Bartlett's last visit to the East was undertaken only a few months ago, in order to inspect some ancient remains of Biblical interest, to furnish a series of illustrations for a new pictorial work on the subject. On his passage home from Greece, he was taken suddenly ill on board the French steamer *Egyptus*, and died in the course of the following day in the prime of life. To the talents of an accomplished artist, a popular author, and traveller—whose graphic descriptions of society, as well as scenery, in every quarter of the world, are generally read and admired—Mr. Bartlett added those higher qualities of mind and heart, which, with all who knew him intimately, formed a bond of attachment which only strengthened with years, and is now cut asunder when most of the difficulties and dangers to which he had been often exposed, appeared to be overcome.

Upon his widow and young family, who were in hourly expectation of his safe return, the death has fallen with crushing severity; and the weight of their bereavement, we fear, will not be a little increased by the fact that Mr Bartlett was never able to retain any copyright in the works which bear his name.

THE LATE MR. ELIJAH WILLIAMS, THE CELEBRATED CHESS-PLAYER.—(From a Correspondent.)—This lamented gentleman was professionally a surgeon, but for many years had chiefly practised as a physician. When the cholera, to which he fell a victim, broke out, he benevolently posted a notice on the door of his house, inviting the poor to apply to him for preventive medicines, if attacked by premonitory symptoms, offering it to them gratuitously. On leaving his home for the last time, he asked his wife to give him some of the medicine, as he felt unwell. Unfortunately, the last bottle was exhausted. He walked to town, and was seized with violent pains near Northumberland House, in the Strand, and, by the advice of a friend, went to the Charing-cross Hospital for relief. He died on the 6th inst., on the 32nd day he expired in the hospital. Some of the medical men hoped that the crisis had passed. Mr. Williams pointed to the blue marks on his nail. He was convinced, from the discoloration, that he would not survive. He has left a wife and four young children, utterly unprovided for; but the Institution, by raising a subscription for her support. It is hoped that the generous, ever really worthy Christian charity, will excite the sympathy of chess-players in particular. We urge the claims of the widow in the more earnestly, because we are personally acquainted with her truly deplorable position. Her husband is only 52 years of age. She is an amiable lady, deserving of aid in her sad bereavement.

CHARITABLE BEQUESTS.—Legacies amounting to £60,000, bequeathed by the late Mrs. Margaret Wilson, of Eaton-square:—To the London City Missionary Society, £5000; Consumption Hospital, £5000; Cancer Hospital, £5000; Religious Tract Society, £5000; Deaf and Dumb Asylum, Belfast, £5000; and Blind Asylum, £5000. And a sum of £40,000, to be invested for deserving poor women of Belfast, who have [illegible] receive 7s. a week.—William Stone Lewis, [illegible] Inn and Hendon, [illegible] £500, has bequeathed [illegible] of his thirty [illegible] School, National Schools, and Female Penitentiary; £1 [illegible] Hospital, the Mendicity Society, and Nightly Shelter to the Destitute £100.

OMER PACHA.

(From a Correspondent.)

IT has been my fortune to meet this now celebrated man in many stages of his career. My first knowledge of him was in the Syrian campaign, and afterwards during a rebellion in the Lebanon, when he defeated the Druses in their native fastnesses, and took Deir El Khammu, the capital of the mountains. I followed with interest his Kurdish campaign, and admired the man who, with inferior forces, a defective commissariat, no roads, and a brave enemy, out-manœuvred, outwitted, and conquered. His advancement under every disadvantage must convince us that he is a really great man; one not the sport of circumstances, but who makes and masters them. From a poor refugee he has risen to be Commander-in-Chief, a post never before occupied by a renegade or a foreigner. I saw Omer Pacha last a few days back, and purpose, as well as I can, giving a description of his appearance, and such parts of his conversation as will interest the public. I had arrived that morning at Rustchuk, and sent him letters of importance: these he read, and begged me to call on him in the evening, when he would have leisure to talk with me. At the appointed hour, accompanied by the usual incumbrance of some dozen followers, I entered the outer gate of his serai, where two respectably-dressed soldiers kept guard; from this we passed on to an inner court, where was another sentry; still unquestioned, we entered the open door and mounted the stairs: here my servants paused and I went on alone. The stairs opened on a good-sized room; on either side were two other rooms, whose doors stood open: these composed the whole house. The Pacha had arrived but a few days previously, and had taken possession of the house as a mere temporary shelter. A servant at the door pointed out the room; and, entering through the folding doors, I found the man all Europe was talking of sitting on a divan, conversing with a Colonel, who was detailing the progress of the works then in course of erection on the other side of the Danube. I could not but wonder at the report, and noticed the entire want of mention of the gallant English officers who had planned, and even personally assisted at the works in question. Omer Pasha rose and greeted me kindly, saying a few civil things. I then, at his request, detailed some things he wished explained, gave in my report, and made several remarks—all of which he took, as I intended them, in a kindly way.

Omer Pacha is just the age for work and action. He has reached that time of life when the first fire and heat of the passions clothes the man—if left with matured strength and intellect, and will continue—unswayed by any of the more animal qualities of our nature. This period of a man's life is more dependant on constitution than on years; and Omer has reached it about fifty odd years of age. Blessed with good health, all his actions—nay, movements—are vigorous and energetic. Tall and spare, his frame is muscular and well knit. His eyes are good and quick; his closed lips bespeak a man of determined purpose—a man to dare and to do. The responsibility of his situation and past work seems to have told little on him; and there was an easy assured manner about him which seemed to say, I have done all I can, and await the result without any anxiety. He was dressed in a white coat, with plain coloured trousers, with broad straps covering the mash, or under-shoe; a waistcoat, and a collarless shirt; and, altogether, for a man on whom hung so much, looked exceedingly cool and comfortable. Our conversation was carried on in French, but the moment the Pacha warmed he ran off into Italian—a tongue he was much more at home in. During the hours he detained me, letters and despatches were constantly arriving, which he read, asking my leave to do so, "Widdin! ah," he said, "my sick get on well; and no enemy seen yet west of the Aluta." Having read them, a secretary was summoned, a few words given, and we talked again. And so it was a dozen times, at least. Nothing disconcerted him. A fresh secretary was called; fresh orders were given; and then, apparently, he laid the whole subject aside, and went on conversing about entirely different matters. One or two of the letters—for he had been found—contained information he would have I been in his place, have set me half frantic:—Here, food had failed: orders to remedy the want were issued. There, a General had disobeyed his most positive orders: a new combination to meet the emergency was drawn out—and so on. What a happy quality this is, this power of dismissing any harassing thoughts; how much of pain and trouble it saves us poor humble folk. It must be a whole day saved to the General. Happy those who possess it.

The Pacha inveighed greatly against the delay of the Allies, and almost laughed at their continued stay at Varna and its environs. "The Russians (he said) have allowed us three opportunities of crushing them. The first was before the Allies had declared war; the next on their first from the Dobrudschs and Silistria; the third is passing away now. We cannot expect a fourth; we do not deserve it." He explained how the campaign had been just as he planned it, and how the Russians had but done what he should have asked them to do. "Silistria (he said) I feared would fall. Its defence was more than I could expect; but then I had a right to look for more help from inundation of the Danube and the climate, not that the latter did not help me, for I hear 29,000 Russians were put *hors de combat* by it. I calculate (he said) upon passage of the river cost them 30,000 men, and me 4000; but then it made all my soldiers worth two of what they were before. I have gradually drawn them on from little to little; I have given them battle under favourable circumstances. I have led them from skirmish to victory till now they have a conviction of their own invincibility: they have gained confidence in themselves, and now despise the enemy almost as much as they feared him a year ago. My poor fellows began the war with a thorough conviction that they would be annihilated; now they are confident of success, and long for the day of action as the bright time of victory." In answer to a question of mine, he said "Yes, I believe the faith among them to be a most sincere conviction, that falling in battle they are martyrs, and enter into the joys of Paradise at once. This forms one of the great objections the Ba hi-bozouks have to entering the French service, and receiving French pay; by taking Christian money, they fear forfeiting their future reward; and consequently numbers of them have deserted." He said, "I studied the material of the Russians well during the time I was with them, for I was attached to their staff when their troops were at Unkier Skelessi; they are fine machines, but with individuality. They are sturdy, and ill-fed; so want energy and stamina. Many of their Generals I have known personally—Liders particularly. I grounded half my plans on my knowledge of him; hence my perpetual passages of the Danube. His indecision and my attacks kept him perpetually harassing his troops with orders and counter-orders—marches and retreats. Gortschakoff, I flatter myself I can always beat. He is a man of plans and rule; and no exigency will induce him to change his last drawn method. And of all things which admit of change, and which it is impossible to plan before, a battle is that thing. It is a glance, a decision, a rede cision, a *coup*, a rush, an instant thought acted upon at once. I believe no General ever planned a battle as he actually fought it." "Yes (he said), the patriotism of all classes has been wonderful; and nothing but it could have enabled us to sustain the war. All classes seem to consider giving up part preferable to losing the whole." And he went on in this strain. Whether he believed it himself, or wished me to do so, I do not know; if the latter, he certainly failed entirely. He then went on and described his own early career—how he had been disgusted at civil engineering, to which he was kept; and how——but the world knows the rest.

We talked a long while; he repeatedly requesting me not to go. He inveighed again and again against the delays of the Allies. "I cannot alone, destroy the foe. Our efforts have been great, but they have exhausted us; but I am ready, and my commissariat prepared. Let but [illegible] of horses, [illegible] of all nations, be appreciated [illegible] yet perfect management. "I had," he said, "to [illegible] with the spur, to escape the [illegible] by, friend, we may meet [illegible] for the Allies [illegible] has done his part, and will do it well [illegible] why do not they advance, and [illegible]

MEETING OF THE BRITISH ASSOCIATION OF SCIENCE AT LIVERPOOL.

The Twenty-fourth Annual Meeting of this great scientific body commenced in this town on Wednesday, September 20th, when St. George's Hall was delivered up to the officers of the Association, for their use until the 27th; and it was immediately portioned out to the various purposes of the meeting. The Crown Court was assigned to the Section of Geography and Ethnology; the Civil Court, to that of Mathematics and Physics; the Sheriff's Court, to Mechanical Science; the Duchy Court, to Chemistry and Mineralogy; the Grand Jury room, to Zoology, Botany, and Physiology; the Concert-room, to Geology; and the Library, to Statistics; while the Grand Hall was reserved for soirées; and the other smaller apartments for committee-rooms, and other purposes. Some few modifications in these arrangements were made in the course of the week; but these were easily effected, from the circumstance that (now for the first time) the whole Association has been accommodated in one building. In numbers, the present meeting has far exceeded all that have gone before; scarcely a name of any distinction in British science was absent; and there was a good sprinkling of eminent persons from abroad.

At the opening meeting on Wednesday evening last, which was held in the Philharmonic-hall, Mr. Hopkins, the President of last year, resigned the chair to his successor, the Earl of Harrowby, who, as usual, delivered an address of considerable length, in which he recorded the progress made in the various branches of science embraced by the Association during the last year. He ended by congratulating the Association on the very splendid reception which was now given to them at Liverpool. The Earl of Derby, in a playful speech, moved a vote of thanks to the President for his address; which was seconded by Sir Charles Lyell.

During the week of the meeting, the business of the sections has been carried on with the utmost activity, and a great number of interesting papers and reports on scientific subjects have been read and discussed. The three questions which seem to have produced most discussion, and to have excited the greatest interest, were that on the fate of Sir John Franklin, arising out of a very admirable paper by Mr. Findlay, "On Arctic and Antarctic Currents," read in the Section of Geography and Ethnology on Friday, in which the great oracles on this subject—Dr. Scoresby and Admiral Beechy, as well as Sir John Ross—spoke at great length (though but little light seems capable of being thrown on the fate of our gallant navigators); the discussion in the Zoological and Botanical Section, on the same day, on Dr. Redfern's paper on the Torbanehill Coal (when opinions appeared to be nearly equally divided as to whether this mineral is coal or not, though they seemed to lean rather to the side of its being coal); and on that by Mr. Rathbone, on the Decimal Coinage, read in the Statistical Section on Monday (when opinions were no less divided, and no satisfactory result was arrived at). Various practical questions in this latter section also gave rise to a very considerable discussion—such as the Laws of the Currency, as exemplified by the circulation of country bank notes, on Friday; on the Progress and Direction of British Exports, and the influence thereon of free-trade and gold, by Mr. Valpy, on Saturday; and on the Effects of Good or Bad Times on Committals to Prison, by the Rev John Clay, on the same day. A feature of the present meeting, also, was the introduction of pure Archæology into Section E, as a branch of Ethnology, by the exertions of Mr. Wright, who read a paper in that section on Tuesday (the 19th), in which he showed reasons for objecting entirely to the system of archæological periods (stone period, bronze period, and iron period) of the northern antiquaries; and pointed out the necessity of greater caution than had hitherto been shown in the study of crania.

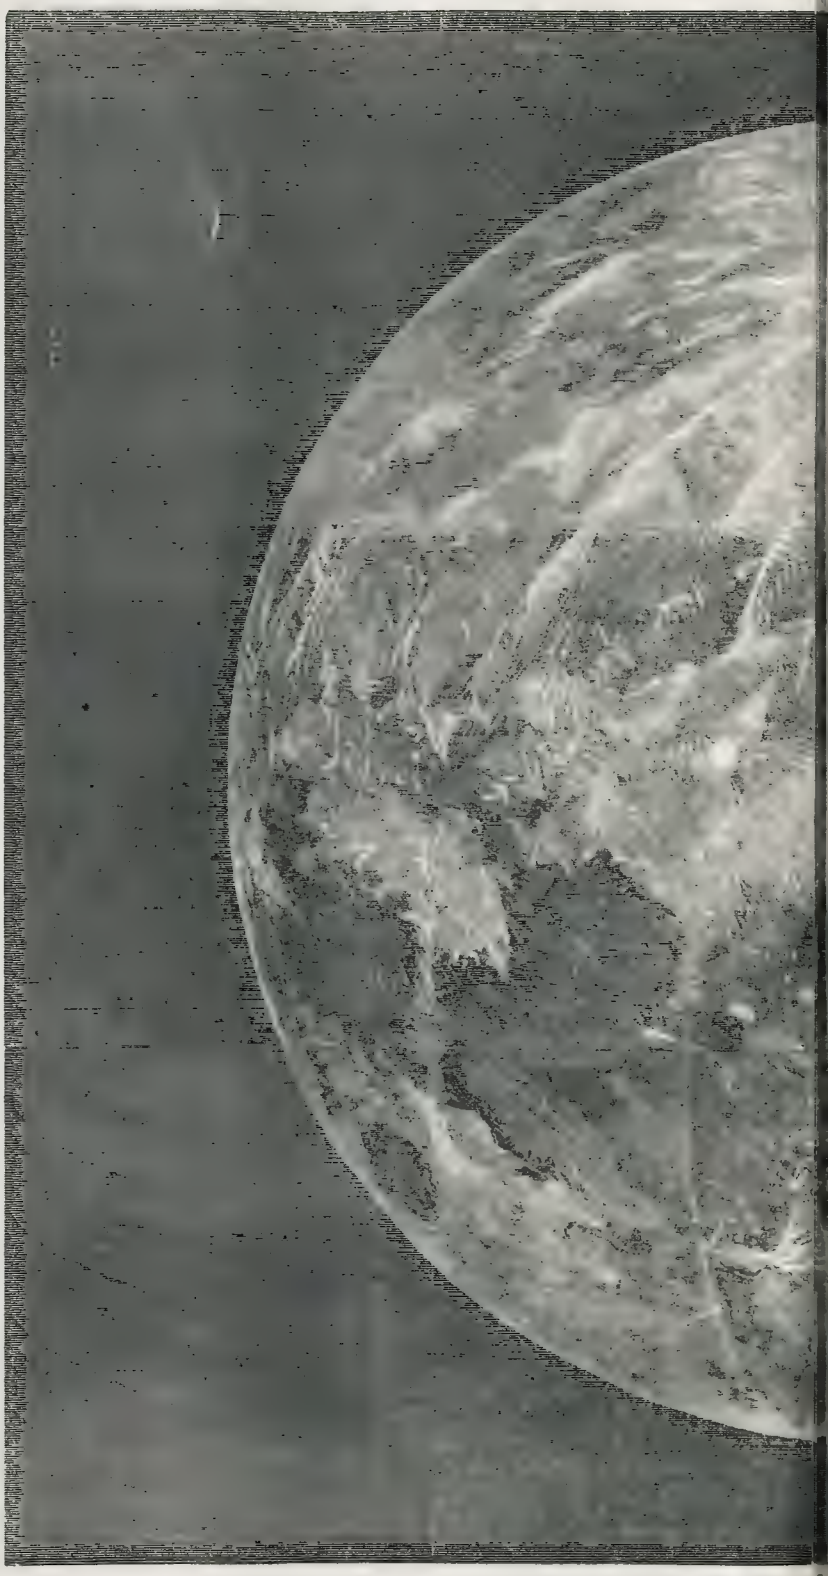
Among the other features of the week, the more prominent were the President's dinner, in the Philharmonic-hall, on Saturday, which exceeded almost everything that was known before of Liverpool hospitality, and at which six hundred guests sat down to table; and the Mayor's soirée, the same evening: at the latter was exhibited the very choice collection of pictures of Richard C. Naylor, Esq., of Hooton hall, which attracted the greatest attention from a very crowded company. The conversazioni of the Association were likewise largely attended, and were enlivened by practical experiments on light and photography. The lecture by Professor Owen on Anthropomorphous, or Man like, Apes in the Concert room, at St. George's-hall, was numerously attended. The lecturer gave a general and popular sketch of the comparative anatomy of this class of animals; describing especially a new species recently discovered on the western coast of Africa, measuring upwards of 4 ft. in height. The adults of the Gorilla species attained the height of 5 feet 5 inches, and when full grown measured 3 feet across the chest. Its head was double the size, and its extremities were enormously developed in comparison to the development of man, and its strength was most enormous. Those huge apes appeared to exist in some numbers in the interminable forests of the Gambia river. The negroes of this country were of a higher class than those of other districts, not being debased by the abominable slave traffic. In their excursions into the forests to look for ivory, their great danger was not from the lion or other wild animals, but from this huge and formidable gorilla. The lion sluuk away on the approach of man; but the gorilla, when he saw man advancing, came down out of the trees to the attack; and, unless wounded in the first instance, he either strangled the man or inflicted such wounds as left indelible marks. The strength of this animal's jaw was fully equal to that of the lion, and its canine teeth equally formidable.

Colonel Sabine's lecture on Terrestrial Magnetism, in St. George's Hall, on Monday, was likewise listened to by a most numerous audience.

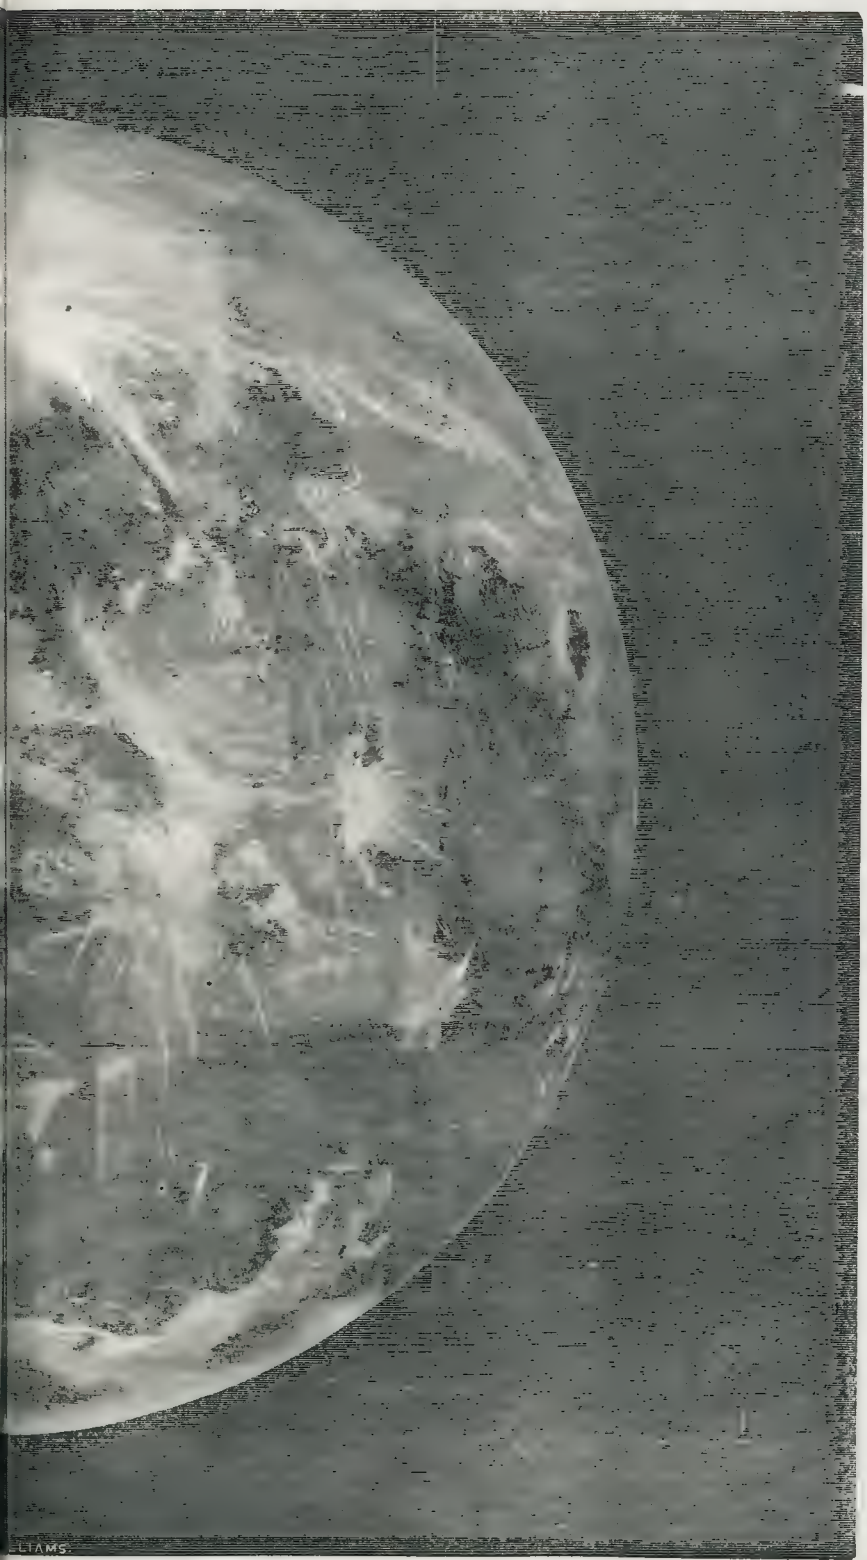
We subjoin abstracts of a few of the papers:—

RUSSIA AND INDIA.

At the meeting of the Geographical Section, on Thursday, an interesting discussion took place on Central Asia, India, and the designs of Russia in that part of the world. Mr. Danby Seymour read some lengthy extracts from the MS. notes of travels of General Ferrier, in Central Asia, from Teheran to Herat, Balkh, Candahar, and along the course of the Helmand, to and round the Lake Sistan. The paper contained a variety of information relating to the character of the people, soil, climate, government resources, &c., of the countries above named; also, some suggestions as to the feasibility of an invasion of India by the Russians, who, it was said, had for many years endeavoured by degrees to push their interests in that quarter of the globe. An interesting discussion, commenced by Sir Roderick Murchison, followed the conclusion of the paper. Sir R. I. Murchison, who occupied the chair, said, the statements made by Mr. Seymour were exceedingly valuable as regarded those portions of the continent of India which had been referred to; but with respect to any contemplated encroachment as suggested by the writer, on India, by Russia in the way described, he considered it so Quixotic that they would never attempt it. He could state that from his own



PHOTOGRAPH OF THE MOON, EXHIBITED TO THE



ASSOCIATION, AT LIVERPOOL, BY MR. HARTNUP.—(SEE NEXT PAGE.)

experience of a residence in India. During five reigns the Russians had attempted to get possession of the little Principality of Khiva, and they had never been able to accomplish it. The invasion of India would require such a large army, that he had always looked upon it as a physical impossibility, and he knew what it was to expose an army to the chance of a total want of provisions. A Russian expedition was formed to cross between Aral and the Caspian Sea. It was found impossible to take 5000 men, and it was reduced to 1500, and even that small army had great difficulty in reaching the Sea of Aral. Mr. Seymour stated that, between Aral and the Caspian, Russia had formed lines of walls, which were in the hands of Cossacks. Colonel Sykes considered the thing perfectly visionary. With regard to an invasion of India by the Russians, nothing less than 100,000 troops would do, besides, they must carry provisions, and keep up a proper commissariat to be effective when they arrive in India. They could never march to the Indus without the risk of an army being altogether lost; and, in support of his opinion, he instanced what had been effected by Lord Keane in India, and the loss he sustained. Mr. Seymour said he had only stated that the Russians did not consider it so.

LUNAR VOLCANIC CRATERS.

On Friday Professor Nasmyth read a paper "On the Structure of Lunar Volcanic Craters." The learned Professor commenced by stating that he had for some time devoted considerable attention to the observation of volcanic craters existing upon the moon's surface, and, although this might appear a little foreign to the science of geology, it would be found that such science might be advanced by it. With the aid of a very powerful telescope, he had been enabled to pursue the subject with very great success; and although he did not consider that he had, as yet, made more than a first step, yet he hoped, in the end, to arrive at some important conclusions. With this hope he had taken the moon under his especial care. He directed the attention of the audience to a very elaborately-constructed model of a large and several minor craters, as shown on the moon's surface by a telescope and also to a large drawing, very carefully elaborated, which he assured them, were correct representations. When these objects were seen in the telescope, they invariably threw out a more luminous appearance than the rest of the moon's surface, and he could have shown them, had the building afforded him the aid of the sun's rays, that a similar radiancy was reflected from the model. The volcanic matter is thrown up with such force that it is spread for a considerable distance around, forming a ring, with occasional concentric circles within it, the centre being a plane surface. The point from which such matter has been thrown is generally surmounted by an apex of greater or smaller dimensions, according to the period occupied in the transition from an active to an exhausted state. To give an idea of the variableness of the volcanic power, he had found that the diameter of these craters varied in extent from a quarter of a mile to 120 miles. The sketch produced to the meeting represented a crater forty miles in diameter, and it was a remarkable fact that volcanoes in the moon were considerably larger than those in the earth. He attributed the highly volcanic character of the moon's surface, and the greater intensity of the volcanic power, to the shorter space of the time allowed for the crustation of the outer surface of that planet. A short conversation followed, in which Professor Phillips said he generally concurred with the observations of Professor Nasmyth. With respect to the absence of water in the moon, he was so convinced himself, that he considered it a sort of heresy to treat of water in connection with the moon at all. And there was evidence which satisfied him of the absence also of any perceptible atmosphere. He had frequently watched different planets passing behind the moon, or the moon passing them. There was a total obscuration the instant that the disk of the latter touched the planet. The same evidence was also to be derived by observing an eclipse of the moon.

COMPASSES IN IRON SHIPS.

On this very interesting question, Dr. Scoresby read a paper on Saturday, especially advancing the loss of the *Tayleur* as an illustration. In the case of the *Tayleur* when he first heard of the catastrophe, and read the evidence, he had stated to some friends at Torquay that he would venture to predict that she had been built with her head to the north. He had found, on inquiry, she had been built with her head nearly north east. Here, then, were the precise circumstances for expecting a change in the ship's magnetic distribution. Having been built with her head to the north east, she had a certain magnetic distribution, and when she began to strain, with her head to the south west that distribution was necessarily changed, and the first effect of it had been to alter the two compasses adjusted by fixed magnets. If the captain had been aware of the changes which might, and most probably would, take place, when the ship began to strain in a different position from that in which she had been built—if he had known that the compasses might vary as much as two, or three, or even four points, he would have known, of course, that he must place no reliance upon them. It did not follow, however that compasses were of no use, because, under circumstances, they were liable to change. They ought to be, and were, of great use for all that. But what he wished to impress upon the section was, that, by attempting to adjust a traveller by a permanent influence, they were only aggravating error, that captains ought always to bear in mind this liability of their compasses to mislead them two or three points, that they should be always looking after their correctors and verifications whenever the sun or a star was in sight, and that, by keeping a compass aloft as far as possible from the iron of the ship, they would always have a standard to which they would be able to refer, and which he, in his Arctic voyages, had always found to be correct.

The General Committee met on Monday evening, for the purpose of deciding, among other matters, upon the question of the next place of meeting. The first application received was from Glasgow. There were also applications from the Queen's University in Ireland, requesting the meeting to be held in Dublin for the year 1857. A request was also made from a committee of the inhabitants of Brighton, in favour of holding the next meeting in that town. An invitation was received from the Town council of Manchester, praying for an early visit of the association to that important city. The directors of Cheltenham College offered to place their buildings and grounds at the disposal of the Association, and also requested the favour of an early visit. Similar applications were made from Gloucester, Ryde (Isle of Wight) and Nottingham. An invitation was expected from Leeds, but, in consequence of the new hall in the town not being yet completed, the invitation had not been made for the ensuing year. After hearing the claims put forward by the invitators of the various towns charged to support the invitations, and maturely considering the subject, the Committee decided that their next meeting, for the year 1857, should be held in Glasgow. On the motion of Sir R. Murchison, seconded by Mr Smith, his Grace the Duke of Argyll was elected President of the Association for the next meeting.

PHOTOGRAPHS OF THE MOON.

At eight o'clock on Tuesday evening, a conversazione was given in St George's-hall, and the numerous as well as distinguished assembly was entertained and instructed, first, by a series of demonstrations of the rotation of the earth, by means of the gyroscope, by M. Léon Foucault: next, by some most interesting experiments with electric light, explained by Professor Stokes; and, lastly, by the projection of the moon on a fifty-feet disc, from photographs taken by Mr. Hartnup, the astronomer of the Liverpool Observatory, and by the Photographic Society of Liverpool, and magnified by aid of Messrs. Abrahams' powerful oxy-hydrogen microscopic lantern.

Professor Phillips submitted to the section, "Notes on the Mountain Gassendi, and Further Trials of Photographs of the Moon." He observed that the duty which he had to perform would have been far better executed by either of the other members of the committee appointed by the Association to take measures for investigating, by accurate telescopic observation, the physical aspect of the moon. The other members of the committee were Lord Rosse and the Rev. Dr. Robinson; both of whom were far better acquainted with the aspect of the moon, by the employment of finer instruments and their greater astronomical knowledge, than he was. But nothing which they had to show, in the shape of the photographs of the moon, was at all to be compared with the results that had been obtained by the voluntary exertions of the photographers of Liverpool. The learned gentleman then proceeded to describe that tract of the moon which had been committed to him to survey, and which contained the crater of Plato. He illustrated his observations by a very beautiful drawing of this portion of the moon's surface by Mr Nasmyth, and observed that daily experience showed that the more their telescopic power was increased, the less circular appeared the lunar craters, and the less smooth the surface of the moon. All was sharp and irritated—a perfect representation of its past history, which was marvellous to see. Passing from this portion of his subject, the learned gentleman alluded to the much-mooted question as to there being traces of the action of water on the surface of the moon, as now presented to us. At one time, he believed that there was no trace of water to be seen; but he confessed that more recent observations, particularly those made with Lord Rosse's telescope, shook his belief in that opinion.

On Wednesday morning, three only of the sections continued their labours, C (Geology), B (Geography and Ethnology), and G (Mechanical Science); and the labours of the Association ended with the General Meeting in the afternoon. Thursday was devoted to excursions, the party (the largest) going to the salt-mines at Northwich, which were brilliantly illuminated for the occasion; the others to St. Helen's, to visit the extensive manufactories of plate-glass, the coal-mines, &c.

SOIREE GIVEN BY THE HISTORIC SOCIETY OF LANCASHIRE AND CHESHIRE TO THE BRITISH ASSOCIATION.

This soiree took place on Wednesday evening, at eight o'clock, in the Philharmonic Hall, which was crowded with visitors, tickets having been issued to a great number of the respectable inhabitants of Liverpool and its neighbourhood, in addition to the members of the Association. At half-past eight, a lecture was delivered by Mr. Wright, "On the Antiquities of the Anglo Saxon Graves of the Pagan Period, illustrative of the celebrated Fausset Collection." This collection, with many other interesting antiquities, being exhibited in the room by the liberality of the Mayor (its present possessor), was examined by the company after the lecture. We shall engrave some of the choicest articles in the collection next week; and give the substance of Mr. Wright's paper.)

At ten o'clock the chair was again taken, and diplomas as honorary members of the Historic Society were delivered to twelve of the most distinguished members of the British Association. A memorial was afterwards presented to Mr. Mayer, for the great services he had rendered to the Historic Society, of which he was one of the three founders; and the proceedings were concluded by the presentation to the Earl of Harrowby of a massive bowl, formed of oak taken from the house at Everton, which was occupied by Prince Rupert, as his head-quarters, during the siege of Liverpool in 1645.

THE COURT.

The Queen and the Prince Consort, with the youthful Princes and Princesses of the Royal Family, are enjoying the prevailing beautiful weather at their Highland home. Her Majesty and His Royal Highness make frequent excursions amid the mountain and forest scenery, and have rarely before been afforded so favourable an opportunity of witnessing the varied beauties of the Balmoral district. The Earl of Aberdeen arrived on Wednesday on a visit to the Queen.

The return of the Court is now stated to be fixed for Saturday next; and the route taken will, it is understood, be over the Caledonian, and thence by the London and North-Western Railway.

The Duke of Beaufort has arrived at Gopsall-hall, Leicestershire, on a visit to the Earl and Countess Howe, from his shooting quarters in Perthshire. The Duchess and family have been staying some weeks with the noble Earl and Countess.

The Earl of Elgin, Governor-General of Canada, is expected to arrive in this country by the next mail steamer from Halifax. The noble Earl, it is said, will have the vacant Garter conferred upon him by her Majesty, in reward for his long and successful Government of Canada.

Lord John Russell is sojourning with his family at Scarborough.

Lady Londesborough gave birth to a daughter on Friday last, at Grimston, near Tadcaster. Her Ladyship and the infant are progressing favourably.

The Chancellor of the Exchequer and Mrs. Gladstone left Audley-end, the seat of Lord Braybrooke, on Tuesday, to visit the Deanery, at Peterborough, from whence the noble host, gentleman and Mrs. Gladstone will proceed on a visit to the Earl and Countess of Ellesmere, at Worsley-hall, near Manchester.

SUDDEN DEATH OF THE MARQUIS OF ORMONDE.—We regret to have to announce the sudden death of the Marquis of Ormonde, which took place on Monday evening, at Loftus Hall, in the county of Wexford

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev W. Williams, to Bedwas, with Ruddry annexed, Monmouthshire; Rev. F. W. Cobb, to Nettlestead, near Maidstone; Rev. C. Harbin, to Teston, near Maidstone; Rev. E. L. Marrett, to Morborne, Huntingdonshire. *Vicarages:* The Rev. G. Carpenter, to Stapleford, Wiltshire; Rev. J. Hooper, to Meopham, Kent; Rev. J. Stonehouse, to Ware, Herts; Rev. T. Paul, to St. Matthew's, Tewkesbury; Rev. H. M. J. Bowles, to St Paul's, Framilode, Gloucester; Rev. W. Melburne, to Redcar.

DEPARTURE OF THE BISHOP-DESIGNATE OF BORNEO.—On Thursday a special service was held at the parish church of St. James's, Piccadilly, for the purpose of enabling those who take an interest in the missionary operations in Borneo to bid farewell to the Rev. Dr. M'Dougall, the Bishop elect, and the missionaries who are about to sail with him to that distant sphere of labour. Prayers were read by the Rev. J. G. Cowan, and the sermon was preached by the Rev. Dr. Jacobson, Regius Professor of Divinity in the University of Oxford, from the 20th verse of the 16th chapter of St. Paul's Epistle to the Romans. After the sermon, a liberal collection on behalf of a female education fund in Borneo was made, and the Holy Communion was administered. It is not yet known when Dr M'Dougall's consecration to the new bishopric will take place. The Bishop-designate was formerly a medical man connected with King's College, London.

On Wednesday Mr. Robert Wm. Howell, B.A., scholar of Jesus College, Oxford, was elected to the vacant fellowship on the South Wales foundation. Mr Howell obtained a second class "In Literis Humanioribus" in Michaelmas Term, 1852.

A NOVELTY FOR LADIES.—As a Postscript to our Illustrated Fashions, at page [illegible], we may mention the happy thought of a Parisian *modiste*, who has suggested a Chaperon, which obviates the inconvenience of wearing Bonnets, at *déjeuners*, and other occasions, within doors, by converting them into Caps. This is done by removing a portion of the Bonnet, as easily as a gentleman can take off his hat; when there remains on the head a *coiffure* of the most tasteful description. The novelty has been imported by Messrs. Jay, of Regent-street.

PANORAMA OF BOMARSUND (Madden, Leicester-square).—This is a clever inland view of the [illegible] of the recent bombardment, and the adjacent [illegible] just been in London, Stockholm, and merits notice as a memorial of the war.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE leading event of this week, as far as our column of talk is concerned, has been the publication of a correspondence between Lord Wrottesley and the Earl of Aberdeen, on the Earl's distribution of the £1200 a year, voted by Parliament from year to year, by way of pensions in aid of persons distinguished in literature, science, and the fine arts. Lord Wrottesley is of opinion—in common with many others—that the distribution is not made with that wisdom which should certainly direct the disposal of such a sum, and for such purposes. He is particularly of opinion that science is not adequately represented in the distribution; and that Lord Aberdeen, in refusing a proposed allowance from it, of £200 a year, to Professor Phillips, the great geologist, has evinced his want of sensibility with science, and his unfitness for this small part of his Ministerial duties. Lord Wrottesley writes thus, to Lord Aberdeen, on the subject he has so much at heart:—

Soon after the accession of the late Government to power, Sir Robert Inglis and myself solicited and obtained an interview with Lord Derby, in which we represented to him that considerable dissatisfaction prevailed among the cultivators of science generally at the bad success which had attended certain then recent applications for pensions to some eminent scientific individuals, which had been preferred by the President of the Royal Society; and, by subsequent investigations, it was ascertained (and I communicated the fact to Lord Derby, by letter dated in April, 1852), that since the accession of her Majesty about thirteen per cent only of the annual sum allowed by Parliament to be granted for pensions to deserving persons had fallen to the lot of science—a result which naturally contributed to increase that feeling of dissatisfaction to which I have already adverted. It appears that a recent application by Lord Rosse of a similar character has been unsuccessful, and that your Lordship, in declining to accede to it, expressed yourself as follows:—"In order to meet even a small portion of the claims preferred to me, I have been compelled to require that poverty should be the attendant of merit, and that the pension should be as much the relief of pecuniary distress as the acknowledgment of intellectual attainments." Whatever our individual opinions may be on the merits of the particular case to which I have alluded, I purposely abstain from stating them, in order that the object of the present address may not be misunderstood—that object being, to represent to your Lordship, with all that respect which is justly due both to yourself and to the high station which you occupy, that the views above expressed as to the disposal of the Pension Fund, would render absolutely nugatory, so far as science and its cultivators are concerned, all the benevolent intentions which Parliament and the country must be supposed to have entertained in their favour when the provision in question was created. That the grant of a pension would be an inappropriate method of recompensing scientific merit when possessed by those who may be properly termed *rich*, I am no disposed to deny; but, if it were hereafter to be understood that the receipt of a pension from the Crown was fully as much the indication of absolute poverty as an acknowledgment of high intellectual attainment, we apprehend that the object of the grant would be hereafter but ill attained. Had such a view of the intention of Parliament been formally announced, the honoured names of Airy and of Owen, of Hamilton and Adams, would never have appeared on the Pension List; and that small encouragement to abstract science which has hitherto been dispensed by the British Government would virtually have been withdrawn; the bounty of Parliament and the Crown would have been looked upon in the light of alms, and men of eminence would not have consented to be paraded before the public as its needy recipients. Considering your Lordship's known appreciation of the claims of literature, and we hope we may also add of science, upon a nation which depends so essentially for its prosperity, and even safety, upon the progress of improvement in every branch of intellectual exertion, I cannot but express on my own part, and on that of my colleagues, our earnest hope that your Lordship will reconsider your views of the object of pensions, and refrain from exacting conditions for their enjoyment which cannot be otherwise than painful to all who have a high sense of the dignity of their pursuit, and may possibly be considered as tending to degrade it.

To this sensible letter Lord Aberdeen thus replies:—

Downing-street, March 29, 1854.

My Lord,—The letter which I addressed to Lord Rosse in October last, in answer to an application from several distinguished scientific men for a pension of £200 a year to Professor Phillips, was intended rather as a public explanation of the motives which had practically regulated my construction of the Civil List Pensions, than as laying down any fixed principle on the subject. But, with the greatest respect for your Lordship's committee, and after fully considering the matter, I do not know that I can as naturally qualify the statement made by me to Lord Rosse. It has been my endeavour, as much as possible, to appropriate these pensions to persons more or less connected with science or literature, or to their families, but the vote of the House of Commons would include a much wider range. The general belief that these Civil List pensions were intended by Parliament exclusively for science and literature is altogether incorrect; and I think right that the matter should be understood. The following are the terms of the Act by which the Queen was enabled "to grant pensions not exceeding £1200, in any one year, to such persons only who shall by their useful knowledge in sciences or who, by their personal services to the Crown, by the performance of duties to the public, or by their useful discoveries in science and eminence in literature and the arts, have merited the royal munificence and consideration of their Sovereign and the gratitude of their country." It is obvious that the whole sum of £1200 might very easily be expended, according to the terms of the Act, without any portion of it being appropriated to science and literature. Indeed, this great latitude has occasionally led to the insertion of names in the List which we cannot help considering as related to there. Nothing could afford me more pleasure than to have the power of distributing a sum equal to the amount of all the Civil List pensions, as an acknowledgment of scientific merit. There are those whose persons whose names I should be most anxious to include in such a distribution; but, under present circumstances, I am prevented from doing so by want of means. On the whole, then, and without making any resolution which should preclude me from exercising a discretion on the subject according to the circumstances of the case, I am still disposed to think that, as a general rule, the practice which I followed would be considered on the whole decidedly beneficial. I have the honour to be, &c.,

The Lord Wrottesley. ABERDEEN.

The wording of the Act is sufficiently large to admit of all Lord Aberdeen's interpretation; but we must confess that the Prime Minister has, since his accession to office, been taking the mere wording of the Act in a way in which (with better judgment) his predecessors in office seldom interpreted it. It has been left to Lord Aberdeen's generous, in every grant, to make her Majesty—unintentionally, we are sure—affix her name to warrants, in which, for a very small sum, a parade is made of poverty that must be not only annoying to many a recipient, but which is really unpleasant to the readers of the warrants themselves. Thus, in 1853 and 1854, we read constantly of "straitened circumstances," "distressed situations," "limited circumstances," "destitute condition," and other painful expositions in Royal warrants, which never should have been inserted therein. We grant, readily enough, that the sum set apart by Parliament is much too small for the many deserving demands made upon it; but it is easy to see that Lord Aberdeen has the cure of the evil in his own hands. He has only to ask Parliament for a larger sum, and he would be sure to obtain it.

It may interest Lord Aberdeen to be informed that the man he admires so much—the late Sir Robert Peel—took a very different view of this part of the duties of a Prime Minister. "I have resolved" (says Sir Robert Peel, writing to Robert Southey) "to apply the miserable pittance at the disposal of the Crown, on the Civil List Pension Fund, altogether to the reward and encouragement of literary exertions. I do this on public grounds, and much more with the view of establishing a principle than in the hope, with such limited means, of being enabled to confer any benefit upon those whom I shall name to the Queen." On this paper principle the pension of £300 a year to Southey. Here was a grant worth having; and what says Southey to Peel in reply. "Now," says Southey (a name which has claims to respect and honour which literature alone can never confer), "Now that lay sinecures are in fact abolished, there is no other way in which a man can be served who has no profession wherein to be promoted, and whom any official situation would take from the only employment for which the study and habit of forty years have qualified him." And to what conclusion did Lord Brougham come on this subject in 1831, when, feeling strongly the Government of this country have long been exposed to [illegible] only too justly—to the charge of neglecting science and letters—he, "if the task of abuse were not great, that pecuniary assistance was of the most desirable means of helping genius; because many [illegible] men is forced out of the path of original inquiry and of refined [illegible] difficulties of his situation, and obliged to spend his time [illegible] accounts on labour little better than mechanical."

Death has just removed from among us Mrs. Warner, the excellent tragic actress, whose latter years had been years of intense bodily suffering; Mr. Peter Buchan, a collector or maker of old-new ballads—whose skill in that way imposed even on Sir Walter Scott; and Mr. Edward Wedlake Brayley, Mr. Britton's old and excellent associate in "The Beauties of England and Wales." Mrs. Warner was never seen to greater advantage than when she was playing to Macready. Mr. Buchan will live among book-buyers, by his two volumes published in 1828, of "Ancient Ballads and Songs of the North of Scotland;" and Mr. Brayley will be remembered by his useful letterpress to Neale's two very handsome volumes on Westminster Abbey, and by his "History of Surrey," in five volumes octavo—of which, however, the opening chapter was really written by Mr. Timbs. Mr. Brayley was eighty four years of age at the time of his death. He began life as an apprentice to an enameller, and closed his useful and modest career as Librarian to the Russell Institution. His old associate in the "Beauties," Mr. Britton (they became friends more than sixty years since), is still alive, in his eighty-fourth year, and hale and well. May years of continued enjoyment pass over him before we say "Hail, and farewell!"

*** We were incorrectly informed as to Mr. J. H. Le Keux having "gone into railway engraving." We are gratified to learn that he continues to engrave in line, as heretofore.

THE THEATRES.

STRAND.—This theatre continues to prosper, and "Hard Times," with its new cast, maintains its old success. A new piece has been added to the *répertoire*; it is of the occasional kind—meant the affair of the 46th, and entitled "The New Ways of Windsor." It would be idle to attempt to describe a plot, where there is scarcely a plan, and no plot at all. Suffice it to say, that the officers and subalterns are engaged in various flirtations with a Windsor milliner's apprentices; that for their offences a mock jury, consisting of females, is impanelled; and that their cases are advocated by two ladies in forensic gowns and wigs. If the merits of this piece are to be judged by the laughter it excites, never was one more successful. It is, however, dependent on its excessive absurdity for its effect—and there the good acting of Mr. Tilbury, Miss Beaumont, and Miss Harding. The house was crowded nightly.

MRS. WARNER.—The lingering illness of this gifted lady terminated fatally, last Sunday. Mrs. Warner was one of the greatest ornaments of the modern stage, and owed her celebrity to her sterling merits. She was of Irish parentage; her father, Mr. Huddart, being a dentist in Dublin, of which city he was a Common-councilman; but subsequently embracing a theatrical life, Miss Huddart was introduced early to the stage. As fifteen, she was engaged for the Plymouth Theatre, and played *Lady Macbeth* to the noble Thane of Mr. Macready. In 1836 she was engaged at Drury-lane by Mr Bunn, and performed the same character, inclusive of others, with Mr. Forrest. But her great feat was in Mr. Knowles' "Wreker's Daughter;" after which she appeared at the Haymarket, and effected an enduring reputation in the part of *Evadne*, in the "Bridal." She divided, during Mr. Macready's management of the patent theatres, the Shakesperian drama with Miss Faucit, and generally undertook the parts that required the greatest power. On those theatres being found ineligible for dramatic management, Mrs. Warner took refuge, with Mr. Phelps, at Sadler's Wells; and, in conjunction with that gentleman, won a permanent triumph and home for the legitimate drama. This plan of management she afterwards continued at the Queen's theatre; where she had to create a theatrical audience, as well as a dramatic taste, and was removed from its conduct when only half her work was done. Her revivals of "The Scornful Lady" and "The Double Marriage" did her infinite credit. With her subsequent career, until her illness, we have not meddle, beyond mentioning that she sought fortune in America, but, owing to the state of her health, failed to find it. But friends, on her return, hastened to her rescue; and her Majesty was pleased to bestow on her case a consideration which sufficiently showed the honour and estimation in which the eminent artist was held. In tragedy Mrs. Warner excelled her competitors, and was, for a long period, the only actress capable of sustaining its severer characters.

THE THEATRICAL SEASON.—The announcements of coming operations are abundant. On Monday night the ST. JAMES'S opens, under the management of Mrs. Seymour, with an original drama by Messrs. Taylor and Reade, and an original farce by Mr. Selby. The caste, comprising the names of Miss Glyn, Mrs Seymour, Mr. George Vandenhoff, Mr. Mead, and Mr. Toole, is full of promise.—The PRINCESS' is advertised for re opening on the 9th, with a new drama in which Mr. Ryder will enact, it is said, the hero.—Mr. Brooke's final appearances at DRURY-LANE are announced for Monday next.—At ASTLEY'S the "Siege of Silistria" is in preparation.—The MARYLEBONE reopens, under the direct management of Mr. Wallack, on the 7th. In an address to the public, the conductor states that "the proprietor has caused alterations and improvements to be made in the building, particularly in relation to the stage, which, by being extended to the depth of 115 feet, will now be the longest in Europe." The interior of the edifice is also described as being "magnificently ornamented in the manner of Louis and gold, upon a beautiful flake-white ground; the dome being repainted, and illustrated with figures and other devices of the finest French workmanship; and the chandeliers being throughout superbly decorated." The boxes also will be increased in number, a back circle having been added. The lessee promises moreover (to quote his own language) "to provide a home for the highest drama of England, and to encourage to the utmost the living proofs and witnesses of its indestructible genius. Not alone the plays of Shakespeare, and the purest dramatists of Britain will be illustrated, with all the resources of scenic and histrionic art within the power of the lessee to command, but entirely new and original dramas of the highest merit will, from time to time, be produced and placed on the boards with the same care and cost that it has lately been the wont to bestow exclusively upon revivals. Justice will be done to the living as to the dead, and no means left unattempted to raise the Victorian age, in its dramatic relations, to a level with the Elizabethan." These promises are in the true spirit.—At SADLER'S WELLS a gorgeous revival of Shakspeare's wildest of tragedies (if, indeed, it be Shakspeare's—touching which there are great doubts)—the tragedy of "Pericles, the Prince of Tyre," is in rehearsal. The appointments are expected to exceed all previous spectacular attempts at scenically illustrating the poetic drama, on the boards of this theatre, celebrated as it is for such enterprises. The character of the hero will be supported by Mr. Phelps; that of *Thaisa*, by Miss Cooper; and that of *Marina*, by Miss Edith Heraud.

LYCEUM.—Mr. Henry Russell will close his Entertainment this evening, after great success; he will forthwith visit Birmingham, Manchester, and Liverpool.

AN IRON THEATRE GOING TO AUSTRALIA.—Messrs. Edward T. Bellhouse and Co., of Eagle Foundry, are constructing a complete iron shell and framework of a spacious portable theatre, for Mr. George Coppin, who has engaged Mr. G. V. Brooke, the tragedian, to perform in the principal towns in Australia, for 200 nights, for which performances he pays Mr. Brooke the sum of £50 per night, or £10,000 for 200 nights! The portable theatre, with all fittings and appurtenances, will cost a sum exceeding £4000. The building contracted for by Messrs. Bellhouse, is eighty-eight feet in length, forty feet wide, and about twenty-four feet high from the ground level to the top of roof. As the floor level of the pit will be sunk about five or six feet below the ground level, there will be considerable altitude in the interior. The walls will be of cast-iron, supplied (Bellhouse's patent) and galvanised corrugated iron sheets, No. 18, wire gauge. The roof will consist of strong iron principals, having the galvanised sheets bolted thereupon. To the gable end of the building, which forms the front, will be attached an ornamental building, which will be arranged as box and pit offices, lobbies and entrances. The theatre will hold 2200. Messrs. Bellhouse have undertaken the complete shell of the building, the ornamental façade, and the principal framework of the interior; and have engaged to have the whole on board ship in London in about thirty days from the date of the contract.

MUSEUM OF ORNAMENTAL ART.—The Museum at Marlborough-house will be re-opened on Monday next. During the recess, the specimens have been re-arranged, and considerable additions have been made. The collection of arms from the Royal Armoury at Windsor will continue to be exhibited. An alteration has been made in the days of admission. [illegible] will be free [illegible] will be admissible with the [illegible] the schools in the metropolis to visit it subject to the Museum on the afternoons of Saturday

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Town-council of Edinburgh have agreed to confer the freedom of the city upon Sir William Molesworth, her Majesty's First Commissioner of Public Works.

Queen Christina arrived at Bagnères de Bigorre on the 19th inst., and slighted at Frascati, where her Majesty has engaged apartments for three months.

Mr. Macgregor, the Member for Glasgow, met a large number of his constituents on Thursday week, and addressed them, giving "an account of his stewardship."

His Royal Highness the Prince of Prussia was to leave Berlin on Monday, for Weimar; and, after a short visit there, will return to the Rhine.

Mr. Hume has been obliged to decline the honour of receiving the freedom of the city of Aberdeen at present, on account of a severe cold and sprain.

Mrs. Chisholm and her party of emigrants landed at Port Phillip on the 14th of July.

The King of Naples has sent to Paris several general officers to compliment the Emperor Napoleon, and to assist at the grand manœuvres about to take place at Boulogne.

The French Emperor has sent the Grand Cross of the Legion of Honour to Admiral Parseval Deschênes, by the hands of the officer who brought home the despatches of the capture of Bomarsund.

Mr. Robert Chambers, has, in a letter to the Edinburgh newspapers, repudiated all literary connection with the new edition of the "Lives of Eminent Scotsmen," published in parts, and stated to be "Edited by Robert Chambers."

His Excellency Count Walewski has returned to the residence of the French Embassy, Albert-gate-house, after an absence of some weeks on leave.

M. Pierre Soulé, of "Lone Star" celebrity, has arrived in Paris from Madrid, after having stopped on his way at Toulouse, Marseilles, and Castillon.

The first scene of the monument to the late Mr. O'Connell was laid on Saturday, by Sir John Power, in Glasnevin Cemetery. There was no public display on the occasion.

The young King of Portugal, having finished his grand tour of the European Courts returned to Lisbon on the 15th inst., and was received by his subjects with every mark of enthusiastic loyalty.

The Hon. Charles Murray, C.B., the newly-appointed Minister to the Shah of Persia, vice Colonel Shiel, has arrived in town from Berne, where he lately filled the post of resident Minister. The hon. gentleman, who is on the eve of departure for Teheran, via Overland route, is to have a salary of £5000 per annum.

Prince Poniatowski, who lately resigned his post of Tuscan Minister at Paris, is about to receive letters of "grand naturalisation," and to be attached to the person of the French Emperor.

His Highness the Maharajah Duleep Singh is at present on a tour in Scotland.

Lablache, Mdlle. Tédesco, Ronconi, and De Bassini have taken their departure for St. Petersburg.

The Queen of Spain and her Royal offspring left the capital of Spain on the 17th for the Palace at Prado, change of air being recommended by the physicians for the infant Princess.

Professor Low has felt it necessary, from infirm health, to tender his resignation of the Chair of Agriculture in the University of Edinburgh, which he has held since 1831.

The King of Naples has conferred on the Cardinal Archbishop the Grand Cordon of St. Januarius, as a mark of distinction for his zeal and devotedness during the raging of the cholera.

The Elmton estate has been purchased by the Duke of Portland for £80,000.

The vacancy in the Rectorship of the Edinburgh Academy, occasioned by the resignation of the Rev. Dr. Hannah, has been filled up by the appointment of the Rev. James Stephen Hodson, M.A., of Balliol and Merton Colleges, Oxford, son of the Archdeacon of Stafford.

A Liverpool house is about to run a line of screw steamers between New York and Havre, and will be prepared to commence on the 15th of November

The Rev. Mr. Livingston has succeeded in accomplishing the arduous and dangerous task of crossing the Continent of Africa.

Miss Blanchard, a medical graduate of Cleveland College, Ohio, has been refused permission to visit the female wards of the Glasgow Royal Infirmary.

The Government of Electoral Hesse has forbidden roulette gambling at the baths of Reinndorf, where great numbers of persons, principally Hanoverians, collected, especially upon Sundays and holidays.

The Professorship of Natural History in the Queen's College, Cork, is vacant. Testimonials from candidates will be received at the Castle up to the 22nd of October.

The electric telegraph in India is to be carried through to Burmah; and a line run from Rangoon to Pegu and Tounsoo, and along the frontier to Meadey. The telegraph cable has already been carried across the Bras; another will shortly be ready for the Sutlej.

The Russians have established on the coasts of the Crimea telegraphic lines in communication with the principal telegraph of Sebastopol.

A Mr. C. De Vries has undertaken, for the Dutch Government, a monthly steam communication with the whole of the Dutch settlements in the Eastern Archipelago, for a period of five years.

The instalment of £300,000 paid on Friday, last week, on account of the Turkish loan, is already on its way in sovereigns to Constantinople.

The Pontifical Government has contracted a loan of about £950,000 with the house of Rothschild, for the withdrawal of paper money.

The Pope's "apostolic delegate" (Dr. Cullen), has appointed the first Sunday in October (to-morrow) for a general collection towards the fund now raising for the establishment of a "Catholic University" in Ireland.

Intemperance appears to be on the increase in Cork. It is stated that the number of public-houses in the city is not far short of 600, which is considerably over the average in comparison of its population.

The publication of books in the Hebrew language is forbidden throughout Russia, unless each volume be stamped by the Censors.

Kelso is now restored to its ordinary quiet state, and the whole of the Edinburgh police have returned to their proper sphere of duty.

The cultivation of opium in Bengal is still increasing. The produce of 1853-54 will, according to the Indian papers, amount to 58,000 chests.

A number of persons in Maine, chiefly females, in the vicinity of the burning forests, became insane, thinking that the final conflagration predicted by the Millerites, had begun.

The Museum at Marlborough House is to be opened on Monday. During the recess the specimens have been re-arranged, and considerable additions have been made. The collection of arms from the Royal armoury at Windsor, will continue to be exhibited.

The Spanish Government has published an order forbidding any other than electors to take part in election meetings, and limiting their discussions to electoral matters.

The Irish reapers are now returning from England, where there have been fewer of them than usual this year. They state that they have received better wages than heretofore in England—in many instances, equivalent to 5s. per day.

The *Catherine Augusta*, a vessel of about 400 tons, sailed from New York on a secret expedition. She was loaded with a large number of muskets and ammunition, and had rather a suspicious sort of crew.

During the past year the Bible Society has circulated, at home and abroad, 1,767,328 copies of the Scriptures; making the total issues since the formation of the society to amount to no less than 27,938,381 copies.

The town of Schastianberg, in Bohemia, was almost entirely burnt down on the 16th. The fire was caused by some children who had been playing with lucifer matches, near a quantity of straw.

The seamen of Shields and the northern ports have given notice to the owners that on and after the 1st of October, they will not sail unless the London coal trade will be raised to 5s a voyage.

The cholera has carried off at Barcelona 6000 persons, or nearly five per cent of the whole population, which is 123,000. In London the mortality has not been one-third per cent.

The town of Daroca, in Arragon, which contained 2300 inhabitants, has been destroyed by an inundation, caused by the bursting of a waterspout, formed in the neighbouring lake of Gallocanta.

The report which has appeared in one or two papers that the 46th Regiment intended to send forth a pamphlet in its own defence, is contradicted on authority.

Even the highest mountains are not refuges from the cholera; a German missionary has died of the disease in the Nellgherries, eight thousand feet above the sea level.

A Russian merchant has made a present of 8000 pictures of saints for the use of the blockaded Baltic fleet.

CHESS.

TO CORRESPONDENTS.

CHESSMEN-RUBIS.—The blank diagrams, sold by Messrs. Kent, Paternoster-row, are, we believe, 10s. a thousand, or 5s. a hundred.

W. H. H.—We have not space to answer questions about Draughts.

H. W. F.—They shall be inserted.

AGED ONE.—Your analysis of the Variations we gave last week is very imperfect. After your 16th move, 16—16. B takes Kt., you give White the terrible move of Q takes B, or K takes Q; overlooking the palpable one of—16. B to K 7th (ch), which wins easily.

M. P.; ESSEX, and Others. We shall probably continue the extracts from "Greco's" MS. next week, and, at the same time, commence a series of beautiful studies, which have been some time in preparation from Carlo Cecio's rare treatise.

*** Great press of matter obliges us to postpone the ends part of the Answers to Correspondents until next Number.

R. T. S., Leeds. The Correspondent at Exeter will take place, we are informed, on the 25th and 26th of October. For full particulars, applications should be made to the Honorary Secretary, A. H. Philpworth, Esq., Exeter-house, Exeter.

ALPHA.—You will find a list of British Chess clubs, with their times and places of meeting, on the wrapper of the *Chess Player's Chronicle*.

SOLUTIONS OF PROBLEM NO. 552, by Clerury-Rarls, Peasburn, A. K., Tyne, So. S., Mona R. W. F., are correct.

SOLUTIONS OF PROBLEM NO. 553, by R. F., Royal Artillery; J. P., School, are correct. All others are wrong.

SOLUTION OF PROBLEM NO. 552.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q R 6th	P moves	2. R takes P	Kt takes B or P
2. B to Q B 7th	P to Q 3rd (best)	4. R discovers mate.	

SOLUTION OF PROBLEM NO. 553.

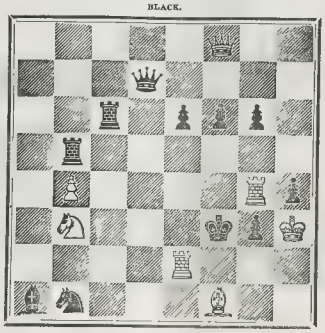
WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q Kt 7th (ch)	B takes Kt	2. Q to K 4th	B takes Q, or anything.

And Mate follows obviously, in two more moves.

PROBLEM NO. 554.

By Mr. W. GRIMSHAW.

[This clever position was one of the competing Problems for the Tourney Prizes.]



WHITE.

White to play, and mate in four moves.

CHESS IN THE PROVINCES.

The following very animated and interesting contest took place lately between Lord LYTTELTON and Mr. WILSON BIGLAND, two of the most promising amateurs of the day

(*Greco Piano*)

WHITE (Lord L.)	BLACK (Mr. B.)	WHITE (Lord L.)	BLACK (Mr. B.)
1. P to K 4th	P to K 4th	9. Q to Q Kt 3rd(d)	P to Q 4th
2. Kt to K B 3rd	Kt to Q B 3rd	10 Q takes Kt	P takes B
3. B to Q B 4th	B to Q B 4th	11. Castles	Q to Q 4th
4. P to Q B 3rd	P Kt to K B 3rd(a)	12. Q Kt to Q R 3rd	Kt to K 3rd
5. P to Q 4th	P takes P	13. K R to K sq (e)	Castles
6. P takes P (b)	B to Q Kt 5th (ch)	14. Q Kt to Q B sq	Kt to Q 3rd
7. B to Q 2nd	Kt takes K P (c)	15. R to K 5th	Q to Q B 3rd
8. B takes B	Kt takes B	16. P to Q 5th (f)	B takes P
		17. Kt to Q 4th	Resigns.

(a) The move of Kt to K B 3rd, in the defence of the Giuoco Piano opening, accepted now as the best possible defence for the second player, has been frowned back as far as Damiano, whose treatise was published in 1512. Damiano, however is no more entitled to be honoured or framing the Giuoco Piano debut than to the invention of the Gambit which bears his name. In the rarer and older work of Lucena, which is supposed to have been printed about 1495, we find both these openings. That under consideration being shaped as follows:

1. P to K 4th	P to K 4th	4. P to Q B 3rd	Kt to K B 3rd
2. Kt to K B 3rd	Kt to Q B 3rd	5. P to K 5th	P to Q 4th
3. B to Q B 4th	B to Q B 4th	6. B to Q Kt 5th &c.	

(b) An opinion appears to be fast gaining ground among good players, that taking the Pawn here is preferable to moving Pawn to K 5th.

(c) Undivised. He should have taken the Bishop, giving check, and then have thrown forward the Queen's Pawn to Q 4th

(d) He might as we have taken the K P P with his Bishop, checking, and then have played Q to Q Kt 3rd, &c.

(e) Q. Kt to Kt 5th looks a more business-like move, though Rook to K sq has its merits.

(f) This is neat and conclusive, for Black must lose his Bishop at least.

BETWEEN THE SAME PLAYERS.

(*Evans's Gambit declined.*)

WHITE (Mr. B.)	BLACK (Lord L.)	WHITE (Mr. B.)	BLACK (Lord L.)
1. P to K 4th	P to K 4th	15. Q takes P	Kt to K Kt 5th
2. Kt to K B 3rd	Kt to Q B 3rd	16. Q to K Kt 6th	K to R square (ch)
3. B to Q B 4th	B to Q B 4th	17. Q to K R 5th (ch)	K to Kt 2nd
4. P to Q Kt 4th (a)	P to Q B 3rd	18. K Kt to R 4th	K Kt to R 3rd
5. Castles	Kt to K B 3rd	19. P to R B 4th (d)	Q B to K Kt 6th
7. P to Q 3rd	P to K R 3rd	20. Q Kt to K B 2nd	B takes Kt (ch)
8. Q B to K 3rd	P to Q 3rd	21. Kt takes B (ch)	Kt takes Kt
9. Q to Q 2nd	Castles (b)	22 Q to K Kt 4th(ch)	K to R square
10. Kt to Q B 3rd	Q Kt takes P	23. K R to B 3rd	Kt to K Kt 2nd
11. P to Q R 4th	B to Q R 2nd (c)	24. K Kt to R 3rd (ch)	K to R square
12. Q Kt to K 2nd	P to Q B 4th	25. Q to K t 6th, and wins.	
13. Q Kt to K R 3rd	K B to Q Kt sq		
14. Q B takes R P	P takes B		

(a) The best move. If White play P to Q Kt 5th instead, Black answers with Kt to Q R 4th, and if his K Pawn be then taken, he retorts with Q to K R 3rd, and is master of the position.

(b) The height of temerity! But why encounter such danger needlessly? Why not have pressed himself from a perilous attack, doubled his adversary's Pawns, and have had the superiority of force.

(c) From this moment to the end, Mr. Bigland plays with great intelligence and accuracy. Every move is planned and timed with judgment.

UNPUBLISHED GAMES FROM THE GRECO MS.

(*In Altro Gambetto bello, con bella difesa.*)

WHITE.	BLACK.	WHITE.	BLACK.
1. P to K 4th	P to K 4th	6. Kt takes K Kt P	Q to K R 5th (ch)
2. P to K B 4th	P takes P	7. K Kt to K B 2nd	P to Q 4th
3. K Kt to K B 3rd	P to K Kt 4th	8. B takes Q P (b)	Q B to K Kt 5th
4. K B to Q B 4th	P to K Kt 5th	9. R takes B	And wins the Queen.
5. Kt to K 5th	K Kt to K B 3rd (a)		

(a) This move is inferior to playing Q to K R 5th, giving check, but it was famously so much so when adopted by the old Italian masters. According to the rules of White's Castling, which gave rise to a modified system in Italy however, it may be preferred. For a player would be pained to Castle on the open side, he attacked and confronted Piece or Pawn of an enemy.

(b) Variation. White to move.

9. P takes Q P	P to K 5th	11. Kt to B sq	P takes P (ch)
10. K to Q Kt 5th (ch)	P to Q B 3rd	12. K to K 4th	P takes B (ch)
10 P takes P	Q to K 2nd (ch)	13. K to B sq	P takes P (ch)
	(a)	And wins.	

CHESS ENIGMAS.

No. 887.—By H. B. C. of HOBOKEN, U.S.

White. K at Black's, Rs at K R 2nd and Q's 2nd.

Black. K at his 5th, Rs at his 5th and Q 8th.

White to play and win.

No. 888. By the SAME.

White. K at K R 2nd, Q at K 8th, Bs at Q 7th, Pawn K 4th and 7th.

Black. K at K B 2nd, Q at K 6th, Rs at K Rsq and Q R sq, B at K 4th, but at K B sq, Pawns at Q 2nd and K Kt 2nd.

White to play and mate in five moves.

NOTES OF A RAMBLER.—No. VI.

PERTH.

THE simple details of the changes that have taken place in the names of towns and streets in the United Kingdom would form a curious history, and the research would be of considerable interest to the patient investigator. In London alone the changes are almost incredible, the process of corrupt ion having been gradual. The names of streets were not, as now, legibly painted at every corner, but subject to the vicissitudes arising from imperfect articulation or treacherous memories; so that, in time, some word of similar sound superseded the original name, and resulted in the establishment of titles bearing no analogy to the original. How St. Olive-street should become Tooley-street; King Athelstane-street, Addle-street; Boulogne-Mouth-street, Bull-and-Mouth-street, are questions the solution of which we need hardly attempt while sauntering though the northern city of Perth.

Perth has, however, undergone many changes, even in its name, and seems to have cast her several designations with as much facility as the Cobra serpent slips its skin. Originally called St. Johnstown, or Johnstone, from the fact of a church, dedicated to St John the Baptist, being founded here at a very early period; and it is supposed to have being one of the first, perhaps *the first*, stone church erected in the kingdom. Subsequently it l st this name, and was called Bertha, a supposed corruption of Bhar-tatha, signifying in Celtic the Height of Tay. As the letters B and P are pronounced nearly the same in Celtic, the change from Bertha to Berth, and then to Perth, was not only easy but almost natural; although, as it now stands, no distinct meaning can be attached to the name.

The situation chosen is about the worst that could be adopted for an extensive city: it is a flat meadow-land, raised only a few feet above the level of the sea, so that anything like a proper system of drainage is next to impossible. The penalty attending the choice of the locality has often been paid by the populations. On several occasions the plague was invited, and, in 1645, its ravages were so great that 3000 of the inhabitants fell victims to it. Should the cholera travel as far north as Perth, I will find a stronger atmosphere ready to receive it if there be any relation between insufficient sewage and the presence of that mysterious disease. To have chosen the flattest and worst locality in the neighbourhood, when so many sloping and undulating grounds are lying adjacent, is one of those evidences of mistaken judgment that cannot well be explained.

But for its historical associations, there is very little in Perth worthy the attention of the visitor. Being the capital of Scotland until the reign of James III., it almost necessarily became the scene of many bloody encounters. When might was the only recognised right, it need not surprise us to find that here sundry Kings and nobles were, by jealous friends or ambitious foes, barbarously butchered. The contiguity of many feudal castles clustering round the centre palace of Scone, and the animosities engendered by the favour of the Monarch being manifested to any one clan in particular, to the exclusion of the others, led to a condition of society by no means admirable, nor likely to cherish those devotional principles for which their ancient Church was originally founded and intended to communicate. Here, however, stands the fine old Church of St. John; and here John Knox thundered forth his anathemas against Popery. To the stirring eloquence of that wonderful man working on the poetical temperaments of the people of Perth, and exciting a number to unite and march on Edinburgh, it is said we are chiefly indebted to the bloodless settlement of the Reformed Faith in Scotland.

We visited with deep interest the North and South Inches, so celebrated in the works of Scott. The former so frequently the theatre of desperate deeds of daring, was now almost covered by a multitude of youths and children enjoying their various games; while nearer the Tay were the lasses busy folding the clothes, which earlier in the day we presume they had been washing in or near the river. Passing through the length of the city to the South Inch, we came upon the status of Sir Walter Scott, which possesses no great merit; and the only structure having any claim to architectural taste, is the group forming the County Buildings The North Inch is open, and well arranged for the purposes to which it is adapted the healthful recreation and enjoyment of the people. The South Inch has pleasant walks and shady avenues equally well adapted for the purposes to which it seems to be devoted. The North Inch may be the Court side or end of the town; the South is as evidently the courting end of the city. Here are no boisterous shouts of merriment, no loud laugh at the issue of a well-conceived and quite successful practical joke; but the scarcely audible whisper, requiring heads to come in close proximity before the sense can be clearly apprehended, if indeed that be possible, when we understand the general absence of mind described as peculiar to people in this tantalising condition of loving truly, and yet being ashamed to speak. Having no desire to disturb the meditations of the few couples, who, by the consent of the town seemed to have conferred upon them the beautiful meadow, we turned towards the river, and half expected to discover a notice to the effect, "that from seven until nine of the clock of the evening the South Inch of this ancient city is devoted to the development of the sacred duties of the heart;" and why not? If one Inch is devoted to play, why should not the other Inch be understood to be devoted to love? Much convenience might result from the adoption of such an arrangement. It would save many blushes to some, and a world of trouble to all. The desire to walk on the South Inch might be considered as approaching within one inch of the altar, and equivalent to asking the size of the third finger. We offer these hints to the citizens, with the full persuasion that we shall be unanimously supported by the fairest portion of the population of that fair city. Here, for the first time, we witnessed the plan of netting, or rather of attempting to net, salmon; but the water was too clear, and the fish were not to be caught. The result of the draught or haul was the source of much interest and some sporting speculation. Bonbons were betted with as much anxiety as if it had been a thousand pounds, and the issue the St. Leger Stakes, with all its accumulated honors.

Perth is said to have enjoyed at one time a considerable foreign trade, chiefly with the Baltic, the Netherlands, and the Mediterranean, but, the silting up of parts of the river and the consequent shallowness of the stream has greatly interfered with its success, and even led to retrograde. The parties interested hope to improve its condition as a port, by deepening the river. Looking at its situation and the much better position of Dundee as a port, we are of opinion that success in the attempt may be hoped for, but never can be fully realised. The genius of commerce will not allow it to be confined. It must be free and move down to expedient points, making at one part its depot, at another, merchants will seek the safer port, whatever may be the desire of interested parties. So long as Dundee marches on with the spirit of the times and enjoys the pressure of encumbering trade, she need fear no rivalry from Perth, and the people of Perth had better spend their money in draining their city than in the hopeless attempt of overmastering a position of certain and dangerous disadvantage. Of actual injury, perhaps, both towns may have spared enough to feed in one-tenth of the time by active operations, to send passengers in the direction in which their energies would be applied. The application of the "Perth City" had better bring their hopes on the proposed railways direct from railways on land, than on the futile and evasive one of reaching it by water.

Surely there are one hundred thousand here such as tanning, printing, shipbuilding, &c.—all of which are either vanished, or on the decline, or to be removed by the cause of trade; while Dundee, from its better position, remains to have great and progressive as Perth could, or could do: and should she succeed even in populating, as the town by the Census of 1851 gave reasonable corroborative evidence that she might, to support the opinions of a

RAMBLER.

LAUNCH OF THE AUSTRALIAN STEAM-SHIP "PACIFIC," AT MILLWALL.

PARIS FASHIONS FOR OCTOBER.

The autumnal season has arrived; and, during the day, whilst the sun shines, summer toilets are required; but in the evening they must be changed for the warmer dresses of winter. As yet there is not much novelty; and the fashions of last spring reappear in place of anything new. One garment only, which we mentioned in the spring, has become decidedly fashionable: it is a small round cloak, with a little collar, and trimmed only with a silk galloon to match. The colour is grey, of a dark or light shade, composed rather of black and white threads mixed, than of grey threads alone. The material employed for these cloaks is either *la peau d'agneau*, or *la petuche frisée*: they are lined with wadded silk. Scotch plaids are much worn; in different colours, mixed with white and black, with Scotch borders.

We have seen lately a new method of arranging the skirts of the dresses, which if adopted, would replace flounces; it consists of bands which reach from the waist to the bottom of the petticoat, at a short distance from each other, the whole of the petticoat being slightly puckered by these bands; they are of the same material as the dress, and are finished on each side with braid. The sleeves are trimmed to correspond, the bands being placed either lengthwise, and thus gathering the sleeves crosswise; or crosswise, and gathered in the opposite direction.

Braces are much worn as an ornament. They are narrow at the commencement, and widen towards the shoulder, descending on the back rather wider than in front, and finishing at the waist. When the body is made with basques, the braces continue to the edge.

The sleeves worn at present are nearly all formed of three puffings; in the gathers are placed little rows of ribbon, similar to those which ornament the bodies.

We have visited the shops, in order to find some great novelty for the winter; but we have only discovered some Scotch plaid satins, of vivid colours, similar to those worn last winter; also, some sarsenets of varied designs, and some new patterns evidently taken from eastern drawings.

For the under-sleeves we have noticed the *Manches Pompadour*. They are made either of muslin or net, and are composed of two large puffings, separated by a smaller one, through which a ribbon is run. they are trimmed with two flounces, either of lace or muslin embroidery; each flounce is headed by a small puffing, and two bows fasten the middle of the sleeve.

PARIS FASHIONS FOR OCTOBER.

PARIS FASHIONS FOR OCTOBER.

The *Manche Eugénie*, adopted by the Empress, is elegant and simple, thus uniting the two essential conditions for becoming fashionable. English embroidery for sleeves, collars, petticoats, &c., is now so common, that it is laid aside and replaced by satin-stitch by chain-stitch. The summer mantillas, for some time past, have been so made that they may suit the season which is advancing; the colour of the sarsenet is darker, and the open embroidery diminished.

White Crape and Blonde Bonnets, with pink feather flowers underneath, which are very becoming to the complexion. Grenadine shawl, with Scotch border and fringe. Dress with large plain dark stripes—a pattern woven in the light stripe of the same colour, and composed of detached bouquets, or of a long wreath. The dark colours most worn are chestnut, which is very fashionable, as are also violet, green, and black.

THE ILLUSTRATIONS.

Sarcenet Bonnet, with a feather, the inside trimmed with flowers; collar embroidered in satin-stitch, with long points. There is a great tendency to exaggerate the size of the collars, which should be avoided. Dress of chestnut-colour sarcenet, with three flounces, ornamented with a velvet pattern, woven in the silk; it follows the points of the flounces; in each point there is a small velvet bouquet. We have seen another dress with this little bouquet in coloured silk as well as the pattern which borders the flounces; the sleeves, opened at the inside seam, are formed with points similar to the flounces, and have the same border under-sleeves, in muslin.

Bonnet of Rice-straw and Blonde; poplin dress, with wide stripes; sarcenet scarf-mantilla, ornamented with stamped rounds, and trimmed with guipure or net; the material of the mantilla being fastened together

LAUNCH OF THE AUSTRALIAN STEAM-SHIP "PACIFIC."

A splendid paddle-wheel steam-ship, called the *Pacific*, was launched, on Saturday last, from the building-yard of Messrs. Scott Russell and Co., Millwall, under circumstances of great interest, from her being entirely owned by a Colonial company, and their expectation that she will prove one of the fastest vessels afloat. Her dimensions are as follows:—Length over all, 270 ft.; ditto between perpendiculars, 250 ft.; breadth, 32 ft.; depth, 24 ft.; tonnage, 1300 tons. The engines are oscillating, of 450 horse power nominal, working up to more than 1000 effective horse power. There are four independent boilers, and the ship is propelled by feathering paddle-wheels of enormous strength. It is expected that she will realise a speed of at least sixteen miles an hour at sea, under steam, without the aid of her sails. She has two large decks for passengers, and a saloon more elegantly decorated and finished than any similar vessel in this country.

The *Pacific* has been built for a few enterprising individuals in Sydney

PARIS FASHIONS FOR OCTOBER.

THE TURKISH MUSEUM.—"THE HAREEM."—(SEE NEXT PAGE.)

and Melbourne, who, at the suggestion of Captain W. C Thompson, have formed themselves into a company, called the Sydney and Melbourne Steam-packet Company. This Company have already purchased four fine steamers to run between the above ports and Adelaide, and they empowered Captain Thompson to build for them this splendid steamer. It is a fact strongly characteristic of the energy and enterprise of this fast rising colony, that they require for their coasting trade vessels of a class equal, if not superior, in speed and appendour of equipment, to any of those employed on our own coasts. The *Pacific* will proceed to Australia under steam and sail. It is to be hoped that her prosperous trade may justify the enterprise of the Sydney and Melbourne Steam-packet Company. We understand she will have accommodation for one hundred first class passengers, and three hundred second-class, besides several hundred tons of cargo. The distance between Melbourne and Sydney is about six hundred miles, and it is calculated that the voyage will be accomplished in two days, and that the great speed of the *Pacific* will secure her a monopoly of the trade between these points.

The launch took place shortly before three o'clock, the company, a large number of whom were ladies, having been brought down from town a short time previously in two steamers, freighted by the builders for that purpose. The lines of this beautiful vessel, as she lay upon the stocks ready for launching, excited considerable surprise from their extreme sharpness, but it is understood that by this means very great speed can be attained, and her builders believe that she will prove one of the fastest vessels afloat. At about ten minutes past three the last shores were knocked away, and Miss Savage, the young lady by whom the ceremony of naming was performed, stepped up to the bows, from which a bottle of champagne was suspended, and dashed it against the vessel's side, naming her, at the same time, the *Pacific*. Straightway the vessel glided down the ways, gaining speed as she progressed, till she went crashing and surging, with her broken up cradle, into the water. The launch was a highly successful one, and, notwithstanding the crowded state of the river, not the slightest accident occurred; the *Pacific*'s paddle-box passing within a few feet of the bowsprit of one of the transports on the opposite shore, before she felt the influence of the tide. Her mould, and the light and graceful manner in which she sat upon the water, covered with the flags of various nations, were highly admired by the nautical gentlemen present; and it is worthy of remark that she was launched with the whole of her machinery, paddles, chimneys, &c., on board.

After the launch, the company sat down to an elegant luncheon. Mr. J. Scott Russell presided; and after "the Health of her Majesty," gave "the Navy and Army of England," with which the Chairman coupled "the health of Commodore Martin," observing that it was under the superintendence of that gallant officer that nearly all the provisions and *matériel* had been sent out with so much expedition and success to the Black Sea.

Commodore Martin having briefly responded to the toast, the Chairman then gave "Prosperity to the steam-ship *Pacific*," coupling with it the name of the young lady by whom she had been named, Miss Savage. The Company by whom the vessel had been built were all Australians, and were already carrying on a very successful trade between Sydney, Melbourne, and Adelaide, with four other steamers; and they had caused this vessel to be built with the intention of eclipsing, by her speed, all the vessels now out there. It was a very laudable ambition, but it yet remained to be seen whether her speed would be such as to enable her to accomplish this object. At present all they knew was that, whereas it was expected she would not draw more than eleven feet water when afloat, the result had shown that she did not draw more than nine feet eight inches at one end, and nine feet six inches at the other, so that their first anticipations had been more than realised. Her contract stipulated that she should have a minimum speed exceeding sixteen miles per hour, and from what he had seen that day he had not much fear upon that head.

Captain Thompson purposed taking the *Pacific* out to Australia, and he expected to make the shortest run out that had ever been made. He hoped, therefore, that as many as were anxious to visit the Colonies would avail themselves of this opportunity, as he would not be satisfied if he did not make the voyage in less than sixty days.

The toast was drunk with much enthusiasm; and Mr. Fairfax, one of the owners, returned thanks. The health of Captain Thompson followed; to which that gallant officer briefly responded.

Several other toasts were afterwards drunk; and, at the close of the festivity, the company were conveyed back to town in the steamers.

We understand that Mr. G. V. Brooke, the tragedian, will sail in the *Pacific* on the 30th of next month, for Melbourne.

SERIOUS ACCIDENT AT SHEFFIELD.

About two o'clock on Saturday afternoon a portion of the Castle Mills, situate in Blonk-street, belonging to Messrs. Wm. Parker and Co., gave way and fell to the ground with a tremendous crash. The first warning of the approaching desolation was the fall of a huge stone forming part of the hulls, which were afterwards destroyed. A large trough immediately followed, and then a quantity of ground blades. The whole of one long story of workshops on the north-west side of the building was seen to bend in the middle, and then come down with a frightful crash. Those working in that part of the building were buried beneath the fallen roof. Shovels, pickaxes, and crowbars having been procured, men set to work amongst the *débris*, and in the course of an hour eight persons were got out, more or less injured. The men continued to work away with vigour for some time longer, when it was at length discovered that no other parties were missing, and they desisted from any further search. The fallen building had contained twenty troughs, eighteen of which were at work. Different opinions exist as to the cause of the accident. Some believe that the foundations near the boiler gave way, whilst others conjecture that the superincumbent weight of machinery, throwing too great stress upon the iron girders which supported the brick arches, had brought the whole to the ground. The damage is variously estimated at from £2000 to £3500. A dray-horse was killed by the falling building.

ACCIDENT AT THE CASTLE MILLS, SHEFFIELD.

MR. MORRIS BARNETT.

This ingenious dramatist and artistic actor, has, within the last fortnight, repeated his meritorious performance of *Monsieur Jacques*, at the Adelphi Theatre, previous to his professional visit to the United States. His enactment of the *rôles* of "old Frenchmen" is unrivalled upon our stage; and, with a full recollection of Charles Mathews the elder, and Gatti, in *Monsieur Morbleu*, Mr. Barnett's talent in this line is not lessened in the comparison.

The idea of devoting himself to the dramatic profession first occurred to Mr. Morris Barnett, whilst leader of the orchestra at the French Theatre. He accordingly studied various models in the persons of Perlet, Potier, and Bouffé. Mr. Frederick Yates being then at Manchester, Mr. Barnett proposed to join his *troupe* at the Adelphi in the chorus, that he might become accustomed to the sight of an audience. After one season, he went to Brighton, as a comedian, and thence to Bath. Mr. Barnett was next engaged by Mr. Bunn for Drury-lane Theatre. His first hit was in a piece by Mr. Douglas Jerrold, entitled "The Schoolmaster," in which the impersonation of the character of *Tom Drops* earned Mr. Barnett universal praise. From this essay his dramatic career may be dated; it was followed by various successes in foreign characters the greatest *coup* being made in the farce of "Capers and Coronets." Mr. Barnett next wrote and acted "Monsieur Jacques," which created a *furore* at the St. James's Theatre, and was performed throughout the provinces with equal success. Mr. Barnett next appeared at the Princess's, under the management of Mr. Maddox. Mr. Barnett's impersonation of the *Old Guard*, at that theatre, will be

MR. MORRIS BARNETT, AS "MONSIEUR JACQUES"

remembered by an Illustration in our Journal. Mr Barnett then devoted himself to a literary career, and joined the *Morning Post*, to which journal he was attached for seven years. Of late years, he has applied himself to dramatic composition; and has produced several pieces which have attained more than ordinary popularity; amongst them may be mentioned, the "Serious Family;" "Serve Him Right," and the "Married Unmarried"—the latter, one of the successes of the last season, at the Princess's Theatre.

Mr Barnett's vivid impersonations of character will doubtless be relished by the playgoing public of the United States; and he has our best wishes for his success in his new field of action.

THE ORIENTAL AND TURKISH MUSEUM, HYDE-PARK-CORNER.

WE return to the Illustration of this beautiful Exhibition, for the purpose of Engraving one of its most characteristic scenes; namely, an Apartment of the Harem, or Saloon of Reception. It is a model, or, in theatrical phrase, a "set scene," and occupies the upper end of the gallery. It presents the interior arrangement of a Turkish apartment: the sofa is a general article of furniture; at the foot are placed mattresses, furnished with cushions, and these are called, by the Osmanlis, Erken-minderi, or seat of homage, where humbler visitors, or members of the family, are allowed to place themselves. The angles, or corners, of the sofas are regarded as the seats of honour; but the most honourable person in the company may, at his or her option, occupy any part of the couch—the most select place themselves on each side, according to their own rank. The servants are always present, and stand in a row, at the lower end of the room.

There are several windows on each of the three sides of the room, so as to permit a full view of the surrounding scenery while they are seated, for the Osmanlis are very fond of sunlight and the beauties of nature The windows of the harem are all furnished with close lattices, permitting those from within to see without being seen. The present saloon is in the more modernised style; the sofa is only on one side; European couches, chairs, tables, and mirrors being substituted for the other sofas; they also endeavour to imitate the Europeans in the style of the drapery, which are often of the most brilliant hues.

There is much social etiquette among the Osmanlis. A visitor is received according to her station in life, and after being announced is met by the lady of the house, with her suite, at the head of the staircase, or at the door of the saloon, or sometimes by merely stepping down from the sofa, as may be demanded by the rank of the guest.

The manner of salutation also varies, those of equal rank and age endeavour to kiss the hem of each other's garments, or to exchange temenahs. The temenah is a very graceful mode of saluting, and is made with the right hand, the fingers being first touched to the lips and then to the right temple. This temenah is used as frequently as "thank you" by the English, serving as an acknowledgment for all compliments and kind inquiries. After the visitor is seated, long chibouques with amber mouthpieces, set in diamonds, are offered by the slaves; after which, sweetmeats are served upon a silver tray, with goblets of water, and then coffee. Upon an intimation of departure, sherbet is served, after which the visit is terminated, and the guest reconducted in the same manner in which she was received.

The ceremony of a Turkish reception is here illustrated. A Kadun (wife of the Sultan) is supposed to pay a visit to Fatima Sultan, congratulating her upon her betrothal to the son of Redschid Pacha. The illustrious guest, having been duly welcomed, and conducted to the most honourable seat on the sofa, has been served with pipe and sweetmeats, and is about to partake of coffee.

Upon the right is Kuslar-lar-Aghasi (or Head Black Eunuch). This person was formerly so influential, that he ranked among the Ministers of State; but the eunuchs have now lost all their influence, and are merely the domestics of the palace. He is here represented in the ministerial robes of bygone dignity.

We should add that the costumes of the principal figures in this tableau are extremely elegant.

NATIONAL SPORTS.

From twice one hundred thousand throats, rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course, or more.
SIR FRANCIS DOYLE.

THERE never were fairer promises of a lovely autumn, and sportsmen of every kind and degree seem to be up and doing. Six racing fixtures are made for next week—to wit, Handsworth on Monday; Chester Autumn, Kelso, and Sherborne, on Tuesday and Wednesday; and the Yorkshire Union flunt and Wrexham, on Thursday and Friday. Chester is, as usual, paramount for the week, and is likely to continue likely to possess any extra attraction for a non-professional. Tramore (Ireland) has its steeplechase on Monday, and Warwick follows suit on the 18th. No meets have as yet been advertised; but cub-hunting has been remarkably successful everywhere, and foxes are said to be in lack of forced in the land. The Scotch coursers follow up the Ardrossan meeting, which begins this day, with the Biggar (Open), which is fixed for Tuesday, &c. The Border (Roxburchshire), and Aberdeenshire (Turriff) also stand for Tuesday; and it is said that the Scotch sportsmen, who would gladly course the year round if they could, are determined to have a good spell be ore any frost comes. Commemore (open), Cheshire, comes off on Tuesday and Wednesday; and the first of three great Huggate (open) meetings—at all of which Mr M'George is to judge—will gladden the Yorkshire lovers of long-tails on Wednesday, Thursday, and Friday. The ground is beautifully situated, near the Pocklington Wolds, but is rather more flinty than some coursing like. If the two all-aged stakes are full, another 16-dog stake will open, on the same principle. The Aquatic list for the next week is at present very light; and merely consists of a rowing-match between M'Carthy and Sheen, for £10 a side, from Putney to Mortlake; and another for the same distance, but for £25 a side, between T Pocock and Styles. The veterans Newell and W. Pocock row the same distance, for the latter sum, in November.

No fresh feat or serials have appeared in the sporting world of late, with the exception of a new Paris paper, entitled *Le Sport*. Out of compliment to *la belle alliance*, it Anglicises its phrases. Boxing is headed *la Boxe*; and it speaks of a horse having fallen from its high estate, "*pourné les cannons en l'air*." A Doncaster paper has put forward a novel plan to resuscitate the falling fortunes of the r Cup race It proposes that it should be ran two miles, and made a *limited handicap*: i e., three-year-olds to be handicapped b tween 7st and 8st., four-year-olds between 8st. 9lb. and 9st. 10lb.; and five-year-olds between 9st. 9lb and 9st. 9lb. This system has never yet been tried, and it seems very well adapted to bring first-rate and good second-rate cup horses together. It is said that Lord Derby offered 1000 sovs. for Knight of St. George this season; and the *Sporting Magazine* has a story about a believer in coincidences, who backed the Knight of St. George to win him £200 simply because he was "9" on the card, and because it was also nine years since an Irish-bred horse had won the St. Leger Lord Derby has made no sign, but a sort of semi-official intimation has been given, that John Scott intends to publish an Acrobat statement. His friends in the press seem puzzled how to explain away the matter, and some of them state that Acrobat's running, like many other horses, is very uncertain, and that he does not like a distance Unfortunately, he has run so true on every occasion but the St Leger, when the stable did not care to win with him, that the first theory is valueless; and the second one is answered by the fact that, in spite of most wilfully bad riding, he ran over the two-and-a-quarter-miles cup course at Chester without showing any symptoms of being a jade. Oddly enough, if the time test has anything in it, the Doncaster Stakes and Chester Cup were run at the same pace—viz, a mile in 1 min. 52 secs The stable have always a speculation on hand, and even spoke of him as being "*a mere hack by the side of Dervish*," that they will find the public rather hard of belief when they come forward with excuses for his poisoning himself as good a horse as Voltaire Newman can throw over the St. Leger distance at Newmarket on the Second October, or Houghton Meeting, would settle the question better than any "statement." It seems that Sam Rogers had a slight touch of the gout, and was unable to attend the sale at the latter place. The running at the Newmarket meeting of the present week has been a successful one, and both The Trapper and Alembic were lucky in meeting most wretched fields. Dirk Hatteraick's "head" defeat by Rambling Katie proves that he is like the rest of the Van Tromps—not very fast; but that he requires a distance. What with this filly and Clotilde, Lord John Scott has more luck with a small stud than any man on the turf. The hitherto unbeaten Bonnie Morn has at last been shot down by Riffleman, who thus gallantly confirms Mrs. Osbaldestone in her resolution not to sell him. It is said that this lady won £3000 on him at Good wood. West Australian is shortly to leave Whitewall for Kirkby Farm, near Tadcaster. His stud price will be fifty guineas, and his subscription limited to thirty. Muscovite still continues in good force for the Cesarewitch, and the Stockbridge Derby for 1856 has proved a successful experiment, and closed with fifty entries.

NEWMARKET FIRST OCTOBER MEETING.—TUESDAY.

Handicap Sweepstakes of 20 sovs. each.—Nathan, 1. Falcon, 2.
Eastern Counties Handicap.—Old Rowley, 1. Antaverta, 2.
Match; 100, h. ft.—Weathercock, 1. Bluebeard, 2.
Second Year of the Black Triennial Produce Stakes.—Alembic, 1, Hesse Cassel, 2.
Hopeful Stakes.—Clotilde, 1. Claret, 2.
Sweepstakes of 10 sovs. each. Duet, 1. Donald, 2.
Bucker ham Stakes.—Rambling Katie, 1. Dirk Hatteraick, 2.
Grand Duke Michael Stakes.—The Trapper, 1. Alembic, 2.
Match: 200, h. ft. Ferraria received from Farce.

WEDNESDAY.

Granby Stakes.—Benka, 1. Clove, 2.
Handicap 3 s sepsuakes 16 sovs each. Donald, 1. Refraction Colt, 2.
Sweepstakes.—Love's Young Dream, 1. Wild Mazyrelı, 1. Farx, 2.
Fifty Pounds.—Sharavogne, 1. Adine, 2.
St. Leger Stakes.—The Trapper, 1. Hesse Cassel, 2.
Third Year of the Fifth Triennial Stakes.—Talfourd, 1. Vandercken, 2.

THURSDAY.

Rutland Stakes.—Nina colt, 1; Tynemouth, 2.
Seventh Triennial Stakes.—Rifleman, 1. Bonnie Morn, 2.
Queen's Guineas.—Sharavogne, 1. Hex, 2.
Sweepstakes.—Crown Pigeon, 1. Guy Mannering, 2.

CHESTERFIELD STAKES.—TUESDAY.

Revival Plate.—Moonbeam colt, 1. Venessa, 2.
Scarsdale Stakes.—Lord John, 1. Middlesborough, 2.
Chatsworth Stakes.—Mortimer, 1. Rabgill, 2.
Innkeepers' Stakes.—Chorus, 1. Middlesborough, 2.

WEDNESDAY.

Chesterfield Stakes.—Mortimer, 1. The Deformed, 2.
Ladies' Stakes won by Middleborough.

NORTHALLERTON RACES.—THURSDAY.

Two-year-old Stakes.—Jack Sheppard, 1. Rystone, 2.
North Riding Handicap.—Braxey, 1. La Belle, 2.

FRENCH COURTESY.—In return for the compliment lately paid by England to her ally, by christening a man-of war *France*, it is intended to prefix the word *Grande* to the *Bretagne*, now building at Brest, a warsteamer of 120-horse power, which will, when finished, be the finest ship in the whole French navy.

NARROW ESCAPE OF EARL FITZWILLIAM.—As this nobleman now on a visit at Marske Hall, and the Rev. Mr. Wharton, were bathing in a heavy sea, just below the marine residence of Mr. Pease, of Marske (York), on Monday, one of his Lordship's attendants, also in the sea, was carried out of his depth. The rev. gentleman hastened to the rescue—being a first-rate swimmer—but was soon overpowered in the death grasp of the drowning man. Earl Fitzwilliam soon joined in the fearful struggle, and now a common fate for all three seemed inevitable. Mr. Pease's family and servants were alarmed, and one of them, James Wilson, dashing on horseback into the water, by swimming the animal and the use of ropes landed all safely. The hot bath at Cliffe-house and medical aid were immediately available. The servant was gradually restored, and the noble Lord and Mr. Wharton are recovering from the effects of this alarming incident. Save for the prompt aid of the horse and his rider, the result could not have been doubtful.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During the whole of the week the amount of business transacted in the Consol-market has been very limited; yet, in the absence of large purchases and sales, prices have been tolerably firm: indeed, the fluctuations have been only to a nominal extent. However, the supply of stock has certainly increased, without, however, leading to any desire on the part of the Bears to operate, as they are waiting for further details of the progress of the Allied armies in the Crimea. There has been a good demand for money, and the discount market has continued rather tight. The various failures have created caution on the part of the private bankers in making advances; and the lowest rate at which even the best bills have been discounted is 4½ per cent. Bill-brokers in general are, by no means, largely supplied with bills, but the discount houses which of late heavy imports of bullion have been taken for the Continent and India; and it is stated that the amounts subscribed for in the Turkish loan are being forwarded to Constantinople by the Oriental Bank.

The week's imports of bullion have amounted to £4c0,000 from America, £250,000 from Australia, and £80,000 from other quarters. Amongst them are about £400,000 in English gold.

The Consol Market on Monday was very inactive, and prices showed a tendency to decline. Three per Cents were done at 91¾ to 95 for Money, and 91¾ ⅜ for the Account. Bank Stock was done at 22½. India Stock, for the Account, 259. Exchequer-bills were 6s. to 9d. premium. Exchequer-bonds, 1858, 99¾; Ditto, 1859, 99¾. On Tuesday business was very restricted, and the Three per Cents touched 95¾ to 95. Consols for Account, were 95¾ ⅜; India Bonds, 7s premium; Exchequer-bills, 6s. to 9d. premium; and Exchequer-bonds, 1858, 99¾. On the following day the Three per Cent Consols marked 95⅝ to 95⅞ for Money, and 95¾ ⅜ for the Account. Long Annuities, 1860, reassed 4 9-16; Exchequer-bills, 6s. to 9d. premium; Exchequer-bonds, 1858, 99¾; Ditto, 1859, 99¾. On Thursday the Consol Market was very quiet. The Three per Cents were 95 to 95¼ ⅛ for Transfer, and 95¾ ⅜ for the Account. Exchequer-bonds were rather lower, they being quoted at 99, to-day's prices. Exchequer-bills were 9½.

Our accounts from the provinces state that trade generally is dull.

As regards the Foreign-house, we may observe that it has continued dull, and that prices have further declined. The following are the leading quotations: Mexican Three per Cents, 24¾; Peruvian Four-and-a-Half per Cents, 70¾ ex div.; Portuguese Four per Cents, 40¾. Russian Four-and-a-Half per Cents, 89; Spanish Three per Cents, 37¾; Ditto, New Deferred, 18¾; Turkish Scrip, 9½ prem. ex. new; Brazilian Five per Cents, 101; Buenos Ayres Six per Cents, 86; Danish Five per Cents, 102; Granada Deferred, 6; Mexican Five per Cents, 88¾; and Belgian Four-and-a-Half per Cents, 91¾.

There has been a steady, but by no means active, market for Joint-Stock Bank Shares. The following are the prices that have been supported:—Commercial of London have marked 31¾; London Chartered of Australia, 7⅞; London and Westminster, 40¾; Provincial of Ireland, 50; Union of London, 52⅞. Miscellaneous Securities have been dull; yet we have very little change to notice in the quotations:—Australian Agricultural, 49⅞; Canada, Six per Cent Bonds, 110¾; Crystal Palace, 2⅞; Peninsular and Oriental Steam, 61; South Australian Land, 2⅞. In Canal shares, very little has been doing, as follows:—Ashton and Oldham, 156; Coventry, 209; Derby, 80; Grand Junction, 57; Grand Surry, 48; Leicester, 68; Loughborough, 67⅝; Macclesfield, 51¾; Neath, 105; Oxford, 110; Regent's, 16; Rochdale, 60; Stafford and Worcester, 107; Stourbridge, 285; Severn and Wye, 24; Warwick and Birmingham, 27⅛; Worcester and Birmingham, 27⅝. Water-works Shares have realised full prices:—Berlin, 3; East London, New, 1¾ prem.; Grand Junction, 73; Kent, 80; Lambeth, 97; New River, 85; West Middlesex, 102; Southwark and Vauxhall, 88; Spanish Three per Cents, 37¾; Ditto, New Deferred, 18¾; Turkish Scrip, 9½ prem. ex. new; Brazilian Five per Cents, 101; Buenos Ayres Six per Cents, 86; Danish Five per Cents, 102; Granada Deferred, 6; Mexican Five per Cents, 88¾; and Belgian Four-and-a-Half per Cents, 91¾.

There has been a steady, but by no means active, market for Joint-Stock Bank Shares. The following are the prices that have been supported:—Commercial of London have marked 31¾; London Chartered of Australia, 7⅞; London and Westminster, 40¾; Provincial of Ireland, 50; Union of London, 52⅞. Miscellaneous Securities have been dull; yet we have very little change to notice in the quotations:—Australian Agricultural, 49⅞; Canada, Six per Cent Bonds, 110¾; Crystal Palace, 2⅞; Peninsular and Oriental Steam, 61; South Australian Land, 2⅞. Water-works Shares have realised full prices:—Berlin, 3; East London, New, 1¾ prem.; Grand Junction, 73; Kent, 80; Lambeth, 97; New River, 85; West Middlesex, 102; Southwark and Vauxhall, 88; Spanish Three per Cents, 37¾; Ditto, New Deferred, 18¾; Turkish Scrip, 9½ prem. ex. new; Brazilian Five per Cents, 101; Buenos Ayres Six per Cents, 86; Danish Five per Cents, 102; Granada Deferred, 6; Mexican Five per Cents, 88¾; and Belgian Four-and-a-Half per Cents, 91¾.

The returns of the circulation of the Private and Joint Stock Bank Shares in England and Wales for the four weeks ending on the 2nd inst., show an average weekly circulation of that period of £6,326,983, or a decrease on the month of £114,772. These banks are now below their fixed issues, at £1 264 949.

The settlement of the half-monthly Account in Shares has produced some heavy ness in the Market for Railway Stock, and prices have not been supported. The following are the official closing money prices on Thursday.

ORDINARY SHARES AND STOCKS.—Caledonian, 85; East Anglian, 1⅝; Eastern Counties, 2¼; East Lancashire, 67; Great Southern and Western (Ireland), 91¾; Great Western, 71⅞; Lancashire and Yorkshire, 70⅞; London and Blackwall, 8¾; London and Brighton, 102¾; London and North-Western, 101; London and South-Western, 86; Midland, 69¾; North-Eastern, G. N. E. Purchase, 99; Ditto, York, 86; South Eastern, 62¾.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 98; Hull and Selby, 102.

PREFERENCE SHARES.—Caledonian, 99; Chester and Holyhead 5¾ per Cent, 17¾; Great Northern, 5 per Cent, 106½; Ditto, 4¾ per Cent, 99¾; Great Western 4¾ per Cent, 97; Ditto, Birmingham Stock, 73¾; South Eastern, 7½.

FOREIGN.—East Indian, 22; Great Luxembourg, Obligations, 3
Mining Shares have been very dul. and drooping. On Thursday, St. John del Rey were 28¾; Bristol Iron, 8; Rhymney Iron, 22.

THE MARKETS.

CORN EXCHANGE, September 25.—To-day's market was moderately supplied with English wheat. Select samples were in fair request, at full prices but other kinds met a slow sale, and late rates were only supported. About an average per cent was transacted in foreign wheat, at last week's currency. Floating cargoes were steady. Grinding barley moved off freely, and, in some instances, the quotations had an improved tendency. Other kinds of barley were dull Malt sold slowly at late rates. The demand for oats was inactive, yet prices were supported. Beans and peas moved off steadily, at extreme rates. No change in the value of flour.

September 27.—The amount of business doing in to-day's market was limited, to-day, at M. nday's currency.

English Wheat, Essex and Kent, red, 52s. to 53s; ditto, white, 57s to 72s; Norfolk and Suffolk, red, 52s. to 56s.; ditto, white, 54s. to 58s.; rye, 37s. to 39s. to 40s.; grinding barley, 23s. to 24s.; distilling ditto, 25s. to 26s.; malting ditto, 27s. to 30s.; Lincoln and Norfolk malting oats, 27s., brown ditto, 25s. to 26s.; Scotch and Waterford potato ditto, 24s. to 25s.; Yorkshire and Lincolnshire feed oats, 21s. to 24s.; potato ditto, 23s. to 25s.; Yorkshire and Cork, black, 19s. to 20s. ditto, white, 23s. to 28s.; Irish beans, 41s. to 43s.; grey peas, 34s. to 37s.; maple 38s. to 40s.; white, 41s. to 45s.; boilers, 42s to 47s per quarter. Townmade flour, 50s. to 52s.; Suffolk, 45s. to 48s. Stockton and Yorkshire, 45s to 47s.; country marks, 40s to 43s.; American, —s. to —s. per 196 lbs.

Norfolk.—Fine new changed hands steadily, at 52s. per bushel. Hempseed is rather dearer. Other seeds are a slow sale.

Lincoln, English, sowing, 56s. to —s.; Baltic, crushing, 38s to 40s.; Mediterranean and Odessa, 60s. to 62s.; linseed, 42s. to 44s. per quarter. Coriander, —s. to —s. per cwt. Brown mustard seed, —s. to —s.; white ditto, 7s to 8s. 6d.; and winter tares, 12s. per bushel. English rapeseed, £36 0s. to £39 per last of ten quarters. Linseed cakes, English, £9 0s to £9 5s.; ditto, foreign, £9 10s. to £11 10s. per ton. Rapeseed cakes, £5 0s. to £6 10s. per ton. Canary, 40s. to 50s. per quarter. English clover seed, white, —s. to —s.; red, —s. to —s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8d. to 9d.; of household ditto, 7d. per 4 lb. loaf.

Imperial Weekly Average.—Wheat, 52s. 9d.; barley, 31s. 2d.; oats, 24s. 7d.; rye, 34s. 11d.; beans, 41s. 6d.; peas, 37s. 9d.

The Seven Years' Average.—Wheat, 59s. 9d.; barley, 31s. 5d.; oats, 27s. 0d.; rye, 36s. 5d.; peas, 38s. 4d.; beans, 39s. 8d.

Liverpool Corn Market, Sept. 25.—Wheat, 58s. 9d.; barley, 31s. 6d.; oats, 25s. 6d.; rye, 34s. 6d.; beans, 41s. 6d.; peas, 37s. 6d.

Manchester Corn Market, Sept. 25.—Wheat, 58s. 9d.; barley, 31s. 6d.; oats, 25s. 6d.; rye, 34s. 6d.; beans, 41s. 6d.; peas, 37s. 6d.

Aylesbury Market, Sept. 25.—Wheat, 58s. to 64s.; barley, 31s. to 34s.; oats, 24s. to 26s.; beans, 38s. to 40s.; peas, 36s. to 38s.

Beef.—The demand for all kinds has fall n off, yet we have scarcely any change to report in the quotations. Coarse ordinary sound cattle 10½d per lb.

Mutton.—Our market has continued flat, but we have no further decline to notice in prices. Inferior sheep have changed hands at 4s. 8d. to 5s.; good, 5s. to 6s.; prime, 6s. to 6s 2d.; Scots, 5s. to 6s.; fine yellow specimens of Downers, 6s. 2d. to 6s. 4d.; and extra Cheviots, 6s. 6d. to 6s. 8d. per 8 lbs.

Veal.—Inferior, 4s. to 4s. 6d.; middling, 4s. 8d. to 5s.; prime, 5s. to 5s. 4d.; and extra, 5s. 6d. to 6s. per lb.

Pork.—Inferior, 4s. to 4s. 6d.; middling, 4s. 8d. to 5s.; prime, 5s. to 5s. 4d.; and extra, 5s. 6d. to 6s. per 8 lbs.

Lard.—Prime, 6s. to 6s. 2d. per lb.

Coffee.—The general demand is inactive, yet good ord. ary Ceylon cannot be purchased under 47s. per cwt.

Tea.—There is less activity in the demand. Prices, however, are supported. Several large sales of Bohea have been withdrawn from auction, at from 10s. to 14s. per cwt.

Sugar.—The transactions in West Indian of Irish butter are limited, and the qualities are well supported. Foreign butter is dearer, and most kinds of English command rather more money. The bacon trade is quiet and mutton is inactive, and prices are rather drooping. Hams, lard, and cheese are very dull.

Tallow.—Our market has continued flat, but we have no further decline to notice in prices. Yellow candles have changed hands at 4s. 3d. to 4s. 4½d.; good, 4s. 6d.; brown 4s. to 4s.; fine yellow rendered Dementara, 38s. 6d. to 39s.; low to good, 33s. to 38s.; low to mild, 36s. to 37s.; fine mild, 38s. to 39s.; yellow, 35s. to 36s.; white, 41s. to 42s.; mauritius, 35s to 36s.; grainy yellow, 34s. to 40s.; white, 40s. 6d. to 42s.; and brown Mauritius, 32s. to 33s. 6d. per cwt. Town tallow is 6d. per cwt. Rendered scraps are scarce, at from 4½ to 4¾ per cwt.

Coffee.—The general demand is inactive, yet good ord. ariaCe

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—Under the Management of Mr. CHARLES KEAN. This theatre will OPEN for the season on MONDAY, OCTOBER 9, with a New Play, a Farce, and a Ballet.

THEATRE ROYAL, HAYMARKET.—MONDAY, OCTOBER 2, and during the Week.—In consequence of their great attraction the SPANISH DANCERS will repeat during the week, being positively their last engagement in London as they leave for the provinces on Monday the 9th inst. Mr. MUDGE, the Irish Comedian, every Evening in Her to Good Luck, and How to Pay the Rent.

TURKISH EXHIBITION and MUSEUM, 57, GEORGE'S GALLERY, HYDE-PARK-CORNER, Piccadilly (two doors from ELEVEN till TWELVE (Saturdays excepted, when it closes at SIX). Admission, 2s. 6d; Children, 1s. 6d. Season Tickets, 5s.; Children, 3s. 6d. Family Tickets for Five, 10s. Schools admitted at Half-price. Her Excellency and his Bond are engaged.

MR. CHARLES COTTON'S ENTERTAINMENT.—A VISIT to NELSON'S FLAG-SHIP "THE VICTORY," with Songs, Scenery, and Anecdote To conclude with a Glee by Purcell, to be sung by Mr. Lee Smith, Mr. Land and Francis. Open on MONDAY, OCT. 2, at the Pantechnicon Rooms, Newman-street, Oxford-street.

CALDWELL'S SOIREES DANSANTES.—DAILY EVENING, from Eight till Twelve. Admire on Gal[illegible] Ladies' Evening. Admission, 1s. Refreshments [illegible] Lessee, Robert Caldwell, Esq. [illegible]

NEW ADDITIONS.—Her Majesty, Isabella, Queen of Spain—Esperero—the Duchess of Kent—the Duchess of Sutherland—the Grand Turkey—the Emperor of Russia—MADAME TUSSAUD'S EXHIBITION, Bazaar, Baker-street, Portman-square. Admission, 1s. Napoleon Rooms, 6d

GRAND MILITARY GALLERY will OPEN on SATURDAY, 30th SEPTEMBER, at the Grand Hall of he Exhibition of the New Society of Water Colour Painters, No. 53, Pall Mall. Military Uniforms of the Army of the East, comprising Officers of the Army of Silistria, 1st Royal Regiment, Marvind St. Arnaud, Schamyl mounted on an Arabian barrer, an Spaniards of the Military Battalion of the Empe[illegible] French, Russian, Austrian, Turkish, Spanish, Italian Bashi-Bazouk, Italian and Turkish troops. Open daily from Nine to the Morning till Ten in the evening. Entrance, One Shilling.

THE MUSEUM of ORNAMENTAL ART, 9, MARLBOROUGH HOUSE, Pall Mall, will be OPENED for the Season on Monday, the 2nd inst. Admission on Mondays, Tuesdays, Wednesdays, and Saturdays (days [illegible] Spencer); and on Fridays the Museum is closed [illegible] Evening reading JOHN EDWARD PANTER, Secretary

INSTRUCTION IN ART, as afforded at the CENTRAL SCHOOL at Marlborough House, Pall Mall, London [illegible] The School consists of I. A NORMAL SCHOOL OF TRAINING TEACHERS and GENERAL INSTRUCTION. II. [illegible] ELEMENTARY INSTRUCTION [illegible] The Superintendent, RICHARD REDGRAVE, R.A. [illegible] The Instruction for Male students only, under [illegible] Master, Mr. [illegible] Mr. [illegible] Mr. [illegible] Class. [illegible] A Monthly Class for the [illegible] Female Students only, [illegible] Mistress, Miss [illegible] Mr. [illegible] Mr. [illegible] Mr.

CARMARTHEN TESTIMONIAL.

ON Thursday week, the borough of Carmarthen was the scene of a very interesting demonstration, in testimony of the high esteem in which the inhabitants hold the private worth and public career of one of their fellow-citizens—Mr. William Morris. The Testimonial is a superb piece of plate, which has been purchased by the subscriptions of the inhabitants of Carmarthen; and the presentation took place at a splendid banquet at the Ivy-bush Hotel—presided over by Mr. Lewis Morris, the Mayor. About 140 guests were present; and, after the customary loyal toasts had been drunk, the Chairman proposed the toast of the evening, the health of their friend, Mr William Morris. The toast was received with three times three, after which the Testimonial was brought into the room, and placed in front of the chair, amidst loud applause. The cheering having subsided, the Chairman, addressing Mr Morris, said—"I am deputed by 200 of your fellow townsmen to present to you this silver Epergne, of which they beg your acceptance, as a slight proof of the esteem you are held in by them and a testimony of their approval of your conduct during the several years you have acted as chief magistrate of this borough. Now, as the last favour conferred is generally the best remembered, they beg me to express their warm and unfeigned thanks for the very generous conduct pursued by you upon the opening of the South Wales Railway. The arrangements upon that occasion were so admirable, and the comfort of all parties so kindly and liberally and impartially administered to, that it was the opinion of all that nothing had been omitted or overlooked; and that the credit of this ancient town had been most nobly represented by you. I have known you, man and boy, for thirty years, and have with pleasure watched your progress as a public character, and am happy to be the exponent of your fellow-townsmen, who desire me to assure you that your able and active co-operation in all matters connected with the welfare of your native town meets their entire approval. In presenting you with this Testimonial, I cannot more aptly express the feelings of your friends than by reading the inscription, and fervently hoping, for them as well as myself, that the Great Disposer of human events will long spare you to your friends and relatives." The Chairman added that, in connection with the presentation of this Testimonial, he held in his hand a list containing the names of all the parties who had subscribed, and he begged Mr. Morris to keep this document, which would be seen by his children and those that came after him, who he trusted, would emulate his good example.

The protracted cheering which followed this address having subsided,

Mr. William Morris thanked the company in an address, in which he adverted to his efforts as a member of the Town-council. He had assisted in promoting the erection of a Market-place, and the establishment of a monthly market for the sale of live stock, which was second to none in the Principality, and which formed the source of no inconsiderable revenue to the borough. As guardians of the public health, the Council had energetically exerted themselves in the removal of nuisances; and he trusted that, by perseverance in the prosecution of public works of a beneficial character, and by obtaining a plentiful supply of water, they would, in future, secure the best guarantee against the attacks of that fearful pestilence, which, not very long ago, made its appearance in their town. Viewing these improvements in the light of a duty to their own preservation, as well as a duty to their poorer fellow-citizens, it afforded him infinite satisfaction, that, having been commenced during his Mayoralty, they had received the approbation of his fellow-townsmen. By following in the same course, he hoped their town would become—what nature intended it to be—the cleanest and healthiest town in the country. He attributed these advantages, in a great measure, to the absence of that party spirit which formerly divided, not only the Town Council, but the community. Mr. Morris sat down amidst loud applause; when

The Rev. W. Read rose, and added that the character of their guest had been commented on as the friend of commerce, of manufacturing industry, and of agriculture; but little had been said of the aid and support he had given to the cause of education, without which neither of the three important branches in question could well thrive. No educational movement had taken place in that district without receiving that gentleman's aid.

TESTIMONIAL PRESENTED TO WILLIAM MORRIS, ESQ., BY THE INHABITANTS OF CARMARTHEN

The health of the Chairman, the Mayor, was drunk with vociferous cheering; a variety of other toasts followed; and the festival was a scene of high enjoyment throughout.

The Plate is an Epergne of beautiful design, modelled by Mr. Alfred Brown, for the manufactory of Messrs. Hunt and Roskell, for Messrs. White and Sons, jewellers, of Carmarthen. The triangular base bears the arms of the Corporation of Carmarthen: Mr. Morris's arms and crest; and the following inscription:—

Presented to Mr. William Morris, by his fellow-townsmen, as a mark of their sense of the efficiency and liberality with which he discharged the duties of Chief Magistrate during the period of his Mayoralty in the years 1851, 2, and 3, and as a testimonial of their estimation of his public services and private worth. Carmarthen, April, 1854."

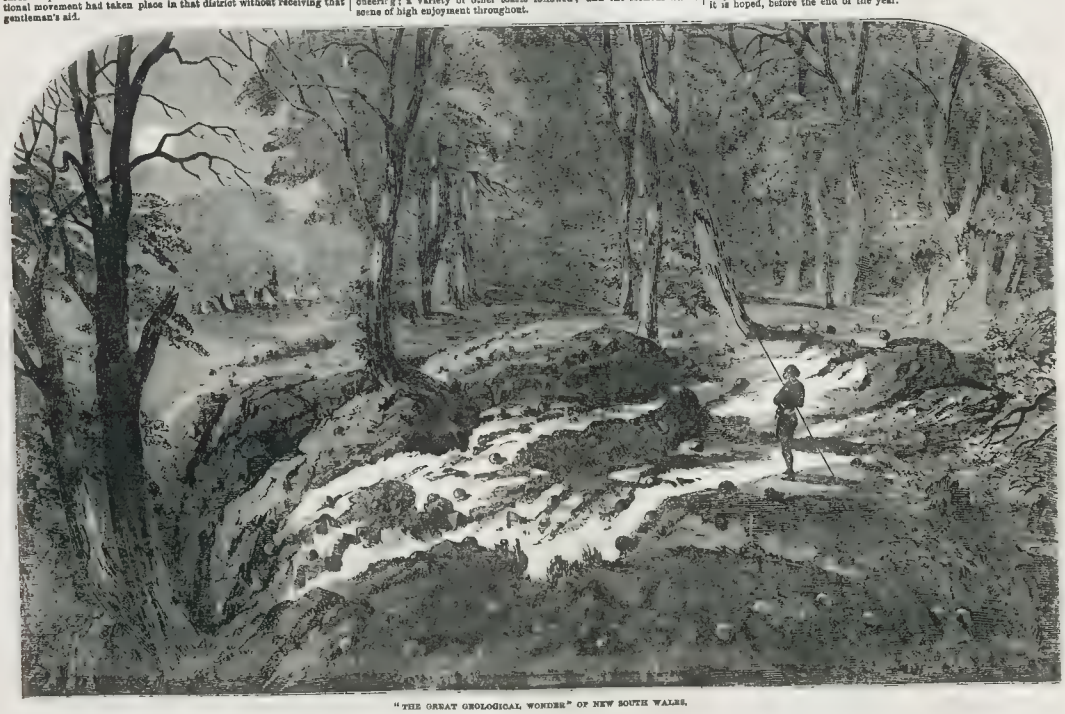
At the angles are emblematical devices of Justice, Commerce, and Agriculture. Standing on the base is a classically-designed figure of Minerva, with uplifted spear and extended shield, protecting Commerce and Agriculture; with accessories of a mural crown, the wand of Mercury, a reaping-hook, sheaves, cornucopiæ, &c. The three figures support a stem, which expands in arabesque scroll-work at top, supporting a cut-glass dish. The Testimonial weighs upwards of 200 ounces; and stands on a massive carved gnarled oak pedestal, designed and manufactured by Mr. John Davies; and the whole is inclosed in an elegant case of gnarled oak, made by Mr Isaac Davies; both of Carmarthen. It was placed for public inspection in the Council-chamber of the town-hall.

"GEOLOGICAL WONDER" IN NEW SOUTH WALES.

GEOLOGY has scattered over plains many a "wonder" for generations unborn; such as the scene here represented, which a Correspondent at Sydney (who has favoured us with the Sketch), describes as "one of the most remarkable and mysterious features in geology ever yet discovered." The moon has lent her mystic influence to the scene. The view is taken at the top of a cliff, where the rocks present all the appearance of having been shattered and battered by artillery. Here are globular pieces resembling the largest cannon balls; they are of grey granite with white centres. Some of them are half plunged into the mass of rock, and must have been thrown into their present position ages ago, when the granite mass, which is of a different colour and description, was in a soft state. Balls are to be found detached and scattered about, as well as fixed fast in the throats of fissures, and rent fragments, as if they had split them up. A clear fresh-water river runs past the bottom of the precipice, which is as high from the bed of the river as the highest part of the Tower of London. Altogether it reminds one of an impregnable natural fortress. On the opposite side of the river is an open valley of considerable extent, and the hills recede in beautiful perspectives until they fade away in blue lines on the horizon. An aboriginal guided our Correspondent, Mr. Robert Cook, to this extraordinary hill, and pointed out the granite balls to him; in return for which, Mr. Cook afterwards made this native a king, by presenting him with a brass breastplate having "King Jemie, Chief of Auchentorlie," tastefully engraved upon it.

THE FRENCH EMPEROR'S MILITARY BAND IN LONDON.—Arrangements are in course of completion for the conveyance of the Emperor's band, belonging to the Guides, to London, where it is intended to give a grand concert on behalf of the widows and orphans of the soldiers who may fall in the East. It is probable that the grand concert will be given at the Crystal Palace on an early day next month.

A TELEGRAPH IN TURKEY.—M. de La Rue, Guard-General of the Crown forests of France, being some time back on a mission in Turkey, the Sublime Porte requested him to prepare the draught of a proposal for the establishment of an electric telegraph from Constantinople to Belgrade by Adrianople, with a branch line to Rustchuk and other points of the Danube. M. de la Rue readily complied, and before long sent in a plan for the desired project. This plan, being submitted to the examination of a commission of competent persons, was approved of with some slight modifications; and the Sultan has since then given his sanction to the plan, by according the concession of the line to M. de La Rue and M. Edouard Blanque. The works are to be executed for a fixed sum, to be paid by the Turkish Government, and it is hoped, before the end of the year.



"THE GREAT GEOLOGICAL WONDER" OF NEW SOUTH WALES.

LITERARY MISCELLANIES.—No. XV.

THE UNINTELLIGIBLE SCHOOL OF POETRY.

WHEN the late Sir Robert Peel once flouted the Economic luminaries of a British House of Commons with "*Sir, what is a pound sterling?*" he was supposed to have asked a very difficult and profound question. Yet it admits of a scientific and satisfactory reply—a solution not forthcoming, it seems, or ready, when the problem was first thundered from the Treasury bench. But, puzzling as was that famous question, there is another equally noted, and far more perplexing, often asked, and hardly ever answered—a question, subtle, metaphysical, volatile, requiring for its solution a more nicely adjusted mental alembic—a question which has been the origin of a hundred controversies, and is the subject of numberless incompatible doctrines—fresh source every day of theories generally incomprehensible, and always insufficient, the truly irritating, and, perchance, to speak practically, needless or nugatory question, "*What is poetry?*" This question can be encountered, indeed, well enough by such replies as attempt no more than description; but a definition is an exploit of a different sort, not merely enabling you to recognise a thing by signs, but expressing all that its essence contains, and expressing it within distinct limits which exclude everything else. A description is the servant, not the substitute, of a definition, and often comes down to the door, with a more or less candid face, to tell you its master is "*not at home.*" Among the descriptions of what poetry is (without defining its constituent essence), perhaps Milton's is the best, where he says that it consists of noble

> Thoughts,
> Which voluntary move harmonious numbers.

We will not trouble Aristotle; we fear he would be rather astonished when he discovered why we speak of poetry at all at this moment. Whether Voltaire had one complete or orbicular idea of anything in heaven or on earth, we are really and truly at a loss to determine; but that he had most clear and trenchant ideas of parts and fragments of subjects is undeniable, and they were just as clear and trenchant when he was wrong as when he was right. His idea of poetry appears to have been that its vital energy consisted in the verse, and that the vital energy of the verse consisted in the rhyme!

M. Lamartine, though a whole world above Voltaire, has some views of poetry—not quite so good even as his poems themselves—(but entirely worthy of him, when in his dithyrambic vein of prose speculation)—they are strikingly unintelligible. It is lucky that his practice is rather better than his theory. Therefore, everything considered, we hardly know where to turn for an authority, in order to discover what is poetry. But, it is much easier to say what is *not* poetry! We should have but to remark, "You know, for instance, "——"? Well, *that's* not poetry. You know"—but we are by this reminded that we have scores of volumes of new "Poems" before us, of all sorts, we fear, except one. Well, are *they* poetry? Alas! they are but rhyme,—and we will not disturb the equanimity of their writers by naming them.

It is not an age unfavourable to poetry. We could name several poets who are appreciated and admired; but, that we may not come too near home—that we may avoid appearing to be either invidious, or something else equally bad, let us, as they say in the country, go a little afield, and look abroad. With other languages we need not meddle: they would, indeed, corroborate what we have to say, with multiplied illustrations; but we can leave the limits of this great empire, without emerging from the huge range of our noble mother-tongue. See the mere sale of the American Longfellow's poems; and then consider them in their finish. They will bear much examination. No, the age is not prejudiced against poetry, or deaf to song. Indeed, no age is really anti-poetical, for that would mean that it was anti-natural: but poets sometimes come not: their voice is silent, after, perhaps, the divine strains of a great bard have echoed in the hearts and imaginations of a whole generation; and if, at that moment, a crew of infatuated emulators or hoarse and discordant mimics, arise, which is often the case, the true poetical instinct which denounces and repels them is by them denounced as the literary deadness and degeneracy of the age. But this is not all for the real poet is thus struck mute many a time when he would have spoken. No Thom can appear without finding some who will believe him to be both Sir William Courtnay and a prophet. No; nor can a literary Tom of Coventry, or a literary Tom of Bedlam, arise, but he discovers some wild and lost stragglers of the reading community to whom he becomes the *τοῦμπ λαοῦ*; until men of taste, of feeling, and of spirit, are almost ashamed to own for real bards that sympathy and that admiration which they see numbers lavishing with so much noisy zeal on the most worthless and despicable claimants. The greatest enemy of the poet is the poetaster. The greatest enemy of poetry is pseudo-poetry. Near this flower of true song springs apace the succulent and blighting weed of pretended inspiration. The evil consequences are great at the least; and they are two at the fewest. What admirers the false production obtains—or, to borrow a phrase from commercial language, what customers the imitation article secures are but so many students debauched away from that which they really, though unconsciously, seek; and then, in addition, a general feeling of disgust, disappointment, and indignation, injuriously affects even the veritable "staple," which such spurious compounds tend to hide and blockade from the public attention. The first damage these do to poetry is that they rob it of *part* of its intended position, in which they supersede it; and the second is in the manner in which they fulfil the vicarious office which they have thus usurped; for they excite only contempt and vexation, where the ennobling, civilising, and delightful influence of true poetry ought to have made for itself a great and beneficial career. There is no thorough remedy for this save in the returns, as it were, of epochs, and in the hands of that Nemesis who uses time for her executioner; but, meanwhile, an imperious obligation rests upon critics—never to indulge in foolish and unjustifiable lenity towards this doubly mischievous class of literary productions.

The elder Disraeli refers with a good deal of felicitous fun to a real, actual school of writers who once made *the unintelligible* the purposed, the intentional basis of their style; there were even *professors of the obscure.*

"JOHN BROWN: OR, A PLAIN MAN'S PHILOSOPHY."—DRAWN BY J. ABSOLON.—(SEE NEXT PAGE.)

May common sense and right reason not depart from us! but professors of the obscure seem impossible. Nevertheless, that they lived and flourished is a historical truth—is recorded and proved fact. Yet the most successful of these would grow livid with envy on reading some of our modern English verse-makers, who rank as poets in the estimation of the fashionable and the feeble. Incomprehensibility, with them, is perfection. To study them as we would a problem in Euclid, for the first time, seems to be the only rule for reading them. But there is a great difference in the result; for Euclid you understand at last, and it is then worth your while; but these writers, we suspect, would never repay you if you could make them out, and you cannot. The worst of it is, too, that the writers to whom we refer possess just enough ability to perform the office (we speak of taste and genius, not morality) of corrupting and debasing, so far as they are successful, the literature of the country. Total darkness was never mistaken of misguiding anybody. It is false lights which lead astray. An entirely stupid author is harmless; *he* cannot bring the imperfectly educated to admire what deserves no admiration—for he is devoid even of that pinchbeck glitter which they mistake in those others of whom we speak for the intrinsic splendour of some precious and incorruptible metal.

And here another consideration occurs. These occasional sparkles and gleams, more or less genuine, which throw an illusory character over the general bleakness, entanglement, and sterility of some of the modern compositions styled poems on their own titlepages, constitute, no doubt, is so far an additional objection, that, without them, the crazy productions would find no readers at all, much less be taken as models and patterns for ulterior imitation. But there is another thought which these better passages suggest, that the writers themselves might, if they would only abandon their miserable affectation, produce works of real merit. Every great poet has his defects. It is not for these that he is admired, nor by these that he is great; but these are what it is easiest to copy. So, in all things. There is ever some weak side on which the noblest mind resembles, and must resemble, the mass of human strugglers; and to equal or surpass him in that point, they have not to be like him in his distinctive character, but merely to be like themselves in their own common infirmities or their most inconsiderable attributes. Pronounce some new poem, for instance, Byronic; and until you have explained your meaning, this is neither praise nor blame. It may mean much, and much either way, in application to a new writer, and it may mean nothing at all, or but very little. A general may resemble Napoleon in his manner of leading armies, and in his manner of taking snuff; but it is easier to emulate the great soldier in this last particular.

Mad with a passionate longing for fame, and more mad with the inter'or sense and secret instinct of incapacity, small men strain to do what great men have done. For, it is a most certain truth, that the desire of renown is not a proof of the power to achieve it, or of the qualities that deserve it. "The last infirmity of noble minds" is an infirmity of an immense number of other minds also; and he cannot be an observer who is not aware that the craving for immortality is just as strong and as ravenous in thousands of persons of exceedingly poor abilities, every generation, as in any one of those mighty spirits who occasionally, "shaking the strength of their unconquerable wings," disengage themselves, and soar upwards out of the vast swamp and morass of mediocrity.

There are two or three infallible signs of genius, to which we will just allude. It would be more correct to speak negatively; it is more correct to say that the absence of these signs is an infallible guide, than that the presence of them is always equally conclusive. But, first, we may take it as a principle better attested, and more easy to establish than any other in criticism, that true genius, whether in the severer or in everything else, is always strikingly marked by a certain simplicity, and by a general, self-sustaining, and pervading coherency. Master minds are intrinsically comprehensible and translucent. Homer is simple, Virgil is simple, Horace is simple; Dante, though gloomy, is severely—and Milton, though learned, is austerely simple. Only in the decadence and corruption of a nation's literature, ob-curity and affectation flourish. Lucan is not so simple as his Roman predecessors; but is he so great? The brocaded Statius was not so simple as his Emperor, nor Parmenio as Alexander.

Another mark, without which you never find exalted genius in any department of human life, is a certain valiant modesty not separated from, but intricately blended with conscious power and self-reliance. You never see a great poet, in the beginning of his work, foaming with arrogance, talking of tearing down immortality from the very stars of heaven, lashing his own conscious weakness into courage by frantic and spasmodic paroxysms of self-assertion. We need by shining example of the Pierian laurel, a beautiful evergreen, much resembling our mountain rhododendron: then there was the prickly, polished, dark-green holly, which I had never seen before, but which is certainly, one of the most perfect of shrubs. The turf was of that soft, dazzling green, and of that sunny and silk-like appearance, which seem characteristic of England. We stopped at last before the door of a cottage, whose porch was overgrown with ivy. From that moment I ceased to feel myself a stranger in England. Everything around me seemed to me, dizzy and weary as I was, was the first sight of the chamber of repose that had been prepared for us. No item of cozy comfort that one could desire was omitted. The soft and springy chairs—the delightful sofa—the bust of Pitt, a bright little tea-kettle steaming in front of the grate, a table with a beautiful vase of flowers, books, and writing apparatus, and neat friends with words full of affectionate welcome, and looks that seem characteristic of a moment. The hospitality of England has become famous in the world, and, I think, with reason. I doubt not there is just as much hospitable feeling in other countries, but there is a delicacy and fineness and some comfor' has been so studied, and matured, and reduced to system, that they really have it in their power to affect more, towards making their guests comfortable, than other people.

The satisfaction of the writer with those of whom she was the guest is ex'ressed in every sentence of her book. It is irridescent with delight, and glowing everywhere with unaffected thankfulness. Mrs. Stowe was pleased with her recognition and reception, and she has done wisely in preserving and acknowledging the kind feeling which grew around everything she witnessed, and that charm she has transferred to these pages. There is a spell in every line, there is magic in the web of every thought, that here finds utterance: that magic is true feeling, which can never be wrong, let critics carp as they will at the spontaneous impulse. It flows from Nature's fountains pure. it is as the life-blood of the heart, and is truly the genuine expression of the soul.

This ebullition of natural emotion does not prevent Mrs Stowe from discriminating the attributes of things, persons, and places. She perceives that England has some advantages not possessed by America, and *vice versâ*. Thus, she makes some judicious remarks on what she calls "the permanence of English homes":—

> The grounds of the Dingle embrace three cottages; those of the two Messrs. Cropper, and that of a son, who is married to a daughter of Dr. Arnold. I think this way of relatives living together is more common here in England than it is in America; and there is more idea of home permanence connected with the family residence than with us, where the country is so wide, and causes of change and removal so frequent. A man builds a house in England with the expectation of living in it and leaving it to his children; while we shed our nests in America as easily as a snail does his shell. We live awhile in Boston, and then awhile in New York, and then, perhaps, turn up at Cincinnati. Scarcely anybody with us is living where they expect to live and die. The man that dies in the house he was born in is a wonder. There is something pleasant in the permanence and repose of the English family estate, which we, in America, know little of.

This remark, properly considered, is of exceeding pregnancy; it hits at once the distinction of the two peoples. Here conservatism, there progress; two distinct manifestations which are the necessary growth of social circumstance, and not arbitrary institutions manufactured by paper constitutionalists. One may see in them natura. laws, which, though in apparent antagonism, are really correspondent opposites only, and different powers for good of one and the same principles.

We cannot proceed seratim through the various pregnant topics with which Mrs. Stowe was honoured. We must make selection. What we have cited relates to her visit to Liverpool. Scotland also has secured an unfortunate remembrance. All her letters are full to overflowing of Scott and Burns, every object suggesting something in their poetry—she felt that she was treading the land of song, and heard music in every breeze. There is much that is delightful in her reminiscences, and not seldom something that is worth noting as of critical value. Here is a passing reflection, which is well calculated to beget more:—

> I see ancient castles are standing romances, made to the author's hands. The castle started a talk upon Shakspeare, and how much of the tragedy he made up, and how much he found ready to his hand in tradition and history. It made the story all the more delightful to chronology; but his fertile mind has added so (e of the most thrilling touches, such as the sleep-walking of *Lady Macbeth*. It always seemed to me that this tragedy had more of the mechanism and power of the Greek, than anything modern. The striking difference is, that while fate was the radical element of those, free will is not less distinctly the basis of this. Strangely enough, while Shakspeare mingles with supernatural agency, he is not a trace of fatalism in it; but through all, a clear, distinct recognition of moral responsibility, of the power to resist evil, and the guilt of yielding to it. The theology of Shakspeare is as remarkable as his poetry. A strong and clear sense of man's moral responsibility and free agency, and of certain future retribution, runs through all his plays.

This is subtle criticism, and we shall remember it whenever we see or read "Macbeth." Verily, Scotland was for Mrs. Stowe a land of enchantment; but we cannot linger on the heather, charming as are her descriptions of Melrose, Hawthornden, and other places. We have some more criticism on Shakspeare, apropos of her visit to Stratford, which indicate in Mrs. Stowe a depth of mind for which probably all reasons are not prepared. She is particularly convinced of Shakspeare being religiously disposed, both by paternity and inclination.

> The common idea which had pervaded the world, of a joyous, roving, somewhat unsettled, and dissipated character, would seem, from many well-authenticated facts, to be incorrect. The galeties and dissipations of his life seem to have been confined to his very earliest days and to have been the exuberance of a most extraordinary vitality, bursting into existence with such force and vivacity that it had not had time to collect itself and so come under self-knowledge and control. By many accounts it would appear that the character he sustained in the last years of his life was that of a judicious, common sense sort of man; a discreet, reputable and religious householder.

The inscription on his tomb is worthy of remark, as indicating the reputation he bore at the time: "*Judico Pylium, genio Socratem, arte Maronem*." (In judgment a Nestor, in genius a Socrates, in art a Virgil.) The comparison of him in the first place to Nestor, proverbially famous for practical judgment and virtue of life, next to Socrates, who was a kind of Greek combination of Dr. Faley and Dr. Franklin, indicates a very different impression of him from what would generally be expressed by a poet, certainly what would not have been placed on the grave of an eccentric, erratic, will-o'-the-wisp genius, however distinguished. Moreover, the pious author of good Mistress Hall's epitaph records the fact of her being "wise to salvation," as a more especial point of resemblance to her father than even her being "witty above her sex," and expresses most confident hope of her being with him in bliss. The Puritan tone of the epitaph, as well as the quality of the verse, gives reason to suppose that it was not written by one who was seduced into a tombstone ode by any superfluity of poetic sympathy.

At length, we get Mrs. Stowe in London, and find her in company of such metropolitan notabilities as Macaulay, Hallam, Milman, Sir R. Inglis, Sir F. Buxton, Lord Shaftesbury, the Rev. Mr. Gurney, Rossetti, Lord John Russell, and others. She seems to have been much annoyed at the modern custom of breakfast-parties in our aristocratic circles, which she tells us "was a novelty to her; that they never had them in America, but that she thought them the most pitiful form of social life."

There are, no doubt, many weaknesses and heresies in Mrs. Stowe's books. She confesses for instance to a melodramatic taste in art, and her opinions on pictures are not always according to authority;—but such shortcomings in knowledge and taste we can readily forgive in the candidate for our applause, when the feeling manifested is every where naturally produced and naturally expressed. These idiosyncrasies of opinion, so to call them, have indeed their own interest, and we should accept such peculiarities as constituent points of personal identity.

In our authoress's remarks concerning the exertions of Lord Shaftesbury on behalf of the London milliners and the progress made in regard to other modern associations for the improvement of the social condition of the labouring classes—among which Model Lodging and Washing Houses and Ragged Schools hold a distinguished place—there is, of course, no information to the English reader; but they are full of novelty and suggestion to the American. And here we shall do well to direct attention to the fact that these volumes are designed for the latter; and that the holiday tone in which they are conceived is well calculated to promote a friendly feeling on the other side of the Atlantic. The task of the authoress has naturally been of a consolatory character. She had to reconcile her American readers to the details of a personal triumph in which America itself could not partake; and, connected with social abuses, not to be relieved in without a sense of national degradation. We doubt not that she has reconciled her duty with the national sentiment by the glow and the brilliancy of these "sunny memories."

Nor are her Continental experiences less pleasing. In them, also, she contemplates the other side of the sunny side. She had the same good word to say of the Parisian soirées and salons, as of London breakfasts and luncheons, and is guilty of the same heresies in art at Versailles as at Windsor; shrewdly observing, "there is nothing safely admirable, I find, about the old masters." Notwithstanding this, however, France was to her a dream-land! "the lotos-eater's paradise! a land where it is always afternoon." The Louvre was the palace of art—a school in which she sought to learn what art was. Claude and Rembrandt are among the favourites of Mr. Ruskin, and Mrs. Stowe speaks as follows:—

> There were Raphaels there, which still disappointed me, because from Raphael I asked and expected more. I wished to feel his hand on my soul with a stronger grasp; these were too passionless in their serenity, and almost effeminate in their delicacy.
>
> But Rubens, the great, joyous, full-souled, all-powerful Rubens! there he was, full as ever of trum, bant, abounding life; disgusting and revolting in painting me least pleasant; defying me to dismiss him; dragging me at his chariot wheels; in despite of my protests forcing me to confess that there was no other but he.
>
> The Medici Gallery is a series of gorgeous paintings, done at the instance of Mary of Medici, to celebrate the praise and glory of the family. I was predetermined not to like them for two reasons: first, that I disliked allegorical subjects; and, second, that I hate and despise the Medici family and all that belongs to them. So no sympat y with the gods blunded my eyes, and drew me gradually from all else in the room, and almost offended me by its power and fertility of invention. I was astonished, which seemed to express with nonchalance what other painters attain by laborious efforts. It occurred to me that other painters are hard and cramped heads, or hard and severe; defying me to dismiss them; dragging me at his chariot wheels; in despite of my protests forcing me to confess that there was no other but he.
>
> The satisfaction of the writer with those of whom she was the guest is expressed in every sentence of her book. It is irridescent with delight, and glowing everywhere with unaffected thankfulness. JOHN BROWN; OR, A PLAIN MAN'S PHILOSOPHY.

(*From the forthcoming Second Series of "English Songs and Melodies": the Poetry by Charles Mackay; the Musical Accompaniments by Sir R. T. Bishop.*)

I.

I've a crown I can spend,
I've a wife and a friend,
And a troop of little children at my knee, John Brown;
I've a cottage of my own,
With the ivy overgrown,
And a garden with a view of the sea, John Brown;
I can sit at my door,
By no shady sycamore,
Large of heart, though of very small estate, John Brown:
So come and drain a glass
In my arbour as you pass,
And I'll tell you what I love and what I hate, John Brown.

II.

I love the song of birds,
And the children's artless words,
And a loving woman's voice, low and sweet, John Brown;
And I hate a false pretence,
And the want of common sense,
And arrogance and fawning and deceit, John Brown;
I love the meadow flowers,
And the briar in the bowers,
And I love an open face without guile, John Brown;
And I hate the selfish knave,
And a proud, conceited slave,
And a lout who'd rather borrow than he'd toil, John Brown.

III.

I love a simple song
That awakes emotions strong,
And the word of hope that raises him who faints, John Brown;
And I hate the combiest whine
Of the foolish who repine,
And turn their good to evil by complaints, John Brown.
But ever when I hate,
If I seek my garden gate,
And survey the world around me and above, John Brown,
The hatred flies my mind,
And I sigh for human kind,
And excuse the faults of those I cannot love, John Brown.

IV.

So if you like my ways,
And the comfort of my days,
I can tell you how I live so unvexed, John Brown;
I never scorn my health,
Nor sell my soul for wealth,
Nor destroy one day the pleasures of the next, John Brown;
I've parted with my pride,
And I take the sunny side,
For I've found it worse than folly to be sad, John Brown;
I keep a conscience clear,
I've a hundred pounds a year,
And I manage to exist, and to be glad, John Brown.

LITERATURE.

SUNNY MEMORIES OF FOREIGN LANDS. By HARRIET BEECHER STOWE. 2 vols. Low.

Never was the cause of the oppressed more powerfully advocated than by the feminine champion of the right in Uncle Tom, and the indignant denouncer of the wrongs suffered by the man of colour. The cordial reception experienced by Mrs. Stowe in this country, afforded the occasion for the volumes before us, consisting of letters written to her family during her sojourn here by the gifted authoress, and they contain her first and most vivid impressions of our manners and country, with some exceedingly valuable remarks on our literary celebrities and most renowned poets. Those on Shakspeare and Milton are singularly pleasing, judicious, and frequently profound.

In her descriptions and criticisms equally Mrs Stowe is disposed to write with a grateful enthusiasm which has as much in it that is national as individual. "An American," she feelingly states, "can never approach the old country without a kind of thrill and pulsation of kindred. Its history," she adds, "for two centuries, was our history: its literature, laws, and language, are our literature, laws, and language."

Spenser, Shakspeare, Bacon, Milton, were a glorious inheritance, which we share in common. Our very life-blood is English life-blood. It is Anglo-Saxon vigour that is spreading our country from Atlantic to Pacific, and leading on a new era in the world's development. America is a tall, sightly young scion, that springs from the old royal oak of England: divided from its parent root, it has shot up in new, rich soil, and under genial, brilliant skies, and therefore takes on a new type of growth and foliage; but the sap in it is the same. I had an early opportunity of making acquaintance with my English brethren; for, much to my astonishment, I found quite a crowd on the wharf, and we walked up to our carriage through a long file of people, bowing, and looking very glad to see us. When I came to get into the hack it was surrounded by more faces than I could count. They stood very quietly, and looked very kindly, though evidently very much determined to look. Something prevented the hack from moving on; so the interview was prolonged for some time. I, therefore, took occasion to remark the very fair, pure complexions, the ruddy cheeks, and general air of health and vigour, which seem to characterize our brethren and sisters of the island. There seemed to be no occasion to ask them how they did, as they were evidently quite well. Indeed, this air of health is one of the most striking things when one lands in England. They were not burly, red-faced, and stout, as I had sometimes conceived of the English people, but full enough to suggest the idea of vigour and health. The presence of so many healthy, rosy people looking at me, al reduced as I was, first by land and then by sea sickness, made me feel myself more withered and more than ever. But there was an earnestness and a depth of kind feeling in some of the faces, which I shall long remember. It seemed as if I had not only touched the English shore, but felt the English heart. Our marriage at last drove on, taking us through Liverpool; and a mil- or two out, and at length wound its way along the gravel paths of a beautiful little recreat, on the banks of the Mersey, called the "Dingle." It opened on me like a paradise, all wearied as I was with the tossing of the sea. I have since become familiar with these beautiful little spots, which are so common in England; but now all was entirely new to me. We rode by shining queens of the Pierian laurel, a beautiful evergreen, much resembling our mountain rhododendron: then there was the prickly, polished, dark-green holly, which I had never seen before, but which is certainly, one of the most perfect of shrubs. The turf was of that soft, dazzling green, and of that sunny and silk-like appearance, which seem characteristic of England. We stopped at last before the door of a cottage, whose porch was overgrown with ivy. From that moment I ceased to feel myself a stranger in England. Everything around me seemed to me, dizzy and weary as I was, was the first sight of the chamber of repose that had been prepared for us. No item of cozy comfort that one could desire was omitted. The soft and springy chairs—the delightful sofa—the bust of Pitt, a bright little teakett-e steaming in front of the grate, a table with a beautiful vase of flowers, books, and writing apparatus, and kind friends with words full of affectionate welcome, and looks that seem characteristic of a moment. The hospitality of England has become famous in the world, and, I think, with reason. I doubt not there is just as much hospitable feeling in other countries, but there is a delicacy and fineness and some comfor' has been so studied, and matured, and reduced to system, that they really have it in their power to affect more, towards making their guests comfortable, than other people.

The satisfaction of the writer with those of whom she was the guest is ex'ressed in every sentence of her book. It is irridescent with delight, and glowing everywhere with unaffected thankfulness. Mrs. Stowe was pleased with her recognition and reception, and she has done wisely in preserving and acknowledging the kind feeling which grew around everything she witnessed, and that charm she has transferred to these pages. There is a spell in every line, there is magic in the web of every thought, that here finds utterance: that magic is true feeling, which can never be wrong, let critics carp as they will at the spontaneous impulse. It flows from Nature's fountains pure. it is as the life-blood of the heart, and is truly the genuine expression of the soul.

This ebullition of natural emotion does not prevent Mrs Stowe from discriminating the attributes of things, persons, and places. She perceives that England has some advantages not possessed by America, and *vice versâ*. Thus, she makes some judicious remarks on what she calls "the permanence of English homes":—

> The grounds of the Dingle embrace three cottages; those of the two Messrs. Cropper, and that of a son, who is married to a daughter of Dr. Arnold. I think this way of relatives living together is more common here in England than it is in America; and there is more idea of home permanence connected with the family residence than with us, where the country is so wide, and causes of change and removal so frequent. A man builds a house in England with the expectation of living in it and leaving it to his children; while we shed our nests in America as easily as a snail does his shell. We live awhile in Boston, and then awhile in New York, and then, perhaps, turn up at Cincinnati. Scarcely anybody with us is living where they expect to live and die. The man that dies in the house he was born in is a wonder. There is something pleasant in the permanence and repose of the English family estate, which we, in America, know little of.

This remark, properly considered, is of exceeding pregnancy; it hits at once the distinction of the two peoples. Here conservatism, there progress; two distinct manifestations which are the necessary growth of social circumstance, and not arbitrary institutions manufactured by paper constitutionalists. One may see in them natura. laws, which, though in apparent antagonism, are really correspondent opposites only, and different powers for good of one and the same principles.

We cannot proceed seratim through the various pregnant topics with which Mrs. Stowe was honoured. We must make selection. What we have cited relates to her visit to Liverpool. Scotland also has secured an unfortunate remembrance. All her letters are full to overflowing of Scott and Burns, every object suggesting something in their poetry—she felt that she was treading the land of song, and heard music in every breeze. There is much that is delightful in her reminiscences, and not seldom something that is worth noting as of critical value. Here is a passing reflection, which is well calculated to beget more:—

> I see ancient castles are standing romances, made to the author's hands. The castle started a talk upon Shakspeare, and how much of the tragedy he made up, and how much he found ready to his hand in tradition and history. It made the story all the more delightful to chronology; but his fertile mind has added so (e of the most thrilling touches, such as the sleep-walking of *Lady Macbeth*. It always seemed to me that this tragedy had more of the mechanism and power of the Greek, than anything modern. The striking difference is, that while fate was the radical element of those, free will is not less distinctly the basis of this. Strangely enough, while Shakspeare mingles with supernatural agency, he is not a trace of fatalism in it; but through all, a clear, distinct recognition of moral responsibility, of the power to resist evil, and the guilt of yielding to it. The theology of Shakspeare is as remarkable as his poetry. A strong and clear sense of man's moral responsibility and free agency, and of certain future retribution, runs through all his plays.

This is subtle criticism, and we shall remember it whenever we see or read "Macbeth." Verily, Scotland was for Mrs. Stowe a land of enchantment; but we cannot linger on the heather, charming as are her descriptions of Melrose, Hawthornden, and other places. We have some more criticism on Shakspeare, apropos of her visit to Stratford,

> "But Jeshurun waxed fat and kicked;
> Thou art waxen fat, thou art grown thick,
> Thou art covered with fatness."

Scornfully he is determined upon it; he will none of your scruples: his women shall be as fat as he pleases, and you shall like him nevertheless.

In the Medici Gallery the fat! appears less prominent than elsewhere. Many of the figures are perfect; and there are specimens among them of female beauty, so delicate as to demonstrate that it was not from any want of ability to represent the softer graces that he so often becomes hard and coarse. My friend, M. Bodin, made the remark that the genius of Rubens was somewhat restrained in these pictures, and chastened by the rigid rules of the French school, and hence in them he is more generally tame.

I should compare Rubens to Shakspeare for the wonderful variety and vita. force of his artistic power. I know no other mind he so nearly resembles. Like Shakspeare, he forces you to accept and to forgive a thousand excesses, and uses his own faults as musicians use discords, only to enhance the perfection of harmony. There certainly is some use even in defects. A faultless style sends you to sleep. Defects rouse and excite the sensibility to seek and appreciate excellences. Some of Shakspeare's finest passages explode all grammar and rhetoric like skyrockets—I do thought blows the language to atoms.

We deem it but fair to make the above extract, as Mrs. Stowe's æsthetics have been misrepresented by her critics, who could scarcely have read the remarks that they condemn. There is, indeed, a peculiar bluyonsracy and an originality in her art-criticism; but it is true, because the genuine expression of real feeling. We have to take her point of view, if we would appreciate her decision, and, having done so, we readily enough admire her judgment and taste, even when her verdict differs from our own. It is evident that she values more the genius of the painter than the finish of the execution. True thought, with massive expression, is with her of more worth than the most perfect art with an imperfect ideal. She looks beneath colour and form, and "sees, if soul be wanting there." Where she finds soul, she is willing to compound for execution and colouring. This is what might have been expected from the manifest character of Mrs. Stowe's intellect; and, therefore, we should welcome the corroboration, and admire it, too, as we would the likeness of a portrait to its original. There is something to us exquisitely beautiful in this acquaintance.

As we follow Mrs. Stowe from spot to spot—Chamouni, Mont Blanc, the Mer de Glace, St. Bernard, Strasbourg, Frankfort, Cologne, Dresden, Munich, Antwerp, and other places—we still continue to admire her more and more; all is so genial, so loving, so thoroughly happy in the enjoyment of the good, the true, and the beautiful. We look upon these volumes in other than an ordinary light, not as memorials of gossip and adventure, but as delineations of a free and cheerful spirit, rejoicing in its appreciation and revelling in the consciousness of a life well spent, and of a mind that, in the pursuit of instruction, had been providentially gifted with the power of performance, in a direction calculated to advance and elevate the race, while it relieved the suffering and the oppressed. The work is appropriately jubilant; it is the record of an ovation for a victory accomplished in the cause of humanity and justice.

MY CRUISE WITH THE "ECCENTRIC GENTLEMAN."

BY THE AUTHOR OF "SINGLETON FONTENOY, R.N."

CHAPTER I.

I HAD been three months paid off from the *Lotus*, and was down in the country, stopping with my old friend Mr. Hedger, of Ditcherton, and recruiting my strength, which had been somewhat impaired by a year's service on the coast of Africa. Very pleasantly the days were jogging on—shooting, seeing the country, dining out, and "all night in," being downright luxuries to a fellow who for many long days had been stewing in salt water in the tropics, like a piece of ship's beef. I began to have a very pretty steady trigger finger again; to be able to eat meat without its having been devilled, and to be moderate with cayenne. I was losing that loud voice which one involuntarily acquires by carrying on duty at sea; and I had begun to be glad that I was in a place where female beauty is not confined to two or three, white individuals among a black population (the very sight of a missionary's family being a Christianizing object in itself, irrespective of the missionary's sermons), but tolerably widely spread about. In fact, I was as jolly as it is the custom of Harry Reback Fitzurse Swillington to be, whenever that distinguished individual gets even tolerable encouragement to be so. Such, being the case, fancy my feelings when he following little phase in my career presented itself.

"Harry," said Mr. Hedger, one morning at breakfast, "I think, for a change, we might try some rabbit shooting. I have a cocker as lively as a compass needle, and there is a capital place not far off."

I acceded readily. Half-an-hour found us *en route*. The lapse of a reasonable time further found us entering on the edges of a glen or ravine, plentifully lined with furze, and adorned that broom, a sprig of which forms the symbol of my ancestor, the first Plantagenet.

The cocker disappeared in the hollow. In a couple of minutes we heard his voice. An instant, and a rabbit bolted out at full gallop: a flash, and he turned head over heels a few times, and was as quiet as a spent shot.

My friend Hedger smiled approvingly. Conscious of my skill, I was tranquilly proceeding to load. The ramrod was in my hand, when Hedger said —"Hollo! what the deuce is up?"

I turned to see what attracted his attention. A country lad, whom I had often seen about the stables, was running towards us with something white in his hand. I paused. The clown was out of breath when he reached us, and thrust into my hand a confounded long letter, "On Her Majesty's Service," marked "Immediate," address-ed to myself. I gave vent to an imprecation worthy of Benbow. Opening the fatal document, I found myself appointed to H. M. brig *Thumper*, Commander Woppy, serving on the Mediterranean station.

"It might have waited till we came in," said Hedger, laughing. I thought it might have waited till Doomsday; but good, kind Mrs. Hedger (one of the best and simplest of women) had been awed by its aspect, and forwarded it on, for fear I should incur, through any neglect of hers, some terrible penalties of military law. Confound it! My hand was put out: I did not touch the hair of a rabbit again that day.

The best friends must part, as Jigger of the *Bustard* and to his Maltese tailor when his ship was ordered home. Next day I was rolling along to London; and not long after I was steaming down Channel in a steamer, *en route* to Malta. Prog is excellent in the steamers in one of which I made this journey; the wine is ditto; and I for one did not join in the complaints of Ensign Thumbleston, who memorialised the Directors of the Company on the subject of the sherry—the truth being that the meagre cub was disabled by sea-sickness from judging of that or any other article of refreshment.

When we arrived in Malta—to which this was my first visit—I reported myself on board the flag-ship, and was ordered to wait in her till the *Thumper* arrived. The *Thumper* was just then at sea, but was expected in harbour very shortly. I went below, and made the acquaintance of the flag-ship fellows (by-the-by, I omitted to tell you that I was a mate at this time, i.e., a "passed midshipman," as the Yankees call it), and proceeded to inquire into the reputation of the *Thumper* in the squadron. No sooner had I mentioned her name than I perceived a sensation among my audience.

"The what? The *Thumper*, did you say?"

I said, "The *Thumper*."

The young gentleman who had spoken whistled a popular air.

"My dear sir," said I, with a touch of melancholy, "whatever be the peculiarities of the *Thumper*, I am doomed to experience them. I beg to be enlightened about the vessel. When I tell you that I have arrived with Moper in the *Porpoise*, you will be aware that I am not easily to be frightened by the prospect of service in any vessel. Possibly you have heard of my name; and, in that case, also, you will know that naval difficulties are familiar to Fitzurse Swillington."

"Oh, Swillington, of the *Porpoise*? You brought your first lieutenant to a court-martial, didn't you. Ha! you're to be served out!"

I do not intend to intrude on the public any part of my history not necessary to illustrate the special part of it which I have here undertaken to narrate. But, suffice it to say, I had a little adventure of the above-mentioned sort in the *Porpoise*: it began from the First Lieutenant calling me on deck, publicly, "a d——d son-of-a-gun;" and, my founding a complaint on that event; for the truth is, I am not the son-of-a-gun, but the offspring of a respectable country gentleman, and justice of the peace, the head of a branch of the Swillingtons of Swillington.

"To be served out, eh," said I, "Is the *Thumper* in bad odour, then?"

"The *Thumper*," said the young gentleman who had spoken, "is commanded by an *Eccentric Gentleman*."

The laugh which followed, convinced me that this phrase was a classic one in the squadron. My friend continued, tapping his fore head, "Woppy, the commander, is a strange fellow—a queer card, sir. Very *singular* fellow, Captain Woppy."

I looked hard at the speaker, and gathered somewhat more of his meaning from his face, than I had already from his words. I had in my time sailed with strange men; was, indeed, in South America, when that station was commanded by an old Admiral, who was a hypochondriac. Hypochondria of a decided character marked that old Admiral. He laboured under the hallucination that that part of his body which her Majesty's ships never show to an enemy, was made of glass. This made his conduct occasionally very singular; though, perhaps, you will think that if he had believed his head equally pellucid in substance, he would have been under a still more fatal delusion! But this is mere digression, and must be stopped.

I did not like to press men, whom I now saw for the first time, to talk on the subject of this new commander of mine. I knew I should see him in due time, and that, whatever had to be gone through, I should have to go through, whether I speculated on it or not. "Sufficient for the day," &c., was a maxim of which I had learnt to make the most on the coast of Africa. There, my principle was (knowing the uncertainty of life, and the uncertainty belonging to the occupations of life, in the squadron there), to make the most, and the best, of to-day. Often, by-the-by, the truest plan of preparing for to-morrow, also.

I was not, then, particularly startled, when I heard, in due time, that the brig *Thumper* had arrived. My chest—used to locomotion—swung over the flag-ship's side once more; I was soon shot across the harbour to the *Thumper*, by the brilliant cutter which conveyed me; and I found myself on the deck of the brig which was my destiny.

Nobody in the shape of an officer was there to receive me. I stood still, and looked about me. My first impression was of the dirt and littleness of the *Thumper*, and how much over-masted she was. Everything bore the aspect of neglect. The green paint was dim and dusty; the guns, seedy and brown; ropes, not half coiled down; deck, slovenly. One or two of the men were asleep about the waists, and those who were engaged on anything were doing it in a dawdling easy style. I shouted out for a quartermaster with an energy which I flatter myself made a few of the rapscallions open their eyes.

"Quartermaster," said I, as he made his appearance, "where's the officer of the watch?"

"Officer of the watch, sir? Mr. Mutton's on shore, sir. Mr. Piper's below, sir."

"Oh. And is Captain Woppy on board."

"He's asleep, sir."

Very satisfactory, thought I; whereupon I gave orders for my chest to be taken below. The quartermaster seemed to have had no idea that anybody was coming to join. After several efforts, he succeeded in persuading a few hands to interest themselves in my chest, and convey it down the main hatchway—which they did, as slowly and gingerly as a company of undertakers bringing a coffin down stairs.

"By Jove, you want a change here," said I. The quartermaster touched his hat, and moved off.

Seeing nobody to whom to report my arrival, and determined not to wake Woppy for the purpose, I made the best of my way to the berth to see what destiny had in store for me there. A temporary obstacle was presented to my entry, by Mr. Piper's legs, which stretched across the

door, from the lockers on which he was reposing. Piper growled and grunted, as I disturbed him; he looked up for a moment, staring at me, through half-open eyes.

"Brought the stores?" said he, sleepily. "They'll clear the boat. Somebody 'ill clear the boat—ask somebody—clear the boat."

During this speech he had looked at me, in the most owlish manner; but gradually he opened his eyes a little wider, and presently exclaimed —"Why, d—— it, it ain't Mutton!"

"No," I said. And Piper made no further remark, but relaxed into somnolency. There was nothing in the appearance of Piper (which was raffish and vulgar) to tempt me to break in on his slumbers. I had gathered so far, that Mutton was gone for stores—I supposed to the dockyard—and I employed myself in surveying the place in which it was my lot to reside in the *Thumper*. I never saw a more wretched hole. The buffet, miserably furnished with tumblers and such needful articles, was broken in many places. The table had been "whittled" and cut. The deck was far from clean. I saw that here, as in my other positions in the vessel, I must expiate with suffering my conduct in the *Porpoise*, which had resulted in a reprimand to the First Lieutenant above mentioned. Glancing at the berth, I formed the most dismal anticipations, and prepared myself for Woppy.

I saw that nobody would make the least effort to render my condition tolerable, so I immediately went to work for myself. I sternly ordered the sergeant of marines to provide me with a servant; I gave peremptory orders to the proper authorities to see about my hammock and hammock-man; and, finding that the mess was unprovided with wine, I sent on shore for a private stock of it, and also of provisions, for my own use. I then, ere the first evening set in, felt that I had done my duty to myself (always the first duty which I look after), and went on deck to take a turn quietly, and make the brig's acquaintance.

The first man I met was Mutton, the midshipman. He had been three times sent back in his examinations, and in every sort of examination. He had failed in seamanship, he had been plucked for gunnery, and he had been "spun" for navigation—three times in each. Piper, I learned, was a long, overgrown youngster, big enough for a dragoon. These gentlemen, with Mopp, the clerk, composed our berth. The gun-room mess comprised one lieutenant, Mr. Purl; the master, Shaggyton; the purser, Basket; and the surgeon.

I soon found what kind of man Purl was. He was very glad to make my acquaintance, he said. "Our object, my dear Mr. Swillington, should be to make things pass agreeably. Life isn't long enough for disturbances. Nerves wear. Nerves are the running rigging of the carcase, my dear sir—only, if we wear 'em out, where are we to send for fresh stores?" This nautical metaphor conveyed Purl's philosophy. His object was to get the *Thumper's* commission through as pleasantly as possible, and to make the *Thumper* a kind of yacht. The loose, happy-go-lucky way in which everything was done convinced me that the philosophy of Purl had been hitherto acted on rigidly. To my surprise, I found we were going to sea immediately.

"May I ask you, Mr. Swillington (said Purl gently), to take command forward while the hands are on deck? You take charge of a watch, also, of course. Shall I say that the middle watch devolves on you to-night? Perhaps that will be best."

Delivering himself of this polite speech, he ordered the boatswain to turn the hands up. We were off to sea directly. The men did everything merchant-ship fashion: one topsail dropped out after another, and they were hoisted one by one; a murmur of conversation buzzed about, aloft, while work was going on. By degrees, we left Malta behind; and I found myself leaning against the bulwarks, looking over the quarter at the island, at sunset. "Who the devil's this?" said a voice behind me.

I turned round instanter, and got my first glimpse of Commander Woppy. A little man, with well-formed features, but a most unquiet eye, was before me; with a face not destitute of humour, but well fitted to express rage. He stared at me with extreme curiosity, receded a step or two, and then advanced again. I immediately, of course, announced my name, and that I had that day joined the *Thumper*.

"Be very careful, sir—very careful in the *Thumper*," said he, shaking his fist.

"I shall, sir," replied I, immensely amused by this opening; for no sooner had he clenched his fist than his eyes sparkled, his mouth closed firmly, and he seemed struggling with suppressed rage.

Lieutenant Purl approached at this moment. Woppy turned sharp round on him. "Have you instructed this officer in the discipline of the *Thumper*, Mr. Purl?"

"Rigidly, sir," said Purl, with gravity. "The name of Woppy, Captain, is not unknown to him."

"Eh! he knows my name? Sharp discipline is my motto, Mr. Swillington; but though severe, we are generous. Everything about the *Thumper* is severely regulated, yet is nobody misused. No one calls me a tyrant, Purl?"

"No, indeed, Captain Woppy."

"No; and, by Jove, they have no provocation to do so. But, by all the devils in Orcus!" roared Woppy, suddenly. Again his face darkened with rage; he shook his fist—"Look there, sir! Boatswain's mate, turn the hands up. On deck, everybody."

He paced the deck to and fro: the pipe sounded. Lieutenant Purl seemed, I thought, to resign himself to an inevitable nuisance. I waited to see what the result of this fit would be. The men came rushing up.

In two minutes Woppy had cooled down. What object had shocked him I didn't see. But Purl, as soon as the men had come up, and were waiting orders, drew near the Commander, and immediately after topsails were reefed to make all snug for the night. Nobody but those who like myself had been near Woppy, knew that this was a happy plan of preventing the need of piping the men down, after calling them up for nothing at all.

What all was again quiet Woppy seemed satisfied, and disappeared down his cabin ladder. Purl moved alongside me, and rubbed his hands.

"Mr. Swillington, you observe that one requires a little *finesse* in the management of the *Thumper*. But when *does* life go altogether easily? Our Commander has his peculiarities; let us make the best of them. Mr. Swillington, make the gun-room your home, when you please. Let us live on those terms which become gentlemen. As officers, I am your superior—as gentlemen, we are equals.

(I don't know that I quite accepted this last proposition—but, no matter).

"Mr. Mutton, my dear Mr. Swillington, will take the first watch. Though a little obtuse, and ignorant of his profession, and apt to sleep on his watch, Mutton is yet a useful officer. What, if you kindly looked up occasionally, and—just saw how he got on, till your own middle watch begins?"

Purl looked at me in a most innocent manner. I bowed, and expressed my readiness to "make things comfortable"—which was Purl's favourite expression—though it amounted in practice to the making Purl comfortable only. I saw the nature of my man. This politeness was to cover his tactics, and these were to get the work done by anybody who would do it, with as little trouble to himself as possible. He plainly made the best he could of Woppy—most probably with the expectation of, by-and-by, making his own profit out of the task. On the whole, I resolved (meditating these matters on deck, after the late scene) to accept this chapter in my naval history as an inevitable and curious chapter, cheerfully, and to get away to some less extraordinary vessel as soon as it was in my power.

That night I relieved Mutton, at twelve o'clock, and found him quite ready for his hammock. I had compassion on this poor fellow, after hearing of his many failures in the examinations. He seemed a solid, very dull dog, quite familiar with all the tricks and slang of the service, though so incompetent to master its necessary acquirements. Finding me friendly, he opened himself out in talk, in his simple stupid, pathetic way—reminding me a good deal of a seal in his general character.

"Ah! thank you for coming up so quick, Swillington. I am glad there's somebody come to help us with the work. You can have my great coat if you like. I say, he's up, is Woppy, to the hammock-nettings. Don't you try 'caulking' (slang for scooping) there. And if he don't find you on deck, if he happens to come up, he'll run to the fore-ladder. Don't you trust to getting up by the fore-ladder."

"Oh! I must not trust to the fore-ladder, mustn't I?" I asked, much amused by my thick-skinned friend.

"No. I don't know you can do better than the stern gratings; giving a glass of grog to the quartermaster, you know. You can see when Woppy's light's out if you keep a bit of the tarpaulin off his skylight."

"I thank you very much, Mutton," I answered. "He is'nt a safe customer, Woppy, I suppose?"

"Lord bless you," said Mutton, "he's a rum card. 'Battle, and murder, and sudden death,' they used to call him in the West Indies."

This intelligent and zealous officer having gone below, which he did immediately after this speech, I was left alone with the *Thumper* in my charge, in the quiet midnight. The half-hours wore away in the dreary middle watch style. I walked on one side, then on another; then tried the forecastle; then mounted the stern gratings; glanced at the compass; watched the sails; mused on the sea; thought about my last ship, and about Ditcherton, and wondered what the deuce would come of my present cruise. Three parts of the weary time had worn itself away thus, when I heard something stirring below. I kept my eye on the companion-ladder; and presently I saw a nightcapped head, and soon a body veiled in white, slowly emerge from below. The

"SHYLOCK AND JESSICA."—DRAWN BY JOHN GILBERT.

"SHYLOCK AND JESSICA."

DRAWN BY JOHN GILBERT.

Mr. Gilbert has selected for Illustration a scene from Shakespeare's charming play of "The Merchant of Venice." It represents one of the milder incidents of the Jew's suspicions

VENICE.—BEFORE SHYLOCK'S HOUSE

Shylock, Jessica, and Launcelot

Jes. Call you? What is your wil
Shy. I am bid forth to supp
[illegible] id g
I a n not bid for love, they flatter n
But yet I'd go in hate, to feed upon
The prodigal Christian. Jessica, my girl,
[illegible] I am right loth to go
[illegible] nere is some ill a crowing towards my res
F[illegible] I did dream of money bags to-night

Laun. I beseech you, sir, go; my young master doth expect your
[illegible]
have conspired together. I will not say, you shall see
a masque; but, if you do, then it was not for nothing that my nose fell a
[illegible] falling out
that year on Ash-We
Shy. What! are there mas
[illegible]ck up my doors, and when
[illegible]s vile squeaking of the wry-
the casements then,
[illegible] the public street.
[illegible] fools with varnish'd
[illegible]ears—I mean my cas
[illegible] und of shallow foppery ente
My sober house. By Jacob's staff
I have no mind of
But I will go. Go
Say. I will come

Laun. I will go b
Mistress, look out
There [illegible]hristian by,
Will be worth a Jewess' eye. *exit Launcelot*

The scene presented the artist with an opportunity for the display of the striking costume of the drama, of which he has gracefully availed himself. The Jew wears "his Jewish gaberdine;" the maiden wears in her hair sequins; the impersonation realises Mr. Knight's characteristic of her—"young, agreeable, intelligent, formed for happiness, she is shut up by her father in a dreary
[illegible]
The Jew's clown, or servant, is alike characteristic:—

The patch is kind enough; but a huge feeder,
Snail-slow in profit, and he sleeps by day
More than the wild cat

The [illegible]ture is altogether a very successful Illustration of Shakspeare's highly finished comedy

"THE HAUNTED HOUSE"

DRAWN BY SAMUEL READ.

The subject of Mr. Read's picture is taken from the beautiful poem of "The Haunted House," by the late Thomas Hood. The picture is worthy of the poem; which is the highest praise we can give it.

Under the ragged half-pulling
Of the [illegible] from winders,
That from [illegible] lie lost, nailing
One mark'd gable-mossy timbers.

figure looked round briskly, and the voice of Woppy roared, "Officer of the Watch!"

"Here, sir!" shouted I instantly.

"Eh? Hem. Oh, you're there, Mr. What's-his-name. Very well. All right."

Commander Woppy (who must have felt it rather chilly, in his night gear) disappeared again; and I heard him thump, thumping away below, very probably in a rage. No, no, Woppy, I mused, you don't catch — Swillington, Esq., asleep so easily — no, no.

But, next afternoon, I had a good specimen of Woppy's best manner. Coming on deck, he found a swab lying about, where "no swab should be." It was his peculiar notion that the *Thumper* was in a high state of discipline; and it was the chief symptom of his strange frame

of mind, that (as naturalists say in writing of the rhinoceros) he was subject to "fits of ungovernable rage." After exploding on deck like a human cracker, he ran down into his cabin, and with the utmost violence rang the bell. The terrified steward, in obedience to orders, summoned the entire body of officers to his presence. Entering (with Mutton at my skirts, in the rear), I found Woppy on his sofa, in a paroxysm, drumming on the deck with his heels. "Do they think me a d—d tyrant! Do they think me a d—d tyrant!" he roared. He kept us all in, exhibiting himself in this position for some minutes; then with equal suddenness ordered us all out, crying "I'll stop your leave for a month!" We hustled away pretty smartly. "Two months!" we heard as we retreated. "Three months!!" resounded at our heels, as we fled. "All the time you're in the vessel!!!" followed from the distance; and as we gained our berth, the roaring died away.

"He's in good voice to-day," said Piper coolly. "Boy—dinner."

The unfortunate boy whose lot it was to be servant to the midship men's mess of the *Thumper*, began spreading the cloth: and everything, I need scarcely say, was in accordance with the general discipline of the brig.

"Why, hang it, no soft tack?" Piper cried.

"Commander made the boat with our bread shove off, sir," replied the boy. "The boatman did not come till we was getting under way."

Piper bestowed a curse on the boatman. "Nothing but salt junk and biscuit," he said; "it's shameful!"

"Yes, sir," said the boy, "there's the preserved meat and the portable soup."

"I'm glad to hear it," said Mopp, the clerk, speaking for the first time.

"We'll do, then," added Piper. Mutton said nothing, but the soul of an ogre gluttered in his eye; and he mechanically fidgetted with his knife and fork.

An involuntary shudder ran through my frame, and a dark suspicion took possession of me.

"Oh, sir," said the boy, continuing his story, "there will be enough of both to do the mess a week."

"The devil!" said Piper. "Why, caterer," said he, turning to Mopp the clerk, "I didn't know the funds were so well off. You manage like a trump."

"The funds," Mopp said, "were just enough to pay the bread bill; and as for the preserved meat, I know nothing about it."

"Why!" exclaimed I, "confound me if you haven't been confiscating my private watch-stock."

The boy turned pale. "Please, sir, I found the——" and he was going on to explain; while my messmates seemed to be relapsing into the melancholy of a few minutes before.

"All right, boy!" I said, making the best of a bad bargain, "I'll stand till better times turn up!" a speech which established my popularity on a stable footing. The first instalment of my supply vanished without delay. The grog which followed brought Woppy's reputation on the *tapis*, and I heard an anecdote of him which I hardly think will make him a favourite with the public, in the "Uncle Tom" days in which I rummage up, among old journals and diaries, the notes for this story.—Woppy, it seems, received no little kindness and hospitality from a "coloured gentleman" in one of our West Indian islands, in the days when Woppy had the *Tartar*. The *Tartar* received orders for another region. Woppy was about to sail—must give a parting entertainment to his jovial coloured friend, and had him to dinner. All went well, the dishes were capital, talk was lively, and wine abundant; off went Woppy to sea, with his guest on board, and *sold him* in the Brazils.

The laugh which I had at this anecdote of our delightful skipper, was still fresh in my memory, when I went up for a mouthful of air, about six that evening. Woppy was on deck, and in one of those light and playful moods which alternated with the "rhinoceros" fits of rage, and constituted the opposite pole of his singular character. While in one of these, he would play and jest with anybody; but you could no more trust him than you could trust a hyæna. It was like playing with gunpowder, harmless enough till a spark fell in your way—and then! ——. Purl managed him marvellously, and used to be called his "keeper;" and this evening, he was never far from his elbow, while topsails were being reefed, or on any occasion when the hands were at work.

After several days, during which we had been running before a fresh breeze, I found the brig entering the bay, on which stands a fine Spanish sea-port. The wind chopped round, as it happened, and I heard from the steerage (where I was shaving, in fear of my life) the bracing sharp up, and other operations, which indicated that we had to "beat" in. I swallowed my breakfast as quickly as possible; and, by the time the hands were turned up, was all ready for work. I found the brig under plenty of sail, making a long "leg" over towards an old castle of the Moorish times, which stood on a hill on one side of the bay. Seldom have I seen a finer sight than that bay, that morning. Below, the light fell full on the white town, all along the boundaries of the sight there was a chain of blue hills; inside of which were visible, on the slopes, down to the sea, pleasant olive-groves and vineyards. The breeze brought a whiff of green country, which refreshed me.

Never have I seen Woppy in a higher state of animation than he was that morning. He had mounted a yellow summer waistcoat—which, by-the-by, seemed to excite no common admiration among the crew, who, with the usual discipline of the *Thumper*, passed sly remarks on it, which reached my ears, and caused me to roar "Silence!" in a professional, but ineffectual manner. Somehow I expected we should have a scene with Woppy that morning; and when I saw that he was going to "carry on"—going to give orders—and take the brig in himself, I prepared my spirits for the enjoyment of a "lark."

The master stood on the forecastle. Woppy, with a telescope under his arm, stood on a carronade slide, aft. The brig headed on towards the shore, which seemed to swell out and grow large as we approached, so that we saw the figures of men distinctly, and presently their faces.

"Time to go about!" shouted Old Shaggyton, the master.

The man in the chains kept probing old ocean at every throw, and singing out the soundings; at first in the regular sing-song style, and then, as the work grew hotter, in plain straightforward fashion.

"Time to go about," shouted Shaggyton, again. "And a half-three!" cried the man with the lead. Glancing over the side I could see the bottom.

"Put the helm down," cried Woppy. The brig came round very well. "D—d close shave," muttered the master. The brig quickly made way out again, on the other tack; deeper soundings were called out directly.

No sooner had the brig tacked than Woppy made a dive to his cabin; and re-appeared—or did I only fancy it?—wiping his lips. Shaggyton winked his eye at Purl, who had come forward for a minute, and who presently went aft, and hovered about Woppy in his peculiar way.

"Luff!" shouted Woppy; and the brig was brought up to the wind which slanted a little. "Ah!" says Woppy, "make a good leg up on this tack."

"Quarter less four," shouted the leadsman, after some time.

Once more the brig was put about, and once more Woppy dived to his cabin. His eye glittered more than ever at each of these dives; and as the town drew near, and a Spanish frigate was seen at the anchorage, as well as various merchant ships, it was plain that his spirits rose with the occasion, and that he felt it incumbent on the *Thumper* to make a display. And the *Thumper did* make a display.

Presently we were skirting along one side of the bay, keeping close-hauled, and edging into deuced close quarters with the shore.

"Three!" shouts the man in the chains.

No word from Woppy. A slight electric throb passed through the brig a few minutes after. She had just grazed!

"Keep her away!" said Woppy, waving his hand to the man at the wheel.

"And a half four," cried the man in the chains.

"Luff!" said Woppy. And so, enjoying an excitement, like billiards or liquor, or both together, he kept the brig running up to the verge of grounding, and then sheering off barely in time to save her bacon. At every tack he bolted below for a tumbler, and after every tumbler he put her about better. Finally, he slashed into the anchorage, passing so sharp ahead of an English brig that he knocked off her jibboom; having done which, he shook his fist at her raging skipper, and called him something or other, like the "eccentric gentleman" he was.

CHAPTER II.

We were for some time at anchor in the harbour of this pleasant Spanish town. I visited a good deal (among the nobility, of course) and had more than one convivial evening at our Consul's. Woppy kept up his reputation. The Spanish authorities happening to have a review, Woppy made his appearance on horseback—and a curious figure he was on horseback. Some manœuvres of the beast he was on proving too much for him, he gave vent to the national exclamation in tones so terrible, that the officer in command sent an aide-de-camp to see what was the matter with him; to which he replied, "All right, Pompeo!" But trifles like these were matters of every-day occurrence. I once expected that he would have precipitated Europe into a general war.

It happened that I was breakfasting with our Consul, who turned out to be from the same county as the Hedgers, and was not sorry to find a fellow who could talk to him about it. The Consul had married a Spanish woman, and his daughter united the languor of the South to the freshness of England. After breakfast, I was lounging about, talking to this young person, with the vivacious gallantry natural to the Swillingtons, when it chanced that I got a glimpse of the *Thumper* from a part of the house, which commanded a view of the bay. To my surprise, the *Blue Peter* was at the fore—the signal for sailing. I was obliged to make my *adieux*, and hurry on board. I found the brig in a state of extreme excitement. The men were at quarters, and the guns cast loose!

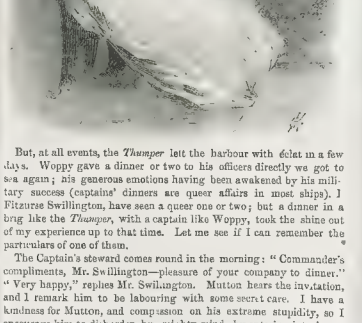
"Mr. Swillington, to your quarters, sir!" cried Woppy, when I appeared on deck.

What were my feelings, when I found that Woppy, having had a dispute with some local authorities, had announced his intention of *firing on the town*, if he did not get satisfaction by two p.m.? As there was a Spanish frigate of fifty guns in harbour, and as the harbour was very well fortified, Woppy could reasonably expect nothing but annihilation in five minutes. But Woppy (in one of his moods) would have attacked anything. He ran about, watch in hand, from one part of the deck to another. I resigned myself to destiny, and only prayed that Purl might be able to exercise the influence over Woppy for which I gave him often credit. Meanwhile, the men cast loose the guns, and stood by to begin proceedings, when they should get the word. And Woppy strode to and fro, watch in hand, waiting for the appointed hour.

"Well," thought I, "there's no use in grumbling at destiny;" and I quoted an old nautical proverb, which affirms, that a man who would "go to sea for pleasure, would go to the devil for pastime." I was stationed at quarters, at the fore part of the ship; and, from the forecastle, I saw boats passing to and fro, between the Spanish frigate, the shore, and the brig, which (as I learned) was the subject of the dispute. Far it be from me to pretend to know the question at issue with any accuracy. But certain rights were claimed in a brig in the harbour, and Woppy fairly gave notice to the authorities, that if the English flag was not hoisted in the brig, and the Spanish pulled down, by two p.m. he would open fire, as above-stated.

Woppy, during the day, kept up a kind of monologue in which he loved to indulge, when the hands were on deck. "Trifle with me will they? No, by —— they won't! As sure as my name's Woppy, I'll teach them better. By twenty thousand devils (vers came a paroxysm), what are you doing at that gun? Double shot it, sir—double shot it! See to it, Purl!"

Here he looked at his watch, and then jumped on the stern gratings and fixed his eyes on the brig. "Now for it," thought I, "has Purl not the pluck to confine him as a maniac, and take command himself?" At this instant, Woppy, taking off his straw hat, waved it round his head, and shouted "Three cheers!" The whole body of our *Thumper* fellows—some of the biggest blackguards, and likewise some of the best sailors in the Mediterranean fleet—burst into a tremendous cheer. I sprung to the forecastle ladder, and saw that the authorities had given in, at the last moment, and that the English flag floated from the brig in dispute. This triumph put Woppy into a state of excitement, which lasted for several days, though it was a victory which, perhaps, did not please the authorities at the Admiralty quite so well. For the Spanish authorities wrote to Madrid; Madrid complained to the English Minister; English Minister referred to English Consul in town; English Consul in town wrote back explanations; correspondence was sent to Admiralty; by Admiralty to Foreign-office, &c., &c.; and, for ought I know, the business is still negotiating itself somewhere to this hour, after Woppy, the father of it, has been for some time in his grave!



But, at all events, the *Thumper* left the harbour with éclat in a few days. Woppy gave a dinner or two to his officers directly we got to sea again; his generous emotions having been awakened by his military success (captains' dinners are queer affairs in most ships). I Fitzurse Swillington, have seen a queer one or two; but a dinner in a brig like the *Thumper*, with a captain like Woppy, took the shine out of my experience up to that time. Let me see if I can remember the particulars of one of them.

The Captain's steward comes round in the morning: "Commander's compliments, Mr. Swillington—pleasure of your company to dinner." "Very happy," replies Mr. Swillington. Mutton hears the invitation, and I remark him to be labouring with some secret care. I have a kindness for Mutton, and compassion on his extreme stupidity, so I encourage him to disburden his mighty mind, by entering into jocose talk, and making him laugh. Presently, he says—"That I am going to dine in the cabin—that wine is out in the berth (which I know too well)—that I wont want my share of the rum—that——The deduction

is obvious (as the newspapers say); and I offer my rum to Mutton who can carry any quantity, perfectly unharmed, as these solid, stupid fellows generally can. By half past four I am dressing myself in the midst of difficulties in the steerage; at five, the piper and drummer strike up the "Roast Beef of Old England"—I join in a procession at the tail of Purl and Shaggyton (giving a glance of admiration at Shaggyton's waistcoat, as big as a topgallant sail, and in his eyes the perfection of dress), and in we march to the cabin, where Commander Woppy awaits us, very fresh looking, and not a whit less eccentric than ever. "Ha! sharp five—take your places, gentlemen—Mr. Shaggyton, be good enough to say grace!"

There was an unjustifiable glimmer of mad humour in Woppy's eye; I never saw a man more puzzled than Shaggyton, who, I am certain had never been asked to do such a thing in his life; he stammered, and blurted out, however, such supplication as he could. The steward whisked the cover off the soup-tureen, and dinner began. I remarked that, rude as the cabin was, the plate was very fine, and some of it even old; for Woppy belonged to a considerable family (doubtless the reason why, with his peculiarities, he got commands); and I believe he made a point of dining every day (even when alone, and upon a chop) with all his plate on the table. "Soup?" he said. "Hem!—hot water and barley. Gentlemen, my cook's an idiot, but you must make the best of him; he's mad, but can be managed."

Really this hit his own case so exactly that I involuntarily glanced at Lieutenant Purl; but Purl preserved his gravity, and consumed his soup. Three times Woppy pronounced the soup execrable; but he took three plates of it. I remarked that Purl never acted on anything which our Commander said, but made the best dinner he could without attending to his advice. I followed his example, and found the soup really capital.

The great bore on these occasions is the difficulty attending conversation. The Captain must, of course, take the initiative; and, generally, the talk transacts itself as quietly and soberly as a game at whist. The Captain, by-the-by, also, being too often as slow as a "dummy." But with Woppy this was not the objection, for he was free-and-easy in the extreme. His tongue wagged away from the moment the cover was off the soup tureen.

"Well, steward, anything more to eat? There's Mr. Swillington there; he's got the appetite of a hunter! Mr. Swillington, a glass of wine? Sir, I drink to you. I look on any man's joining the *Thumper* as a personal compliment to myself."

I drank to our gallant Commander with my usual cordiality; and left him to enjoy his mistake of supposing me to have volunteered for the *Thumper* (if mistake it were, and he was not slyly sarcastic) undisturbed.

"Purl, will you partake of pillau?" said the alliterative Woppy. The Lieutenant assented. "Mr. Swillington, fowl?—what part do you prefer?—liver-wing? See you d—d first!" This jest (which, so applied by a captain to a sub, is of venerable professional antiquity) made the rugged Shaggyton roar with laughter, so that, as he was taking sherry at the time, he was thrown into a fit of coughing, which made him black in the face.

"Slap his back! slap his back!" Woppy shouted. Delighted at the opportunity, I gave the old fellow a slap, which resounded again.

"Why, Shaggyton, I thought you were going to choke,' the Commander said

"Wine went the wrong way," growled the master, scowling at your humble servant also.

"Gad, your wine don't often make any mistake," said Woppy, with some humour, and winking at Purl and me.

"I don't care, if it keeps clear of my 'tel," was Shaggyton's response.

I confess I expected Woppy to have gone off into one of his fits at this remark, which, I thought, conveyed a sarcasm. But he did not seem to hear it, and some fresh dishes made their appearance at the moment, and set him off about them. In due time came dessert, and the loyal toast which commences it in her Majesty's service; and which will be drunk in the Baltic, I hope, before this paper of mine appears. Woppy was liberal with his port, and encouraged drinking; but I (who guarded myself by the sagacious Purl) took care not to be led into jovi[illegible]ity. Whenever Woppy mischievous, as a hearth-fire warms up a [illegible]. I have heard that in the West Indies he has been known to make a fellow drunk, and then bring him to book for what was truly his own fault. Nay, I noticed that Purl became more reserved at every turn of the bottle, and before long he made a dead stop.

"What! no more wine? Mr. Swillington, won't you take some more?"

"No, thank you, Captain Woppy."

"Oh, you don't take anything! Steward, coffee."

The coffee was just entering, when I heard a running about overhead. Then came footsteps on the companion-ladder, and Mr. Piper entered and reported that there was a strange sail in sight, which looked like a man-of-war.

"I don't know what ship of our's can be knocking about now," Purl said, after the youngster had gone on deck again.

"Going to Gibraltar, most likely," the master observed.

"We'll have a look at her," said Woppy abruptly, rising and breaking up his dinner party with little ceremony. We followed him on deck. His lively and free-and-easy humour had disappeared. He was sulky with Purl. His face was red. The men, when they turned up to reef topsails, remarked that the skipper's face was red, and knew he had just had his dinner. Bless you, they see when the skipper's face is red as well as his officers do; they know when he's got his wind on board, as well as the satirical Primby does; they tattle over the private life of the potentates "aft," as on shore snobs tattle about the private lives of lords, and actors, and others, with whose proceedings they have no manner of concern. But you are mistaken if you fancy the good-natured gabble of a forecastle is not many, many degrees a superior sort of gossip to the gossip of drawing-rooms and taverns—in heart, at all events. Yes; I am not a British patriot of the brandy-and-water school; but I do maintain that the genuine old Conservative loyalty exists fresh and vital in our sailors. If you would know what that sentiment was which Sir Roger de Coverley's tenants had towards Sir Roger de Coverley; if you would know what that feeling was which was felt for a good Lord of the Manor in olden times—felt by the yeomen of Froissart's days towards the gentlemen who led them—that sentiment which the old ballad-writers had for the old ballad heroes—you may get a glimpse, I say, of the nature of that old-fashioned kind of relation between man and man still in the English navy. But I Swillington, my dear sir, you digress; and bagmen will sneer at you if you don't take care.

The man-of-war turned out to be the *Violet*, and she *was* on her way to Gibraltar, as the experienced Shaggyton had guessed. She hove to, some three cable's-lengths off to windward of us, and sent a boat with a midshipman, whom I recognised, the moment he reached the deck, as an old messmate in South America.

"Halo, Swillington! you here?"

"By Jove! Fred, is that *you*?"

We met, like two English brothers, in this romantic fashion. We had not seen each other for three years.

Duty first: so my friend reported himself to Purl before saying a word more to his ancient chum, thus blown up against him by a chance wave and wind. I saw Purl speak to him, and then Woppy, who indulged in a pleasant little solo of cursing and swearing on the receipt of the news, which, as I directly learned, was that we were ordered to return to Malta. The *Violet*, it seems, expected to find us at Gibraltar.

For Delormie joined me, after delivering his letters for the Captain. While his boat was alongside us, as we lay to, I enjoyed a few minutes' chat with him.

"So, you're with Woppy; he's a strange card, isn't he? You've heard, I suppose, of the loss of the *Firefly* on the coast?"

I had not. Fred Delormie then drew his arm inside mine, and moved out of hearing of everybody, and whispered something in my ear. I started back.

"Make sail! *Violet's* boat shove off, sir! Go on board your own ship, sir; go to the devil, sir!" shouted Woppy from behind us.

"Same thing in *some* cases," whispered Fred, with a hurried shake of the hand. Away went the *Violet's* boat; and the *Thumper* filled, and stood on again, altering her course.

Woppy was, indeed, in a mood. For myself, I had received a hint from my friend Delormie which had quite thrown me out of my usual semi-stoical calm. To be cooped up in a "slummy" brig, messing on ship's beef and dough, with three such messmates as I had—overworked, and exposed to the caprices of a gentleman of unsound mind—was in itself a wretched position; but, if what Delormie had hinted was founded on truth, I resolved to take steps to alter my condition *instanter*. That I would get anybody to exchange with me was, of course, in the last degree improbable; but, whether or not, I was determined to leave the *Thumper*.

I was musing on this resolution, in the first watch, when the ingenious Lieutenant Purl came up to me. In his fine oily way, he expressed his admiration of the night—the fineness of the night; upon which I hinted that he might keep the first watch. "Ah, ha!" laughed Purl. "This is quite brotherly, now, dear Mr. Swillington! Quite the friendly familiarity I like between officers." . . . . And so he took no further notice of the proposition, of course. But he said that he found our captain a *little* more unmanageable than usual. And then he drew my attention to his skylight, which was usually covered over at night, and showed me how it was possible to keep one's eye on Woppy, through a chink in it, while there was a light below—a measure which had been resorted to when Woppy was—was— out of sorts! Mutton had discovered this convenience, I remembered, too, and had used it for his own purposes—viz., in order to know whether the Captain was likely to come on deck, and so spoil that "caulking" in the watch which Mutton esteemed it the great triumph of his intellect to secure. It is among my laughable reminiscences of the *Thumper*, seeing Mutton kneel down and peep down into Woppy's cabin, with this object. He would poke his pug nose right into the glass; and then he would get on his legs again, and communicate with the faithful Piper, in this fashion:—"He's got his waistcoat off, Piper;" or, "He's in regular dish-a bil-now, P; there go his tr——." But we are scarcely at liberty to exhibit Commander Woppy to the public in his private night attire.

We were three days going to Malta, during which Woppy kept his cabin. "Quiet, sir—bowel complaint," the surgeon said. It is my private opinion that Woppy drank a good deal of brandy-and-water during this period. He occasionally rang the bell, and told you "not to take the mainsail off her," if he heard you piping the watch to shorten sail. But Mr. Purl used quietly to shorten sail, if needful, and provide for the safety of the brig in spite of her Commander. He had these fits of seclusion, they told me, and, indeed, I was not sorry for it.

When we had been in Malta for some days, a lieutenant from the flag-ship came on board one morning—a Mr Rose, a spic-and-span genteel sailor, who evidently thought the *Thumper* a very plebeian vessel. He was inclined to patronise us most contoundedly; and before long I involuntarily felt myself jerking my fingers, and gazing with much earnestness at his nose. Mutton and Piper gazed at a well dressed man with scorn. "I say, Swillington," Piper said, "let's ask him down to the berth, and give him some dough." They did not understand his apparition. They could not guess what was the matter, when they found that the *Thumper* weighed, and ran out of the harbour with the swell gentleman on board. For myself I felt certain suspicions of mine confirmed, and thought more earnestly than ever on the great question, how I should get clear of the brig, and that as soon as possible.

What a slashing breeze! The *Thumper* ran before it. The island waned away towards the horizon. Canvas fluttered from bulwarks to truck. Woppy, Mr. Rose (the swell), almost all of us, were on deck. I watched Woppy, and I saw a twinkle in his eye which foreboded something. He had a cynical, but very loud laugh, and he talked away to Rose in his most eccentric style. There was a sheen of humour about the cloudy and fiery insanity of Woppy. And really he played his part very well, in company of the swell—one of the most conceited specimens of a pet officer and dandy I have ever seen.

"Heave the log, Swillington," Woppy said. I did so. "Nine knots." "Oh! you'll get more than that out of her," Rose said, with a smile. "With this breeze she ought to do more than that."

The wind grew fresher and fresher. The log was hove again and again, and a note made of the return each time. Mr. Rose expressed himself more satisfied. Then we tried her on a wind, and in all kinds of ways; and Mr. Rose chuckled and rubbed his hands, and said, "Capital, my dear sir; I didn't think the *Thumper* had it in her. Capital!"

I went below to the berth, and found Mutton and Piper exulting in the brig's progress. "You geese, said I, "do you know what you're applauding?"

"Eh!" said Mutton, looking owlish and alarmed.

"Why," said I, "don't you know what this trial means, which seems to delight you so much?"

"No," Mutton said," I don't."

"*Only that the brig is going to be sent to the coast of Africa, that's all. She had better have sailed like a tub.*"

So saying, I left these young gentlemen to enjoy the reflection, and when I went on deck found the breeze swelling into a young gale. The island lay far to windward, with a black thunder-cloud hanging over it, under which it shone with a white gleam. I was in no humour to enjoy the breeze, or anything else; I knew what the "coast" was, and not pleasant under any circumstances, I knew that it would be intolerable under the command of Woppy. That officer was still aft with Mr. Rose, Purl, Shaggyton, and others.

Mr. Rose took out his watch, and said, "Won't it be time to make

for the harbour, Captain Woppy?" Then he added pleasantly, "We have a dinner to-day in the *Cleopatra*—entertain the Buffs."

"Oh, lord," says Woppy, "I was going to have asked you to take a bit of cowheel with me, in my quiet way." Mr. Rose looked surprised. "Or, there's Purl there, he has horse," added Woppy. "As for my midshipmen, I don't know how the devil they live," he added rather rally, having an innate disgust and contempt for anybody who dressed like a swell. "But, lord, we must not keep the Buffs waiting!" he roared suddenly, after his fashion. "Reef topsails!" And so we took in a couple of reefs, and made for the harbour of Valetta.

Picture, now, the brig lying close-hauled, as well up as she can—she behaves very well. Commander Woppy dives to the cabin, as we saw him do the other day—comes up, and puts her about. I watch Woppy. That wild eye glitters. Once or twice, when Mr. Rose congratulates him on the *Thumper's* performance, he gives a peculiar laugh. He jumps off the carronade slide with more than his usual energy, and his loose, thin hair blowing out from under his cap, as he cries "Ready, oh, ready!" and every time, that "Ready, oh, ready" sounds shriller and louder. The hands are turned up to "bring ship to an anchor;" the sky is darkening, and the wind freshening, as the dirty and rough-looking, but lively brig nears the stony shores of the fortified island. There is quite plenty of sail on, particularly as the *Thumper* is overmasted, and eyes are turned up, occasionally, at the strained topsail yards from the crew gathered together, fore and aft, at their stations.

She goes about. Woppy jumps from his carronade slide, and dives again to his cabin. She heels over on the other tack, and makes (like a weary bird for her nest) for a part of the shore near a stately fort, at the entrance of the harbour. The master is on the forecastle. Purl is near Woppy: I looked at them, and saw Purl speaking to him, and saw Woppy waive his hand, as if he was motioning him off.

Suddenly, the master made a signal to Woppy from the forecastle. The brig was again eagerly and fiercely making for the rocky shore. "Time to go about, sir," cries the master. Purl was running to the tiller to put the helm down, himself, when the Commander roared out "Wait." A pause followed of deadest silence. "Put the helm down," shouted Woppy, with a glaring gun, which I still vividly remember. As if conscious of her danger, the old *Thumper* came readily to the wind; but, in full swoop, she struck, with a shock which threw us all up against each other; the tiller snapped in half like a bit of sugar-stick, and the brig slowly reeled over, hard and fast.

The best "remedial measures" were, of course, taken, with the aid of the squadron in harbour. But, after this, there was no possibility of sending the *Thumper* to the coast of Africa. Her sailing was spoiled; she was got off, "hove down," and what not; but she never recovered her qualities. Commander Woppy was "invalided;" and the officers and crew dispersed to various ships. They say that Woppy did it "on purpose"—that his family were much annoyed, as it was expected the "Coast" would have finished him—and so forth. I say nothing—except that I hope next time I'm staying at Ditcherton I shall not be called away from my rabbit-shooting to take a Cruise with an Eccentric Gentleman.

WHEN THE KYE COME HAME.

(From the "Book of Scottish Songs"—National Illustrated Library.)

Come all ye jolly shepherds
That whistle through the glen,
I'll tell ye of a secret
That courtiers dinna ken.
What is the greatest bliss
That the tongue o' man can name?
'Tis to woo a bonnie lassie
When the kye come hame.

When the kye come hame,
When the kye come hame,
'Tween the gloamin' and the mirk,
When the kye come hame.

'Tis not beneath the burgonet,
Nor yet beneath the crown,
'Tis not on couch of velvet,
Nor yet on bed of down:
'Tis beneath the spreading birch,
In the cell without a name,
Wi' a bonnie, bonnie lassie,
When the kye come hame.

There the blackbird frae his nest
For fear maist he lose his mate,
And up upon the topmost bough,
Oh, a happy bird is he!
Then he pours his melting ditty,
And love 'tis a' the theme,
And he'll woo his bonnie lassie
When the kye come hame.

When the bluart hears a peerl,
And the dauk turns a pea,
And the bonnie lucken gowan
Has laidit up his ee,
Then the laverock frae the blue lift
Drops down, and thinks nae shame
To woo his bonnie lassie
When the kye come hame.

Then the eye shines sae bright,
The hail soul to beguile,
There's love in every whisper,
And joy in every smile.
Oh, no the world sae gay a crown,
Wi' its pearls and its fame,
And miss a bonnie lassie
When the kye come hame?

See yonder pawky shepherd
That lingers on the hill;
His yowes are in the fauld,
And his lambs are lying still;
Yet he downa rangs to rest
For his heart is in a flame
To meet his bonnie lassie
When the kye come hame.

Awa' wi' fame and fortune,
Wha' comfort can they gie?—
And a' the arts that prey
On man's life and life
Gie me the highest joy
That the heart o' man can frame,
My bonnie, bonnie lassie,
When the kye come hame.

JAMES HOGG.

"THE LOWESTOFT HERRING FISHERY."—DRAWN BY E. DUNLAP

WHO'LL buy herrings
Fresh and sound?
Who'll buy herrings
By the pound?

By the pound—
Or by the ton—
Fine fresh herrings
Every one!

Who'll buy herrings
Newly caught—
Half a hundred
For a groat?

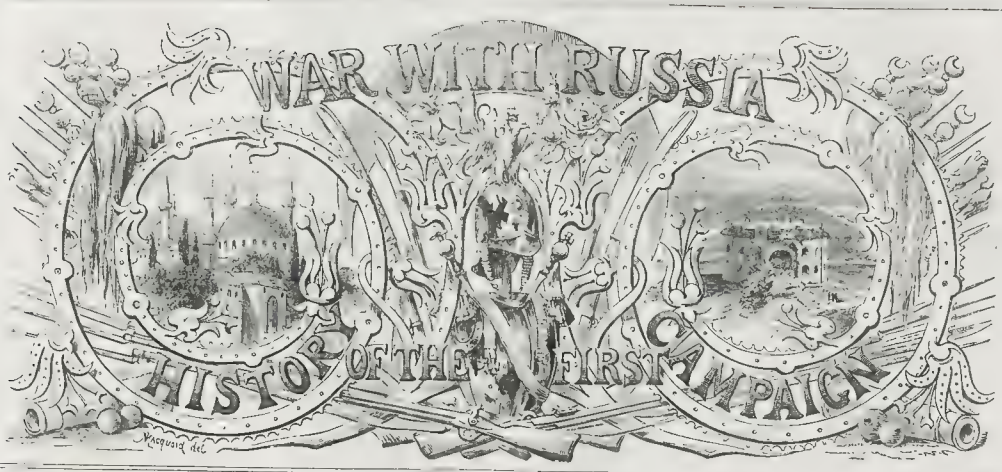
Fresh, they're wholesome—
Salted, fine—
Good to breakfast,
Or to dine!

Who'll buy herrings?
Here's to spare—
Frugal dainties,
Poor men's fare—

Thanks to Heaven,
For bounties free,
Thanks for herrings
In the sea!

"WHEN THE KYE COME HAME."—DRAWN BY C. DODGSON.—SEE PRECEDING PAGE.

London: Printed and Published at the Office, [illegible] Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, SEPT. 30, 1854.



No. 705.] SATURDAY, SEPTEMBER 30, 1854. [VOL. XXV.

HISTORICAL SUMMARY OF THE RUSSIAN WAR:

FROM ITS COMMENCEMENT TO THE PRESENT TIME.

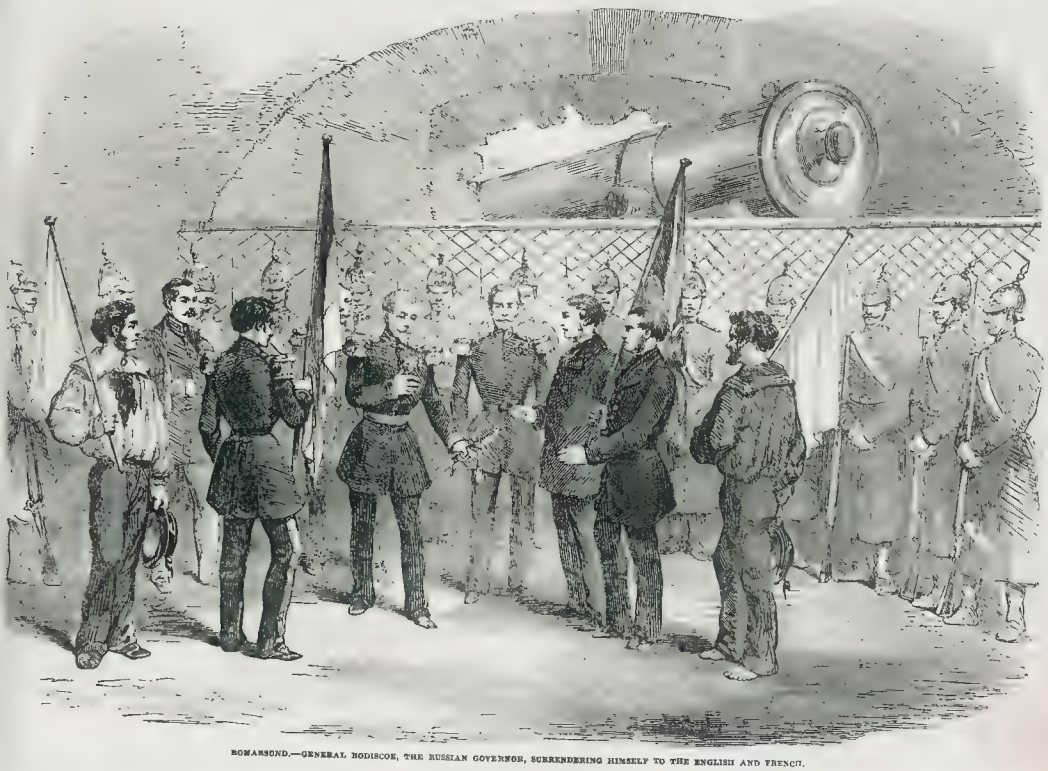
IF the most intelligent man moving in common English or French society were suddenly asked to give a brief, a clear, and a connected account of all the transactions of the Russian War—from the beginning of it to its present stage—he would first, perhaps, be surprised that anybody should need such information. But he would immediately be still more surprised to find how difficult it was for him to furnish it; that, instead of being able to state, offhand, in their real order and due arrangement, the facts required, he would be obliged to ask time for reflection; and then, even, time to make some references. He would discover that he had, indeed, in his mind an idea of all the events; but that his impressions, though very vivid respecting the principal particulars, were, after all, a mass of anachronous entanglement and historical confusion.

In some degree, this is always the case upon the occurrence of momentous and protracted international changes—until time has been given to the public to free itself from the first excitements, and from the multifarious, but transitory, delusions by which they are attended. Perhaps, indeed, the very facilities which now exist for publishing diurnally every premature version which may arrive of affairs interesting to the public, have contributed to heap upon the progressive reports of this great war a burden of crude messages and announcements, which confuse the true chronicle of facts; and, in short, *we have not so much to learn the story as to recall it succinctly, and to unlearn the many successive misstatements of it.* Already, the newspaper records of a single year of stimulating and, to our generation, novel and portentous intelligence—with second versions, and third versions, and corrections and alterations—exceed in bulk the immense history in which Gibbon chronicles the stupendous revolutions, the many memorable conflicts, and the countless European vicissitudes, of *fifteen centuries.*

It is time to weed this literary wilderness; to preserve only what is valuable; to put even that in its right place; and to supply a compendious, lucid, and reliable narrative of a conflict which might be said to have been long impending, and yet which virtually took Europe and the world by surprise.

FIRST PERIOD: INVASION OF MOLDO-WALLACHIA; AND STATE OF RUSSIAN TROOPS.

It was towards the end of August, 1853, that the first Vienna Note was declined by the Porte; and not very long afterwards, that the second was peremptorily rejected by the Czar. But nearly three months earlier, orders had been dispatched from St. Petersburg to carry the Russian divisions forcibly across the Pruth into the Turkish territory—thus making war, but not declaring it. On the 3rd of July the order was executed. Those rich corn countries were seized; taxes for the maintenance of eighty thousand troops were imposed by the Czar upon four millions of the subjects of Abdul-Medjid-Khan, and contracts for nine months were based on these new imposts; the Danube, the greatest inland highway of commerce in Europe, was brought under the invader's immediate and stringent control; the Hospodars were deposed; a Pro-



ROMARSOND.—GENERAL BODISCOE, THE RUSSIAN GOVERNOR, SURRENDERING HIMSELF TO THE ENGLISH AND FRENCH.

visional Administration, at the head of which Prince Michael Gortschakoff was nominated to represent with supreme powers the undefinable Protectorate of Nicholas, was established; and, in short, the Czar, carried into effect the very claims concerning the admissibility of which he was at the same time holding an illusory discussion with all Europe. The movement was made suddenly and rapidly. In the very first instance fifty thousand troops—of which, perhaps, a third was cavalry, and which were attended with proportionate parks of artillery (seventy-two guns, in fact, of large calibre)—were pushed into Moldavia; and these troops were virtually but the advanced guard of the intended army of occupation. Two immense lines of march—one from the centre of European Russia, and another, equally long, from the very confines of Asia, were all alive with armed men, succeeding each other, and pressing forward to a common destination. From Kherson and Kief moved those who were to replace the garrison of Bessarabia; and the vacant and remoter cantonments were, in their turn, supplied by the advancing columns of Taurida and the Don Cossacks of Pultowa and the Ukraine. They came—the children of ancient and barbarous races—various in costume, in stature, in complexion, in manners, in arms; but all gathered and drilled into the one huge system of military tyranny and religious fanaticism. The worst and cheapest troops came first. This method is essentially Asiatic. We picked our men to send the most efficient; and the French have included, in their expeditionary divisions, a part at least, and a large part, of their best soldiery; and if, when these had gone, the army of the Baltic consisted of very young soldiers, they were at least armed, provisioned, accoutred, and trained with even additional liberality and more scrupulous caution. Very different from such troops were the Russian soldiers who now poured into Moldavia. Perhaps there is no armed body in the service of the Czar which ever derives the full and fair measure of provisions, of clothing, and of equipment, represented on paper by their cost. If there be such a body, it is that of the 60,000 or 70,000 Guards. The chief particular in the annual expenses of the State is that of the support of its armaments; and, in theory, the country being considered, sufficient sums are, perhaps, apportioned to the purpose. But in practice these sums are misappropriated; a great part of the money is intercepted before it can reach the soldier. Corruption and venality corrode all departments of the military administration. The Guards being constantly under the eye of the Sovereign, escape most of the frauds, which, where they can be practised, injure alike the treasury of the State, and the comfort and efficiency of its defenders. In less favoured regiments, a gold imperial must be spent, in order to do badly, what a silver rouble ought to have done well. The Colonels grow rich, while the soldiers perish of cold and want.

But when it is the system to select for the first hardships of every enterprise, that part of the soldiery who are the most reduced and damaged by the effect of these practices, it may easily be conceived in what condition some of the half-starved Russian divisions, after a fatiguing march through difficult countries, appeared in the Principalities. We speak not of those who had but to cross the Pruth from the borders of Bessarabia, but of the great masses who were simultaneously hurried from distant points to support the advanced guard. The first *hardships*, in truth, were not for the first comers. These were naturally the nearest. Osten-Sacken's corps was in movement behind, when Gortschakoff and Lüders were entering the Turkish territory.

The Czar had long succeeded in raising a party in his favour in Moldo-Wallachia; but, be it observed, it was only a party; it was not the people, it was such a party as he has in Prussia, or in Baden. That such a party existed in the Principalities, is proved by the fact that, *before* the Russians had sent one soldier across the Pruth, the Divan of Moldavia assembled, on the 14th of June, at Jassy, and there voted an address of sympathy and homage to the Emperor Nicholas. Under the circumstances of the crisis, sympathy and homage amounted to an invitation, which he scarcely needed.

Five days after Prince Gortschakoff had passed the frontier stream (more fatal than the Rubicon), he assisted at a "Te Deum," which was intoned with solemnity at St. Spiridion, the great Greek Church of Jassy.

A week later—that is, on the 15th of July—instead of the seventy-two guns with which the Russians had entered the country, they possessed in Jassy alone 144 heavy pieces of artillery; and this great park and 40,000 men were instantly directed to advance upon the Danube. In another fortnight, having put this formidable column upon the march, Prince Gortschakoff was 160 miles away, at Bucharest, exchanging compliments with the Bishops, who had there assembled to give him welcome. Thus he was solemnly received in the respective chief cities of the two provinces. Between his stay in the first of these capitals and his arrival in the other, Ghika, the Hospodar, had sent to the Sultan a memorial of so equivocal a nature that it was considered a renunciation of the Ottoman allegiance. Under this impression, which was perhaps just, Abdul-Medjid deprived him at once of the title to that office, from the exercise of which he had already been practically excluded. First the Russians robbed him of the possession, and then the Divan deposed him from the dignity. The invaders, with whom he temporised, terminated his jurisdiction *de facto*; and the Suzerain, whom he betrayed, abrogated it *de jure*. Ghika shortly afterwards explained his conduct, and was re-admitted into partial confidence at Constantinople.

The Czar felt that he had now taken steps from which he could not recede without incurring humiliations abroad which might impair his authority at home, and, perchance, imperil his dynasty. The armaments of Russia, therefore—to use a favourite term of our diplomatists—proceeded with such activity, that they were apparent to the most casual observation; and, not content with the re across in his hands, the Autocrat decreed, on the 23rd of July, a new conscription of seven in the thousand. Meanwhile, a concentric despatch of troops was continued from all the southern provinces of the empire upon Bessarabia. They arrived, diseased, ill-provisioned, exhausted, after a desolating march of sometimes thousands of miles, over roadless countries.

MEASURES TAKEN BY THE DIVAN; AND FIRST PROCEEDINGS OF THE INVADER.

On the other side, the Sultan was not inattentive to events, nor unequal to his dangerous and difficult position. He had to provide against attacks in Asia, as well as to guard the European seat of his Government. So early as the 23rd June, Selim Pacha was nominated Seraskier in Anatolia, and a large army was placed under his command. The choice of this officer was as unfortunate as that of Omer Pacha in Europe was judicious and happy. The first object was to provide against the advance of the Russians from Georgia along the southern shores of the Black Sea—an advance which, unopposed, would place Constantinople in a worse position than if the invaders, having forced the Balkans, lay encamped in the European province of Roumelia, which corresponds to the home counties of London. In this other position, the capital might still rescue the empire; and, with the Allied fleets in the Bosphorus, and off the Golden Horn, might await events with tranquil defiance. More than this, a Russian army in Roumelia might be said to have crossed the Balkans only to perish. A victory near Adrianople, over a fresh and vigorous Anglo-French army, would, to those wearied troops, be a moral impossibility; while retreat over the mountains would offer the alternative of certain annihilation. But, if a large force from the Transcaucasian provinces could succeed in pushing through Erzeroum and Trebizond, and occupying Anatolia, then both the Channel of Constantinople and the Straits of the Dardanelles would be effectually commanded by the enemy; the key of the entrance of the Black Sea would be in his hands; and he could imprison in those waters, or exclude from them, the maritime defenders of the Porte. A favourable moment would then allow the Russian legions to be thrown across into the very metropolis.

This Asiatic danger being averted, Omer Pacha was appointed the Turkish Generalissimo in Europe; and so soon as the news of Prince Gortschakoff's invasion had reached the Divan, Omer was ordered to break down all the bridges over the Danube, and immediately to adopt what strategic measures he deemed advisable for the defence of the State. This was on the 11th July. At that time the French were holding their camp at Helfaut, and we our camp at Chobham. There was a great and unaccustomed activity in all our dockyards and arsenals. The same noise of preparation resounded in France. *But the fleets were still in Besika Bay.* We feared not that we could be locked out from the future scenes of naval conflict; Woronzoff and his troops were a thousand miles inland to the East, the Turkish levies of the new Seraskier lay between, and the castles of the Dardanelles were in the proper custody. All this was true, and we knew it; but not one great General was in the service of Russia, a fact on which we could not then presume; and one great General, aided by fortune, and commanding in Armenia, might have reversed the conditions we have enumerated and made a speedy and disastrous change in all the circumstances of the situation. It was still a time of political suspense; and while Omer Pacha was proceeding to the Danube and Prince Gortschakoff was exercising all the despotic powers of a conqueror in the Turkish territory beyond that river, actually pressing into his service *by forced enlistment the very Boyards* whom he could not induce by persuasion to join the cause of the invaders; while the Grand Duke Constantine was at Odessa, urging forward with vehemence the concentration of troops, the outfit of vessels, and the accumulation of all the means of an immediate and desperate struggle; while Italy and Hungary and Poland displayed new signs of disquietude; while Austria was repairing her financial resources and silently collecting her military strength; while Servia and Bosnia were breaking into insurrection; while the Ottoman Empire was convulsed with its prodigious exertions to use and yet to control the explosive passions which now raged and ravened for a vent—while, for example, *at Aleppo, on the 9th of August, a conspiracy to murder all the Christians* was with difficulty assuaged (rather than suppressed); while already the clash of arms began to be heard, and blood to flow, on the banks of the Danube;—while this was the state of Europe, war was yet nowhere declared, *not even by Turkey.* And to show the wonderful delusion of men's minds, we may mention that so late as the 17th of August the Austrian Consul-General at Bucharest announced in a letter which was at once published, that he had received positive news of the establishment of peace.

Trade was not yet quite suspended, and corn was shipped from Odessa in very considerable quantities, just twelve days before the Austrian Consul's very Austrian announcement. But great storms began now to sweep the Black Sea, while the presence and the proceedings of the Russians in Greater Wallachia imposed new difficulties on the export of grain from that important cereal outlet and emporium. On the 25th, it was known that one thousand vessels would be required at the Sulineh Mouth to ship the arrears. It is, therefore, not surprising, if we take this as but a sample of the difficulties arising, that something very nearly approaching to a dearth was felt at the close of 1853. That year, which had begun, with so fair a promise, ended in gloom and alarm. A scarcity prevailed; a pestilence impended; after forty years of peace, improvement, and civilisation, a vast war, to be waged with new and more terrible implements of destruction, was at hand; and none could promise themselves that they should witness its termination.

Darker and darker, by swift gradations, became the colour of events. The cholera and the hosts of General Lüders were heard of together in Bessarabia, and together they entered Brailow. On the 1st of September the Sultan ordered an immediate additional levy of 80,000 men, which was answered on the 24th by a ukase of the Czar, calling out a new conscription, though he had, *only two months and a day before*, by a similar measure, torn so many thousands of his wretched serfs (the only wealth of the Muscovite Boyards) from their agricultural labours.

Four days after the Sultan's Hatti Sherif, Prince Gortschakoff, who was at Bucharest, about twenty-five miles from the great river which he had orders to pass, issued a proclamation, concluding with these extraordinary words:—"Russia is called to annihilate Paganism, and those who would oppose her in that sacred mission shall be annihilated with the Pagans! *Long life to the Czar! Long life to the Deity of the Russians!*" So the expressions have been, and, no doubt, with literal exactitude, translated. But it is quite evident that the virtual meaning, in Russ, of the words rendered by "long life to," is "*hurrah for*," and that the mention of the Supreme Being, by a brutal and illiterate soldier, unused to composition, was intended as merely symbolical of the particular religious cause for which he was come to do battle. But, even, with this palliation, a more barbarous manifesto could scarcely be cited; and the precedence given to the cheer for the Czar over the cheer for the Czar's Maker (unless a climax was intended by the accomplished author), indicates the very peculiar nature of Russian fanaticism. In truth, fanatics have always fought well; and these poor slaves fight badly. Therefore they are not real fanatics. We shall find, in addition to this, that they are badly led by their generals; and it is a very curious fact, which the history of the present war seems likely to corroborate, that Russia never yet produced a leader of troops who was of the *highest order*. Every other great military nation can, in its own annals, point to scores of such commanders—except, indeed, Prussia; and Prussia has not, perhaps, been long enough a Power of Europe to have yet produced another Frederick.

Two days after Prince Gortschakoff's proclamation, the sentiments of the Wallachians might be conjectured from the proceedings to which the Russian General was obliged to resort. Several Boyards were arrested *on the charge of corresponding with Omer Pacha.* And what if this were true? War was not declared; Russia herself was at pains to represent the invasion of the Principalities as no invasion at all; but, emphatically, a peaceful occupation, executed without the least breach of amity between the Czar and that Potentate, who, besides, was certainly the Sovereign of these Boyards. Yet they are cast into prison, for being but suspected of writing to a high officer in the service of their own Monarch, the Czar's good friend.

On the 10th, the French Ambassador to the Porte, became so uneasy that, on his own responsibility, he ordered three French frigates; and Lord Stratford de Redcliffe, yielding to his persuasions, ordered, in like manner, three English frigates, to ascend the Sea of Marmora, and to moor at the entrance of the Bosphorus. This was but a slight and scrupulous demonstration. Far more decisive advances of the enemy were progressively occurring; and Giurgevo, on the north bank of the Danube, facing Rustchuk, was selected, instead of Fokschani, at the base of the Crapack hills, to be the scene of the chief Russ an camp. The mouths of the river were now filled with corn, which could not be exported. These accumulations, on the 17th of September, amounted to 40,000 kilogrammes of white wheat, 9000 of red, 16,700 of maize, and 25,000 of rye.

The last fruitless diplomatic effort before Turkey declared war—an effort on the one side to come to an understanding, and on the other to overreach, Europe—was the conference at Olmütz, where the Czar tried his personal influence over the young Emperor Francis Joseph. Nicholas arrived at Warsaw on the 20th of September, and thence reached Olmütz on the 23rd. Seven days later, he was again at Warsaw, disappointed and baffled, as it was commonly imagined, in all the objects of his late visit—a visit which had not been undertaken until Envoy after Envoy (each of higher reputation than his predecessor) had failde at Vienna. We know not, for our part, with what understanding the two Monarchs separated. The subsequent conduct of Austria is, perhaps, the best light by which we can guide our conjectures; and, whatever praise may be due to Francis Joseph, this reflection will occur to every body, that he might have earned a still higher praise, *for he might have prevented the European conflict altogether.*

As if to alarm England, the exaggerated statements of Russia's power, and of her means of war, were accompanied by the announcement of occasional victories, menacing India in their results. Thus, we now heard how General Perewski, Governor of Orenburg, had stormed Ahmetzi, *and had laid open the road to Khiva.*

SECOND PERIOD: HOSILITIES AFTER TURKEY, BUT BEFORE ENGLAND AND FRANCE, HAD DECLARED WAR

It was not till the beginning of October that the Sultan, who could wait no longer for the Allies, and, indeed, no longer restrain the eagerness of his own people, formally declared war against Russia, and decreed that 150,000 fresh troops should be raised and organised at once, for the defence of Islam. The Czar, when this heroic act of the "sick man" was announced to him, declared that, "from that moment forth, *he retracted all his concessions.*" What his concessions had recently been to Turkey, or what concessions he meant, it would have been perplexing to determine.

The declaration of war could not have been further delayed. Even before it was possible for the news to have reached the Danube, about 1800 Redifs suddenly passed the river, and made a foray on the Russian side. They met part of Lüders' division, fought their way successfully back to the water's edge, and recrossed in safety with their spoils.

Omer Pacha had been diligently employed in organising his wild troops since the early part of July; and, with the aid of some European officers (chiefly French), belonging to the Artillery, Engineers, and other military classes and denominations, he soon saw himself at the head of an army in which he could place confidence, and which proved itself equal to all the exigences of the war. The Turks are patient and hardy in the field; their courage—where they have not reason either to distrust or to despise their own commander—is proverbial, and has been proverbial for more than four hundred years. But since they first broke into Europe, many improvements in the material instruments of war have necessitated corresponding changes in the tactics of an army. Mahmoud, the late Sultan, perceived this; and he determined to revolutionise his military establishment, and to substitute the "Frank" weapons and the "Frank" discipline for the arms and system of his people. *After* he had destroyed the Janissaries, and *before* he could supply their place with his new troops, came the last Russian invasion. How absurd it would be to draw any conclusion respecting the comparative efficiency of Turkish and Russian soldiers, from the events of that war may be perceived at a glance. A regular Russian army encountering, not a regular Turkish army, but a rabble of armed Turks, *who had just abandoned their national mode of battle and had not acquired familiarity with even the rudiments o the new system*, cannot, by its exploits, give us any criterion whatever by which to judge whether such an army of Russians ought, or ought not, to defeat a proportionately numerous Turkish force, well disciplined, well equipped, and well commanded.

The problem was soon to be solved in a manner which astonished all Europe. Omer Pacha, having duly received notification that war was declared, granted yet three weeks to all neutral flags to pass to and fro on the Danube, and proclaimed that this licence would terminate on the 25th of the month then current, October. All Russian subjects resident in Turkey were placed under Austrian protection. The election of the monk Anthinos to the Patriarchate of Constantinople—although he had two competitors of the Russian party, who would have given 60,000 piasters for the post—shows the feeling which at this date, prevailed in the capital. There was no necessity for our fleets to remain where they unhappily did remain all that year. The Russians were diligently using the Black Sea as a highway for the movement of troops, the re-arrangement of strategic posts, and the transit of provisions, arms, and ammunition. For example, 5,000 Russian soldiers, whom the fleets might have intercepted, were landed in October at Redout Kaleh to succour the army of the Caucasus, and to attack Batoum; and many operations which have since entailed severe fighting and great bloodshed, in Asia as well as in Europe, were by our supineness and hesitation (for we could have paralysed in a moment all those movements) allowed to be quietly accomplished. On the 1st November M. de la Cour was recalled, and General (now Marshal) Baraguay d'Hilliers appointed Ambassador at Constantinople on the part of the French Emperor.

BATTLE OF OLTENITZA.

It was the next day (November 2nd) that Omer Pacha began to cross the Danube. He had been ordered by the Turkish Government to break down all the bridges. That this alone would have been a very inadequate precaution, the finished soldier who was charged with the protection of Turkey, perfectly well knew. But it is very frequently possible to do more towards defending a river on the enemy's side of it than on your own—on the farther, in fact, than on the hither bank. A long line of river cannot, with equal forces, be so guarded as to hinder the enemy from somewhere crossing it in strength; but, firstly, such a position may be taken as to place him at a disadvantage when he does cross; and, secondly, the defender of the river may himself cross, and strike a heavy blow against the enemy in some unguarded and vulnerable point, and then return, to watch for another chance. Omer Pacha adopted both these plans. Establishing securely his communications with the sea through Varna, and rendering Schumla, at the distance of thirty miles inland, impregnable, he collected such a force of infantry and artillery around and within easy reach of that powerful basis that by always refusing, as military men say, the right wing of his position, and throwing the left forward, which it will be seen he did throughout, he was sure, *at the very least*, of fulfilling his trust, and of defending the remainder of Turkey effectually. For of two things, one—either the troops thus thrown diagonally forward and outward from his left hand would succeed in defeating the Russians, in which case all was well; or the more advanced wing would have to retire. In this case it was diagonally drawn back as it had been thrown forward, gaining more and more strength as th

Russians retained less and less, and as it approached the powerful basis of the position, viz., the right flank resting on Schumla, Varna, and the sea. Now either the Russians would, in that position, fight a general battle (and Omer Pacha could not be better pleased than by such a proceeding on their part), or they would retreat to secure their supplies. To turn Omer Pacha's position by their right, which would be the furthest removed from their magazines and supports, and then, while his army lay unharmed and complete in their rear, to venture by a large circuit, first towards the west, and subsequently southwards, would be to allow him to destroy them at his leisure—which would probably be before they had arrived, starving, at the foot of the Balkans

Having taken these defensive precautions and having collected a disposable body sufficient for his purpose, he determined to divert the Russians from passing the Danube, by passing it himself. His sudden presence would compel the enemy to much marching and countermarching, perhaps even to a great concentration of troops—operations not performed without serious fatigue, or without disturbing the combinations, and arresting the more general designs of the hostile commander. Besides all this, he might inflict some direct and severe loss on the enemy. But the great object was, by a bold movement, to animate and cheer his own troops, and to dispel the delusion of Russian superiority.

The arrogance of Prince Gortschakoff, favoured Omer Pacha's project, in two ways; first, to defeat him after he had assumed so high a tone, and after he had spoken of "annihilating the Pagans," would produce only the greater moral effect, if it could be done; and secondly, that very arrogance and over-security of the Prince and his Lieutenants, made it more easy to be done. Omer Pacha's first movements perplexed the Russians; and this effect, which was certainly obtained, may excuse a rather too bold extension and projection of that elastic left wing which we have described. The extremity of that wing stretched westward far beyond the junction of the Aluta, and hovered menacingly around Lesser Wallachia; and, if Prince Gortschakoff's commissariat had allowed him to collect the mass of his troops against the centre of so long a line (upwards of 200 miles), he might at once have split it into two, and forced the Danube. But, in war, time is of as much importance as space; and Omer Pacha was perfectly well informed of the state of the Russian preparations. Add to this that the enemy's position was itself so straggling as to make it less unsafe and less strategically incorrect to diffuse and scatter his own, in pursuance of any objects then in view. Accordingly, he proceeded to seize an island far up the Danube, between Widdin and Kalafat, where a strong body belonging to his left wing intrenched themselves firmly. Prince Gortschakoff could not conceive what was intended. He adjourned for the moment his own passage of the Danube, and even took measures to protect his right from being turned, and a disaster incurred in Lesser Wallachia. Taking some troops, he, on the 1st November, hurried to Slatina on the Aluta, and suspended or altered all the plans of his campaign. Omer Pacha, tranquil and firm, saw that amongst other things, the effects of a diversion were produced. Since the 19th of October he had busily but secretly collected 200 gun-boats at Rutschuk, and with these he flung two or three thousand men across, who intrenched themselves near Giurgevo. While the Russians were assembling to storm this position, which was certain to cost them a greater loss than they could inflict, the sword of Omer had but dazzled their eyes. Every push told indeed, but the first few passes were only the bewildering play of a good weapon in a firm and skilful hand, and were intended to secure the opening for a more fatal thrust driven home with greater vigour.

On the 2nd of November, and on the 3rd and 4th, he forced his passage fifteen miles lower down from Turtukai to Oltenitza, with 13,000 men. The Russians were numerically much stronger. But they had been, in part, perplexed respecting the designs, and even respecting the presence of the Turkish Generalissimo; in part, they were outmanœuvred during the actual operations, and in part they were beaten fairly on the field. The Turks forced the passage with artillery, held it manfully by the bayonet, and then secured it with spade and pickaxe. The conflict lasted, omitting the intervals which interrupted it, for three-and-twenty hours; and will ever be memorable under the name of the Battle of Oltenitza. It was at the very time during which it was contested that Nicholas was exclaiming in his distant capital, "*non confiteor in æternum.*"

The combat, and the manner of it, deserve a special description. At Turtukai, or just below it, the Danube is about 1200 yards across; but there is an island between the two shores, which island is 600 yards distant from the south, and 200 yards distant from the north bank. Now, as the Russian margin of the river descends almost to the water's edge, whereas the Turkish shore rises to the immense height of 600 feet, it is quite evident that the Russians, had they even occupied that island, could not have kept it for half an hour against the Turkish artillery from the opposite eminence. But they attempted not to occupy it; and Omer Pacha, taking it with perfect security and sensible advantage, planted thereon a strong battery; for the island, though commanded by the south shore, commands the north, and commands it irresistibly. All these operations of Omer were managed with the calmness and precision of an able game of chess, and the step we have just described was the first important move. As it was of decisive value to put in use this battery on the island, so it was equally desirable that it should not play *over* the disembarking Turks—an aim which, if it can be avoided, is too nice and critical for a chance-medley and hand-to-hand encounter, such as was certain to ensue. For this reason, the landing point was chosen not directly in front of the island, but lower down, and to the right, so that the battery mentioned should effectually protect the Turkish left, by enfilading its assailants. To protect the Turkish right the largest guns which Omer possessed were placed by him in battery on the south shore still lower down. They had to clear a range of 1200 yards. The Turks thus protected, and at first only 3000 strong, crossed one river, but landed from the waters of two. A little stream, called the Argish, flowing from the north, seems to refuse the Danube just as it is about to fall into that great river, and, taking a short parallel sweep to the east, then turns again to the south for a few yards, and effects its confluence. Here the Turks landed, and spreading somewhat to the left, had, of course, on that flank and in their rear the bending stream of the Argish. In front of their left and of their centre, the ground was full of copsewood—in front of their right it was open. They had intrenched themselves by ten o'clock in the morning of November 2nd.

At eleven o'clock a cloud of Cossack skirmishers attacked them, and were followed by four columns of infantry and twenty cannon. Large masses of cavalry immediately afterwards appeared against the right of the Turks, the only part of the field where horse could manœuvre. We need say no more; the nature of the position speaks for itself. The Russians could on that day collect but 8000 men, and these were with ease repulsed; for, though the occupants of the intrenchments were but 3000, that number was sufficient, with the advantage of their field works; and there was the protection of the river batteries besides. Next day the Russians were in greater number, but the Turks had also been reinforced incessantly, and, moreover the intrenchments were stronger. Omer Pacha gained a second victory, precisely like the first. On the 4th of November, [illegible] made. The Russians were [illegible] into this ventrenchments, and forward outpost all the men he could spare, amounting to 15,000.

A very protracted and desperate engagement ensued. There was, what even Frenchmen and Russian men would call, real fighting. The Turkish left was impregnable as far as it was both very unyielding, and had in front of it covered ground and brushwood, where the enemy lay, the ground was [illegible]. But on the Turkish right, which was assailed over an open and level space, a fearful slaughter ensued. The Russian infantry tried to storm this side. When first advancing, they were mowed down in whole companies by the Turkish artillery from the south bank; on their nearer approach, the fire of the Turkish musketry, and even pistol shots, discharged from behind a cover which hid the [illegible] effective retaliation, continued to shake their army and thin their ranks. But "they would not be refused." They reached (in some disorder, it is true, and much weakened, but still they reached) the foot of the earth-works. At this time the Osmanlis had hardly lost a man since morning. A sudden shout arose [illegible] down, they leaped over their own intrenchments, and charged the [illegible] decimated, and already half-broken assailants with the bayonet, routing them completely. The movement could not [illegible] account of the Russian cavalry, which prohibited all pursuit. In many respects, it was a very peculiar contest; and we can account for the smallness of the number slain, on the side of the Turks. It is stated to have been under twenty. The Russians lost a thousand men. Omer Pacha, all this time, showed the temperament of a Turk, instead of that of a German, which he is. He is an Austrian of the name of *Lattas*, a soldier of fortune, who has become a great General, and has secured to himself, already, a considerable place in history. During the engagement, he remained on his own side of the river. He had taken every measure in his power. He had done what he could do to ensure victory; and he now watched the varying phases of the action while smoking his pipe. He was quietly seated on the high ground with a celebrated stranger, who was present through motives of professional curiosity—General Prim, the Spaniard. They gazed on the scene through telescopes, seated, with their feet comfortably stretched towards a large wood fire. They saw the test-fight of an army hitherto untried, and they saw its victory.

Our endeavour has been so to describe the operations of this memorable day that a civilian might understand them. We wish our readers also to appreciate with discrimination the abilities of Omer Pacha. His military genius is solid, rather than dazzling.

After this event, the Turkish position seemed to be, for some time, that of assailants, much more than of men acting on the defensive. They occupied both sides of the Danube, in the most important places. We have seen how they stood at Turtukai and Oltenitza. These Turks were but part of the same division which held Rustchuk and Giurgevo, and were led by Omer in person. Sistova, Nicopolis, and Rahova were also in their hands. They had, under the command of Ismail Pacha, crossed the river at Widdin, and not only had seized Kalafat, but had entered Kalarasch with 4000 men. They had placed two thousand men on an island, as though they would hold both the banks, and likewise what lay between.

Nine days elapsed before the Russians ventured again to attack the Turkish redoubt between Oltenitza and the river. They were waiting for reinforcements. The season was now growing late; but as rapidly as its rigours would allow, large reinforcements were poured from Bessarabia into the Principalities These were not the reinforcements to which we allude, and which the Russians at Oltenitza were awaiting; they expected strategic succours rather, which they could command by the recall of their scattered divisions, and the reparation of Prince Gortschakoff's mistakes. On the 11th, they again attacked the stubborn intrenchments. General Engelhardt had arrived with the reserves. They were repulsed with loss. They then endeavoured to mask the position; and, by getting possession of the island for even an hour, to force this out-garrison, on their own bank, to lay down its arms. All these attempts were unsuccessful; and, on the 14th of November, they were even forced to look more to defence and less to attack; for, on that day, the Turks had the spirit and strength to make an outburst; and, having fallen upon Oltenitza itself, and ravaged its suburbs, retired without loss. On the 26th Omer Pacha established a bridge between the south shore and the island of Mokan or Mokanson, higher up the Danube, not far from Giurgevo; and, about the same time, he withdrew the troops which were in position on the farther bank in front of Turtukai, and under Oltenitza; and though retaining also the island of Ramadan, he was obliged to concentrate his soldiers rather more, in the face of the ever-increasing numbers of the enemy.

A GENERAL SURVEY.

This was the true situation of affairs when an absurd rumour, which arrived on the 17th of November, threw London and all England into commotion, after having terrified Vienna and excited the Continent. It was reported that, by a series of most brilliant victories—the details of which were at present wanting, but likely to come by the next mail—the Turks had driven the Russians with great carnage *beyond* Bucharest, which was on fire "in three places." The circumstantial appearance of this statement reflects credit on the judgment of its inventors—who had doubtless their motives for paltering so shamefully with the public anxiety. Similar fabrications, such as that the Turks had advanced towards Krajova, offering a battle which General Fishback declined, sustained the wonder of distant cities, while the Turks were very prudently drawing more together, and evacuating Oltenitza, Giurgevo, and Kalarasch. In reality, Omer Pacha was reducing the length of his line; but he took care both to conceal the movement, and to strike whatever blows fortune permitted. He still held Kalafat, while, at a distance of nearly three hundred miles from that position by the convex road which he was obliged to use (though at a much shorter distance through Wallachia), he gave the Russians a severe check at Matchin, in the north of the Dobrudscha, facing Brailow. The enemy began to respect a man to whom they ascribed the endowment of ubiquity. Ubiquity, however, is not true generalship; and the quasi-ubiquity of rendering it impossible to the Russians to guess where they should meet him next,—this, with what might result from rapidity of movement, was the only ubiquity to which Omer Pacha aspired.

The Russians imagined that they had built a house, where they indeed had but pitched a tent; and, as if they were permanently fixed in the Principalities, General Budberg was now nominated by the Czar President of the Civil Administration of Moldavia. The appointment was worth one year's purchase.

A little incident occurred on the 17th, in which we think we recognise Russian agency; we allude to the reconciliation, at Frohsdorf, between "Henry the Fifth" on the one part, and (in the name of the whole Orleans family), the Duc de Nemours, on the other. The reconciliation took place seven years too late. We doubt if it could ever have prevented the reign of Napoleon III.; but certainly it has not shaken his throne.

For a fortnight nothing of importance happened; though it is worth while to mention that the same Russian war-sap, *Vladimir*, whose daring and skilful sally afterwards from Sebastopol (when we suppose that port to be securely blockaded by the Anglo-French squadrons) excited the admiration of Europe; that same ship *Vladimir* on the 23rd of November, 1853, spread terror along the Bulgarian coast, where she captured and carried away a Turkish pepper vessel and an Egyptian war steamer of ten guns.

MASSACRE AT SINOPE.

We need not pause long upon the infructuous, if not apocryphal exploits, in Asia, of Selim Pacha, who was reported about the same date to have stormed Kars, and to have won a battle at Gumri, or Alexandropol, on the 13th. Five days later, Ali Pacha was beaten at Akhalzick by General Andronikoff. A more decisive event now arrests our attention. The terrible 30th of November arrived. Six Russian ships of the line, with several smaller vessels of war, suddenly filled the aperture of the harbour of Sinope. There were in port thirteen Turkish sail, unprepared for action, and not expecting it But had they even received warning, their whole fleet was no match for the six Russian first-rates, without counting the powerful frigates and other war craft by which they were supported. We must here observe that, when the Sultan had declared that he was at war, he, in one sense, merely announced a fact; but, with a feeling not usually shown on such occasions, he added that his was purely and essentially a defensive struggle; that he wished but to deliver his territories from the armed stranger and the invader, and that he would nowhere either violate the Russian frontiers, or seek to retaliate the aggression which he had suffered.

Admiral Nachimoff commanded the Russian fleet at Sinope, and Osman Pacha the Turkish naval detachment. This last was, in a short time, burnt and destroyed. Seven frigates, one steam frigate, two schooners, and three transports were, all except two, reduced to a shapeless heap of floating timbers, blackened with gunpowder, stained with blood, and covered with mutilated human limbs, and the corpses of 5000 brave and unfortunate Turks who, taken at fatal disadvantage, had fought to the last with unshaken heroism. In a few minutes after the action began, the outer vessels of the Turkish detachment were blown "into one long port hole." The feeble battery of Sinope, overhead, brought no succour. When its untimely guns were at length fired, some of their shot fell among the friends whom they were destined to protect. Admiral Nachimoff's squadron sustained comparatively little injury, though some of the vessels showed how strenuous had been the unavailing resistance. A few Turks swam to land, and, clambering over the heights, escaped. Osman Pacha, before he could set fire to his own flag-ship, was taken prisoner, desperately wounded. The chief prizes which the Russians thought it still possible to remove, foundered while towed behind them in the Black Sea. Osman Pacha, whom they carried half dead to Sebastopol, expired there within six weeks from his arrival. The news of this event electrified all Europe. When it was known at St. Petersburg, the Czar distributed naval decorations, ordered a solemn "Te Deum" in the churches, and published an exulting manifesto.

WAR IN ASIA IN 1853 AND 1854.

We have alluded to the unsatisfactory vicissitudes of the war in Asia. The Turkish forces destined to operate in Anatolia, Abasia, and Armenia were in a state of demoralization, which a consummate General, armed with unlimited authority, could not have at once repaired. General Guyon, our countrymen, who had assumed the Ottoman name and style of Kouschid Bey, is an instructive soldier and an able man; but he was, during all this time and for long afterwards, in a subordinate position. He was compelled to witness disasters which he knew how, but which he was not permitted, to avert. The river Arpatchy forms the frontier between the Russian conquests and the Turkish possessions in Asia. In this neighbourhood the doubtful struggle reeled to and fro, with much slaughter but small results, from July to December. At the battle of Akhalzick, on the 18th of November, and, indeed, at the previous combat near Kars, one important military observation was made, and has been preserved. The Russians owed those victories in part to the weight of the metal in their field artillery. It is usual to constitute such batteries of 12-pounder guns. The Russian field batteries, however, consisted of 16-pounder guns; and yet they were moved, mounted, and managed with all the requisite ease and rapidity. We could not interrupt the sequence of the serious events which marked a more vigorous and decisive campaign in Europe, to recount the contemporary struggles in Asia. This necessitates both a retrospect and an anticipation; but they shall be brief. In August, Mustapha Zarif Pacha, Commander-in-Chief of the Army of Batoum, advanced from Kars, and attacked General Prince Bebutoff without success. That officer, who appears to be a man of no mean ability, assumed the offensive himself on the next day, which was the 5th of August, and defeated him, at Kurukdar, near Gumri. General Bebutoff had worsted Selim, at Bayazid, in July. Bayazid stands between the sources of the Euphrates and those of the Araxes, communicating directly with Trebisond. General Bebutoff, therefore, by this last exploit, opened the high road from Persia to Anatolia, by the south of Mount Ararat. At this time, such were the difficulties interposed by Schamyl in the Caucasus, that almost all the provisions and supplies of the Russians at Tiflis, and in advance of it, were conveyed to them by the precarious communications of the Caspian Sea; and, had a competent officer commanded the Turks in Kars, it is hard to say to what extremities the enemy might have been reduced. But, nothing could exceed Selim Pacha's unfitness for his situation. This Selim (for there are two in the war of Asia) displayed from the first not even the courage of a common soldier. But let us describe the chief combat in this Asiatic war. While Bebutoff lay in front of the main body of the Turks, some of Andronikoff's division, greatly to the Turkish right, had defeated the outposts, and were truly reported to be stealing round by the rear of that flank towards Erzeroum. General Guyon, being asked his opinion, at a Council of War summoned in haste and terror, advised an instantaneous advance, on the 4th of August, of the whole army upon Bebutoff, and then a rapid return against the column behind, near Erzeroum. By this means the Pacha could use all his force in succession against each of his divided enemies; but, by hesitation, he would soon allow them to press him, as it were, in a vice. Unfortunately, the 4th and 5th of August were esteemed unlucky days in the Turkish calendar, and the movement was delayed till the 6th. Between the Turks—who had been forced back from their former positions—and Kars, lay the enemy. Behind him rose the white towers of Gumri; and, beyond these, and on each side of them, shone the snow-crowned hills of Georgia. Thirty-five thousand Turks advanced at midnight, by the glimmer of torches, to surprise the Russian position; but treachery had preceded them, and they found that they were expected. It was a disgraceful day. Zarif Pacha lost heart and head at the first shot, and galloped about the field pale with terror himself, and terrifying his followers. Kesul Pacha fled at once, on the right flank. Vely Pacha, through jealousy of Guyon, neglected to take that brave and collected

ENCAMPMENT OF THE RIFLE BRIGADE, AT CONSTANTINOPLE.—FROM A DAGUERRÉOTYPE BY J. ROBERTSON.

soldier's advice, which would have retrieved the day. The superior officers deserted their men. Half an hour after the troops were engaged, none of the Bunbashis or Murallais (the colonels and the majors) were to be seen. The mountain battery which had seized the heights, commanding the Russian right, never fired a gun—never acted at all. Major Tevey, an American, who was there, expostulated in vain. Of the forty infantry battalions, the 5th Anatolian and the 4th Desardet regiments alone resisted cavalry. One man, and one only, may be said to have behaved with real distinction—this was Tahir Pacha, in command of the Turkish Artillery, which was admirably worked from first to last. Such was the fight beyond the hills of Hadji Velecy, where 35,000 Turks were ignobly defeated by 18,000 Russians, whom they had thought to take by surprise. No reliance can be, or ought to be, placed on the conduct in the field of men who are pusillanimously, as well as unskilfully officered and led.

General Bebutoff had blown up the forts of Bayazid, as he wanted to use the garrisons in the field: such a measure would have saved Napoleon in 1813, and Charles I. in the Great Rebellion.

We may here mention that, at the first outbreak of hostilities, the Russians had evacuated their forts in another scene of this widely-scattered conflict—we mean along the eastern shore of the Black Sea, among the Tcherkessians of Circassia. These forts protected their most direct communications through the Caucasus with the Georgian provinces.

On the 20th of August, however, General Bebutoff's combinations were disconcerted by the hero Schamyl—but for whom, indeed, Russia would, long since, have securely appropriated all the Turkish provinces on the south of the Black Sea. That indomitable man, with 20,000 Lesghian Circassians, broke into Georgia, and carried away hostages from Tiflis itself. This sort of excursion seems to be with him a regular annual operation. When most forgotten he is surest to be near. We return to Europe.

WINTER CAMPAIGN ON THE DANUBE.

On the 20th of December, the Turks who had recently struck a sharp blow at Matchin in the Northern Dobrudscha, at the extreme right of their line, were equally active and successful on its extreme left. They advanced from Kalarasch and stormed, though they meant not to keep it, the post of Karakal on the Aluta. We have explained the motives of this merely ostensible and misleading ubiquity on the part of Omer Pacha. The Turks retired from Karakal, and even from Kalarasch, but fortified themselves with unwearied assiduity in Widdin in Rahova, and in Nicopolis, on their own side of the Danube. With respect to Matchin, Omer Pacha had still less desire to retain it. He never intended to occupy the Dobrudscha during the sickly months which were impending. On the contrary, he wished the Russians to lose themselves in that fatal position, and they did. Where he could strike he struck; and, if the irritation of defeat, combined with the real facility of the occupation, should induce the enemy

ENCAMPMENT OF THE GRENADIER GUARDS, AT CONSTANTINOPLE.—FROM A DAGUERRÉOTYPE BY J. ROBERTSON.

HORSE BAZAAR, AT CONSTANTINOPLE.

to advance, it was what he wished. He fixed his own head-quarters at Rustchuk, and awaited events.

The severity of the weather, from the 22nd of December, rendered operations for some days impossible. It was the armistice of nature. About this time, Constantinople was racked with ministerial changes and political struggles. The Capudan Pacha was superseded by Halil Pacha, and some popular outbreak had seemed not improbable. The French Ambassador offered the Sultan the protection of the French fleet, but Abdul Medjid replied magnaminously that "he would rather abdicate than accept foreign assistance *against his own people*." On Christmas-day, the Allied squadrons were still in Beicos Bay; and, though more decisive counsels were known to have animated (since the catastrophe of Sinope), the counsels of the Maritime Powers, the state of the Black Sea delayed till the 4th of January the entrance of the fleets. The Union Jack and the Eagle were still reflected in the waters of the Bosphorus from the masts of a mighty but inactive armada.

The Russians had sustained many checks in the field. The spell of their arms was departing. But they announced how inadequate their preparations had been, how every day their position was strengthened, and in what irresistible force they would soon establish themselves throughout the scene of action. Two hundred thousand soldiers were to be poured into the Principalities, and were in fact fast arriving at their destination, in spite of the horrors of long winter marches through a thousand obstacles.

Osten Sacken's corps was marked and proclaimed with formidable regularity in all the stages of its approach. A sublime diary diversified the journals of Europe, describing the nearer and nearer progress of those invincible legions through ice and snow and storm, and amidst difficulties hardly to be conceived. For weeks the attention o the world tracked in suspense the awful advance. The troops, meantime, which were already in Wallachia, spread themselves (with very poor strategy, in our humble opinion, not to speak of the impolicy of the demonstration) along the *Austrian* frontier, from Orsova nearly to Kronstadt, in Transylvania. Any one who but glances at a map will see the uselessness, the waste of men, the insanity of this disposition. Not such the conduct of Omer Pacha. Ever warily withdrawing, in reality, his right wing, he abandoned northern Dobrudscha, and fixed upon Trajan's Wall as the limits of his first stand in that direction. This memorable barrier against the cognate barbarians of ancient times, extends, eastwards, from a little below Czernavoda, on the Danube, to Kustendjeh, on the coast. Just about that point, the Danube, which has been flowing from east to west, tak a

BRITISH INFANTRY IN BARRACKS, AT GALLIPOLI.

a bend at right angles to the north, and encloses the Dobrudscha between its waters and the sea. At Galatz, some eighty miles further, it resumes, at another right angle, its former eastward course, and thus furnishes the western and northern boundaries of that vast morass called the Dobrudscha, of which the Euxine and Trajan's Wall, respectively, form the eastern and southern limitation. Behind Trajan's Wall Omer Pacha stationed a force sufficient to impose quarantine upon the advancing and pestilence-bearing invaders. It was a front of twenty miles to defend, or less; for it was not passable or practicable for more than two-thirds of its extent; and this was under thirty miles. It was General Liiders who was to conduct the invasion on this side.

The Russians, having raised intrenchments at Bucharest, began a serious triple advance. One corps, 22,000 strong, was to attack Kalafat; a second was to occupy Karakal; and the third was to move down the Aluta towards Turna. With these operations (and the withdrawal of the Russian fleet into Sebastopol) ended the year 1853. And in the opening days of the next year (though on the "Old Christmas-day" of '53, according to the Russian style, which still reckons by the Julian Calendar), one of the most brilliant feats of arms in modern Turkish history astonished the world, and proved what vigour still was left in *the sick man*.

BATTLE OF CITATE.

Of the three Russian corps, whose orders to execute a simultaneous advance we have mentioned, the westernmost was that which was ready to enter first into action. "The Pagans," stationed at Kalafat, were those whom it was the special business of this column "to annihilate." It was commanded by General Fishback, under whom acted Generals Engelhardt and Beliegarde; while Prince Vassilitchkoff led the cavalry. Their whole corps consisted of but 22,000 men, of whom 7000 moved more slowly to act as a reserve, loitering near Karaul, on the left of the line of march. The operations, in our humble opinion, continue still to evince the incapacity of the Russian Generals. There was a neighbouring column, only a few miles to the left, as strong as their own. Had both been rapidly united, and flung together either upon Kalarasch, and so across to Rahova, or hurled in combination against Kalafat, resistance would have been clearly impossible. But they moved in parallel lines, each with a different, each its own distinct, destination. But, doubtless, the operation which we have hinted, and which would have been very easy to French troops, and even to our own, required great celerity of movement. Otherwise, the dispersed Osmanlis would themselves have had time to make a corresponding concentration. Now in celerity of movement, the Russians are not only inferior to the French (whose forces in this excel all other modern nations, and indeed excel all the *regular* armies that ever existed), but inferior even to the Turks, and strikingly inferior to them. For commissariat reasons (and several others), it is extremely inconvenient and unadvisable to concentrate a very large body of men except *just before fighting*; and the time allowed by this last expression ought not to be longer for an army of fifty, or even seventy thousand men (previously distributed at proper strategetic points, or, in other words, well led), than twenty-four hours. All great generals have recognised this principle, and have tried so to arrange that they could, in the presence of the enemy, reduce it to practice. But what the French habitually do in twenty-four hours, the Russians, during this war, have frequently taken six and even fourteen days to accomplish. Let us attend General Fishback in his present proceedings. Not being joined by the column on his left, nor by any of the idle garrisons to the rear of his right, and having disposed of seven thousand of his own men as a reserve, he found, when he arrived at Citate, that he had with him only fifteen thousand. Now, the Turks at Kalafat, whom he was going to attack, were intrenched; and no soldiers defend intrenchments better. Moreover, their force was numerically equal to his own; and, finally, they were in immediate communication with Widdin, across the Danube, and probably from Widdin would be largely supported. He began to doubt whether he was strong enough for his undertaking; the only wonder is that he had not entertained this doubt a week earlier. Accordingly, this intending assailant suddenly halted at Citate, and began to throw up intrenchments, not between the village and the Turks, but behind the village. In this deliberate manner he was occupied during the 4th and 5th of January, new style, and the assault upon Kalafat was postponed to the 13th, the Russian New-year's Day. Fishback would open the Julian year brilliantly; large reinforcements were demanded; the inactive columns on his right were summoned to join him from Radowa, Orsova, and the Transylvanian frontier; and then a grand combined onslaught would drive the Turks into the Danube, or at the worst compel them to cross it, and seek refuge in Widdin. These proceedings clearly prove the justice of our criticism on the original plan,—which they stultify. A strategy which is always correcting itself, must be bad; nor is even, in general, the correction good; for a wise measure, in war, is a wise measure only at the precise moment for it. Next day it is often as foolish as the blunder which it is meant to repair. The Russian Generals are always busy each week with the measures which belong to the preceding week, for it is only a week afterwards that they discover what ought to have been done a week before; and then, with equal folly, they do it, though it has become in its turn as unsuitable as their former measures. They are aware of an opening when they see the enemy cover it; and though it is no longer an opening (for the ward of the fencer is up), they thrust. On the other hand, they are themselves exposed; they know it not, but they suddenly feel the point, and then they parry in that guard to avert a lunge which is not coming—it has come already, and pierced home. Can these men be called Generals?

The Pachas, Achmet and Ismail, who commanded at Kalafat, were informed of all General Fishback's movements, and well knew that the intended attack of the 13th of January would be very serious. Resolute leaders of resolute troops, they yet looked forward with anxiety to an encounter with forty-five thousand Russians, exactly three times the number of their own force. They determined not to await the leisure of the Russians, or the ultimate danger of such an assault, but to sally forth at once, and to fight General Fishback at Citate, on more equal terms. At daybreak therefore, on the 6th of January (Christmas-day in Russia), they marched from Kalafat. They had fifteen field guns, ten thousand regular infantry, whom Ismail and Achmet Pachas themselves led in person; four thousand cavalry, commanded by Mustapha Bey; and a thousand Bashi-bozouks, under the colonel of the gallant and adventurous Skender-Beg, of historic name. The road to Citate led through Roman, Galuntza, Funtina, and Moglovitz. To prevent any surprise of Kalafat in their absence, Ismail had ordered over 3000 of the garrison of Widdin, as a temporary guard. He took the further precaution of leaving about an equal number of troops at Moglovitz, on the road, in order to maintain his communications, and at need, protect his retreat, if he was beaten. By their help he would, at the worst, rally his force at Moglovitz. It was nine o'clock the assailants entered Citate, in the streets of which were posted 3000 Russians and four guns. By a cross street, the Turks brought some of their own pieces to play upon the defenders, and then Achmet charged them in front with his infantry. After the first onset, the Turks disdained the restraints of rank and file—restraints not suited to street-fighting. The battle resembled a meeting of innumerable pairs of duellists; and for this species of close and personal action the Turks had the advantage in arms, in bodily vigour, and in courage. The Russian soldier possessed now no weapon but his bayonet, and was cumbrously accoutred. The agile Turk had the bayonet also, and if, in the crush, or the turns of the dense and wild struggle, a blade and its shorter thrust, or its cut, were more desirable, he instantly had the ready and national weapon in his hands. From house to house—storming every place out of the window of which a shot had been fired—from crossing to crossing—indoors and out of doors—the assailants pressed back the Russians; and, in three hours, had driven them into their intrenchments. Against these the Turks forthwith brought up their field-pieces, which, we believe, were as many as fifteen; and here they suffered their principal loss that day. The cannonade was briskly sustained on both sides, and several bold assaults upon the works were repulsed. In the midst of this conflict, the Russian reinforcements from Karaul appeared. Had they arrived while the Turks were entering the village, they would, perhaps, have finished the action almost as soon as it had been begun. But now the position taken by those who were beleaguering the Russian trenches, and a part of whom faced about to meet the new enemy, must be reached through some suburban orchards and gardens; and as the reserves ventured upon these, they were used as a natural intrenchment by the Turks—with this difference, that the defenders were prompt to sally from them. It was a curious position; the Turks were, at the same moment, assailants in front, and on their defence in the rear; and, while their original attack was repulsed, they were victorious over the attack against themselves. The hedges, the walls, every tree, every bush, served them as so many fortresses. Meantime Ismail Pacha, when he had driven the Russians out of the streets of Citate, had recollected the force he had left at Moglovitz, and bethought him with what object. His circumstances were now altered. He no longer contended for safety; he contended for victory; and he wanted to make victory as complete as possible; he therefore sent for these reserves. They arrived, just as the Russian column from Karaul had been entirely repulsed, with the loss of 250 men, and were dispersing in a disorderly flight, pursued by a sufficient body of horse to prevent them from rallying. The Turkish ranks were now re-formed; and, with new vigour, and augmented numbers, they returned to the assault of the intrenchment, out of which the Russians had never been able successfully to sally. This last effort was triumphant. The Turks burst through the defences, and routed the disheartened troops behind them. About 2400 Russians were slain in the village, among the gardens, and in the field works. A proportionate number were wounded, and, amongst these, two Generals, who are stated to have been Aurep and Tuinont. We believe that the Turks took not a dozen prisoners—so ferocious was the engagement. They, on their side, had 200 men killed, and 700 wounded. They captured four guns, and all the ammunition and stores in the intrenchments; besides, of course, obtaining the arms of the slain. The village of Citate remained in their hands; and on the next day, and the next again, they held it by force against the vehement efforts of the enemy to retake it. They ranged about the neighbourhood as masters for a few days longer, and, by several brilliant raids and forays, drove the Russians all the way back to Krajova. This division of the invading army now established its head-quarters at Slatina—a more distant and more modest situation than they had recently intended to select; and Europe thenceforward heard no more of the great deed appointed for the 13th of January, viz., the storming of Kalafat. All the Russian combinations were, in fact, arrested and dislocated by this prompt, this brilliant, rush of the Turks upon Citate—a dictate of genius. They saved their post, in the only way in which it could have been saved—by assailing that of the enemy. Such was the remarkable combat of Citate—an action which proves that the Turks know how to attack and to storm intrenchments, as well as how to defend them. We have been the more minute in our account of this event, because some people, at this time, called it *"a waste of bravery."* No deep insight into the mysteries of strategy is needed to perceive that this exploit, on the contrary, displayed the greatest prudence, that it economised the Turkish means and chances, dispersed and disordered the plans of the invader, and tended powerfully to render his final discomfiture more practicable and more certain. After a short time, still guided by the same steady and circumspect moderation, the Turks retired to their intrenchments at Kalafat, where they had by this time mounted 250 heavy guns. There, and at Widdin, immediately behind it, on the other side of the Danube, they had increased their force to 25,000 men.

SUBSEQUENT OPERATIONS; AND THE PROCEEDINGS OF THE EUROPEAN POWERS.

On the day before the battle of Citate (the 5th), Omer Pacha had again alarmed the Russians at Giurgevo, where there was a sharp skirmish, in which the Turks had rather the advantage. They then recrossed the river. Omer was teaching them to forget 1829—to know their own prowess, and to place a due confidence in him, and in themselves.

Still, it is not to be denied that the Russians were very far indeed from having any reason to dread being expelled from the Principalities by Omer Pacha. He skillfully led forces who gallantly served him. But that is all. His means were inadequate to recover Wallachia; and barely able, if ably used, to protect the Empire. He could not really assume the offensive; and he scarcely succeeded, by the exercise of very great ability, in pretending to assume it. The Russians were incessantly reinforced. Their siege-trains had begun to arrive, and they had parked a hundred and twenty large guns at Galatz, opposite the Bessarabian frontier, and a hundred at Giurgevo.

In the Crimea, the Czar, prescient of coming dangers, had ordered the erection of coast batteries, which were now rising in every favourable spot upon the cliffs. At such a time, and after such occurrences, the order reached our fleet *to salute* the Russian ships. There was a better use, than that, for our guns. At Constantinople, news arrived that Kars was taken, and that, on the other hand, all Abasia had pronounced for Schamyl, and that a great attack upon Sueffketil had been repulsed. The Allied squadrons patrolled the Euxine; there was no danger of another Sinope; and Turkish reinforcements, therefore, were dispatched by sea to Armenia. In the following March, the Sultan, it was announced, would join the army of Bulgaria; and great and truly Asiatic preparations resounded in Adrianople to entertain him when he should pass. A palace was newly equipped in that ancient city, where eight hundred domestics and five hundred horses, belonging to Abdul-Medjid, had already arrived. Less depressing intelligence was brought from Asia; the Turks were again the assailants, and were operating at Akhaltzik, and against Gumri.

On the 19th of January, Lieutenant-General Schilders, who, in 1829, had taken Silistria, and who was at the head of the engineering department in the Russian army, left Warsaw, in pursuance of a command of the Emperor Nicholas, and, on the 26th, reached Krajova, to assume the supreme direction of the siege operations of the ensuing campaign. Omer Pacha had then been ill for three weeks, in fact, since the date of the last combat at Giurgevo and he was reported to be dying. About the 14th of the month the news reached the Sultan and on the 20th, or the 21st, two of his own household physicians were in attendance upon the able warrior who had retrieved the fortunes and restored the fame of the Osmanlis. This was at Schumla whither he had retired. In ten days more he was again well, and he resumed his duties. General (now Marshal) Baraguay D'Hilliers, the French Ambassador, a good diplomatist, but a better soldier—the last surviving pupil of Napoleon, made—about this time, that tour of inspection for which he was well qualified; and we will note, in passing, that, at the same date, the Russo-Greek conspiracy broke out Europe was alarmed more by what could not then be known than by what was ascertained; and when Arta was seized, some people supposed that the Ottoman Empire, filled with explosive materials, was now at its end, and that it would be at once burnt out in a huge civil conflagration. The limits of the insurrection, however, were soon as well known as its nature and its origin.

General Schilders made his first report before the end of January—it was not the loose and cursory conjecture of a hostile witness, but the official return of an experienced Russian General to his Sovereign, respecting the losses of a Russian army. We cannot read it without a shudder. He states that, in January, 1853, *thirty-five thousand Russian soldiers* had already perished in the Principalities. This is not only a Russian statement, we repeat, but the statement of one of the ablest and most distinguished Generals in the service of the Czar. And yet, at that date, there had been only two months, or, at most, ten weeks of actual fighting; nor was it, in truth, chiefly by the sword that this stupendous loss had been inflicted. Fatigue, hunger, want, cold, the marsh fever, and the cholera, had swept away five-sixths of these wretched victims to the military ambition of one bad man.

For about a month, dating from the battle of Citate, both armies on the Danube were occupied chiefly in preparations for fighting; and it is fortunate that the illness of Omer Pacha—which lasted three weeks—occurred after such exploits as secured his troops for a while from the chance of any serious molestation. But, further, he had made already his principal arrangements; and his part now was to wait. During this lull in the war, Count Orloff was endeavouring, at Vienna and Berlin, to detach the two great German Courts from England and France, and to induce them to espouse the cause of the Emperor Nicholas. What were exactly the offers which Count Orloff was instructed to make, or by the proposal of what iniquitous equivalents he hoped to succeed, we are not able to say. One day, doubtless, the details of that secret negotiation, like those of many in former times, will be made public. Of the minor German Courts, and of the degree to which they were swayed by the feelings of marriage, kindred, or by the spell of his political influence, the Czar was sure. But on Denmark and Sweden he was very anxious to make an immediate impression. These two States, backed by his own maritime power—with their coast batteries, island-fortresses, and fleets—skilled in the marine topography of the shallow, winding, and entangled waters which form the entrance to the Baltic,—those Powers, thus defended and armed with all the peculiar vessels that suit the scene, might have offered, in the ensuing spring, a formidable barrier to a hostile expedition. The Czar, however, made no progress in the favour or the fears of the two Scandinavian Monarchies—the janitors of his northern dominions; and, in his rage, he at length sent to King Oscar what we may call "a last word, which amounted to this, *"Look, then, well to your own interests."* We think he has looked to them well, and would have looked to them even better, if, instead of refusing to act with Russia, he had resolved to act against her.

The reader perceives how vast were the necessary dimensions of a war with Russia. Our brave countrymen would have to fight, at the moment, in scenes which were thousands of miles asunder, yet everywhere against the same enemy. Comrades, well known to each other were to help in a common work, while one part of them were in the frozen north, and the other amid the pestilential heats of Bulgaria, and off the rose-fields and vineyards of the Crimean coast, with all the continent between. Nor was the large battle-space which Europe afforded, sufficient for such a conflict. It was to rage in Asia, and to threaten even a part of North America, Russian America, with its presence. Its range embraces—we do not say many very different countries merely—but even many distinct and dissimilar climates—those vaster territories and divisions of nature herself.

It was on the 8th of February that, at length, Baron Brunnow, the Ambassador of the Emperor Nicholas at the Court of St. James, took his reluctant and memorable departure from London. M. Kisselef, at the same moment, said the same significant farewell at Paris, to our powerful and faithful Ally, Napoleon the Third. Thus England and France, confederates for the first time in a great military struggle, were left face to face with the most important war which had occurred for many centuries, and, beyond comparison, the most awful (in the means of destruction) ever known since the foundation of the world. Count Orloff's mission having failed to preserve peace, war became the only road to its restoration; and in the hope that that war might be short, all good men wished it should be vigorous. Still the Allies were unwilling to make the rupture irrevocable. They framed a statement of the terms on which they could yet treat with Russia, and, having obtained the assent of Austria to the principles of their proposal, sent it to St. Petersburg. They then redoubled their preparations for the conflict. The Baltic fleet was fitted out, and Sir Charles Napier selected for its command. The French contributed their contingent to this fleet; but, while in the Black Sea, they maintained a magnificent naval force and even a greater number of first-class ships than we ourselves, their proportion of the Baltic fleet was considerably smaller. Therefore, Admiral Parseval Deschênes here gave precedence to Admiral Napier, just as Lord Raglan, in the united army of the East, yielded the highest post to the Maréchal de St. Arnaud, who brought a larger force into the field. It was agreed that the expedition of the Western Powers to Turkey should, in the first instance, consist of about seventy-five thousand men, of whom the French should furnish about fifty or forty-five thousand, and the English rather more than half that number. But the Emperor Napoleon openly announced that, in case of necessity, he could spare, and would send, a hundred thousand troops to that particular scene of conflict; that he would maintain, in addition, a great army in camp and ready for the march, on the northern frontier of France; and that this host he would, if compelled, lead in person to a part of Europe where no operations were originally contemplated, and where, he hoped, there would be no occasion finally to act—a part of Europe where he should resort to renew the memorable lessons of 1806 and 1807. Nor was this all: besides the splendid army which he would at once dispatch to Turkey; besides the mighty fleet which would act in the East conjointly with ours, besides the camp at Toulon, in the south of France, and the military centres to be formed at Brest and Lorient in the north; besides the vast, effective, and independent army, which would be soon collected in the Pas de Calais; besides the second, and necessarily smaller, fleet of twenty-five ships of war, which were to support and share our own Baltic expedition;—he determined further to send—what would be very much needed in the latter seas, but what

England could not sufficiently spoon supply—or, indeed, well spare at all—a strong body of land troops to operate in connection with the naval force. All these engagements he fulfilled—and so fulfilled that, in every instance, his deeds outstripped his words. Such facts convey a splendid, indeed, but a just idea of the resources and the vitality of France, and show (when we consider the commercial troubles and civil dissensions which lately racked and enfeebled that noble country) how much may be accomplished, and in how very short a time, by the wisdom, the public spirit, the undaunted and unrelaxing energy, the high trust highly fulfilled, of a great man at the head of a great nation. We must remember, moreover, that all these efforts prodigious as they were, by no means laid upon the powerful and gallant people, now joined with us in a hearty brotherhood of arms, a load too heavy for their strength; but were accompanied by a public prosperity long unknown, and never known to the same degree—a prosperity not interrupted by these measures, and still, in truth, daily and hourly increasing. Yet all this is but little; nor could we adequately describe the magnificent place which the empire of our confederate occupies in the destinies of the Continent, without taking into the picture many particulars foreign from our present task. The feats of power mentioned, which would seem, in their magnitude, to have resulted from the efforts of many nations, not of one, have in no respect interfered with the general service of France. They have not altered the posture of her domestic authority; they have not diverted the action of her foreign influence; they have not even disturbed her outlying garrisons of occupation or protection. One French force effectually guards from violence the nascent arts and rising commerce of Algeria, along hundreds of leagues of an important coast; another, in the capital of Italy, reminds the wavering Councils of Vienna that Russia is not the only Power which has access to the dominions of the House of Hapsburg, or at whose call, and under whose banners, oppressed nations might shake off the sway of that House, and make an end of its empire.

Early in February, on the other hand, our own military arrangements were far advanced. The Militia had, in great part, been actually levied, and were fast acquiring that discipline which alone they wanted, to render them a perfectly sufficient defence of the country in the absence of our soldiers. On the 22nd of the month, the first British detachment, destined for the East, the Coldstream and Grenadier Guards, left London by railway, for Southampton, and there embarked amidst the acclamations of an immense multitude, who had flocked from neighbouring, and even from distant counties, to bid good speed to their defenders. After this date regiment followed regiment in quick succession. The cavalry went last; and the horses were so long delayed, that loud complaints arose on the part of the public, who, in their impatience, could not understand the great difficulties attending the enterprise. A part of the provisions, and especially one shipment of provender, were in a state which proved that some base contractors could seek a fraudulent profit at the cost of a great, a momentous enterprise, upon which were bent the just solicitude, and yet the highest hopes, of millions; and that men lived who could be content to swindle a few pounds, though the unhallowed gain must diminish the efficiency of a national expedition, and perhaps waste the lives, or tend ingloriously to spill the blood, which our soldiers had devoted to the interest, the service, and the honour of our common country. All this time the French were also in full activity. Great forces of cavalry and infantry and field-guns were directed towards the south; and, passing through Lyons and Grenoble, reached the sea-ports of the Mediterranean. There, a sufficient fleet was fast assembling for their transport; and they were rapidly embarked at Marseilles and Toulon. The heavier artillery required for siege operations was not so soon prepared. Even with us this was destined to be the last munition furnished; but, late as we were in sending that material, it is, nevertheless, the only particular in which we outstripped the celerity of our emulous Allies.

DESULTORY CONFLICT ON THE DANUBE.

Such were the occurrences in the West while the long-suffering world awaited the answer of Nicholas to the last offers of the Western Powers, sent through the hands of Austria. It was wisely agreed to prepare for war, though it was modestly determined to defer declaring it until the superb Autocrat should, by his next message, in whatever sense, deliver the nations from further uncertainty. The news that the Russian Envoys had quitted London and Paris reached Constantinople in about twelve days (that is, on the 20th of February, 1854), and excited the wildest joy. The delight of the Osmanlis overcame their habitual gravity. The ancient capital of the East broke into a frenzy of exultation. Intelligence of the great event was dispatched to the army of the Danube; but, before the messengers arrived, that army already knew it from the wild Syrian recruits and the Bashi-bozouks of Asia, who tried the mettle of their Arabian coursers in a race against the Government couriers, which should be the first to report the awful and final rupture between the Giaours of the East and the Giaours of the West. Hostilities had been actively resumed. After their late repulses and humiliations at Matchin, at Giurgevo, and at Citate, the Russians, as though retreat were their next business, began to fortify Fokshani, a place far to the rear, seated at the foot of the Carpathians, and about half-way between Bucharest, the chief town of Wallachia, and Jassy, the distant capital of Moldavia. In Fokshani they laid up large military stores; and then, finding that there was no advance of the Turks, and that their own reinforcements were constantly, if slowly, arriving, they resumed the offensive.

About the 18th of February they collected a considerable strength against Giurgevo, and attacked it, with much loss indeed, but, in this sense, with success, that the Turks, after two or three days' resistance, evacuated the place in perfect order, and took boat to Rustchuk. This was on the 19th of February. The enemy immediately seized the town. Guns were then directed against Rustchuk. Day and night the Russians sought, by force and by guile, to cross at that point. The resistance was desperate. Nevertheless, by the increasing weight of the pressure, Omer Pacha felt that the enemy in some place must attain the right bank of the Danube. The melancholy certainty justified his original plan and dispositions. He took an extraordinary resolution, however, which was in some respects a change (unless it was a corollary) of that plan. He determined not to recall his outlying and far-extended left wing; but, in case of any intermediate advance and irruption of the enemy, to leave it to act like an independent army, and to give it a roving commission—predatory, adventurous, dangerous—on the right flank of the whole Russian occupation. It should have its base upon Servia, and, in case of mishap, its retreat upon Bosnia. Semendria on the north, Ustiza on the south, Zvornick straight behind, in the west, should be to its rear, what Schumla was to have been. Schumla, he hoped, would take care of itself, and he of Schumla. Perhaps the noble combat of Citate inclined his doubtful thoughts to this decision. The consequences of that victory were long felt; and on the 24th of February the Russians were still on their defence, and rather timidly commanded, in front of Kalafat—a town which according to their own plans, ought to have been stormed on the 13th of the previous month.

March opened with a change. The Russians had completed their dilatory preparations; and they now had, for attack, all the means which they were likely to have. Still, on the very eve of their grand and irresistible advance into Bulgaria, Wallachia was the scene of another warning blow. The Turkish column at Rahova crossed the Danube on the 4th of March, and drove back the Russian outposts of Kalarasch with perfect success, and no small slaughter. Then, while the whole force of the enemy was assembling to punish this inroad, the Turks returned in safety to Rahova. On the 5th of March martial law was proclaimed through all the Russias and in Poland; and orders came to the Russian Generals in the Principalities to press the war more vigorously. On the 11th of the same month there was a violent struggle around Kalafat; but the Turks remained masters of the place. It was their last stronghold on the northern bank of the Danube. But they continued to keep the south bank, as well as some islands in the stream. That island, especially, opposite Turtukai (the Turkish batteries on which helped to gain the Battle of Oltenitza), will be remembered by the reader. Prince Gortschakoff attacked it on the 15th March, and would have gained it very dearly at the cost of 2000 men; for that island, as we have shown, was as much commanded from the south shore as it commanded the north. But Prince Gortschakoff lost 2000 men in this attack, and, at the same time, failed to take the island. It would have been a victory of very uncertain value; but it was a bloody defeat instead. About this time, between the 12th and 16th, two frigates, one English and one French, were dispatched from Beicos Bay, to open by force the Sulinsh Mouth (which is the middle mouth) of the Danube. It may seem to posterity wonderful that Beicos should still have been the station from which to summon even *any* of the Allied vessels. But many untoward circumstances—some natural, and others, perhaps, conventional and deceptive—the delays of diplomacy, and the dreadful storms which had so long swept the Black Sea—combined to render it as advisable in appearance, as it was fortunate in results, that the fleets should return frequently to their old moorings.

MEASURES TAKEN BY ENGLAND AND FRANCE.

On the 12th of March, 1854, the Emperor Nicholas vouchsafed to the terms proposed by the Western Powers this memorable reply, "*that those terms required not five minutes' consideration.*" He, in fact, rejected them with contempt; and announced to his own Ministers and great officers that, before he submitted to such conditions, he would sacrifice his last soldier, and spend his last rouble. While this haughty decision—the general purport of which the electric wires sent flashing at once through all Europe—was borne to London and Paris by the overland couriers, the French and English troops began, though very gradually, to muster in force at Gallipoli. It was a considerable time before they had assembled on the little peninsula to the west of the Dardanelles about 14,000 French and about 7,000 English troops. The French had a shorter voyage to make; but then they had more soldiers, more materials of war, and more provisions, to transport. They arrived the first; and they disembarked and encamped with greater ease, promptitude, and order, than our soldiers. They had, moreover, come so much better furnished, that, in several instances, after their own debarkation, they helped, and greatly expedited, with the boats of their men-of-war, the landing of a much smaller body of English troops. Once on shore, the same almost imp-like agility of our gallant friends—their tact, readiness, self-possessed assurance, and good-humoured audacity, gave them still the advantage. The services which we could scarcely induce the Turks to render, after days, and sometimes weeks, of discussion, the French very cleverly, and very properly, extorted on the spot. They were, moreover, accompanied by the whole of their tools; while at least a portion of ours was sent by a different conveyance from that of its owners. The French camp speedily resembled a colonial settlement; while Gallipoli and all the neighbourhood were Gallicised as if by magic, both in name and in deed. "Office of the French Quarter-master-General," "Office of the French Commissary-General," "French Hospital," "Youssouf-street," "Street of the Posts and Mails," "French Light Infantry-street," "Head-quarters-street," "General Engineer Office-street," "Army Police-office Quarter"—such, or similar and equivalent designations, couched in the French language, and inscribed on conspicuous sign-boards, routed away and replaced the old Mahometan styles and indications, and introduced European method, and a luminous, simple, and convenient clue into the intricate obscurity of the place. French names were established everywhere; and, what is more instructive, *French prices*. A market tariff for every article of necessity was immediately fixed, and it was rigidly enforced. It was impossible not to be struck, at every step, by the characteristic proceedings of our vivid-minded and active allies; by their adaptability to circumstances—their resolute and instantaneous effort to master these—their great faculty of acting together without confusion,—and their really wonderful idea of military self-administration. The rapid measures we have enumerated are merely a part of those which both amused and instructed our own troops, down to the very privates. For instance, the landing had hardly been forty-eight hours effected when, not only all that we have detailed was accomplished, but a perfect system of French police was in as full action among themselves (and occasionally among the Turks) as if they had been in Marseilles or Algiers; and, at the same time, it was stated that our regimental surgeons had to borrow what they at first happened to want from the medicine-chests of these alert confederates; though we are bound to add that, if this necessity existed, it lasted but for a very few days.

That so close an association, and so intimate an intercourse between the armies of the two great Powers of the West were certain to lead to much enlightenment on *both* sides, anybody can see. There are many points in which we excel those gallant troops; and they have studied us with attention, and doubtless not without profit. On our parts, perchance, there was also something to learn. But, independently of this reciprocal advantage, and far above it in value, is the amity which has thus been established. This expedition has been a greater destroyer of prejudices than centuries of passive friendliness in less contiguous intercourse could possibly have been. The two nations have literally shaken hands and embraced; and their love is on both sides the warmer for former conflicts, in which they witnessed each in his antagonist personal qualities of heroic valour and boundless generosity, which have excited a reciprocal and eternal admiration—a reciprocal and indestructible esteem. It was their warriors who represented the two countries in the quarrels of other days; and it is their warriors who now represent them in their enthusiastic and profound reconciliation. The chiefs and officers of the English expedition had, in Paris, met the chiefs and officers of the French expedition, and had been received with transports of joy, and the most prodigal hospitality; the common soldiers, and the common sailors also, wherever their ships approached each other on their way to a mutual war against the enemy of both, testified their feelings, and exchanged a cordial greeting, in rapturous cheers and shouts, which awoke to their martial noise the echoes of many a strange and classic shore. And, at last, when, on the strand of Gallipoli, they met to conquer or to die, side by side—to share their hardships, their battles, and their glory together—the French and English troops—sailors and soldiers alike—almost threw themselves into each other's arms. Indeed, their reciprocal good-will was often testified in a ludicrous manner; nor was it always strictly observant of the proper bounds of discipline. The poor fellows, not content with contriving, out of the little they possessed, to exchange presents, would sometimes, when these failed, exchange, in moments which were only too convivial, their very dresses; and, one morning at parade, a French Colonel of Zouaves was exceedingly perplexed to see among his men a soldier, whose corps he knew not; but who resembled, he thought, by his cap and feather, a Highlander of the British army. At precisely the same moment, the Colonel of the Highland regiment was astonished to behold on one of his gallant men the yellow leggings and some of the other accoutrements of the Zouaves. The respective commanding officers soon found that the apparent Highlander spoke French, and the apparent Frenchman English. In their fraternal computations the night before, each soldier, vexed that he could not speak a word that was understood by his comrade, had resorted to this extraordinary method of demonstrating their sentiments.

This incident in itself, doubtless, is trivial; but, historically, nothing ought to be considered trivial which both illustrates and proves far more authentically than could whole pages of dissertation—and, of course, with much livelier effect—some vast revolution of national sentiment, or the passions prevailing at a great crisis, and not slightly influencing great events. At home, the popularity of the war and the public enthusiasm in its favour, were sometimes illustrated by incidents quite as amusing as those which marked the brotherly cordiality subsisting between the French and English soldiers at Gallipoli. The remembrance of our readers will bear us out in this observation; but we will put one little occurrence of the kind on record. A gallant private, under orders for the war, spent his last night in a farewell feast with some dear friends, who induced him to drink more than was advisable. He parted from them so late that he had to march fast if he would re-enter his barracks in time, and he thought he could give himself fresh strength and add wings to his speed, if, near London, bridge, he took a pint of porter on the way. Entering a public-house he demanded this refreshment, placing the price on the counter. The publican saw that he had already drunk too much, and refused to serve him; whereupon the soldier seized a pint belonging to some one else, and, holding the owner away at arm's length, drank it, saying that this was "Russian treatment," and that he would have his money's worth by force, if not by favour. A scuffle ensued, the gallant soldier slept that night in a police-cell; next morning he was brought before a magistrate, and fined five shillings. He declared he had not such a sum in the whole world. He was told he must go to prison till it was forthcoming. But he simply rejoined, looking round the court, that he was under immediate orders for the East—a fact confirmed by his sergeant, who, besides, praised the man's general character. Immediately, a good-humoured contest arose among the spectators, who should be the first to pay the fine. The soldier, with many thanks to his deliverers, "whom he did not know," said they might rely upon his doing his humble duty; and he hoped that, with the help of his comrades, he should "thrash the Russians." Our readers will pardon these short anecdotes, for the sake of what they serve to commemorate so graphically.

In France, the same feelings everywhere prevailed; and the unanimity of the people strengthened and expedited the measures of the Government. The recruits for the new "conscription" came, of their own accord, to be enrolled; and the public sentiments were even more strikingly evinced, in connection with perhaps the most wonderful and original of the many wonderful and original measures of State by which Napoleon III. has signalised his reign. We allude to the French Loan, issued to the community at large, on the 10th of March, 1854. He addressed himself not to speculators, bankers, and capitalists, but to his people themselves. He was convinced he could thus obtain a larger sum, raise it in a shorter time, and receive it on better terms for the State; but, above all, he saw an opportunity of forwarding, by this bold appeal, one of his most cherished designs. He would give to France what England long possessed, a new class directly interested in the general stability: he would have thousands of *public fund-holders* all over the country; and when he had thus led his people to yield hostages to order, he would have made one step more towards the accomplishment of his great mission, "the mission (we quote his own words) of closing for ever the era of revolutions in his native land."

In a single week 310,000,000 francs were subscribed to this novel loan, and in an extraordinarily short time, it was all at the disposal of the French Government.

It was in the same week, on the 11th March, that our Baltic Fleet sailed from Spithead, in the presence of the Queen, who led it out to sea in her yacht, the *Fairy*, offering the most heart-stirring spectacle, which the present generation had ever beheld. The *Royal George* moved the first, followed rapidly by the *St. Jean d'Acre* and *Tribune*, under single-reefed topsails. Then in quick succession, obeying the signal "to weigh" of the Admiral—who stood, glass in hand, on the quarter-deck of the *Duke of Wellington*—came the *Impérieuse*, *Blenheim*, *Amphion*, *Princess Royal*, *Edinburgh*, *Ajax*, *Arrogant*, and *Hogue*. The paddle-ships, *Leopard*, *Valorous*, and *Dragon*, were the next; and these completed the first division of England's Baltic Fleet. The Admiral himself led it, or rather followed it, in that stupendous floating fortress of 131 guns of the largest calibre, the *Duke of Wellington*, which throws a ton of metal at every broadside, to a distance unparalleled by any batteries on land or sea. Another great division was preparing to follow this noble fleet of sixteen war-steamers, of which eight were line-of-battle—two being three-deckers, and three carrying Admirals' flags: Admiral Chads, in the *Edinburgh*, and Admiral Plumridge in the *Leopard*, acting under Sir Charles Napier. Of these sixteen war-steamers, all but four were built on the screw principle. The only fault to be found with the fleet, is that it was *too* fine, and that the vessels were too large and massy, and of a draught too deep for the seas in which they were to act. About the time of these operations of the allies in widely separated scenes, the sympathies manifested towards Russia by a large part of the population in the kingdom of Greece, began to excite uneasiness and indignation. Indeed, it was found necessary, not very long afterwards to drop, while on their way to a worthier scene of action, a portion of the French contingents; and some six thousand of these troops landed accordingly near Athens, in order to bring a petty but troublesome kingdom to its senses. They landed the greater part of that number at the Piræus on the 16th of May. We mention this to save or abridge future digression from the more important events which will occupy the reader's notice. It was on the 27th of March that the formal rupture between Turkey and Greece occurred. The Greek Envoy, General Metaxas, receiving on that day, his passports at Constantinople. The Sultan had sent whatever troops he could spare to the frontier of Thessaly, under Achmet Pacha, to oppose the inroads of the Greeks who were endeavouring to organise a general insurrection of their co-religionists all over the Turkish Empire;

THE TRANSPORT FLEET EMBARKING THE TROOPS, AT VARNA.

SEBASTOPOL.—FROM AN ORIGINAL DRAWING.

the *foreign* Greeks thus abetting against the Divan its Greek *subjects*, to the profit of Russia; and no doubt, suborned by Russian gold, and urged on by Russian instigations. On the 1st of April, the Turkish troops, near Janina, in Albania, obtained a small advantage over these marauding enemies, who, according to the laws of war and of nations, were little better than freebooters. A step taken by our Ambassador, about the time when the intelligence of this victory reached Constantinople, combined with that intelligence to elate the spirits of the Divan. Lord Stratford de Redcliffe issued a circular to all our Consuls on the 6th of April, denouncing the Greek insurrection, and calling on them to disown its abettors, wherever they were found. The immense expenses to which Turkey was subjected by all these emergencies had induced the Sultan to adopt a very violent, and we believe, in Moslem countries, an unprecedented expedient, which equalled in audacity, though not in bloodiness, his predecessor Mahmoud's massacre of the Janissaries. The Sheikhul Islam, or High Pontiff of the Mussulmans, was deposed, and all the revenues of the mosques were appropriated to the State. It was—to compare Christians with Pagans—not merely like a suppression of monasteries and a seizure of all their effects, but it was a confiscation of ecclesiastical property in general throughout the Empire. This also effected, be it observed, an immense amount of lay property, assigned, for the sake of stability, in turbulent but fanatical lands, to the ecclesiastical protection of titular owners, sacred in the eyes of State and people. It was not, therefore, a time for the Porte to make needless domestic enemies. But, transported by the rapture of his high struggle, and encouraged by Lord Stratford's recent circular, the Sultan struck on both sides, and with both hands. He decreed that all Greeks, within a brief delay named, should quit Constantinople, under liability of the seizure and escheat to the Crown of their possessions, with the penalty of personal arrest added. But here the veteran soldier, General Baraguay d'Hilliers, Ambassador of France, interposed. He besought the Grand Signor to make a distinction. There were disaffected Greeks, and there were faithful Greeks. The tie between the disaffected Greeks and Russia was exclusively a religious tie; it never had been *national*, and it never could, in any one respect, be so regarded. Now, the religious tie was impossible between the Latinist or Roman Catholic Greeks and Russia, the religion of which was known to be disavowed and detested by such Greeks. Their loyalty to the Sultan was, besides, both proverbial of old, and manifest now. If these were expelled from their homes and occupations, and in so undiscriminating, unmerited, and arbitrary a manner confounded—innocent with the guilty, patriotic with the traitors—and thus driven suddenly from Constantinople, he must reluctantly take his own departure also from that city. No more was required; and the Sultan observed the distinction which had been thus laid before his attention.

We have seen that, as our soldiers went to the East, so our fleet went to the Baltic, before either this country or France had yet formally declared war. The marvellous stand made by Omer Pacha upon the Danube was not, and could not be, foreseen. This will account for the choice at first of Gallipoli as a great landing-point. It was the shortest way to interpose at Adrianople between the capital and the Russians, should these force Mount Hæmus, and burst into Roumelia. Powerful works were even constructed from the Gulf of Saro to the Sea of Marmora, to render, in case of necessity, the Isthmus of Gallipoli a safe retreat behind a new Torres Vedras of the East; and this was the first serious occupation which the English and French soldiers undertook in companionship. But affairs changed in their aspect; and many of the regiments were sent up to Scutari; and some even beyond this, to Buyukdéré, on the European shore, above Constantinople. After it was known that war had been actually declared by France and England, the troops were gradually collected in still more advanced positions—at Bourgas, and then at Varna. When the insolent remark upon the last offers made to Russia (rather than answer to them) was known in Paris and London, all the forbearance of the Western Powers was fairly exhausted; and, on the 28th of March, war was officially proclaimed. Russia followed up the rejection of our conditions by some untenable proposals of her own, based on the same wild claims with which she had started originally. These last proposals were pronounced, on the 7th of the ensuing month, quite inadmissible by England and France.

FINANCIAL CONDITION OF RUSSIA.

We think it must be evident to all readers, from the complicated and wide-spread transactions of arms and negotiation which we have now related, that Russia was, from the very outset, bent upon war—bent upon some desperate effort to achieve a new and predominant position in the comity of nations. She had been, in truth, for a considerable time husbanding her resources and preparing her means for some unusual exertion. In 1853 she had freed herself from the annual interest of certain old loans, by paying up the principal. She then withdrew the sums placed in the public Stock of France and England; issued Treasury Bills to meet the current expenses; and prohibited the export of the precious metals from her own territory. Still, her financial situation in a general war, such as that which she has so wantonly provoked, can never be sound. The ordinary revenue of Russia would perhaps be £32,000,000; but, allowing for the inevitable abatement caused by war in the proceeds of the Customs and Excise, it can scarcely amount to £24,000,000 at present; while the expenditure is enormously and concurrently increased. No doubt the sums obtained just after the Hungarian war, under the plea of finishing the Moscow Railway, were not yet exhausted when this vast conflict commenced. But the stress of it is evident, from the financial expedients to which the Czar presently resorted. He appropriated at once five millions sterling of the bullion which forms the basis of the paper money; and, at the same time, he issued four millions sterling of Treasury Bills. He also invited loans and *accepted gifts* (praising the patriotism of the latter) from various public funds, from the Clergy, and from the Charitable Trusts of the empire; and when "the Dutch Loan" failed, he levied a forced loan, amounting to eight millions sterling, from his own subjects indiscriminately, and called it a voluntary contribution. By these means he realised, in a year and a half, nearly thirty millions sterling. But all the resources on which he drew feel the pressure of the war, which renders much of the agricultural produce unsaleable, while it impoverishes the Boyard or landowning class by the inordinate and unpaid drain of the most valuable part of their live stock, the poor serfs—swept off in conscriptions. Before the war, the metallic reserve of the Russian Government was worth twenty-one millions sterling; but the notes in circulation amounted to £50,000,000; and while the bullion has since incessantly diminished, the issues of paper have incessantly augmented. If we add to these grave facts three others—1st, that there is an immense Land and Banking Company guaranteed by the State, which company (it is called "the Lombards") holds five millions of the serfs in pawn; 2ndly, that the deposits of money lent by all classes to Government, *and renmable on demand*, were, on the 1st of January, 1853, according to the official return of the Russian Minister of Finance, not under £128,960,000; and 3dly, that the funded debt of Russia amounts to £60,000,000 more, we shall be able to form some idea of the solidity of Russia's financial condition under the weight of a vast struggle like the present. The financial data which we have used in this sketch will be found in M. Léon Faucher's lately-published calculations of the monetary resources on which the Russian State can depend.

Very different was the financial situation of the two Maritime Powers. England required neither a loan nor any very crushing addition to the weight of her taxes; and the loan of the French Emperor was not only a brilliantly successful fiscal expedient, but a vast political measure which is likely to form an epoch in the social history of France. Nor was the French Government forced to resort to oppressive taxation to meet the interest which the new stock, thus created, was to bear. Many old imposts, on the contrary, from which the country has been lately relieved by the Imperial Government, in its tentative, cautious, and gradual approaches towards the economical principle of Free-trade, will probably never be revived. In England, the continuance and duplication of the Income-tax, and certain new dues on foreign bills of exchange drawn abroad (dues to be levied in a superior method; which was suggested to the Chancellor of the Exchequer, we are informed, by a Mr. Pace, of the City) constitute the chief fiscal peculiarities of our great war budget.

ACTIVE ENTRANCE OF ENGLAND AND FRANCE INTO THE WAR.

With this brief but necessary glance at the general condition of the respective belligerents, we may continue our record of the actual events. And here we are obliged to say that, having landed the English and French expeditionary forces in Turkey, and, as it were, set them down within reach of the enemy, we shall find little to justify any minute journal of their proceedings for the next few months. The war proceeded; and, indeed, one very remarkable part of the struggle—a truly memorable transaction—soon engaged the attention of all Europe; but we miss, in the story of it, the action or presence of the Allied forces. They were near, and took no part. In short, though ghdispatched in spring, they were not destined to engage the foe till autumn. During that long delay, sufferings formed a greater part of their history than actions, and these sufferings were of the saddest kind in the soldiers' estimation—the visitation of a dreadful pestilence, not the hardships or catastrophes of a glorious campaign. With the exception of one vigorous blow struck by the fleet, our remarks apply to the general attitude of both services. On the other side of Europe, however, something was to be achieved (though even there not much at first), and the reader will perceive that many of the adventures of the Baltic expeditionary force were contemporaneous with the occurrences which we now proceed to mention in their order.

BOMBARDMENT OF ODESSA.

Trustworthy information having come that between Sebastopol and the various Russian stations, from Anapa to Odessa, there was a constant and active passage to and fro of troops and stores, the Allied fleets issued forth and patrolled the whole Euxine, forcing the Russian ships to take refuge in Sebastopol; after which, Admiral Dundas and Admiral Hamelin, with their squadrons, approached Odessa on the 22nd of March. There, the squadrons shortening sail about three miles out to sea, sent a small vessel with a flag of truce, to summon General Osten-Sacken to deliver up to them all the ships, &c., in the harbour, failing which, chastisement should forthwith be inflicted for the massacre of Sinope.

Before anything was attempted against Odessa, some shots from the batteries had been aimed at an English flag of truce (borne by the *Fury*); and it was indispensable to teach our barbarous enemies, by a severe lesson, to respect the laws of nations. Next day, the 23rd, twelve war steamers of both nations were detached from the fleet, and sent within range of shot; the order being to spare the town, if possible, but to destroy the batteries, the magazines, and the vessels in the harbour. The order was scrupulously obeyed in the first particular, and executed with brilliant effect in the second. The detachment of steamers approached, accompanied by rocket-boats; these ventured further in, being a smaller mark for the land artillery, which dared not besides waste its fire *short* of the covering frigates and steamers. The boats having taken their station, the attacking detachment began a most singular and beautiful movement in file, tracking one the other's wake with exquisite precision, along an ever-repeated circle; and as each vessel touched those points of her orbit which were nearest to the Russian batteries, she delivered her broadside, passing onwards, and made way for her successors in the revolving chain, until her own turn should come again. To borrow a most graphic and striking expression used by an eye-witness, the ever-returning evolution of these graceful minsters of a memorable act of vengeance seemed, in the distance, to be performing a sort of wild waltz together, as they laid low the fortifications of the proud Russian seaport. In the midst of the action, one of the French steamers, struck by a red-hot shot through the hull, caught fire, and returned for a brief space to the fleet, to have assistance in extinguishing the flames. This was very soon effected; and the wounded falcon hastened to take again her destructive place in what may be said to have resembled also the wheeling flight of some beautiful birds of prey swooping at intervals, each in its turn, upon the quarry.

The defence from the shore was at first very spirited, and the Russians are described as having stood well to their guns; but in range these were inferior to the artillery of the ships; and, by sensible degrees, the fire of the garrison became slower. At length two great powder magazines of the Russians blew up in quick succession, while most of the batteries were dismounted, the forts knocked to pieces, and the ruins strewn with the bodies of the artillerymen. When the defences were shattered into a shapeless ruin, and the resistance of the Russians had evidently ceased in despair, and when thirteen of the enemy's ships, laden with munitions of war had been captured, the Allied detachment drew slowly off, and rejoined the fleets. Their comrades who had, from the yards of the distant men-of-war, witnessed the action, descended now and welcomed them, with shouts that might have been heard on shore. What the Russian loss was in slain and wounded we have not, of course, the means of ascertaining with exactitude. The officers engaged have estimated the number of the enemy killed at about eight hundred or a thousand soldiers. The Allies had ten sailors wounded and five killed. Such was the bombardment of Odessa on the 23rd of March.

Shortly afterwards the loss of the *Tiger* (16 guns) occurred. She grounded at the Campagna Costazzi, near Odessa, in such a position that she could not use her batteries against the field artillery on shore. After a short fight she surrendered, and her crew (250) were all made prisoners, and carried to Odessa, where they were well treated. The Captain's (Giffard's) wounds proved mortal; and he told the officers and sailors around with his last breath, that to his death they owed their own lives; for he was going to fire the powder magazine when he was struck down. The Russians blew up the *Tiger*.

PASSAGE OF THE DANUBE BY LUDERS AND GORTSCHAKOFF.

It was about this epoch that Prince Dolgorouki, sent to Teheran to involve Persia in the Czar's quarrel, struck the Sedr Azim, or Prime Minister of the Shah, with a cane to punish his reluctance. The most imperative instructions had now come from St. Petersburg to the Russian Generals in the Principalities, to effect some great exploit *at whatever cost*. The frightful significance of this order delivered Prince Gortschakoff and his coadjutors from certain natural scruples and hesitations. Long since, the Czar must have perused the report of General Schilders, announcing, so early as the month of January, a loss of thirty-five thousand Russian soldiers, although active hostilities had then lasted only about ten weeks. There could be no illusion in the Imperial mind, and yet this order is sent to the Generals, enforced by the awful addition, "*at whatever cost*." To hear was to obey.

We have seen how, on the 15th of March, Prince Gortschakoff had been frustrated in a bloody attempt to seize the island between Oltenitza and Turtukai, losing 2000 men, and yet failing to storm the place. Lüders had five days before this crossed the Danube at Galatz. He was in force, having 24½ battalions, 8 squadrons, 6 sotnias, and 64 guns. Gortschakoff, learning the fact of the passage so far down the river to the rear of his own left, determined to abandon for the present his disheartening operations against Turtukai and Rustchuk, and to fly to the support of Lüders; thus imparting, he hoped, a decisive character to the advance of that enterprising General. By a retrograde circuit, he passed even beyond the rear of Lüders' left flank, and threw himself across the river a little above Tultscha, with 14 battalions, 16 squadrons, 6 sotnias, and 44 guns. He brought with him more cavalry than Lüders, though a smaller general force; and their united columns amounted to nearly 50,000 men. The reader is aware that Omer Pacha had decided not to dispute possession of the Upper Dobrudscha; and it is, therefore, nearly incomprehensible, though stated in all the contemporary accounts of these operations, that Prince Gortschakoff should have there taken eleven guns and 150 prisoners. His capture of the guns is more unintelligible than his capture of the prisoners, who might have been the unarmed or half-armed ordinary inhabitants—for the guns must have belonged to Tultscha, which the Turks still held as an outpost, and which was the only place they retained in all that region. This event took place about the 23rd of March, the day of the bombardment of Odessa, and five days before the Emperor Napoleon, who, on the 2nd had, in person, opened at Paris the Legislative Session of 1854—joined Queen Victoria, in a common declaration, purporting that the rupture between them and Russia, and that their alliance with Turkey for the purpose of active and direct operations of war, were now *accepted facts*. Redschid Pacha, General Baraguay D'Hilliers, and Lord Stratford de Redcliffe, soon afterwards signed the tripartite treaty to this effect, at Constantinople; and, still later, it was solemnly ratified at Paris.

On the same 23rd of March, as we have seen, the Danube was forced by the Commander-in-Chief of the Russian army of occupation; the fortifications of Odessa were laid in ashes, and the Governments of England and France agreed that they would at last publish in all form their acceptance of the Russian challenge. These are among the amusements, and this is but the mysticism of history; we will therefore add, at present, only one more such coincidence, or as the French term it, "*rapprochement*." It is not, indeed, in private life alone that these strange juxtapositions of events may be observed which have suggested throughout all countries a number of well-known wonder-breathing proverbs. The very day on which the long-prepared Greek conspiracy exploded, was the day when, at the other extremity of Europe, by an equally striking and curious *obvium fit*, the declaration of war, in pursuance of the tripartite understanding just mentioned, was issued by the Maritime Powers. Dates are the chords and the discords in the great music of human annals.

The perilous success of the Russian divisions, who had now burst into the Northern Dobrudscha, was soon counterbalanced by a misfortune, the news of which reached the ill-starred commanders in the midst of their exultation. Fokshani, where they had piled up the richest part of their laboriously-accumulated munitions of war and general stores, was burnt. The loss to a struggling military treasury must have been extremely serious; though we cannot specify its amount.

The divisions which had crossed the Danube continued their advance, taking Babadagh on the sea, and Hirsova on the river. All the Upper Dobrudscha, except Tultscha, was now occupied by the invaders; and by April the 3rd their Cossacks patrolled as far as Kustendjeh, which the Turks kept, and which was their grasp upon the sea, at the east of Trajan's Wall. On the north shore of the Danube, the Turks retained nothing except Kalafat, two hundred miles to the west.

Before we pursue the Russian enterprises of April, and their results, in the Danubian war, it may be interesting to our readers to cast a glance over the general circumstances of that period. The first object which strikes us is another of those curious historical coincidences already remarked. On the 7th of that month the alliance defensive and offensive between Austria and Prussia was concluded, the overtures (made too late) of Russia were rejected by the indignation of the Maritime Powers; and our Baltic fleet had left Kioge Bay, and was patrolling every creek and inlet, not still frozen, of the Scandinavian seas. The two Princes of the Blood Royal, who belonged respectively to the English and French expedition to the East, were among the latest who set forth. On the 9th of April Prince Napoleon left Paris, with Vely Pacha, the Ottoman Ambassador; and the Duke of Cambridge, still more dilatory, was on his road from that capital nine days later—and then, not by so direct a line to their common destination, but viâ Strasbourg; and, indeed, when the Danubian campaign had reached its very crisis, he was at Vienna. But it was destined that the Allied powers of the West should be excluded from the triumphs, as they were excluded from the heat and the labours, of the Danubian campaign. The troops, both eight thousand men cannot be expected to withstand for ever an army of 60,000." "Silistria still holds out." "It is rumoured that Omer Pacha, on the —, was advancing, at the head of 70,000 men, from Schumla, to the relief of Silistria. The rumour wants confirmation. The Allied troops were still busy encamping round Varna." "The telegraphic report about the advance of Omer Pacha, at the head of 70,000 men, turns out to be a *canard* of the Viennese Stock Exchange. It is doubted whether Omer Pacha could bring quite that number into the field at present. He remains quietly intrenched at Schumla, where he is supposed to have only about 55,000 troops of all arms. The besieging force scattered around Silistria in the necessarily dispersed array of an investing army, numbers now at least 60,000 men, who are very much harassed by the repeated and desperate sallies of the garrison." "The reported surrender of Silistria is not true. The place still keeps the Turkish ensign flying, though the valiant garrison is nearly exhausted. It is a pity something could not be done to succour them. Theirs is a waste of heroism." A curious story is told about an interview, under flags of truce, demanded by the Russians. The Muscovite Commander wished to spare, he said, the needless effusion of blood, by merely informing Mussa Pacha of a fact, viz., the Czar had sent *conclusive* directions that Silistria "*must be taken*;" therefore it might as well be given up at

ance; to which Mussa, stroking his beard, replied that he also had a fact to communicate, viz., "that Abdul-Medjid-Khan had honoured him, Mussa originally (and he was not aware that the mind of his sacred Highness had changed) with conclusive instructions to defend the place, nor would he surrender it if he had but a thousand men, and all Russia was at its gates, with the Czar in person." Thereupon, a sort of Masonic sign is said to have been made by the hand of the Russian Commander, which sign implied an enormous sum in gold "imperials." Mussa's only answer was: "Let us now separate—the interview under white flags is over."

All this, in substance, was true; and our allusion to the incidents here will save us the necessity of recurring to them hereafter. Let us quote a few words more from the electric messages of the time. They are at present both interesting and elucidatory. "The wonderful garrison of Silistria is said to be now reduced nearly one-half. On the — they made another amazing sally, and routed the Russians at the south front. This cannot last much longer. The next mail will probably record the surrender of the fortress. The terms will be mild, it is thought; the garrison, at least, are certain to have the honours of war." (They were, indeed. Of those honours the heroes made sure.) "On the 24th, the Maréchal de St. Arnaud, Lord Raglan, and Omer Pacha reviewed together the Turkish army at Schumla." (This was true.) "The troops were found to be in splendid condition." (True—an exact and just description.) "Next day, the 25th, the Russians succeeded at length *in imposing between Varna and Silistria*." (True again—both the facts and the dates.) "The fortress must now hoist the white flag; the continuous bombardment is terrific; a combined assault by storming columns *thirty thousand strong* is to take place immediately. Of course, it will prove successful. The brave defenders are worn to skeletons. Nothing can exceed the efficiency of both the Anglo-French and the Turkish troops now lying respectively at Varna and at Schumla. Among them they muster, perhaps, 80,000, or even 90,000. The half of such a host would soon give an account of the Russian forces who are storming Silistria. Postscript. *A most incomprehensible rumour prevails that the grand assault has failed.* N.B. This must naturally be received with caution." We think that our readers will feel obliged to us for this rapid retrospective sketch; and now we can finish the historical reasoning to which facts drove us, and drove us reluctantly. In three short sentences the whole case can be stated. Firstly, the conviction prevalent (and, at that time, a most rational conviction) was this, that Silistria would fall unless a movement of the troops collected in Bulgaria was made for its relief; secondly, the conviction was prevalent (and it was equally just, equally rational) that if such a movement was made, it would most certainly raise the siege; thirdly, *no such movement was made.* Silistria could be saved by a given measure, which was perfectly practicable. Without that measure Silistria would be lost. That measure was avoided. Therefore, may we not fairly ask—was it the intention, was it the wish, that Silistria should in fact be lost? We fear that, if the reply was honestly given, it would be affirmative. But what motives could exist? They could not be strategical. No; but they might be political, or, rather, they might be diplomatic. The Emperor of Russia saw by this time that his calculations, based upon expected dissensions between England and France, and on the weakness of "the sick man"—in short, that *all* his calculations were quite illusory. He was willing to accept the terms then offered. But his honour must be saved—he must not be degraded in the eyes of Europe, or desecrated in those of his own people. His pride must be humoured. Some great success must be achieved, and then he would proclaim that he was satisfied; and that, not from the stress of defeat, or compulsion, but under the influence of his "habitual moderation," he wanted to terminate this quarrel, and relieve the anxieties of the world. *Peace, it was thought, would immediately follow the capture of Silistria.*

If this vile deference to the vainglory and selfishness of the man who had inflicted so many injuries upon the community of nations was indulged at the cost of that community, if the feelings of the tyrant and the despoiler were honoured above the interests of his victims, above the interests, indeed, of the world at large, above the claims of the most righteous of causes, and (let us not forget it) above the blood of the faithful and valiant garrison of Silistria, doomed thus to destruction and to abandonment, we may at least console ourselves with two facts—first, the conduct of Omer Pacha; and, secondly, the conduct and the fate (combined) of the troops in Silistria. Whatever restraints may have been imposed upon Omer Pacha's movements by instructions, originating in some foreign Embassy at Constantinople, endorsed or adopted by the Divan, and then sent in authoritative form to Schumla, they but weakened and relaxed, they could not wholly prevent, the Turkish Generalissimo's operations. A grand and decisive movement ending in the annihilation of the whole Russian army, was, perhaps, averted; but the disgrace and the discomfiture which might have been deemed so impolitic, supervened all the same, in spite of the subtle precautions of an ignoble and ignominious diplomacy. Mussa Pacha's dull valour, and Omer's obstinate activity, defeated all these suppositious combinations of the closet—if they ever existed. Without suspecting them to have existed, the page we have now to write will remain one of the most mysterious in military history.

The operations which we have already described will have shown to a discerning reader that the Russians had virtually evacuated Lesser Wallachia, in order to collect an irresistible force for the crowning exploit of the campaign. Political and warlike considerations coalesced in pronouncing this exploit the most important of all. The withdrawal of the right wing of their Army of Occupation, the massing of troops between Bucharest and Slobodzie, the advance of Liders, with the Danube on his right, and their own main advance towards that river in front (as the river flows due east before it turns northwards),—all betokened that the enemy was now making a great and last endeavour, in the most elaborate form of combination. But here we must note a curious circumstance, which soldiers will easily appreciate. Omer Pacha, in the face of this grand advance, did not recall his left wing. We have sufficiently explained his probable motives. He felt, so far as he himself was concerned, that he could deal with the Russians, and yet not bring another man to Schumla. Now, when such a large proportion of the invading force retired across the Aluta, this left wing of the Turks became at once an independent army, and, like Hal-of-the-Wynd, could "fight on its own hand." All that Omer asked of them was to operate on the right flank of the enemy, to make as many diversions as possible, and perhaps, ultimately, to harass, or even to intercept, his retreat. We want this to be borne in mind.

General Liders was rather more forward, and rather readier, than the comrades whose movement he was destined to protect. It was not their fault; six days before his own check at Czernavoda they had broken through the Danube, between Rassova and Silistria. On a misty day (the 19th of April), Omer Pacha encountered this enemy. It is related that, in the midst of the action, a body of Turks, whom he had ordered to make a considerable circuit to the east, and then to assail the left flank of the Russians, appeared as if marching straight from the coast, guided by the noise of cannon, and the uproar of combat. The English were known to have recently landed at Varna; perhaps some had landed at Baltschik; perhaps, even some not much below Kustendjed. Who could these be, these columns from the east, except the English? While the doubt arose, and prevailed, a portentous sign seemed to afford the answer. A flag, French and English, were all this time incessantly forwarded; and, *on the 12th of the month* only three battalions of our Guards remained at Malta, awaiting their conveyance. The pride of the Czar amidst this clash of arms, was still unbending; and, dating from the 19th of April, six weeks were by him proclaimed free for English and French vessels to clear out of the Russian ports. On the 26th of this memorable month the Queen in Council ordered *a National "Day of Humiliation;"* and, to complete our present digressive and discursive glance at the more general, and sometimes very distant, occurrences to which we should not wish to turn aside in the narration of the ensuing Danubian campaign—it was in the midst of this warlike incandescence of all Europe, that Mr. Pease and the other members of the "Peace Conference" proceeded to St. Petersburg, and (almost literally) requested the infuriated Autocrat—to be a good boy. Generals Canrobert, Bosquet, and Martimprey, who had arrived on the 3rd at Gallipoli, began, by their presence, and even by the noise of their very names, amid an Eastern population, to impart a new gravity to the whole Western movement—the character of a great Crusade *inverted.*

We may mention here—for fear of omitting it—a circumstance which exemplifies the truth of the inspired intimation that the utmost wisdom of man is only fully before Him who knows and foresees everything. Of all the measures adopted by the two leading Powers of Europe in the beginning of this contest, that which united the most suffrages in praise of its wisdom, was the Emperor Napoleon's expedient of sending to the scene of action some of his Algerian army; not only as starting from a nearer point of departure, but, still more, as having been tried in a similar climate and in a not dissimilar warfare. And again, of all the troops in his African dependency, *the Zouaves* were, in every sense, considered to be the most eligible for such a service—European in discipline, and to a great extent in blood, Mahometan in experience—the very men, in short, to reach the rest of the mixed expedition how to avoid the imprudences incidental to such an enterprise, and how to secure its success. Now, of all the corps brought together by this great adventure, the Zouaves have suffered, beyond comparison, the most, in sporadic sickness and in general ill-fortune. Moralists or physiologists may speculate on the doubtful lesson: we have only to note the certain fact.

It was on the 16th that Admiral Plumridge sent home the *premices* of the war, the first Russian prizes, five vessels of commerce; and on the 17th four more such vessels followed. They were laden chiefly with salt. The first division of our Baltic fleet—consisting wholly of steamers, 17 in number, carrying nearly 10,000 men and 1017 guns—was speedily followed by the second; this last brought 25 ships of war, of which twelve were line-of-battle. The united divisions constituted a noble fleet of forty-two vessels, 2200 guns, 16,000-horse power, and 22,000 sailors and marines. The only additions desirable to this splendid armament were a military force (which arrived too late for any but a partial and disproportionate exploit), and a sufficient flotilla of steam gun-boats drawing but little water, which were equipped too late altogether to be of service during the year 1854.

We return to the war on the Danube. The Russians, having seized Hirsova, spent some time in preparing for a great attempt to pass Trajan's Wall; but, though their Cossacks scoured the country down to the very ramparts of Kustendjeh, they found that they had selected a most difficult part of the Turkish line to force; and at Czernavcda, on the 25th of April, more than five weeks after General Liders crossed the Danube at Galatz and, nearly a month after the second Russian column had followed near Tultscha to his support, their united divisions were taught a severe lesson. The Turks, at that place—which is some five miles to the south of Trajan's Wall—once more checked the Russian advance; and, in a sharp action, repulsed the enemy with considerable loss. On the whole, the avenues by which the Russians endeavoured to penetrate from the Dobrudscha were defended for about seven weeks; during which time, the invaders —being locked up amid the marshes of the worst district of the whole Turkish territory in Europe—suffered incomparably more from ague, fever, cholera, and privations, than they suffered in the field. It must not be supposed that this advance along the coast against Omer Pacha's right wing was an isolated movement. On the contrary, it was part of a very large combination, which Marshal Paskiewitch, Prince of Erivan, was, on the 8th of April, summoned from Poland to superintend in person, and in which the famous General of Engineers, Schilders, was to take an eminent part. Marshal Paskiewitch had long since expressed an opinion, that Prince Gortschakoff was conducting the campaign indudiciously; and, just about the time of which we speak, there was an immense change in all the Russian dispositions. Their right was drawn back; their left, as we have related, occupied the Dobrudscha, and was thundering vehemently, at the north-east gates, so to say, of Bulgaria; while, now, the various columns which had been countermarched from beyond the Aluta, were massed in apparently irresistible strength all around Bucharest and Slobodzie, and in front of those towns, bearing fast upon the Danube, between Oltenitza and Czernavoda. With General Liders' army, these concentrated troops maintained their communications through Hirsova; and his instructions were to press forward at whatever cost *and to interpose between Varna and Silistria.* It was evident that the recent peremptory and dreadful orders from St. Petersburg were impelling the Russians to their last and truly desperate exertions.

SIEGE OF SILISTRIA.

We approach the siege of Silistria. In the history of that great operation there is one mysterious and sombre particular, which the reader will notice. The subject is more than delicate; and we will not, in our present uncertainty, say anything beyond what the duties of a historic narrative imperiously require. How is it that from the 1st of May to the 15th of June the besiegers were allowed to press forward their scientific approaches, and their sanguinary assaults, *unmolested by any serious or regular attack from without?* A very great Anglo-French force was by this time mustered at Varna; and, allowing for all the windings of the road, not more than seventy miles interposed between that maritime station and the very walls of Silistria, while a much shorter march would have precipitated the irresistible soldiers of the West upon that army of many sufferings which beleaguered the gallant fortress. But several replies may be given, even if unsatisfactory ones, on behalf of our own and the French troops. We accordingly repeat the question, with more direct reference to the Turkish host which Omer Pacha held at Schumla. He had, at the least, seventy thousand men accumulated around that impregnable position, or within easy summons; and *his* march for the relief of Silistria would have been still shorter than that of the Allies. It was the general opinion in Europe, it was the impression among our officers in Bulgaria, and, *we have reason and warranty for adding, that it was, for about three weeks, Omer Pacha's own conviction* that Silistria, unassisted, must fall; and when we say "unassisted," we mean without some strong and combined effort to assist it. It was, also, not for a moment denied, that the beleaguering army would have to abandon their enterprise if that effort were made and they were thus attacked. It was, in the end, found that, although not externally assailed in the manner we have described, they were yet obliged to raise the siege; can there, then, be any doubt what the result would have been, if a powerful force had disturbed their operations?

We speak not of any wild advance, or attempt to advance, up the Dobrudscha; nor do we refer in any manner to a general effort to carry the war across the Danube; what we say is specific; it relates to one and only to one, manifestly practicable movement, which, it is acknowledged, would, if made, have delivered the most important river fortress in Turkey; and without which, it was supposed, that fortress must surrender; and this movement *was not made.* We wish the reader to fix the true case in his mind; it is well worthy of his attention. This, then, it is: The general expectation was that Silistria would fall, if the forces in Bulgaria did not move—Omer Pacha, like the rest, entertaining that expectation; on the other hand it was the unanimous conviction of all concerned, that, by a move of the troops in Bulgaria, Silistria could most certainly be saved. And with this expectation on the one hand, and this conviction on the other, the troops in Bulgaria remained quiescent during the whole time of the danger. The very style in which the progress of the siege was adverted to by the journals of Europe is most remarkable, *ex. gr.*:—"Silistria had not fallen at the departure of the last advices." "It is rumoured that the besieged made a great sally on the —, and destroyed the Russian works opposite the west front, slaying a thousand men." "The marvellous resistance of Silistria still continued at the date of our despatch; though, of course, a garrison o not clearly distinguishable, but strikingly similar to the colours of England, waved at the head of the advancing body. Panic seized the columns of Russia. They wavered, they broke their ranks, a considerable loss was incurred, and the field remained in possession of the Turks.

But yet, the main movement threve. So early as the 14th, great batteries had been erected on the north bank of the Danube, opposite Silistria; and the town was bombarded from morning till night; and, undoubtedly, the Russians now began to show themselves in force on both banks of the Danube, near and around that fatal fortress. On the 28th of April the Russians, being completely established on the south bank, attacked the outworks of Silistria. On the same day, one hundred miles to the west, at Nicopolis, Sali Pacha had a battle with the Russians, who had neglected all the country lying to their right, because they were endeavouring to envelope Silistria in every direction, and they thought they had excluded the western or left wing of the Turkish army from the real business then in hand Sali Pacha defeated the enemy, killing nearly 2000 of them. In conformity with their usual strategy, straggling and indecisive, the Russians at the same time that they were thus endeavouring to force the Danube from Turna, tried also to exhibit themselves in apparent strength at Radowan, nearly sixty miles to the right. Suleiman Bey, whose rank was that of a Colonel, stormed Radowan, and had the glory of beating the invaders with almost as much slaughter in this place as Sali Pacha had inflicted on them at Nicopolis and Turna. But these reverses o the Russian right might have been expected, when the men were weakening it in order to strengthen the divisions destined by them to take Silistria. The assault on the outworks was so hotly received, that full three weeks elapsed before General Schilders had completed the investment. On the adverse shore he piled up batteries of heavy guns, which maintained a continual bombardment; and with those guns he left his portable hospitals (or ambulances) and his reserves. The forces which he transported over the Danube to form the actual leaguer were not less than 58,000 men, while the garrison mustered 8000 only. His artillery, which was numerous and heavy, has been variously computed. Probably the most effective batteries were those which he directed against the south-west fronts; and here, indeed, the fire was severe and terrible. On this side the ground rises in a series of platforms, which could not be surrendered to the enemy with safety to the town. They are occupied, therefore, by outworks which are all-important; for, on the day when they are taken, Silistria is virtually taken. The outworks are called respectively Arab Tabia and Ilamli. They are of earth. The Turkish artillery protecting them was repeatedly silenced; the walls behind them were repeatedly breached; but, burrowing in the cavities of that redoubt, the indomitable defenders waited only till the thunder of the guns had ceased, and till the tramp of the storming columns made the ground about them tremble, when they appeared swarming out of the bowels of the earth, and—dagger in hand, rather than sword in hand—flung themselves upon the assailants. The Russians in these great assaults—which, as the siege progressed, were conducted in larger and larger force, committed one of the most incredible military blunders on record. They advanced in heavy costume, and even with their knapsacks on their shoulders. They met those, therefore, who soon neutralised and reversed the effects of General Schilders' artillery. The slaughter on these occasions (and from May the 11th to June the 29th they were numerous) is hardly to be believed. Always bearing in mind this species of inter-act, we may describe in one sentence nearly a month's operations before Silistria: to wit, it was alternately bombarded and assaulted. Armed only with their temperance and their fanaticism, the small Turkish garrison flinched not for a moment. As the earthworks were damaged, it was necessary to repair them; and as the Russians mined (a last resource), it was indispensable to countermine. Enormous hardships and evident risks were to be encountered in these duties. For the most part, the patient Osmanli displayed the spirit of a true soldier. As he smoked, or rather sucked, a pipe in which there was no longer any tobacco (the facts have been witnessed), he lay at the bottom of a trench watching, with envy the better-supplied comrade whose tarboosh rose above the level of the margin—because that comrade worked with the spade, and was therefore on his legs. A cannon-ball sweeps away the red cap and the head within it. The recumbent spectator arises, saying that "Allah is great!" He takes the spade from the yet warm hand, disengages the nargilly from the clenched teeth, and fills the brief vacancy—his own tarboosh now surmounting the clay embankment. Soon, the place is again vacant, and a successor equally intrepid and equally serene, continues the excavation; and in ten minutes, it has thus taken, as it were three generations of valiant Osmanlis to fortify one soldier's post in a bombarded intrenchment, and, while doing so, to smoke one pipeful of Latakia tobacco. But when we say that these noble soldiers flinched not, we would confine our observation to that one month whi h we have mentioned. At length, they showed signs of flagging. The odds were great; the work was incessant; the fatigue was overpowering; the enemy was near, and seemed every day to increase in power; their friends were distant, and had apparently forgotten them. Four men met this natural depression with, in war, that priceless resource, that resource above all treasures in value—intellectual bravery and thoroughbred resistance. Of these four men one was a German, two were British officers (Lieutenants Nasmyth and Butler), and the law was the heroic Mussa Pacha. This man was destined to save Silistria, but not to know it; to triumph conclusively, completely

GHELENDJIK BAY, COAST OF CIRCASSIA.

gloriously, and not to witness his own success; to win imperishable praise, and die without hearing the first cheer. Butler, Nasmyth, and the Prussian engineer told the Turks that they must not despond because the besiegers were laying powder under the surrounding works. Against those mines other mines could be wrought, and all the enemy's labour would be more than lost; for before they approached near enough to do damage, they would themselves be blown into the air. The Turks took heart again, saying that Allah was indeed great.

On the 11th of May, Silistria itself was assaulted. The assailants were beaten, and lost more than two thousand men. Meanwhile, however, the works were incessantly advanced; and, so convergent were the movements with a view to storm or reduce this great fortress, that the right wing of the general Russian army of occupation was consigned to every mischance; whereas the Turkish left wing, as we have said, was transformed, virtually, into a powerful and dangerous army. On the 21st of May another general assault was repulsed. On the 26th of May the left wing, being now an isolated division of Omer Pacha's force felt its way eastwards, to Turna, Semnitza, and Giurgevo—in all which places it found, and severely defeated, the enemy. Some such results Omer Pacha had foreseen, when (if we may use the phrase) he had abandoned this part of his forces to themselves. We must not confound these Turks with the Turks defending, originally, that part of the Danube which on the other shore, corresponded with the present position of the advancing victors. Quite otherwise; the conquerors had come from the west, not straight across the river; and their "*vivat*" was, properly speaking, Widdin. The Russians persisted in disregarding such casualties; and, on the 29th of May, only three days afterwards—a very fatal date to choose for a contest with the Musulman—Prince Gortschakoff and General Schilders ordered a combined assault upon the south-east, the south, and the west fronts of Silistria. Hurled from the breaches, the enemy himself acknowledged that he lost that day, between one thousand and two thousand Grenadiers. We are convinced that the loss amounted to near five thousand men. They had *used* thirty thousand in the attack. It was the anniversary of the Turkish conquest of Constantinople. On the 29th of May, 1453, Mahomet II. took forcible possession of that European territory which his descendants were now defending with so much heroism. Two days after the assault just mentioned, the last day in the month (May 31st), the outflanking left wing of the Ottoman army had pushed to Slatina, and there had won another victory; and, indeed, on the previous day, which was the day immediately following the great assault upon Silistria, they had fought a battle at Karakal (through which Slatina is reached in that direction), had taken six field-pieces, and had slain *three thousand* Russians. Truly, the position was growing serious, but Silistria "must be taken."

At the beginning of June, when this unfair, this most cruel contest had lasted more than a month, Omer Pacha, whatever diplomatic arrangements might, or might not, have been made, could resist his own feelings no longer. He would have been no soldier—he would have had for his comrades no bowels of compassion, had he remained still impassive, while beholding so much suffering, so much patience, and so much valour. He was moved; and he moved. On the 4th of June he put 30,000 men in action, and ordered them, with his best wishes, to do something for Silistria. On that same day he commanded his garrison at Rustchuk to try their fortune against the Russian works on the island of Mokan; and the works were completely destroyed. A detachment of the column dispatched to the relief of Silistria, entered it on the 5th, partly stealing, partly breaking, through the Russian lines. Mehemet Pacha led this reinforcement. Some of the succouring force were repulsed, and shut out; but they remained near, watching for the next sally. It took place exactly three days afterwards, on the 8th of June. It was by night; and then, over a thousand Russian corpses, about a thousand more of the Turkish reinforcement entered Silistria. On the 13th, five days afterwards, a still more tremendous sortie was effected. Three Russian mines were sprung during the conflict: all their works were destroyed, and the carnage was enormous. At last an end was put to this desolating enterprise. A grand assault (through breaches rendered practicable by the artillery of General Schilders) was ordered for the 28th of June. The Russian soldiers had now been eleven months in the provinces of Turkey, and had never yet seen a Turk's back. They had known nothing but disaster, unvaried even by an episode of success; and, when ordered, on the 28th, to the breaches, stood doggedly in their ranks. Prince Gortschakoff, in alarm, adjourned the attack till the next day. He occupied his evening in the composition of a

CAMP OF TCHOUROUK-SOU, ON THE BLACK SEA.

EMBARKATION OF FRENCH AND ENGLISH TROOPS, IN VARNA BAY.

ENCAMPMENT OF TROOPS, AT VARNA.

manifesto or proclamation which deserves to live for ever. The principal argument in it was that, if the troops of his Majesty the Czar did not take Silistria on the next day, *their rations should be stopped*. Next day came. It is very rare for general officers to be wounded in number. It is foolish, unmilitary, perhaps unmerciful, in them to expose themselves to personal danger, except where an army requires extraordinary encouragement. The Russians were thoroughly discouraged and demoralised. This fact is best shown by the number of general officers killed the next day. Silistria "must be taken;" and when the storming columns on the 29th were mustered for the assault, the gloom in the countenances of the men gave a bad augury of the result. Repulsed twice from the defences, they hesitated to obey when ordered once more to advance. Upon this Count Orloff, jun., General Schilders, General Gortschakoff, and General Lüders placed themselves at the head of the men, crying to these to follow; while Prince Paskiewitch rode up to the spot and addressed them partly with reproaches and partly with encouragements. The assault was unsuccessfully renewed, and a murderous carnage took place. General Schilders, to whom destined to take a fortress, the capture of which twenty-five years before had been the commencement of his reputation, was struck by a cannon ball, which carried off his thighs. General Lüders had his jaw struck away, Count Orloff was killed, General Gortschakoff was severely, and Prince Paskiewitch desperately, wounded. The Turks had not only repelled the assault, but had pursued the assailants up to their very batteries. Some of the relieving column outside had meanwhile alarmed and disordered the Russians in the rear. This practically terminated the siege; for the garrison was again succoured during the confusion of the engagement; and the Russian works were so damaged, that they would have all to be recommenced. Mussa Pacha, struck by a spent ball, died of the hurt in a few hours. Such was this memorable siege of Silistria, which might be compared with that of Saragossa for the bravery of the defence. We believe we shall not be guilty of exaggeration in saying that, from first to last, the Russians lost, under or near the walls of Silistria, 30,000 men.

They now recrossed the river, so thoroughly demoralised, that, had there been a sufficient force to pursue them, they must have either laid down their arms, or been annihilated. They retreated from every point towards Fokshani and Brilat; evacuating not only Lesser, but Greater Wallachia. Skender Beg and some of the other Turkish chiefs who commanded in the south west of the Principalities, pursued the enemy at leisure beyond the Aluta. It was only in the Upper Dobrudscha that the Czar now held any portion of the further bank of the Danube.

The Allies had meantime assembled, to the number of about 50,000, in Varna and the neighbouring camps; and, as the campaign was finished upon the Danube, they began to meditate some other expedition; and, after many councils of war, it was secretly decided to invade the Crimea, and to attack Sebastopol. Siege-trains were ordered from England and France, transports were prepared, and everything gradually provided. But the cholera attacked both the armies and the fleets, which for two months lay prostrate under this dreadful scourge. It cost the English at least 700 men—the French, including those who perished in the fatal excursion through the marshes of the Dobrudscha, must have lost *more than* 4000. It was in July that the greatest mortality occurred; and the corps which suffered most, was that of Generals Canrobert and Espinasse, at the bivouac of Kavarlik, near Kustendjeh—the Zouaves being more than decimated. When Khan Mirza, on the 23rd July, allowed himself to be surprised at Karassu, by the retiring Russians, General Youssouf took his fine corps forwards—and in that one long march 1500 dropped down and died, without counting the regular daily losses. The Austrians who had seemed constantly on the point of joining the Allies, but without ever really joining them, and who were expected to aid the Turks, but never did, now began to muster in large numbers along the confines of Transylvania. During the next month the discomfited columns of the Czar were all behind the Sereth; and Prince Gortschakoff sent them in lines to Jassy. General Dannenberg assumed the chief command of the routed forces; Numerous vacancies had rendered his promotion rapid; and Prince Dolgorouki, who had returned from Persia, was dispatched by Nicholas from St. Petersburg, to investigate the causes of so many and such huge calamities. On the 22nd of August, Omer Pacha, seated in an open carriage, with Cantacuzene (a name recalling old Byzantine recollections), made his triumphal entry into Bucharest. He published a conciliatory proclamation, and the Sultan decreed an amnesty for all treasons committed during a time of terror and military coercion. In the beginning of the following month the Russian head-quarters were removed from Jassy, an l withdrawn behind the Pruth. The expulsion of the invaders was complete; the campaign was finished; and then, and not till then, Count Coronini and his Austrians entered the Principalities, "*to protect*," they said, a territory which had been effectually protected by its own lawful owners, and which these obliging strangers had, in no one particular, assisted in defending.

Such was the glorious Danubian campaign, from its commencement to its close.

OPERATIONS IN THE BALTIC.

Meantime, the Allied fleets had been active in the Baltic; the French division having passed through the Channel to join Admiral Napier, so early as the 23rd of April. It consisted of twenty-five sail, nine being ships of the line, and, with the English squadrons, made the whole a fl-et of about sixty-seven vessels of war. The navigation of the northern waters was not universally practicable till the middle or end of May; and, even when it was, not much was effected, beyond the blockade of the Russian navy, which shrank behind granite fortresses, and the reconnoissance and study of the various maritime strongholds of the Czar along those seas. On the 20th a gallant exploit was performed at Hango, two Russian ships being cut out from under the very guns. On the 30th Bomarsund was bombarded, and the next day Ulcaborg was destroyed. Prizes of not much importance continued to be sent home. But on the 20th of next month a check was sustained in attempting to land at Gamba Karleby, where we were repulsed with the loss of 54 men, killed or missing. Shortly afterwards the greater part of the fleet—fifty-one sail, in fact—were assembled in Baro Sound; and the French and English Admirals pressed their respective Governments to send them a military force. This was made ready with great energy by the Emperor Napoleon; and 25 000 French troops, under the command of Baraguay d'Hilliers, sailed in the beginning of August, on board English ships, for the Isles of Aland, which lie across the mouth of the Gulf of Bothnia, half-way between Stockholm and Wirmo, in Finland. The soldiers were landed in company with a body of our Marines, and under the protestion of the united fleets. The nature of the soil obliged them to use earth-bags for their batteries; and in one battery alone there were 15,000 such bags. The conoidal rifle balls of the French sharpshooters soon drove the Russian artillerymen from their casemates, while the walls were breached both by sea and land. The *Leopard* threw 120-pound shot from a distance of 2000 yards; and it was afterwards ascertained that 40 lb. or 40 lb. shot will, at a distance of 500 yards, breach granite works. The roof of the principal fort was of iron, and underneath the there were six feet deep of sand; then granite. This roof was torn to pieces in a few hours. On the 15th of August General Bodisco, having lost his two subsidiary forts, surrendered with 2000 prisoners, who were sent at once to England and to France. The forts were then destroyed; and such was the new and sudden mistrust which the Russians conceived of their boasted defences, that they themselves blew up, a few days afterwards, the fortifications of Hango.

EXPEDITION TO THE CRIMEA.

In the Black Sea, meantime, the preparations for the Crimean expedition were pressed forward with greater energy in proportion as the cholera abated. But so vast was the scale of the enterprise, that successive delays occurred. Originally the invading force was to have sailed on the 15th of August; then the 20th was the day; then the 22nd; then the 26th; then the 1st of September (by which time the French siege-train would have arrived at Varna); then the 2nd of September. At length all was ready; and 58,000, out of 70,000 men—cavalry, infantry, and artillery—with an ample supply of all needful munitions, were embarked at Baltschik on the 7th. The French numbered 25,000, the English the same; and there was a picked corps of about 8,000 Turks. In a flotilla of between two and three hundred vessels, this first and much larger part of the united army were transported up the coast to Fidonisi, or the Island of Serpents, from which point to Cape Tarkan, in the Crimea, they would make both the shortest and the most sheltered passage. Being reviewed and found all ready at Fidonisi, the monster armada took its second departure on the 11th, and reached, without accident, the destined shore on the 14th. On that day the troops were landed prosperously at "*Old Fort*," some twenty miles beyond Eupatoria, or Kheleff, within four or five easy days' march from Sebastopol. Upon this great fortress the columns were at once directed; while the transports returned in haste to fetch the reserves, amounting to about 15,000 men.

We cannot do better, in order to conclude this Historic Sketch, than to quote Lord Raglan's late despatch from Old Fort:—

> It states that the Allied armies arrived at the place of disembarkation near the Old Fort, in lat. 45, at break of day upon the 14th, and before night they had succeeded in landing nearly all their infantry and part of the artillery.
>
> On the 15th the swell upon the shore considerably impeded operations, but some progress was made; and the exertions of the fleet, under the immediate command of Rear-Admiral Sir Edmund Lyons, excited the admiration of the army, and were in fact above all praise.
>
> The surf continued on the 16th (the date of the despatch); nevertheless the disembarkation of the horses and baggage was proceeding with the utmost rapidity.

In our accompanying Number, all further and more recent intelligence will be found.

THE ILLUSTRATIONS.

THE SURRENDER OF BOMARSUND.—(*Page* 317.)

THE scene portrayed upon the front page has been engraved from a Sketch by Mr. E. T. Dolby, accompanied by the following details:—

> Down went stones, iron chimneys, sand-bags, &c., and the Russians made a poor reply; the shot falling lamentably short, and the aim being negligent, as if they had lost all heart. About the middle of the day, the man at the top mast, on the look-out, roared with all his might to the Admiral: "They are showing a flag of truce, Sir!" Every telescope was bent upon the fort (the long-fort—our biggest enemy); and there, sure enough, was a white cloth, fastened to a pole, and waved in the most energetic manner from one of the shattered embrasures. "Cease firing. Signal flag of truce!" bawled the Admiral. Ours, you know, is the flag-ship; so every other ship keeps a look out towards the *Bulldog*, for signals. A large white tablecloth was fastened to the signal halyards, and run up to the foremast, where it fluttered against the clear blue sky. Every ship answered it except the *Edinburgh*, which did not observe it at first, and fired the *last shot* at the forts *from the ships*. However, the Admiral seized a speaking-trumpet, and soon set them right. A boat was lowered, and Capt. Hall (of the *Bulldog*) jumped into it with three or four of his men, and pulled straight for the shore. Some moments of suspense succeeded, as our Captain, with the little white flag in hand, approached the Russian fort.
>
> The land batteries not having seen the flag of truce from the forts which was held out to the ships, continued to fire, when the flag was suddenly withdrawn from the embrasure, and we feared some treachery; but in a few minutes it was planted on the top of the roof, where the batteries could see it, and another held out to the ships. Captain Hall landed, and jumped on shore flag in hand. I saw him hold the flag above his head, and wave it; but no one came out to him. We were now in a dreadful state of excitement; officers and men were crowding to the best points of the ships to command a view. There stood Captain Hall alone on the shore. All was silent as death. Presently we saw him walk deliberately up to the fort, followed by his little boat's crew, and disappear behind the western angle. Sir Charles Napier now ordered a boat out, and our three Admirals—Napier, Chads, and Plumridge—went off, landed, and also disappeared where Captain Hall did.
>
> At this moment my attention was attracted to an unusual movement among the low brushwood upon the hill to the westward of the forts, when suddenly I perceived hundreds of French soldiers rushing down the rocks. I suppose at least two or three thousand line coats, and of course twice the number of red legs were chasing each other at one time down in the direction of the forts. The first runners soon reached the gates, and there drew up in one dense column about twelve deep. This settled the question at once. Resistance on the part of the Russians, with three thousand of the enemy at their gates, and many more within call, would have been sheer madness. Inside the fort, the Governor, an old man with white hair and moustache, laid his hand upon his heart, and said to the English and French officers: "Gentlemen, I surrender myself into your hands, together with the soldiers of this fortress. I believe I have done my best to hold the place for my country and Emperor; but, finding further resistance on our part useless, I place myself at your disposal, as the representatives of the Allied Powers—England and France." Such was the surrender of Bomarsund.

THE RIFLE BRIGADE.—(*Page* 320.)

THE Artist has here represented a detachment of the Rifle Brigade waiting "the assembly" after falling in on their respective parade. Dressed of their knapsacks, they are about to go through the customary morning inspection; after which they are dismissed to their tents. The easy, listless attitudes of the figures offer sufficient guarantee that no order had, at that period, been issued for the rifles to quit the peaceful encampment for a more stirring existence. The men patiently await the bugle-call, when they go through a routine of duty which is daily attended to as a matter of course. Both battalions of this splendid corps are now serving with the expeditionary force in the East. It has ever highly distinguished itself, when England has assumed a hostile attitude, in the front of an enemy. It was at Copenhagen, under Lord Cathcart, in 1807; at Monte Video, under Sir Samuel Auchmuty, in 1808; at Corunna, with Sir John Moore; at Busaco, in 1810; at Barossa, under Lord Lynedoch, in 1811; at Fuentes d'Onor, Ciudad Rodrigo, and Badajos; at Salamanca, in 1812; Vittoria, 1813; Nivelle, Nive, Orthes, and Toulouse. It was present in nearly every general action during the Peninsular War; and served under the Duke of Wellington at Waterloo, in 1815.

ENCAMPMENT OF THE GRENADIER GUARDS.

(*Page* 320.)

THE Sketch portrays some officers of the Grenadiers Guards listening to one of those interminable tales, related by a professional story-teller, who has managed to find his way within the boundaries of the camp. The presence of these gentlemen is more to be attributed to a laudable desire of benefiting themselves by their recitations, than from hope of affording any extraordinary amount of gratification to their listeners. The scene is taken in the vicinity of Constantinople, and the rows of dark cypress trees rising in the background, announce their proximity to the final resting-places of the "true believers."

HORSE BAZAAR AT CONSTANTINOPLE.

(*Page* 321.)

ONE of the busy scenes in the Turkish capital during the encampment of the British troops in the suburbs, was the Horse Bazaar, sketched by our Artist. It is, certainly, a much more picturesque affair than our large horse-mart in Baker-street. The scene represented is a small square, with groups of Turks, smoking; in the foreground are British officers bargaining for and trying horses, mules, &c. About the square are houses which serve for stables; and at the doors are Turks smoking, &c.

BRITISH INFANTRY AT GALLIPOLI.

(*Page* 321.)

THE life of a soldier on service is one of unvarying excitement. Whether under canvas, in quarters, or bivouacking in the open country, he contrives to make himself at home as far as capabilities will allow. The changes inseparable from war brings him acquainted with strange scenes; and the necessity of providing for immediate wants fertilises an inventive ingenuity which, until urged by pressing need, he was unconscious of possessing. Occasionally he may find himself admirably housed, and blessed with an ample supply of provisions. At another time he must make his "shake-down" as best he can, under the blue canopy of heaven. Tired and foot sore, after a harassing march, he is frequently obliged to satisfy the cravings of hunger with anticipation of rations, until the commissariat, unavoidably delayed, brings up the ever welcome stores. Under all circumstances, he philosophically makes the best of the position in which he is placed, conscious that the leisure of his locality is held on a precarious lease subjecting him to ejectment at a moment's notice. An order to advance is invariably received with joyous acclamation; and to those unaccustomed to such scenes, the alacrity and willingness evinced by all command towards facilitating the move must create considerable amazement. Our Illustration depicts a portion of the British Infantry in barracks at Gallipoli. The order to march has just been received, and no enchanter's wand could more effectually convert inactivity and sluggishness into energy and action than a few words read from the orderly-book has instantaneously achieved. As if by magic dull inertness starts into bustling energy. Knapsacks are repacked, arms carefully examined, accoutrements inspected; and in brief space all that denoted inextricable confusion is moulded down into perfect order and regularity. Each man takes his place in the ranks fully equipped, and prepared to move off at the word of command. Such is the effect of discipline.

THE TRANSPORT FLEET AT VARNA.—(*Page* 324.)

(*From a Correspondent.*)

I SEND you a Sketch of the Transport Fleet, embarking the Army at Varna. The whole arrangements appear to have been carried on well, on our side of the Bay. The French are hard at work on the Varna side of the bay. They have a number of small brigs and schooners. The crowd of vessels, the constant movement of troops—regiment after regiment—embarking guns, gabions, fascines, and horses, passing every five minutes in rafts, steamers, and boats, is exciting beyond measure. I feel confident we shall do our work; though sickness has pulled us down very much: the men look very hollow in the cheeks, and pale.

This Panorama ought to come out at once, to be of interest. If I live, I will send one of Sebastopol.

SEBASTOPOL.—(*Page* 325.)

THE town of Sebastopol is situate on the point of land between the commercial and military harbours, which rises gradually from the water's edge to an elevation of 200 feet. It was partly defended on the west, towards the land, by a loopholed wall, which had been pronounced by one of the first engineers of Russia to be perfectly useless; and plans for completely fortifying the place in that direction were said to have been made; but whether the work has since been fully carried out we know not, though we have a deep conviction that a long defences will be found to exist there:—

None of the sea batteries or forts are of the slightest service for defence on the land side. Indeed, the great fort, St. Nicholas, has not a gun pointed in that direction, and such an armament would be perfectly useless if it existed, as that part of the hill on which the town stands rises behind it to a height of 200 feet. In fact, all the fortresses and batteries, both to the north and south of the great bay, are commanded by higher ground in the rear.

The port of Sebastopol consists of a bay running in a south-easterly direction, about four miles long, and a mile wide at the entrance, diminishing to 400 yards at the end, where the "Tchernaia Retchka," or Black River, empties itself. The average depth is about eight fathoms; the bottom being composed of mud in the centre, and gravel at the sides. On the southern coast of this bay are the commercial, military, and causing harbours, the quarantine harbour being outside the entrance in a direction, and having deep water.

The Military Harbour is the largest, being about a mile and a half long, by 400 yards wide, and is completely land-locked on every side. Here at is that the Black Sea fleet is moored in the winter, the largest ships being able to lie, with all their stores on board, close to the quays. The small harbour, which contains the naval arsenal and docks is on the eastern side of the military harbour, near the entrance.

The port is defended, to the south, by six principal batteries and fortresses, each mounting from 60 to 120 guns; and the north by four, having from 18 to 120 pieces each; and, besides these, there are many smaller batteries.

The fortresses are built on the casemate principle, three of them having three tiers of guns, and a fourth two tiers. Fort St. Nicholas is the largest, and mounts about 150 guns. It is built of white limestone—which is very durable: the same material being used for all the other forts. Between every two casemates are furnaces for heating shot red-hot, the calibre of the guns is eight inches, capable of throwing shells or 68-pound solid shot. That point where the greatest number of pieces of artillery can be concentrated is probably about the centre of a line drawn from Cape Constantine to the eastern promontory of the Quarantine Harbour, on which part of the guns of Fort Constantine, the Quarantine Battery, Fort Alexander, and Fort St. Nicholas, with some other batteries, may be brought to bear; but these cannot, at the utmost, amount to more than 250 pieces, even allowing that spot to be commanded by 100 guns of Fort St. Nicholas.

GHELENDIK BAY.—TCHOUROUK-SOU.

(*Page* 328.)

THE accompanying Illustration is from a Sketch by Lieut. Montagu O'Reilly, H.M.S. *Retribution*. It shows the Bay of Ghelendik, with the town and distant mountains, on the coast of Circassia. This place was evacuated by the Russians—destroyed and blown up by them—on the 28th of May last.

Tchouronk-Sou, on the Black Sea, was, at the period the Sketch was taken, the encampment of Selim Pacha. He lost the battle of the 29th July, and recently arrived at Constantinople, in great disgrace. He harangued the passengers in the Trebezond boat in extenuation of his failure. He said, "the Russians attacked my army; but it was not my fault, for I was asleep in the village twenty miles off, and of course could not prevent them. I came up with a reinforcement, but could do nothing, for we had forgotten our cartridges. The Russians took all our tents, but they were so rotten that they threw of no use; and as for the fifteen pieces of cannon that were lost, I will pay for them out of my own pocket."

VARNA.—(*Page* 329.)

WE have so recently described Varna and its military life, that we shall here merely say a few words as to the localities of the Sketch, taken by Lieut. Brodin (Royal Artillier,) shortly before the recent embarkation of the troops. In the upper Sketch, the Horse Artillery are encamped upon the hills to the left; in the valley are the Guards; to the right of the centre is Lord Lucan's camp; and, further right, are the 5th Dragoon Guards, and the 1st Royal Dragoons; and in the right hand foreground is the road to Varna. In the second, or lower, Sketch, are the Lake of Varna, is the English Camp; opposite are the French Cavalry. On the right is the Cove of Varna; and in the bay are French transports. Opposite is Captain Woodhouse's battery for transport.

THE BATTLE OF OLTENIZA, FROM TURTUKAI.

(*Page* 332.)

THIS very spirited scene is well described in the narrative. The accompanying Illustration is from a coloured drawing made by Major Dixon, from whom it was obligingly brought by the Earl of Carlisle, as a present to Lord Dudley Coutts Stuart, M.P.; who has kindly placed this interesting picture at our disposal. In the foreground is Omer Pa ha.

OLTENITZA, FROM TURTUKAI—FROM AN ORIGINAL DRAWING.

THE ILLUSTRATED LONDON NEWS.

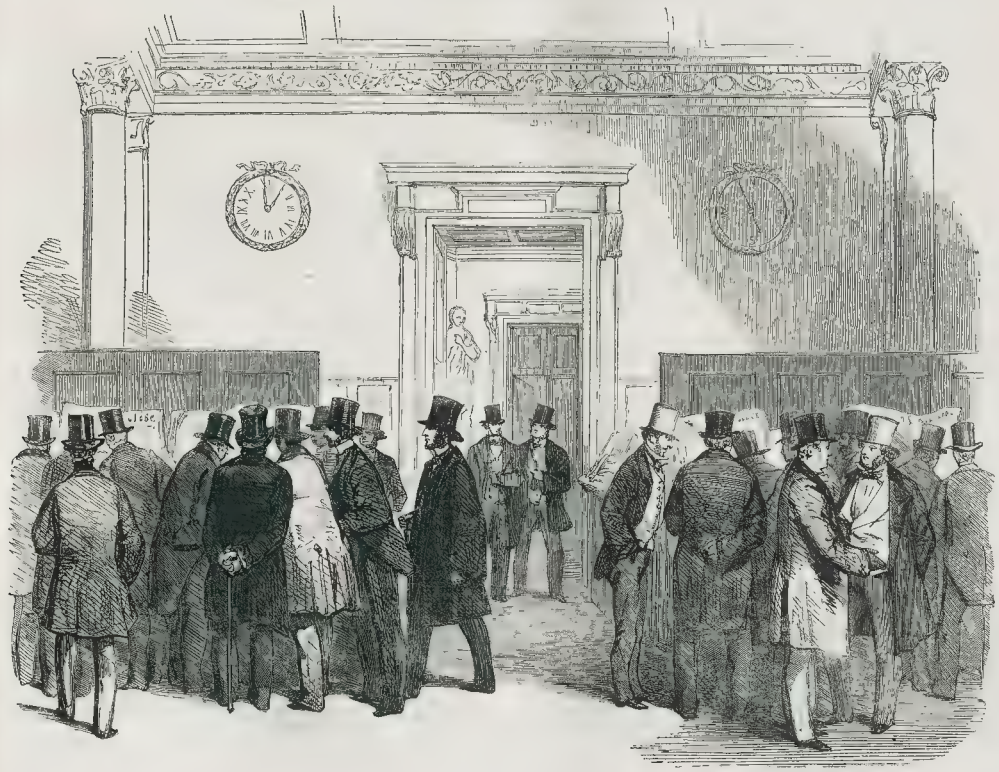
No. 706.—VOL. XXV.] SATURDAY, OCTOBER 7, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE VICTORY IN THE CRIMEA.

BRITISH impatience is satisfied at last. The people have had their hearts in their work since the first commencement of hostilities against Russia. The glorious victory of the Alma, and those which have in all probability succeeded it, will convince them that the Government, and everyone embarked in the cause—from the Generalissimo, to the meanest soldier in the ranks—have been quite as much in earnest as themselves. Captious critics—with a licence which proves that we are a free, and with an ardour which shows that we are a bold and high-spirited nation—may have found fault with delays and preparations that were necessary to render failure impossible and success magnificent; but all the while the responsible Governments of Great Britain and France were steadily pursuing their great object, and equipping the most splendid armament that the world has ever seen. The result has surpassed the expectations of the most sanguine. Instead of a tedious siege—protracted late into the winter, and trying the health as well as the temper of the besiegers—a series of pitched battles has done the work in a few days. Never before was a position stormed and carried with such gallantry and devotion. Never did Allies combine in a juster cause; never did nations associate for objects so utterly untainted with selfish and unworthy policy. It is a fitting conclusion to say that never did success so rapidly and so completely reward them. In the records of all time, the 14th of September—the day when the Allied armies landed in the Bay of Kalamita—will be memorable, not only for the actual achievements of which it was the precursor, but for its large and beneficial influence upon the future history of civilisation. France and England may exclaim with Cæsar, but with a grander justification—"We came—we saw—we conquered!" They have vindicated the public law of Europe; they have signally punished a gigantic aggressor; they have read a useful lesson to foul ambition; and, with the conquest of the Crimea, and the restriction of Russia within her proper limits, which we may expect as the inevitable consequence, they have inaugurated a new era of peace and progress, not only for themselves, but for the nations of Central and Eastern Europe; all of which have too long been exposed to decay and ruin in the dark and deadly shadow of the Russian Empire.

At the time at which we write, full details of the events in the Crimea are still wanting. We trust to be able to supply them before our journal goes to press. We shall not in this place attempt to recapitulate them, even in so far as they are known. It is sufficient to refer to them as deeds of arms unsurpassed by any of the gallant achievements of either Frenchmen or Englishmen in the days now happily gone by, when they were foemen worthy of the prowess of each other. The recital of those events will call a glow of honest pride into the cheek of every man in both nations to whom the fame of his country is dear, and will make millions of hearts throb with generous enthusiasm. There is no longer any jealousy between France and England; emulation has succeeded in the minds of both. The talismanic syllables of "Alma" and "Sebastopol," that will be inscribed hereafter on the banners of both armies, will strengthen their great alliance, and will be words of good omen in every household. France and her magnanimous ruler have even more reason to be satisfied than Great Britain. It is not only the remembrance of Waterloo that has been deprived of the sting that it once had to wound the susceptibility of France; but "Moscow" is a name that will no longer grate harshly upon the ears of a high-minded people. Nobly has France effaced the remembrance of both. In the bloody fields of the Crimea she has signally avenged herself of her former opponents: of Great Britain, by forgetting the unhappy feuds of less enlightened times, and by fighting and conquering with her in the purest of causes; and of Russia, by showing the Russian people that though frost and snow, and the rigour of the elements may, perhaps, conquer the armies of France, all the might of all the armies of Russia which have the courage to face her, is powerless against the courage, the discipline, and the patriotism of Frenchmen.

Satisfactory as the progress of events must be considered with reference to the future progress of the war, the public will not be in the least degree surprised to learn that a similar blow has been simultaneously struck in the Baltic. The Czar has been too long guided by the blind impulses of his revenge and ambition to be



LLOYD'S MERCHANTS' ROOM—READING THE NEWS OF THE VICTORY ON THE ALMA.—(SEE NEXT PAGE.)

coerced into peace even by such deadly thrusts as have been given in the Crimea. One grand blow has been struck; but it requires another to finish him. Sebastopol, it appears, is not yet taken; but awaiting that event, which we look upon as certain to occur ere the lapse of many days, we trust that the Allies are simultaneously preparing to "strike home" in the Baltic. If not at Cronstadt itself—which is by no means impossible, after the easy demolition of Bomarsund, and with the impetus which our brave sailors will derive from the shouts of victory that are now ringing into their joyous ears from the Black Sea—it should be aimed at the forts and arsenals of Sveaborg and Helsingfors. The naval power of the Czar must be utterly destroyed. Not only must he be taught that Russia is not and will not be permitted to become a great naval power, but he must be taught to tremble for his capital and for his throne. The loss of a province will not be enough to punish so mighty and so obstinate an offender. He cannot himself believe that the Allies will stop short in the work of victory. Their path is clear before them. The blood of the brave soldiers and sailors of Great Britain and France which has been shed in consequence of his rapacity cries aloud for vengeance. Individual men may refrain from punishing a fallen foe; but in the case of an empire like Russia, the Allies must keep on punishing until they are assured that the enemy and disturber has actually fallen, and that he has not resources in men, or money, or opportunities, to re-assume the offensive position which it has cost so much trouble and blood to destroy. Mercy, for the mere sake of being, or appearing to be, merciful, would, in such a case as that of Nicholas, be cruelty in disguise. The tears and groans of widows and orphans—to say nothing of the apparently meaner considerations involved in all the personal hardships and calamities, and the pecuniary costs of the struggle—demand that the Czar shall not only be defeated in his present attempt to subjugate his neighbours, but that he shall be so effectually humbled and punished as to render it both physically and morally impossible that he or his immediate successors (for we anticipate that his own reign will not be a very long one) shall attempt a similar infraction of public right for half a century at the least. As one of the means to the attainment of this end, the Crimea must not only be conquered, but must be declared independent of his rule. Whether it shall be erected into a semi independent State, under the joint protectorate of Great Britain, France, and the Ottoman Porte, is a question for future consideration; but it may be taken for granted that it never, under any circumstances, will be allowed to remain in the possession, or under the control of, Russia. The Crimea—if not Bessarabia and Georgia also—is a "material guarantee" for the pacific behaviour of the Czars that all Europe is interested in exacting, and which Great Britain and France will assuredly not fail to insist upon.

In the meantime, while waiting for the capture of Cronstadt, or, if that be impracticable, for the demolition of Sveaborg and Helsingfors—without attempting which, we think the gallant Baltic fleet would be ashamed to come home—the people of Great Britain and France, in the midst of their rejoicings, will render heartfelt thanks to Him in whose hands are the issues of battle, that the evil-doer has received a signal discomfiture, and that the prospects of a speedy and permanent peace have been so greatly increased by the victory which their arms have achieved. They will remember in their thanksgivings that Peace was their object in going to war—that their interests are not those of a sect, or a party, or a dynasty, or one particular corner of Europe, but of the whole human race, and that they advocate the principles of right and justice which are the original elements of all religions, whether Christian or Mahomedan, and upon which human society is founded. In this cause they will look for still greater victories; and will not, with the blessing of Heaven, relax in their efforts, until they are enabled to "turn their swords into ploughshares, and their spears into pruning-hooks," by such a re-adjustment of the European Commonwealth as shall not permit the weak to be at the mercy of the strong; but which shall consolidate the whole, by justice and equity, by mutual forbearance, and by the recognition of the great fact, that the very diversity of nations and races may be made their best bond of union, by the interchange of ideas, the complications of a civilising commerce, and the teachings of the Gospel of Peace.

LLOYD'S.—NEWS OF THE WAR.

Lloyd's Rooms, in the Royal Exchange, are, as most of our readers are doubtless aware, the resort of merchants, shipowners, shipbrokers, and underwriters. Here, all intelligence of things political, as well as maritime, is early known; and the excitement to see the second edition of the morning papers, or to scan the evening journals, is most amusing. In the Merchants'-room at Lloyd's all the daily newspapers, the foreign journals, and most of our provincial papers, are to be found; and to the ladies the subscribers to the Rooms flock to sit and read the news; and, as the time approaches for the "second editions" of the leading daily papers to be posted in the Rooms, the number of readers is generally considerable; and, when the attendants affix the slips, cut from the aforesaid papers, on small boards, and place them on desks, the crowding to catch a glimpse at the "latest intelligence" is very exciting: everyone being eager to see, there is an unusual amount of endeavours of tall men to peep over little ones, of pushing to obtain glimpses between heads and hats, or sidelong glances at the newspapers. About four o'clock in the afternoon is the scene of the greatest excitement: the evening journals are then posted up; there are several copies of each displayed, and great is the struggle to get the first of the "Special Intelligence," or the very last from "Our own Correspondent." This scene we have depicted in the Engraving upon the preceding page.

The Russian Prisoners.—Persons who have had charge of the Russian prisoners in this country state that the officers amongst them are a very different class of persons from military or naval officers who have been sent to this country by the Czar. The latter are highly educated, and make a favourable impression of the civilisation of Russia. The former are very inferior as respects education.

The Czar's Paternal System.—There are great complaints from Poland of the scarcity of labourers for the harvest. Among others, a German, who has purchased land in the vicinity of Wloczawk, states that he and all his neighbours have had splendid crops; of which, however, the greater part have been left to rot in the fields, in consequence of the universal want of labourers in Poland. This gentleman went into Prussia lately to hire workmen; but none would engage except on condition that he would procure exemption for them from the annoyance of the Russian passport system, and pay them a silver rouble (between three and four shillings) per diem. This inability of the agriculturists in Poland to house their crops, and the consequent destruction of grain, may have led to the Czar's prohibition of the export of corn to Austria. The want of labourers is attributable to the forced levies for the recruiting of the army. That measure tells in two ways: it takes some labourers from the harvest-field to carry muskets, and it frightens others out of the country.

THE INVASION OF THE CRIMEA.

(*Continued from Supplement, page* 334.)

ALLEGED CAPTURE OF SEBASTOPOL.

The Duke of Newcastle's caution to the public, in the *London Gazette Extraordinary* of September 30, "against expecting any details for several days," respecting the proceedings in the Crimea, was evidently much wanted. After all the instances they had witnessed, from time to time, of the unserious manner in which stock jobbers use the telegraph on such occasions, the people of England and of France allowed themselves to be deluded into a "fool's paradise" for several days, by certain mysterious despatches from Lord Raglan, stating that Sebastopol had fallen, which were always to come to hand, but never arrived. The first announcement of the important victory was on last Saturday afternoon, when the following circumstantial account of the great event was given in a despatch from Vienna:—

Vienna, Saturday, September 30.

Authentic advices from Bucharest state that a great battle has been fought, which ended in the victory of the Allies, and the taking of Sebastopol.

The steamer which carried this news from the Crimea to Constantinople communicated it to another steamer bound from Constantinople to Varna, whence the glorious tidings were forwarded to Omer Pacha.

The latest authentic advices from Constantinople, dated the 23rd of September, received this morning, confirm the battle and victory of the Allies near Sebastopol. Further details are still wanting.

Vienna, Saturday, September 30.

The evening *Lloyd's* says that the Turkish Embassy has just received the intelligence that the garrison of Sebastopol, with all its *matériel* and the whole fleet have surrendered. Permission was afterwards given for the garrison to withdraw, but was declined, the Russians begging to remain prisoners of war.

The evening *Wanderer* publishes a despatch, dated Odessa, 27th Sept. It says:—

"The battle before Sebastopol commenced on the 22nd. A decision was expected on the 23rd. The Russian losses are already very considerable. One General and two Colonels are killed. General Chumatoff is wounded."

Another despatch apparently confirms another private despatch, to the effect that Fort Constantine was taken upon the 24th; whereupon the garrison of Sebastopol surrendered on the 25th.

In France the false news arrived also on Saturday, but no one entertained the slightest doubt of its truth. The stock-jobbing device was greedily swallowed by all classes. A courier was dispatched with the news to the Emperor, at Boulogne, and he told the French Army that Sebastopol was taken.

For several days the hoax was kept up. On Sunday the Turkish Minister in London received a despatch from Omer Pacha, in which it is stated "Sebastopol has been taken," and a despatch was received in Paris with the same news from the Turkish commander.

Paris, Sunday Evening.

A Turkish despatch from Omer Pacha announces that Sebastopol has been taken, with all its war *materiel* and fleet.

The garrison were offered free withdrawal, but preferred remaining prisoners of war.

The English Ambassador at Vienna confirms the capture.

The French Three per Cents have risen to 70f. 60c.

On Monday the *Moniteur* gave the following despatch from Vienna, which was copied into all the London papers, no one doubting the authenticity of the information. The *Moniteur* said, the French Government had not then received direct and official news of the taking of Sebastopol; but that the French Minister at Vienna had addressed to the Minister for Foreign Affairs the following despatch:—

Vienna, October 2nd, 11.30.

Count Buol communicates to me this instant the following despatch, addressed by the Imperial agency at Bucharest to the Minister of Foreign Affairs at Vienna, dated Bucharest, Sept. 30, at six o'clock p.m.

"This day, at noon, there arrived from Constantinople a Tartar, the bearer of despatches for Omer Pacha.

"As the latter is at Silistria, the despatches had to be forwarded to him.

"This Tartar announces the taking of Sebastopol. According to his account 18,000 Russians were killed, and 24,000 made prisoners. Fort Constantine was destroyed, and the other forts, with 200 guns taken. Six Russian vessels had been sunk.

"Prince Menschikoff had retired with the remaining vessels into the interior of the port, and had announced to the Commanders of the Allied forces that he would blow them up if the attack continued. Six hours had been given him for reflection, inviting him to surrender in the name of humanity.

"A French General and three Russian Generals, all wounded, had arrived at Constantinople. That city will be illuminated for ten consecutive days.

"Neither Count Coronini nor Dervish Pacha, nor the other Consulates, have received despatches from Constantinople. These despatches are probably in the packet addressed to Omer Pacha, and cannot, consequently, reach Silistria before to-morrow at noon."

The *Moniteur* went on to say that Baron Hübner had been charged by Count Buol to address to the Minister of Foreign Affairs the most sincere congratulations of the Cabinet of Vienna on the brilliant successes obtained by our troops in the Crimea.

As the accounts from all quarters, though differing in points of detail, agreed most remarkably in the main facts, the universal belief was that Sebastopol had fallen. In Paris the artillerymen were stationed at the guns in front of the Invalides, with lighted matches, ready to fire as soon as the official news arrived. The compositors in the Imperial printing-office were not allowed to go home lest they might be wanted to assist in publishing the despatches from Marshal St. Arnaud.

On Wednesday people began to doubt. The story about the Tartar who had arrived with despatches for Omer Pacha was not found to hang well together. No official news had arrived, and it was, therefore, concluded by many that the whole of the circumstantial narrative was a stock-jobbing invention.

The following despatch from Berlin, which was received on Tuesday afternoon, threw some doubt on the previous reports, but it was soon discovered to be incorrect as to date:—

Berlin, Tuesday, October 3.

A telegraphic despatch, received here direct from St. Petersburg, says that Prince Menschikoff telegraphed on the 26th September, that he had withdrawn his troops, unmolested, from before Sebastopol, towards Baglicheserai, to await reinforcements from Perecsh and Perekop.

The Prince added, that up to the 26th, Sebastopol had not been attacked.

A moment's reflection showed that reports sent from the extremity of the Crimea on the 26th September, by the way of St. Petersburg could not have been received at Berlin on Oct. 2. The movement of the Russian army announced in the despatch alluded to, could, therefore, only refer to the movement of Prince Menschikoff to meet the Allied armies; and, from the tone of the despatch, it is evident that, at the moment the report was drawn up by the Russian Commander-in-Chief, no encounter had taken place between the armies. Supposing the report to be correct as to facts, the most probable cause of the error was in making the 26th appear to be the day on which the despatch was sent off, whereas it must have been the day on which it arrived at St. Petersburg; the news it contained coming down no further probably than the 18th or 19th, up to which time no attack had taken place.

A despatch dated Odessa, of the 26th ult., states that "several battles had taken place in the Crimea, in some of which the artillery of the fleets shared;" that "Prince Menschikoff had left the Alma, and fallen back towards the heights of the Katcha;" that "he had been joined by General Chomatoff coming from Kertch, with 6000 foot and a regiment of Cossacks;" and that "on the 22nd there had been a battle, the decision of which was expected on the 23rd, and in which the Russian loss had been considerable; one General and two Colonels having been killed, and General Chomatoff wounded."

The following despatches from Bucharest, of the 28th ult., confirm the Russian report:—

Bucharest, September 28.

Perfectly authentic intelligence has been received that Prince Menschikoff was attacked on the 22nd by the Allied forces in the plain of Kanjantsi, on the Katcha. After a sanguinary battle, which lasted some hours, the Russians, being totally defeated, fled, and were pursued to the intrenchments before Sebastopol.

Bucharest, September 28.

On the 23rd of September the Allies took all the forts lying on the right bank (Fort Constantine side) of the port of Sebastopol, and the rumour was spread that Sebastopol itself had surrendered.

On Wednesday the *Times* published the following despatch, but it will be noted that no new or official authority is given for what is called—

DECISIVE INTELLIGENCE.

We have received from our Correspondent at Vienna (by Submarine and European Telegraph) the following despatch:—

"On the 23rd Fort Constantine was destroyed by the Allies, and Fort Alexander taken. On the 24th, all the redoubts and forts around Sebastopol, all the batteries, and the Arsenal, were in the hands of the Allies. The flags of the Allies were hoisted on the tower of the Church of St. Vladimir. It is believed that the day on which Prince Menschikoff surrendered at discretion was the 26th. It is said that the remainder of the Russian fleet is safe in the hands of the Allies. The Turkish army will at once cross the Danube into Bessarabia."

This glorious intelligence is thus confirmed by way of Paris:—

"A private telegraphic despatch states that, at the end of a second battle gained by the Allies, they bombarded Fort Constantine, the Citadel, and the fleet, all of which surrendered. The Russians have lost 18,000 men in killed and wounded, and 2000 prisoners. Six ships of the line and Fort Constantine have been destroyed."

On Thursday all doubt was set at rest as to the true character of the Tartar despatch. From official information received on that day it was ascertained that up to the 28th ult. Sebastopol was not in the hands of the Allies, and that, consequently, all the previous circumstantial announcements of the fall of that fortress which had appeared for the four days were mere inventions. The substance of that intelligence was that on the 28th the Allies were in position at Balaklava, about eight or ten miles south of Sebastopol, and a favourable point for landing the siege-train, &c.; that the Russians had destroyed their own fortress of Kamiesch, on the point of the Circassian coast nearest to the Crimea, and that its garrison were proceeding to reinforce Prince Menschikoff's army; and that Prince Menschikoff was in the field with 20,000 men. Although this news is not such as the previous accounts would warrant us in anticipating, yet it may be considered as certain that it was not the consequence of any reverse suffered by the Allies, who were about to march immediately on Sebastopol.

FROM THE PARIS CORRESPONDENT OF THE MORNING CHRONICLE.

Paris, Thursday, Oct. 5th.

A despatch from the French Minister at Vienna has been posted up at the Bourse denying the fall of Sebastopol.

The Austrian Consul at Odessa writes, under date of Sept. 29th, as follows:—

"The Allies renewed fighting on the 25th and 27th. They were on the Belbeck, ten versts from Sebastopol.

"English vessels had brought 300 Russian wounded to Odessa.

"Under date of 30th September, Lord Stratford de Redcliffe writes from Constantinople that the Allied armies had established a basis of operations at Balaclava on the morning of the 28th, and were preparing to march on Sebastopol.

"The *Agamemnon* and other English vessels were in the port of Balaclava, where there was every facility for landing siege artillery.

"Prince Menschikoff held the field with 20,000 men, awaiting reinforcements."

On Thursday afternoon an extraordinary edition of the *London Gazette* was published, the contents of which we subjoin:—

(From the *London Gazette* Extraordinary.)

Thursday, October 5, 1854.

War Department, October 5.

His Grace the Duke of Newcastle has this day received a letter of which the following is a copy, enclosing, by direction of the Earl of Clarendon, a copy of a telegraphic despatch from Viscount Stratford de Redcliffe, her Majesty's Ambassador at Constantinople.—

Foreign-Office, October 5, 1854, 10½ a.m.

Sir,—I am directed by the Earl of Clarendon to transmit to you herewith, for the information of the Duke of Newcastle, a copy of a telegraphic despatch from Viscount Stratford de Redcliffe, dated September 30, 9½ p.m., and purporting to have been forwarded from Bucharest by her Majesty's Agent and Consul-General, on September 30, 8½ p.m., and containing accounts from the Crimea.

I am, &c., E. Hammond.

Translation of the Exact Copy of a Telegraphic Despatch, received October 5, 9 a.m., and transmitted by the Agent of England in Wallachia, at Bucharest, the 30th of September, 1854, 3½ p.m.

Lord Stratford, Constantinople, to Lord Clarendon, Minister of Foreign Affairs, London.

September 30, 1854, at 9½ p.m.

The Allied armies established their basis of operations at Balaclava on the morning of the 28th, and were preparing to march without delay upon Sebastopol. The *Agamemnon* and other vessels of war of the Allies were in the port of Balaclava. There were facilities there for disembarking the battering train.

It is stated that Prince Menschikoff was in the field at the head of 20,000 men, expecting reinforcements; that the fortified place of Anapa has been burnt by the Russians; that its garrison was marching to the scene of action; and that a convoy of ammunition, escorted by Cossacks, had been taken and destroyed by an English detachment.

The *Banshee*, bearer of this news, left the Crimea on the evening of the day before yesterday.

Stratford de Redcliffe.

Along with the above the Government received a despatch communicated to them by the Austrian Minister, from a Russian source, dated Odessa the 28th, containing intelligence from the Crimea to the 27th. It states that a series of sanguinary conflicts were taking place on the Belbek from the 25th to the 27th, when the steamer left, with what result was not known up to the latest date. If, however, as is stated by Lord Stratford, the Allies were at Balaclava on the 28th, they could not have been fighting on the Belbek on the previous day, unless the invading force had been previously divided. A straight line drawn between these two places (which are about twelve or thirteen English miles apart) would fall close to Sebastopol, and the armies would have to traverse a greater distance than could be accomplished in a day's march. If, however, the Russian account be true, it would almost necessarily follow that the Allies must have forced the Russians to retreat into Sebastopol, or at all events, forced their position on the Belbek. Nothing is said as to the arrival of the 20,000 reserve troops, which were to reach the Crimea about the 22nd. They may possibly have formed the nucleus of the army at Balaclava.

It may perhaps be well to add that Sebastopol is believed to be almost unfortified on the south side, and that it is from that side that it is supplied with water.

KILLED AND WOUNDED IN THE BATTLE OF ALMA.

As no account has yet been received of the arrival at Marseilles of a steamer from Constantinople with the details of the battle of the heights of the Alma, the Duke of Newcastle thinks it right to make known that he fears the account of the casualties on that occasion cannot be published before Monday, at the earliest.

War Department, Eight p.m., Oct 5 1854.

THE DIVERSION IN BESSARABIA.

The news from Rustchuk of the 24th ult. confirms the statements already given regarding the proposed diversion in Bessarabia. At the above date all the roads of Bulgaria running towards the Black Sea were covered by marching troops—infantry, cavalry, and artillery. Many thousands of waggons were required to convey the provisions, munitions, and *matériel*. The troops were supplied with double rations; but, as a counter-balance, were required to double their marches. Omer Pacha gave orders that the march should be sufficiently rapid to ensure the arrival of the troops on the coast by the time of the return of the transport ships from the Crimea, in order that the embarkation should commence immediately, and the transport be effected at a favourable season.

A letter from Galatz of Sept. 21, in the *Lloyd* of Vienna, says:—

There appears not to be any doubt that Omer Pacha intends to strike a blow at the Russians concentrated at Ismail. He will not, however, commence his march on Bessarabia until he hears of the capture of Sebastopol.

THE WAR IN ASIA.

At present, while the public attention is concentrated upon the Crimea, few persons trouble themselves about what is going on in Asia. The news from that quarter is not encouraging. The latest despatch from Trebizond, viâ Constantinople, of the 16th ult., is as follows:—

General Andronikoff, with a superior force, had fortified himself at Urughieh. The condition of the Ottoman army on the Tschuruksu was unsatisfactory. The Governor of Kars remains active. The Russian outposts had advanced to Untschikilissar again, interrupting the communications with Persia. A second caravan, with 3000 horses, had been intercepted. Schamyl has abandoned the attack upon Tiflis, appearing resolved to co-operate with the Allies on the Circassian coast.

The following extract from the *Lithographic News Sheet* of Vienna gives a more favourable view of affairs:—

According to the last accounts which have been received from the theatre of war in Asia, and which come down to the 17th, the Russians are concentrating themselves at Tiflis. The question is whether all the efforts they are making will succeed in preventing the followers of Schamyl from leaving the mountains, as the operations of that chief are vigorously supported by the Turkish army, which has been re-organised.

OMINOUS SYMPTOMS ON THE AUSTRIAN FRONTIER.

While Turkish and Russian armies are confronting each other on the frontier of Bessarabia, Austrian and Russian armies are confronting each other on the frontier of Gallicia. On the side of Austria Krakow (Cracow), at the western extremity of this frontier has been converted into an intrenched camp, and its old fortifications have been encircled by redoubts. Towards the centre of the line Zaleschtschykit, on the Dniester, has also been converted into an intrenched camp. The position of this little town is naturally strong; the river covers it on three sides. Sutchowan, in the Bukowina, close to the Moldavian frontier, is also fortified. In a line behind these advanced posts, a number of towns, villages, and castles have had their defences strengthened. A citadel was built in Lemberg last year, and now the town is being surrounded by outworks. At Pilzno, where the road to Lemberg diverges from the road that leads to the Dukla pass and along the Carpathians, intrenchments have been begun to be thrown up. The works of the long-neglected railway which was to connect Gallicia with Vienna are being eagerly pushed on: between Lemberg and Dembitza 24 000 soldiers of the *corps d'armée* are kept at work upon it; and between Krakow and Dochnia 7000. Long trains of artillery follow each other day by day along the roads to various points; and there is no end of the convoys of warlike stores. On the part of Russia there has been a simultaneous movement of troops from various parts of the empire into positions which threaten Krakow. The regiments in and around Warsaw have had the camp of Kielce assigned them for winter quarters; and their advanced guard is stationed, part at Pintschoff and part at Olkusch, in the direction of the old capital of Poland and latest acquisition of Russia. Regiments drawn from other provinces have been marched into various towns along the line of the Vistula. The arrival of one of the Orlofls at Warsaw is held to be a sure presage of the speedy arrival of his Imperial master there; and the Czar's railways in that part of his dominions are not so far behind as the railway of the Austrian Emperor to Gallicia. The railway communication from St. Petersburg to Warsaw is now open, and from Warsaw to the Austrian frontier. Whether Russia and Austria really intend to fight is, notwithstanding all this note of preparation, still matter of doubt. The preparations of Austria are as yet all of a purely defensive character. Russia appears to be a little more disposed to give cause of quarrel. The Czar's recent prohibition of the export of grain to Austria may have been prompted by fear of dearth at home; but it may also be meant to injure his former ally.

EXPECTED ATTACK ON CRONSTADT.

A general belief has prevailed within the last few days that an attack upon Cronstadt is seriously contemplated almost immediately. General Niel, the General of Engineers, who distinguished himself in the Baltic by the prominent part he took in the direction of the siege of Bomarsund, is said to have reported personally to the French Emperor that he believed the attack was practicable this year. This report has been communicated to the English Admiralty, and there is good reason to believe that the movement of Admiral Parseval Deschênes portends a more serious enterprise than an attack upon Revel. A despatch from Hamburg, on Sunday, says:—

Admiral Parseval Deschênes, who has arrived at Kiel, has ordered the scattered ships of his fleet to join him there. The officers assume that the French squadron is going again to join Admiral Napier in the Baltic.

The following extract of a letter, dated "Her Majesty's Ship *Edinburgh*, Sept. 26, 1854," shows what the general expectation was on board the fleet:

We are now lying at Nassau Island, it is fourteen miles from Revel, and can see that place as plain as the chipping in my coat. We are to weigh at eight o'clock in the morning until ten o'clock at night—whether for sea or at anchor. I don't think that it is intended to touch Revel; but, as soon as the fleet can be assembled, we will let the Russians feel us in their strongholds.

THE CAMPS AT BOULOGNE.

On Saturday last the French Emperor held a grand review of the troops encamped round Boulogne. He was accompanied by the Empress, whose presence, added to the extreme beauty of the weather, the magnificent display of 40,000 men under arms, and other circumstances of a remarkable character, all combined to form an occasion of high interest and a spectacle of great attractiveness.

While the Emperor was on his way to the spot where the review was to be held, a courier, galloping up, conveyed to him the despatches announcing the victory on the Alma. The Generals cheered when the messenger rushed among them with the joyful tidings, and the crowds of English spectators present joined in sending up hurrah. The Emperor, after reading the despatches, is stated to have said, "Sebastopol est pris!"

The army, now diminishing the line of its square, drew as close as possible, and at once saluted. Then, with so large a body of men, had a wonderfully fine effect, and, though all the bands played "Partant pour la Syrie," without reference to time, the volume of sound, the rolling of the drums, the elevation of the standards in front of the different regiments, and the flashing of the sunlight upon so many thousand bayonets when the order to present arms was given, were things not readily to be forgotten. Having passed along the front, the Emperor returned, and, advancing some into the midst of the square, delivered in a firm, full, manly voice, an address, which was distinctly heard by all the soldiers.

Discipline kept the troops silent until after the Emperor had addressed them, but the moment he ceased a grand expression in the prolonged shout from 40,000 voices of "Vive l'Empereur!"

The Emperor and Empress left Boulogne for Paris immediately after the review. They arrived at half-past five o'clock, and were received with deafening cheers on the Boulevards.

THE CRISIS IN DENMARK.

Matters are evidently coming to a crisis in Denmark. A number of meetings have been held in the capital and all over Zealand, and an Address to the King has been widely circulated and signed, expressing the warmest attachment to the Constitution, and demanding a new Ministry. Representatives of the petitioners were appointed by each county, often by each parish, to meet in Copenhagen and present the Address to his Majesty, and explain to him the feelings of those by whom it was signed. Accordingly, upwards of seventy Addresses arrived in Copenhagen last week. Arrangements were making to present the Address—even a day was named; when the Ministry took the alarm, and persuaded the King to refuse to see the deputation. The deputation determined on remaining in town till the commencement of Parliament, when they will present to the national representatives the petition which his Majesty has refused to accept. On Thursday night, the 28th ult., a great banquet was given in their honour, by the citizens, in the Casino theatre.

A telegraphic despatch from Copenhagen, dated Monday, says:—

The new Danish Parliament has just been opened, amidst a large concourse of spectators. The Speech from the Throne was read by Oersted. It breathes defiance against the Danish Parliament and people. A few hisses, mingled with cheers, for the King and constitution, were followed by enthusiastic cheers for the constitution of the Danish kingdom.

The *German Journal of Frankfort*, under date of Vienna, 26th, says:—

We are enabled to announce, that the English Cabinet has made overtures on the subject of a revision of the protocol of London relative to the Danish succession, and that this question will form an important part in the future negotiations for peace. It is positively stated that the Cabinet of Vienna will not offer any opposition to the revision of this protocol, which was drawn up completely in the interest of Russia.

THE REVOLUTION IN SPAIN.

A despatch from Madrid, dated October 1st, states that serious disturbances had broken out at Malaga, Logrono, and Jaen. It was reported that a Republican conspiracy had been discovered, and that the Infante Don Henrique had been sent to the Balearic Islands.

Queen Christina has sent a manifesto to Madrid, for publication in the *Espana*, in which she endeavours to clear herself by throwing blame upon her daughter, and by declaring that she was always opposed to a *coup d'état*.

AMERICA.

The steam-ship *Africa*, which left New York on the 20th ult., arrived at Liverpool on Sunday morning. Letters from Washington state that information had reached the Government from the American Minister at Madrid, to the effect that the new *régime* of Spain has agreed upon terms for the sale of Cuba. The ratifications of the Reciprocity Treaty with the British North American provinces were exchanged on the 16th. The time for the sitting of the three commissioners at London, for the settlement of claims of citizens of Great Britain and the United States upon those Governments, has been extended four months from the 16th instant.

The reports from the western provinces state that the cholera is raging to a fearful extent, and the yellow fever alarmingly in the southern districts. At New Orleans serious riots have occurred between the Irish and Americans.

The steam-ship *St. Louis*, Captain Eldridge, has arrived at Southampton, with news from New York of the 23rd ult., and 470 000 dollars. The only political news of interest brought by this vessel is the announcement that the Canadian Parliament had voted the paragraph relative to the clergy reserves by 80 against 33; and that his Excellency Lord Elgin would give the Royal Assent to the Bill before his departure from that colony.

THE OVERLAND MAIL.—INDIA AND CHINA.

The letters and papers received from India, *viâ* Trieste, are, to a large extent, occupied with news from Western Asia, where it is alleged that very suspicious movements are still going on. The Chief of Herat is said to have received a friendly letter from the Khan of Khiva, stating that the Persian force at Merw is daily increasing, and that if the Shah once gains firm footing there, whether with or without the aid of Russia, he will be master of all Khorassan. He (the Khan of Khiva) has been assured by the Sirdar-General, who with his troops is encamped near Khiva, that if the Persians make any attempt on Khiva, they shall be driven back by the Russians.

Accounts from Cabul (dated 27th of July) state, "that it has been resolved by the Ameer that a considerable force shall at once march from here and take post at Kalat. After placing the Cabul force in this menacing position in the neighbourhood of Candahar, a message will be forwarded to the chiefs there to give up the Herat territory immediately, and, in case of refusal, the army will march and besiege the city without loss of time."

Mr. B. Frere (Commissioner of Scinde) has forwarded to the Bombay Government intelligence that the Persian flag is flying at Candahar and Persian money being coined there. The Indian Government has decided on not interfering under any circumstances in the affairs of Afghanistan or Persia, beyond preventing the Persians from joining the Russians. It is confidently asserted in the highest official quarters, that the Persians would, on our solicitation, be ready to declare war against Russia; but that such a step would be undesirable, as we do not require their assistance, and their active alliance would entail obligations for the future which might prove inconvenient.

The Persian force at Merw has being strongly reinforced, and from this position threatened Western Afghanistan, as well as Khiva.

Accounts from Hong-Kong to the 6th August, states that the insurrection near Canton has been extending by constant successes of the insurgents, the Government no being reinforced and not strong enough to put it down. Fa-han was in complete possession of the insurrectionary party, and the Imperial forces had withdrawn for the protection of Canton. The rebel camp was within three miles of the city, and as the Tartar garrison must have been reduced in numbers by the constant fighting close to the walls, it was thought that the city would soon be in possession of the Triad and rebel force, which was reported to be numerous. The natives continue to leave the city for places of greater security.

The import trade was suspended, and the export of the tea remaining on the market was made with difficulty, from the numerous hordes of pirates in the river. Several had been no late arrivals of new teas.

The dates from Shanghai are to the 24th ult. The Imperialists were continuing their efforts to retake the city, and the present feeling is they will succeed. There was nothing of moment of the northern army.

DISMISSAL OF THE PAPER COMMITTEE AND EDITOR OF THE "MORNING ADVERTISER."

An important meeting of the licensed victuallers of the metropolis took place on Thursday afternoon, at the Quarterly Court of the Incorporated Society, in the School-house, Kennington-lane, for the purpose of transacting the usual business; and also to take into consideration the following motion, of which Mr. R. Foster (the President of the Mutual Defence Association) had given no ce

[illegible] ment of the *Morning Ad* [illegible] is discreditable to the present high character of journalism, that in moral courage [illegible] inferior to contemporary journals, and its offensive polemical and sectarian tendencies [illegible] excited general disapprobation; that the gross and unwarrantable libels published [illegible] levelled against the Prince Consort, have tended to alienate the favourable feelin[illegible] which its benevolent institutions were universally regarded; that it does not represent the views and requirements, and has neglected to defend the best interests of the licensed victuallers: therefore, this Court does suggest the propriety of forthwith changing its constitution of management, and placing its editorial cont[illegible]

The attendance of members was unusually large (there being between 400 and 500 present) in consequence of the dissatisfaction felt by the trade in general at the conduct of the paper and other communities, and also at the course pursued by the editor of the *Advertiser*, and the apathy displayed by that journal with regard to the interests of the trade

The regular business of the Society having been gone through, the Secretary proceeded to read the Report, which stated the position and prospects of the *Morning Advertiser*, adverting to the increased circulation to a large extent, and its enlargement; and characterising the present publication as likely to cause a diminution in its sale. The Report concluded by calling upon the trade to unite, and give their undivided support to the journal.

The adoption of the Report having been moved and seconded,

Mr. Foster moved as an amendment the resolution given above, and reviewed the character and tone of the *Morning Advertiser* for some time past, insisting that the interests of the licensed victuallers had been neglected by that journal, and especially instanced the apathy of the paper during the progress of the New Beer Act.

The amendment having been seconded, Mr. Grant, the editor of the *Morning Advertiser*, made a long speech in vindication of his character, and in general terms defended that journal and justified the articles which had appeared in its columns; declaring that this agitation was nothing more nor less than a Romish conspiracy.

After addresses *pro* and *con* had been delivered, the question was put and the meeting divided, when there appeared:—

For Mr. Foster's amendment	176
For the original motion	149
Majority against the Editor and Committee of Management of the *Advertiser*	27

The result was received with loud applause.

BANQUET IN LEEDS TO THE LORD MAYOR OF LONDON.—The magnificent hospitality of Lord Mayor Sidney, on the occasion of his entertainment by the Mayor and Corporation of Leeds, at the Mansion-house, in May last, is about being reciprocated. A committee has been formed for the purpose of making the requisite arrangements for giving in Leeds a grand entertainment to the Lord Mayor of London by the members of the borough, the justices, and the Corporation of Leeds. An invitation has been addressed to his Lordship, which he has accepted it; and Friday, the 27th of October, is appointed for the banquet. The Right Hon. Matthew Talbot Baines will preside.

REJOICINGS AT RAGLAN.—At daybreak, on Tuesday morning, the British ensign was seen floating from the castle keep, convincing all within sight of some good news from General Lord Raglan, and which was confirmed on the arrival of the mail, at eight o'clock. Mr. May, the agent of the castle, went round the village, and soon obtained funds from some of the loyal inhabitants to set the bells ringing: the whole of the artillery at Mr. Pritchard's an thy firing, together with some large guns from the Oldhenthy Hill. The inhabitants of the village were invited to the castle in the evening, when the gates were thrown open, and every tower and window illuminated. The company, from the richest to the poorest, danced on the lawn to the inspiring music of the minstrel's harp, whilst rockets from the summit of the lofty keep rushed high in air, telling of victory in showers of brilliant stars. The company afterwards assembled in the grand banqueting hall; and there, round a fire of blazing tar-barrels, sung "God Save the Queen," followed by enthusiastic cheering for the Queen and Lord Raglan. Long is it since the hall of Raglan reverberated to such a mighty sound.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, OCTOBER 5.

Month and Day.	Corrected Reading of Barometer at 32 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
Sept. 29	30.079	72·4	57·2	54·9	+ 1·2	79	Calm	0·00
„ 30	30 131	72·2	39·8	55 3	+ 1·6	78	Calm.	0·00
Oct. 1	30 197	67 2	40 2	54·5	+ 1·2	83	Calm.	0·01
„ 2	30 047	72 2	39 0	55 9	+ 2 8	73	Calm.	0·00
„ 3	29 700	65 1	44 8	53 1	+ 2·3	72	Light airs	0·00
„ 4	29 820	63·0	38 6	51·0	+ 1·6	81	S.W.	0·00
„ 5	29 663	70 6	49·4	60 2'	+ 7·8	76	S.W.	0·24

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the humidity column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer (corrected) decreased from 30·08 in. at the beginning of the week to 30·04 inches by the afternoon of Sept. 29th; increased to 30·13 inches by the 30th; and decreased to 30·09 inches by the afternoon of the same day; increased to 30·20 inches by Oct. 1st; decreased to 29·70 inches by the 3rd; increased to 29·82 inches by the 4th; and decreased to 29·44 inches by the end of the week. The mean for the week, as the height of 28 feet above the level of the sea, was 29.898 inches.

The mean temperature of the week was 55·49, being 2·4° above the average of the corresponding week during 38 years.

The range of temperature during the week was 50·2°; being the difference between the highest and lowest readings of the thermometer on Sept. 29.

The mean daily range of temperature during the week was 27·7°. The greatest range was 35·2° on Sept. 29th, and the least 9° on October 2nd.

The weather on Sept. 29th and October 3rd was very fine, and the sky free from cloud; on Sept. 30th and October 4th the sky was completely overcast. The rest of the week was fine; but the sky was cloudy and fog prevalent more or less each day

For the month of September, the mean reading of the barometer, at the level of the sea was 30.197 inches. The highest temperature during the month was 82 2°, on the 4 h; and the lowest was 37·2° on the 20th the range of temperature during the month was, therefore, 45°. The mean of all the highest temperatures by day was 71·1°, and of all the lowest by night was 46·2°; the mean daily range of temperature during the month was, therefore, 25.0° The mean temperature of the month was 58·6°, being 0·8° below the average of the corresponding month during thirty-eight years. The mean temperature of evaporation for the month was 54·6°. The mean temperature of the dew point was 51.8°. The mean degree of humidity was 77 (complete saturation being represented by 100). The fall of rain during the month was 0·8 inch (eight-tenths of an inch).

JAMES GLAISHER.

Lewisham, October 6th, 1854.

HEALTH OF LONDON.—Within the week ending September 30, the births of 907 boys, and of 862 girls were registered in the metropolitan districts; these numbers exceed their average by 53 and 167 respectively. The number of deaths in the week, were 1161 males and 1075 females; or, together, 2216. At ages less than 15 there were 946 deaths; between 15 and 60, 839; and above 60 there were 361 deaths. The number of deaths from cholera was 754: it is rapidly declining. Its progress weekly is shown by the following numbers:—In the week ending Sept. 9, 1854, the deaths by cholera were 2, 20, 183, 618, 1,000, 847, July 8, there was 1; and in the following weeks 2, 20, 183, 618, 1,000, 847, 1267, 1000, 1540, 1288, and 754 respectively. The deaths from diarrhœa are also decreasing. This disease, in the week ending September 9, caused 284 deaths, next week 289, then 316, and last week 189. The improvement in the public health is better than the 2216 deaths from all causes indicate; and in the last week of the quarter many coroners' cases, spread over the quarter, is returned, and included in the total number. The present epidemic began later than in 1849, and it has latterly been more fatal; but the aggregate mortality will yet, probably, be less than in the year 1849, for the deaths by cholera in that year, to September 29, were 13,098; while the deaths in the present epidemic, to September 30, have been 9707. Yet the loss of more than 10,000, or, including the deaths by diarrhœa, of 12 000 lives, within a few weeks, in the chief city of the empire, is an appalling fact, demanding the strict investigation into all its details, which the Board of Health has directed to be instituted. Is London to continue every five years to be attacked by pestilence, and to lose so many thousands of its inhabitants? Cannot the conditions in which disease is fatal be determined, and causes they be removed?

ROYAL NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a special general meeting of this institution was held, to consider the propriety of altering the title of the Institution. Captain Eyre, R.N., in the chair. Resolutions having been carried that the title of the society be hereafter "Royal National Life Boat Institution," founded in 1824, for the preservation of life from shipwreck," it was stated that the original objects of the institution would not by the change be in any way altered. The Board of Trade had promised the institution some assistance from the Mercantile Marine Fund, to pay the fees of its life-boats, on condition that the Society provided life-boats and boat-houses satisfactory to the Board. The cost of a good life-boat and carriage, with boat-house, is about £300, so that £3000 per annum, said the Board, the assistance of the benevolent is much needed in this great work. From the Admiralty Register of Shipwrecks for 1853, just published, it appeared that 832 wrecks took place on the shores and in the seas of the United Kingdom during that year, with the frightful loss of 989 lives! Several places applied to the institution for new life-boats, but were deferred till its resources were to a more flourishing state. Life boats for various places having been reported ready to be sent to their stations, the proceedings closed.

THANKSGIVING-DAY IN LONDON.—The scene presented at St. Paul's Cathedral on Sunday afternoon, was one which those who had the gratification of witnessing it will never forget. Thousands of people thronged the church for the double purpose of offering up their thanks for an abundant harvest, and for victories already gained. The grand and solemn service was held in the same manner the dome; and many who were present were not unmindful of the fact that, while rendering their praises and thanksgivings, they were standing immediately above the remains of England's greatest warrior. When Mr. Dale, the Canon in residence, ascended the pulpit, the National Anthem was poured forth from the magnificent organ, and the whole of the vast assemblage simultaneously rose and stood while it proceeded. The preacher eloquently pointed out the horrors of war, which he said must ever be considered a judgment, although victory was doubtless a mercy in answer to our solemn prayers. He observed how terrible would have been the result if a deficient harvest had been added to the burthens of a gigantic war; for, if such had been the case, while thousands fell by the sword abroad, thousands more would have been slain by pestilence and famine at home. Not for our righteousness (as reverend gentlemen remarked) had the scenes blessings been conferred upon us, for when we looked at the social state of the country at the present time, there was much that would fill us with the deepest regret. He proceeded to point out that in the metropolis, notwithstanding its abundant wealth, there were many special objects to which the sympathy and liberality of his auditors might with propriety be directed. He pleaded not only for the widows and orphans of those who had fallen by the pestilence, but also for those of the brave defenders of their country, the avengers of a despot's pride, who had shed their heart's best blood in a victory which left nothing to regret but the price which had been paid for it. No collection was made at the Metropolitan Cathedral, a circumstance which is such to be regretted, for the vast congregation was so deeply impressed with the solemnity of the work in which they were engaged, and by Mr. Dale's touching appeal, that a collection on behalf of the widows and orphans of those who have fallen by the pestilence or perished by the sword, would doubtless have been very considerable. Major Fawcett's custom," which has so long stood in the way of cathedral reform, was the excuse for the neglect of an obvious duty. At Westminster Abbey a better course was taken. Lord John Tynne made an earnest appeal to his congregation, and while his Lordship afterwards read from his place at the communion-table the offertory sentences, the willing people gave their liberal alms towards the assistance of those who have suffered the saddest of all human bereavements—the loss of their husbands and fathers. It is also gratifying to be able to state that in most of the metropolitan churches similar collections were made; and that a large fund will, in all probability, find an important addition to his resources in the course of the current week

TURKISH EXHIBITION.—On Saturday, her Royal Highness the Duchess of Cambridge, with her Royal Highness the Princess Mary honoured the Turkish Exhibition, Hyde-park-corner, with their presence.

ROYAL POLYTECHNIC INSTITUTION.—Mr. Pepper, the managing director of this institution, is about to set a laudable example to the charitably disposed by devoting the receipts of Thursday evening, the 12th inst., to the assistance of the widows and orphans of the brave men who have left their lives in the present campaign in the East. The subject of the war derives additional interest at this establishment from the fact that several objects are now daily exhibited which have especial reference to it, amongst these is a model of Sebastopol, very ingeniously and skilfully executed by Sergeant Fairland and Corporal Thomas, and a picture of the same place in the Dioramic View. In addition to these attractions, it should be stated that Mr. Pepper is now lecturing on the "Munitions of War"

MR. WOODIN has, during the past week, given his popular "Carpet-bag and Sketch book" entertainment at the Music Hall, Liverpool, to crowded audiences.

H.M.S. "MIRANDA" DESTROYING THE CITY OF KOLA, THE CAPITAL OF RUSSIAN LAPLAND.

THE WHITE SEA SQUADRON.

In our Journal of last week, we briefly recorded the recent operations of her Majesty's ship *Miranda*, in the White Sea. We have since received from a Correspondent the two accompanying Sketches. One represents the commencement of an action, which ended in the entire destruction of Kola, an important city, the capital of Russian Lapland. The other Sketch shows the capture of two Russian schooners and four luggers—the latter destroyed by us, as being unnavigable to England; but the schooners, together with a third, captured by the *Miranda* some time previously, are now on their passage to England. The Bay is picturesque and snug, about thirty-five miles from the mouth of the river Kola.

The *Miranda* has had three months of unremitting work within the Arctic Circle in the White Sea. The Russian coast in that sea is completely at our mercy, except Archangel, for the present, that being protected by a bar which the *Miranda* could not pass. Some of the places she called at had the temerity to fire on the English flag, and, of course, paid the penalty. This ship, during the eighty days she was in the White Sea, anchored forty-eight times; and while under way and at anchor has boarded 375 ships and vessels, showing the immense trade that will be lost to Russia in consequence of the war with England. Only three were captured, and those fell to the *Miranda*, and are on their way home, laden with flour, fish, and oil, as above-mentioned. Russia has sustained a severe loss by the destruction of Kola, described by the Russian Admiral Sukes as the celebrated capital of Russian Lapland, which, under Peter the Great, became a fortified city, and which in 1809 was visited by the English, who sent in two gun-boats to destroy two vessels, but who made no direct attack on the town. Captain Lyons has visited it in 1854, made a direct attack upon the town, and expunged it from the list of capitals; having had thirty miles of a difficult river to navigate, five miles of which are laid down in the chart as unnavigable. The river in some places is so narrow as scarcely to admit of the ship swinging, with a current running of seven knots an hour. The uncertain knowledge of the strength of the enemy offered no check to his determination to place his ship alongside the battery. Success attended his daring. The *Miranda* lay within point blank range of the battery. The Governor of the city would not come to terms; the guns were manned, and every tower and building loopholed, and filled with men; but they could not stand the shot and shell and redhot shot within musket range. In less than an hour their guns were dismounted, their batteries in ruins, and their city in flames. One tower of the fortified cathedral alone now stands to mark the spot where Kola once had been. Another account states:—

On the 23rd of August, at 6.30 a.m. we anchored off Kola, in five fathoms water. We shortly after observed a flag of truce coming off from the fort. We hoisted a flag of truce in return. Our Third Lieutenant, Mr. C. W. Buckle, went away in the gig to meet the flag of truce with a letter, in which we understood from the quarter deck officers an immediate surrender of the fort, garrison, and Government property was demanded. We could see the different forts, with the men at their guns. We were kept at quarters during that night. No answer being returned in the morning, we hauled down flag of truce, and opened fire with grape and canister to dislodge musketry from the batteries and stockades. Our ship was got up within 250 yards of the battery. Our First Lieutenant, Mr. John F. C. Mackenzie, and Charles W. Manthorpe, Mate, accompanied us in command of the shore party. On landing, our gallant First Lieutenant headed our party of blue-jackets and marines, who rushed up, sword in hand, to dislodge the enemy from the ruins of the batteries and to seize their guns. Upon our pulling in shore the enemy opened a sharp fire upon us from the different parts of the towers and the monastery. Our ship continued fire to cover us. It was about 2.30 when we landed, headed by Lieutenant Mackenzie, who was the first into the battery, which we found completely destroyed by the ship's fire. The enemy was going off beyond double quick time. We took on board one of the battery guns, which had been broken by a shot from our ship; all the other guns were completely buried in the ruins. All the Government stores were destroyed. By 7.30 a.m. on the 24th we had destroyed the whole of the town. It was a tremendous scene of destruction; the buildings, stores, and monastery all in flames, and each bell, as their stupendous beams burnt through, fell to the bottom of the tower, tolling its last knell. There were seven bells.

One of these has been brought home by the *Miranda*. It is a very ancient bell; it measures in extreme circumference 6 feet four inches, and the internal depth is 2 feet 1 inch. It has a magnificent tone. The date on it is Anno 1686. Around the upper rim, in beautiful relief, is a hunting party, with flags, horsemen, and dogs; and around the outer base is a splendid raised wreath of grapes and pine-apples; which is only broken by the figure of a priest holding a cross in his left hand, with a book in his right hand laid over his left breast. The following letters are raised in old Roman character:—"K. O. R. D. T. ✠ — K. I. E. M.—A. N.—M. E. F. E. C. I. T.—."

From the following notification, which has appeared in the *London Gazette*, it would seem that Government had resolved to carry out the blockade of Russia in the far north, next year, in a rather different manner from what it has hitherto done:—

Foreign Office, Downing-street, Sept. 28, 1854.

It is hereby notified that, on and from the 12th day of August last, all Russian ports, roads, havens, and creeks from Cape Swiatoi Nos, in long. 39 deg. 47 min. east, lat. 68 deg. 10 min. north, to Cape Kanin, in long. 43 deg. 32 min. east, lat. 68 deg. 39 min. 12 sec. north, including especially the ports of Arkangel and Onega, were placed in a state of strict blockade by a competent force of the allied British and French fleets.

And it is hereby further notified, that all measures authorised by the laws of nations, and the respective treaties between her Majesty and the different neutral Powers, will be adopted and executed with respect to all vessels which may attempt to violate the said blockade.

NORWEGIAN GRAND TRUNK RAILWAY.

This short but important line, which promises results momentous to the material interests of a large portion of our Scandinavian brethren, has recently been opened under circumstances most auspicious in themselves and suggestive of beneficial results within a period more brief than could have been hoped for by the the most sanguine. The line is forty-two miles in extreme length, connecting the capital Christiania with the Mjosen Lake, which, again by means of steamers, at present belonging to the contractors, has brought the most populous and favoured districts in connection with the coast; from which they have hitherto, in consequence of the difficulty of internal communication, been in a measure excluded. The country through which it passes is exceedingly picturesque. What first strikes the traveller on viewing the mountainous character of the ground, is the impracticability of constructing a railway; and the utmost skill has been required to overcome the difficulties, while the curves and gradients that had to be adopted, prove that these were not few. Indeed, the engines—which were not only designed by Mr. Robert Stephenson, who planned the line (executed under Mr. Bidder), but also built by his firm at Newcastle-on-Tyne—had to be specially adapted to those heavy gradients; and they exhibit great ingenuity and peculiarity.

After leaving the main station at Christiania, and crossing the Agers River, by a wrought-iron girder-bridge, the rise to a distance of 12 miles is one in forty; and the descent at Strommeir, the first chief station, is one in sixty. Here we cross the Nid River by a similar bridge, and shortly begin to rise to the picturesque station under Frogner Church. The next station is at Dahl, in the sequestered valley of Ris. Between this and Christiania the road passes extensive rock cuttings of granite and primitive slate, and over some of the most extraordinary timber viaducts ever applied to railway construction—from 60 to 70 feet in height, and from 400 to 800 feet in length: they look light and elegant, though of immense strength.

Leaving the Dahl station, the line enters a series of narrow winding valleys, with barely breadth enough for the streams which traverse their base to worm their way through: within seven English miles there are, besides eighteen bridges, two short tunnels. On emerging from the second, the Wormen river (outlet of Mjosen Lake) is seen, and immediately beyond is the Eidsvold station, the northern terminus, which stands on the quay, so that the steamers lie alongside. There are seven intermediate stations, all in the Swiss-cottage style, remarkable for neatness.

At the opening all the ministers and high officials, &c., to the number of 300, assembled at the station at Christiania, which is of the old Hanseatic style (decorated for the occasion), to witness the departure of the train, containing the contractors and a select party. At Eidsvold the company partook of a cold collation; and, after walking about the beautiful environs, returned to Christiania, and were again greeted by crowds. At the Freemasons'-hall about 300 sat down to a dinner provided by the contractors. S. M. Peto, Esq., presided; supported by the Councillor of State, Mr. Vogt; the Minister of Finance, Mr. Berg; the President of the Lagthing; the Ministers of Marine, Interior, and War; Commander-in-Chief, Admiral Hesselberg; her Majesty's Consul General; the members of the Storthing; as well as several English gentlemen, who had come over for the occasion. The gallery was crowded with ladies. The chairman, in proposing "his Majesty," alluded to the great interest King Oscar had evinced, and the support afforded to this great national undertaking.

The Minister of Justice proposed "Her Britannic Majesty, Queen Victoria," and paid the most eulogistic encomiums to England and the British; which was received with immense plaudits.

The President of the Storthing, in an encomiastic speech, proposed

H.M.S. "MIRANDA," AND HER PRIZES, IN LITSCHA BAY, RUSSIAN LAPLAND.

THE NORWEGIAN TRUNK RAILWAY.—EIDSVOLD STATION.

Mr. Stephenson, whose counsel and skilful direction had been most instrumental in forming the first railway in that country.

Mr. Stephenson responded by proposing "Success to the Norwegian Trunk Railway;" and, in the course of his remarks said, that, as umpire between the English and Norwegian interests, he had carefully examined and considered the state of the works throughout, and he now expressed his decided opinion that the contract had been complied with. There were, doubtless, many minor works, especially some connected with the different stations, which could not strictly be said to be complete, but he publicly and emphatically declared that the Government ought to have no hesitation in accepting the railway and works as fit and safe for public use.

Mr Peto, in reply to the toast of "The Contractors, Messrs. Peto, Ricardo, and Brassey," proposed by the Minister of Marine, spoke at considerable length; and, having detailed some matters in reference to the works, said the traffic had [been] only opened to Eidsvold but a month, yet 19,000 passengers had been conveyed, and a gross return made of £3000. It was very naturally supposed that considerable prejudices would have been encountered from a class who for ages had possessed almost a vested right in the transit power of the district through which the line traversed. What was the result? Why, that very class had used the railway more than any other; and, instead of competing with the line, at no time had the prices been higher, or had merchants experienced greater difficulties in procuring horses, than since the railway had been opened for traffic. These were facts that strikingly proved the utility of railway communication, and which made the merchant and the public independent of those climatic casualties they were so frequently exposed to. He felt sure that if he lived he should see Norway soon become an exporting country. Its soil was fruitful, and, when cultivated, not only would each property supply the wants of its possessor, but leave a surplus for sale to foreign States. Though the winter of Norway was cold, yet that very severity gave the soil a preparedness unknown to southern climes; and, when its lakes became connected by railways, those products could be shipped with facility and profit. Look at Canada—equally cold—and yet what products were brought from it? Look at Denmark exporting annually 1,000,000 quarters of corn, and 40,000 head of cattle. And why not Norway? He had seen, since he had been in that country, root crops equal to any he had seen in England, and crops of potatoes more abundant than any he had ever seen. Then why should not Norway export largely? He felt sure she would eventually, and when it was calculated that the cost of locomotive traction did not exceed, for the supply of power, more than 9d. to each train per English mile, they would appreciate how large an agent in projects and development railways were.

The Minister of the Interior, M. Bretteville, said—It was their good

COLLATION, AT THE OPENING OF THE NORWEGIAN TRUNK RAILWAY.

fortune that the man who was chosen to manage the execution of this great enterprise possessed extraordinary ability and acknowledged experience—namely, Mr. Bidder; in proposing whose health he had to thank him, on the part of himself and countrymen, for the interest he had evinced in bringing the enterprise to so successful an issue.

Mr. Bidder, in returning thanks, took the opportunity to remark that it had been said the railway was not yet complete; he granted it, inasmuch as a railway can never be complete, unless we can disregard the improvements which time and experience would suggest. In that sense, therefore, he could not wish anything better than that the railway could never be said to be complete.

The meeting, shortly after, separated; and thus terminated the festive inauguration of a system destined to assimilate the means of social intercourse in Norway to those of the most favoured and highest states of Central and Western Europe. All the works of the line were executed with the most hearty goodwill, activity, and intelligence, by the Norwegian labourers—there being no Englich, except Mr. Bidder and his staff of superintendents.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 8.—17th Sunday after Trinity.
MONDAY, 9.—St. Denys. Dutch fleet defeated, 1797.
TUESDAY, 10.—Oxford and Cambridge Term begins.
WEDNESDAY, 11. Old Michaelmas-day.
THURSDAY, 12.—Wat Tyler killed, 1381.
FRIDAY, 13.—Fire Insurance due.
SATURDAY, 14.—William Penn born, 1644. Battle of Hastings, 1066.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING OCTOBER 14

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.

INDIA, CHINA, AUSTRALIA, and CAPE of GOOD HOPE W. C. YOUNG will despatch the following fast-sailing A 1 Clipper SHIPS, at the dates named as under:—

Ships	Tons.	Commanders.	Destination.	Docks.	For sail
Leonidas	697	J. Smith	Calcutta	London ..	Oct. 4
Omar Pasha ..	1279	J. Thomson	Bombay and China	West India	Oct. 10
Fancy	337	J. T. Salmon	Mauritius	West India	Oct. 4
Faithful	433	J. Manning	Hong-Kong and Canton	St. Katharine	Oct 15
John Taylor ..	787	J. N. Cawdell	Sydney	London ..	Oct. 10
Meroe	705	A. Shewan ..	Sydney	London ..	Oct. 12
Canaan	978	J. Seafield	Port Phillip	London ..	Oct. 10
Excelsior	839	J. J. Hogg	Port Phillip	London ..	Oct. 7.
Donnebrog	291	M. Simesen ..	Port Adelaide	St. Katharine	Oct. 15
St. Louis	338	C. P. Davis	Geelong	St. Katharine	Oct. 3
Mercer	268	H. Davies	Cape of Good Hope ..	London ..	Oct. 23

These Ships have been selected specially for their high class and fast-sailing qualities, and will be found well worthy the attention of Shippers and Passengers.—W. C. YOUNG, 84, Cross-street, Manchester; 19, Duke street, Liverpool; and Sun-court, Cornhill, London.

MINERALOGY.—KING'S COLLEGE, London.—Professor M. TENNANT begs with commence a course of LECTURES on MINERALOGY, with a view to facilitate the study of Geology, and of the applica ion of mineral substances to the Arts. The course will be illustrated by an extensive Collection of Specimens, and will begin on FRIDAY October 6th at nine o'clock a.m. There will be another on each succeeding Wednesday and Friday at the same hour R. W JELF, D.D., Principal.

ROYAL ST. JAMES'S THEATRE (under the Management of Mrs Seymour) OPENS for the SEASON with an Original Play, by Messrs Tom Taylor and C. Reade, THE RIVAL, and an Original Farce, by Charles Selby, MY FRIEND TLE MAJOR. The Box-office open from Eleven to Five

TURKISH EXHIBITION, HYDE-PARK-CORNER, PICCADILLY. Open daily from 10 to 7, and on Saturdays only from 10 to 1, when it closes at 6d. Admission, 2s 6d. Children, 1s 6d Saturdays, 5s.; Children, 2s. 6d. Family Tickets for five, 10s. Schools admitted at Half price

THEATRE ROYAL HAYMARKET.—MONDAY, Wednesday and Friday, the Comedy of PAUL PRY. Paul Pry, Mr Wright (formerly of the Adelphi theatre) After which, Sons of the Soil Lucky Farmer, Mr. Hudson. Tuesday, Thursday, and Saturday, the White Horse of the Peppers: Grand Pepper, Mr. Hudson. With Sweetmeats and Wives Billy Lackaday, Mr. Wright

TO CORRESPONDENTS.

H. L., Wanesford.—We cannot inform you as to the "market value" of your painting, by Opie, especially as you do not state the subject. You had better apply to a picture-dealer, whose profession it is, for a stated fee, to give opinions upon the value of a painting. Opie's historical pictures are chiefly remarkable for energy of style, and truth of colouring.

C. G. F.—It is the practice of Insurance Offices, generally, to advance money upon Life Insurances.

S. O. J., Dunstable.—The charge is correct; all single back Numbers of the ILLUSTRATED LONDON NEWS, beyond one month, are charged double price.

T. H., Green Hammerton.—Declined.

A WELL-WISHER AND SUBSCRIBER, York.—The subject has already been illustrated in our Journal.

A. B.—The poems in question are copyright.

W. L., Edinburgh.—Mill's "Essay on Government" is published by Longman and Co.

W. R., Dublin, is right. According to the List of Lord Mayors, in "Stow's London," the date 1420, upon the new Whittington Stone, is incorrect. Stow states Whittington's last mayoralty to have been in 1419. The small volume referred to by our Correspondent, "Anglic Metropolis," is generally correct.

B. W.—Your quotation is incorrect. The lines are—

Stretch with the seat that gave Elias birth,
We kneel and kiss the consecrated earth—

from Dr. Johnson's "London, in imitation of the Third Satire of Juvenal." The locality referred to is the palace of Evanonia, at Greenwich. This satire had been previously imitated and applied to London, by Oldham, in 1682; and before that to Paris, by Holleau. Boswell states there to be scarcely any resemblance between Oldham's and Johnson's performances; but Mr. Bell, in his "Annotated Edition of Oldham," says:—"The parallel passages are numerous; and generally there is more strength, though less finish, in Oldham;" whose poem in contemporary characteristics is more curious than the "London" of Johnson.

A CORRESPONDENT should apply, with the copy of the Bible in question, to a dealer in second-hand books. At the second sale of Mr. Pickering's books, the first edition of the Bible in Welsh, 1588, sold for £22 10s; the English version, known as that of Matthews (imported), 1537, £13 18s.; the reprint of the same version in 1549, £21; and Day's reprint, 1551, £19; Cranmer's Bible, Whitchurch, 1553, £27 10s.; and a fine copy of a rare edition of the same version, Rouen, 1566, £64; the Bishops', or Parker's Bible, 1568, £50 10s.; Tyndale's Testament, 1548, £16 15s.; 1552, £12 5s.; New Testament, Barker, 1611, first edition of the present version, presumed to be unique, £32 15s. All the above, except the first, were bought for America.

A. A., Great Grimsby.—London is the corporate town; which, not having been reformed in 1835, and still remaining a corporate town in 1851, reconciles the inequalities you refer to. In the reports of the Commissioners for Inquiring into Municipal Corporations, which were published in 1835 or 1834, at the period the inquiries were made, you will find the information you seek.

NOTES OF ANOTHER FAMILIAR.—Inadmissible.

A. D. B.—The volume has been compiled with the title-page and list.

G. I. GUNTHORPE.—A Consular denarius of the Julia family. From the impression sent it appears genuine; but is very common.

R. H.—The coins described are of no value.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 7, 1854.

THE public mind, after having been kept in a state of feverish anxiety for the greater part of the week, was, to some extent, calmed on the afternoon of Thursday, by the publication of a *Gazette Extraordinary*, with official news from Sebastopol up to the 28 h ultimo. At that date the great Crimean fortress was still in the possession of the Russians. This intelligence destroyed a whole fabric of magnificent but baseless reports which had previously been in circulation;—of the utter discomfiture of Prince Menschikoff, on the 25th, after a series of brilliant, but sanguinary, battles, on the 22nd and 23rd September;—of the destruction or capture of the Russian fleet;—of the slaughter of 10,000 Russians in Fort Constantine;—and of the ultimate surrender of as many of the Russian garrison as had escaped the fearful slaughter. The tale was certainly an extraordinary one; and although it mainly rested upon the authority of a nameless, and imaginative, if not altogether imaginary "Tartar," it found ready credence in every circle of society. The splendid victory of the Alma, of which we have official and perfectly authentic intelligence, was, however, sufficient to justify the belief that the fall of Sebastopol was certain to occur within a short time afterwards, and the "wish being father to the thought," the marvellous tale of the "Tartar" was very generally believed, not only in London and Paris, but in Berlin and Vienna. A spirit of rejoicing immediately took possession of the public mind of all Europe; and it will, we expect, teach the Czar a lesson of humility—if not of shame—to know that the news of his utter ruin—though unfortunately unfounded, or only premature—excited almost, if not quite, as much satisfaction in Berlin and Vienna as it did in London. The Emperor of Austria was as well pleased to hear of it as the Emperor of the French; and the coffee-houses of Berlin were quite as delighted as the Clubs of London. The Czar will, it is to be hoped, discover, from the reception of this unhappily false report, how few friends he has in the world, and in what a state of complete isolation he stands from all human sympathy.

It will no doubt strike most readers as singular, that the British, and, as far as we know, the French, Government has received no official intelligence of any of the events that must have occurred between the 20th of September, when the glorious battle of the Alma was fought and won by the Allied armies, and the 28th; when, according to Lord Stratford de Redcliffe, they established their base of operations at Balaclava, about twelve or fourteen miles to the south of Sebastopol. Under such circumstances the public can scarcely feel justified in accepting as facts the vague rumours of a second battle and victory on the banks of the Katcha, at a point still nearer to Sebastopol. It is possible that such a victory may have been gained, although Lord Stratford de Redcliffe makes no mention of it; but, in the meantime, it must take its place among the unfounded stories of the too notorious "Tartar," and the other reports that have in so extraordinary a manner been forced into circulation throughout Europe. The despatch of Lord Stratford is, unfortunately, too vague to satisfy the natural anxiety of the public. It does not inform us whether the Allied forces, that have established themselves at Balaclava to prepare for a grand attack of Sebastopol from the south, are the same troops that so signally defeated the Russians at Alma on the 20th. If so, they must have made a long *détour*, and either beaten the Russians again, or found no enemy to oppose them in the prosecution of their march. If the army at Balaclava consist of reinforcements—which we know, from previous intelligence, to have been sent from Varna—the fortress and town of Sebastopol must be beleaguered by our land forces, both from the north and from the south, and by the British and French fleets from the west. That it must very speedily surrender, under such circumstances, is obvious. If it be the victorious armies that landed on the 14th, in the Bay of Kalamita, which, on the 28th, were, in the words of Lord Stratford de Redcliffe, "preparing to march, without delay, on Sebastopol," we must suppose them to be more than a match for the Russians, or they would not have been able to effect such a movement in face of an enemy. In this case the position of Sebastopol would appear to be equally perilous. Even in the absence of those official details of the events which must have occurred between the 20th and the 28th of September, there is every justification for the confident hope and belief that, long ere the present hour, Sebastopol has fallen. The aid that Prince Menschikoff is reported by Lord Stratford de Redcliffe to have sought from Anapa, on the Circassian coast of the Black Sea, will, if it ever reach him at all, arrive too late to be of service. Prince Menschikoff may have given orders for the destruction of that fortress, and have thereby saved the Allies the trouble of battering it about the ears of its garrison; and the 16,000 men reported to have been sheltered within its walls may have duly marched to the relief of Sebastopol. But as the distance between Anapa and Sebastopol is considerably upwards of 250 English miles, as the crow flies; and as such a force, even with good roads and plenty of provision on the way, could not march and transport their guns and ammunition at a greater rate of speed than fifteen or twenty miles a day, it would take them about three weeks to reach the scene of action. Long before that time British and French valour will, it is to be presumed, have followed up the first successes of the Alma, and made an end of Sebastopol. Upon the whole, we see no reason for discouragement in the absence of details, or in the meagreness of those which have reached this country. Europe knows that the Crimea was virtually lost to Russia on the very day that the splendid armaments of the French and English landed in the Bay of Kalamita. If people eagerly—and, perhaps, unconsciously—invent the tale of its downfall, before the event has actually occurred, we can but look upon the extraordinary prevalence of the belief, and upon its universal reception amid the plaudits of millions of people in every country in Europe, as omens and forerunners of a truth about to be realised. The tale was this week an invention. Next week, or the week after, we have no doubt that we shall be able to announce the fall of Sebastopol on the authority of Lord Raglan and Marshal de St. Arnaud. Awaiting that time, the British people will put up prayers for the success of the brave men, who are fighting so arduous but so glorious a battle in behalf of the liberty of Europe. They will confide in Heaven—in the justice of their cause—and in the heroism of their brave fleets and armies—and will not fear for the result.

AT the recent meeting of the British Association, some discussion took place, as our readers are aware, on the subject of the Civil List Pensions which are annually bestowed by the Government on persons eminent in Literature, Science, or Art, or upon their destitute families. The correspondence between Lord Wrottesley and the Earl of Aberdeen, on which comment was made in our weekly column of "Town and Table Talk," elicited from the Earl of Aberdeen a statement of his Lordship's views on the proper distribution of the fund. The Prime Minister is of opinion that the whole of the miser. ble sum of £1200 per annum might very easily be expended, according to the terms of the Act in which it is granted, "without any portion of it being appropriated to Science and Literature." The Act sets forth that pensions, not exceeding £1200 in any one year, may be granted to such persons "as have just claims on the Royal beneficence; or who, by their personal services to the Crown, or by the performance of duties to the public, or by their useful discoveries in science and attainments in literature, have merited the gracious consideration of their Sovereign and the gratitude of their country." Lord Aberdeen put an accurate though a narrow interpretation on the Act, and vindicated its letter without remembering its spirit. But since his Lordship's correspondence with Lord Wrottesley was given to the world, it has come to light that Lord Aberdeen has himself departed even from his own interpretation, and given a pension on the Civil List to the widow of a person who had no claims during his lifetime on the charity or gratitude of his country, and can, consequently, have transmitted none to his relict. The late Lord Fullarton was not eminent in Art, Science, or Literature; and we are not aware that he rendered any peculiar services either to the Crown or to the country. He was, no doubt, a very fair Judge, and administered justice in Scotland with as much dignity and discretion as any other Judge who ever sat on the judgment seat in that portion of the empire. But, as he was very handsomely paid for his office—receiving, we believe, a salary of £2500—or, perhaps, £3000 per annum—we cannot imagine on what grounds his widow has been thought entitled to a pension of £200 per annum out of the fund which should have been sacredly reserved for more appropriate recipients. If a Judge, in the receipt of a handsome income, is improvident enough to leave his widow in a state of destitution, it is, doubtless, a hard case upon his survivor; but we do not see on what grounds of justice or expediency the country ought to be called upon to provide for her. The clergy of the Church of Scotland—a most estimable body of men, who do not on the average receive a stipend of £250 per annum, about a tenth of that received by a Scottish Judge—never leave their widows to be supported by the public. By a system of insurance, and annual payment amongst themselves, they raise a fund for the maintenance of their widows and orphans; and never scandalize the Church of which they are the ornaments, by appealing to the public for eleemosynary aid to support their families. The condition of Mrs. Fullarton is, no doubt, one that should excite commiseration—or Lord Aberdeen would not have deprived Science, Art, Literature, and unpaid public services, of the small chance of £200 per annum, which has just been snatched up for a Judge's widow. We do not object that Mrs. Fullarton should be provided for—say by the Scottish Judges, who were the colleagues of her late husband, and who are most interested in preventing a lady in her position from becoming an object of public charity; but we do, on the behalf of Literature and Science, and also on behalf of the other claimants included in the very comprehensive list to which Lord Aberdeen would extend the objects of national gratitude, object to the case of Mrs. Fullarton being turned into a precedent. The whole subject requires reconsideration. Not only is the fund itself unworthy of the country, but the manner in which it is distributed is at variance with justice and right feeling. As we remarked last week, the remedy is in Lord Aberdeen's hands. He has only to ask Parliament for more money, to obtain it. If there be a fund for Charity, there should also be a fund for Merit. If Poverty has a right to urge its claim, why should not Genius—too often engaged in unmercenary and unworldly, though ennobling pursuits—urge its still higher claims on the gratitude of a great nation? But it is too bad that the improvidence of a well-paid Judge should be allowed to make an inroad upon a fund already too scanty, and which ought to have been reserved for more legitimate and equally pressing objects.

THE COURT.

The extremely fine weather has induced her Majesty and the Prince Consort to prolong their sojourn in the Highlands until the 12th inst., on which day the Court will leave Balmoral for the south. During the past week her Majesty, H. R. H. Prince Albert, and the Royal family, have taken their accustomed walks and drives; and have visited Ballochbhuie, Loch Calater, and the Shiel of Alt-na-Guisach.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary leave Cambridge Cottage, Kew, this day (Saturday), for Knowsley, to honour the Earl and Countess of Derby with their company for several days. The noble Earl and Countess have invited a distinguished circle to meet the Royal Duchess and Princess.

The Duchess of Wellington has arrived in Belgrave-street from Balmoral Castle, having been succeeded as Lady-in-Waiting to the Queen by the Countess of Desart.

The Earl and Countess Granville have arrived in Bruton-street from Germany.

Lady Peel and Miss Peel have arrived in Whitehall-gardens from a tour in Germany.

Lady Molesworth has arrived at Taymouth Castle, on a visit to the Marquis and Marchioness of Breadalbane, from Inveraray Castle, the seat of the Duke of Argyll. Sir William Molesworth has returned to town to resume his official duties.

QUEEN ANNE'S FARTHING.

BELSTON RECTORY, Sept. 29, 1854.

Seeing in your paper of the 16th inst., the question respecting the Queen Anne's Farthings again mooted, allow me to make a few remarks, and state a fact which is not generally known. There were only three struck, when it was perceived that a flaw existed in the dye. This was immediately destroyed, and another ordered to be made, bearing the same date; and from this latter dye are those many farthings that have since been in circulation.

The traditional history of the former three is, that the Queen kept one, afterwards presented to the British Museum by George III.; another was in the possession of one of the Derby family for years, and sold to the British Museum. The third was given by the Queen herself to the [illegible] of Honour, who transmitted it to her daughter [illegible] given to her god-daughter, a relation of mine, [illegible] thirty years since, that she had [illegible] collector at the British Museum, [illegible] it is now in the possession of her son Mr [illegible]

[illegible] of your readers [illegible] this statement, [illegible] examine the two coins above-mentioned, [illegible] across or near the bridge of the Queen's nose [illegible] marked mark between the two coins. I am, &c.,

H. G. ATTHILL.

LATEST INTELLIGENCE.

LATEST FROM SEBASTOPOL.

By a telegraphic despatch from Marseilles, we learn that the *Fury*, which left Constantinople on the 27th ult., arrived at Marseilles on Friday (yesterday) morning. Up to the 24th there had been no further fighting in the Crimea. The 23rd Regiment lost all its officers but three, of whom Captain Bell was the senior. Colonel Ainslie was killed in planting a standard on the heights of Alma. General Brown had a horse killed under him. Sebastopol is invested. A Russian naval division of fourteen sail had made an unsuccessful endeavour to push out. In the battle of the Alma the Russians defended the heights with 100 guns; yet the Allies carried the summit. The want of cavalry was much felt in the pursuit.

The *Moniteur* of Friday (yesterday) morning announces the occupation of Balaclava, of which the Allies have already made a considerable place. The Allied armies were in communication with the fleets. A safe and practicable road leads to Sebastopol. The Allies are now firmly established in the Crimea. The various columns of the army had to cross several rivers in succession, in order to turn the Gulf of Sebastopol, and enter the mountain country, before they could arrive at Balaclava. Menschikoff had been driven to a distance with the wreck of his army.

The greatest imaginable sensation was caused on Friday in Paris by the appearance on the Bourse of two despatches, similar in substance to the one we have elsewhere given, communicating the rumours on which the public have been feasting for some days, about Sebastopol having fallen. The people rushed in crowds to the spot where the paper was posted, to get at which was something like attacking the intrenched post of Alma. They who were so fortunate as to approach close enough to the paper read as follows:—

TELEGRAPHIC DESPATCH.

THE MINISTER OF FRANCE TO THE MINISTER OF FOREIGN AFFAIRS.

Vienna, Oct. 4, 1854.

The news brought by the Tartar is contradicted at Bucharest itself. It is the battle of the Alma amplified. The Russians without doubt received news from Constantinople beyond the 24th ult. The Austrian Consul at Odessa sends word, by telegraph of the 29th, to the effect that the fighting had recommenced from the 26th to the 27th. It is said that the Allies were on the Balbec, at ten versts' distance (about 2½ leagues) from Sebastopol. An English steamer, with a flag of truce, had just taken to Odessa three hundred Russians badly wounded. (Signed) DE BOURQUENAY.

THE BATTLE OF ALMA.

Lord Burgherash, senior Aide-de-Camp to Lord Raglan, who arrived at Marseilles on Friday morning, in the *Fury*, brings home the detailed despatches relating to the battle of Alma, with the list of casualties. His Lordship cannot be expected to arrive in town before Sunday (to-morrow) morning.

It appears from the accounts which have reached the French Government that the battle was fought within a very short distance of the sea coast. The French army, consisting of either three or four divisions, occupied the right, and was, consequently, nearest the sea. The English occupied the centre and the Turks the left. The French army being nearest the sea, fully one-half of it was protected by the fire from the steamers, so that the extreme right and centre of the French line could not suffer much. The French division which suffered most was on the left of the French line, and next to the English. It was commanded by General Thomaseon, who, as you are aware, was desperately wounded, and who it is said to have since died of his wounds.

The brunt of the battle fell upon our countrymen, who have not only had the post of honour, but, it is feared, have been the greatest sufferers. At the French Ministry of War it is stated that, from the information which has arrived, there is reason to believe that the loss of the English far exceeded that of their army. The main charge must have been a tremendous one. It seems that, although the Russians were posted on the opposite side of a deep ravine, and on the top of a steep and difficult bank, where they had deliberately taken up their position, and where they were protected by their artillery, the whole of the English army and the left division of the army stormed this formidable po-ition in front and carried it. Every military man knows what a desperate affair such an attack is, and that the very moment of the storming of the heights of the Alma leaves no doubt that it will be recorded in our annals as one of the most glorious exploits of our brave countrymen.

LORD STRATFORD'S DESPATCH.—The telegraphic despatch received from Lord Stratford de Redcliffe on Tuesday, which we find in our second page, appeared, curiously enough, to have been sent from Constantinople at half-past nine o'clock on the evening of the 30th ult., and to have been received at Bucharest at half-past three on the same day, thus not only annihilating time and space, but distancing them by six hours. The mistake was, doubtless, that of the Consul-General at Bucharest, who probably forwarded the despatch on the 3rd, and not the 30th.

NAVAL AND MILITARY INTELLIGENCE.

THE system of hutting troops encamped, which is at present carried into effect by the French forces about Boulogne, has attracted the attention of our military authorities; and Major-General Sir Frederick Smith, of the Royal Engineers, has left for the French camps, for the purpose of inquiring into and reporting upon the applicability of the system to our Army.

Sir Baldwin Walker, Sir Thomas Hastings, and Mr. Watts, visited Woolwich dockyard on Saturday to inspect the *Pelter* gun boat. The Lancaster oval guns which have been cast for the light draught gunboats are one ton and a half lighter than those fitted in the *Arrow*, &c.; the guns mounted on traversing platforms on board the *Pelter* being 6 cwt., while those on board the *Arrow* class of screw steam despatch gunboats are 9 cwt. each.

THE *Sarah Sands*, steamer, with three companies Royal Artillery and invalids from other regiments in Canada, sailed from Quebec for Liverpool on the 15th September.

THE *Adder* steam-vessel came up the river at an early hour on Tuesday morning from Sheerness, and towed the *Prince*, screw steamtransport, to Greenhithe, where she is to complete taking on board the powder, shot, and shell she is to convey to the seat of war in the East; and, after she has her compasses adjusted, and embarked the 46th Regiment of Foot, now ordered to go on board at Greenhithe, she will proceed to her destination.

AN order has arrived at Sheerness for the removal of the Russian prisoners and their officers to Millbay Prison, at Stonehouse, Devonport. They were to leave by the steam-vessel *Precursor Adder*, at eleven o'clock on Thursday. The following officers on parole leave with them: Captain Esanloff, Captain Shoetoff, Sub-Lieutenants Agafonoff and Pitchilin, also Pomitoffski, Hankelstech, Lauer and wife, and Lubinoff and wife—eight in number. Part of them will leave by the English steam-vessel *Nile*, with the following officers:—Lieutenant Sverroff and wife, Captain Perbinsky, Lieutenant Ribston, and Commissary Iversray—four in number.

FOUR line-of-battle-ships, on their return to Sheerness from the Baltic, are ordered to be taken into the fitting basin, when their crews will have six weeks' leave of absence, and be paid the wages due to them. On their return they will be at liberty to volunteer for any ship in active service requiring hands. This is a boon the blue-jackets have long desired.

THE *Royal Albert*, 121, screw steam-ship, Captain Sir Thomas Pasley, was ordered to take her coals on board on Wednesday at Sheerness, and prepare for proceeding round to Spithead.

IT is expected that the regiments of the Irish militia are to be enrolled, and the numbers for each county will be published immediately

MAJOR-GENERAL CHARLES MURRAY HAY, late of the Coldstream Guards, has been appointed Commander-in-Chief of the troops in the Mauritius, in succession to Lieutenant General Sutherland, who resigns on promotion.

ON Wednesday 2000 stand of arms, taken from the Russians at the capture of Bomarsund, were landed at the Tower-wharf and deposited in the Armoury stores of that fortress.

AT the early parade of the Guards, on Wednesday, orders were read out for the men to hold themselves ready to proceed to reinforce the service companies of their respective regiments in the Crimea. It is confidently stated that the last battalion of Grenadiers will have its strength increased to 1000 by volunteers from the 2nd battalion, and proceed forthwith to the Crimea.

OFFICERS AND CREW OF THE TIGER.—The *Palmyra* transport, with the remaining portion of the officers and crew of the *Tiger* released from Odessa, and invalids from the Black Sea, arrived at Plymouth on Wednesday night and will come on to Portsmouth; when the officers, with Lieut. Hoyer and others, will assemble, to be tried by Court-martial for loss of their vessel.

THE AUSTRIANS IN WALLACHIA.

(From our Special Correspondent.)

BUCHAREST, 18th September, 1854.

THE Wallachians were overjoyed at the entrance of the Turks into Bucharest. They hoped that, after the uncertainty which had marked their political existence under Russian protection, would follow a more natural and secure state of things. Their situation under the Russian Governor Budberg, and Halchinsky his satellite, had indeed been unenviable. Freedom of action and liberty of speech they were alike debarred from; and discontent, though strong, was reduced to vent itself in whispers. But even these exhibitions of feeling were not without danger in a place where spies and agents of the Russian Government swarmed within the offices of the Wallachian administration. Argyropoulos, a Greek; Isandes, a valet—raised to place by peculation and subserviency—such were the men who held the reins of Government. It was but natural, in consequence, that the Wallachians should have hoped for change when Russia retired and made way at Bucharest for the victorious Turks. The Ministers who, during the occupation, had been the servile tools of Russia, had departed; a Philipesco had remained behind, and filled the department of Finance; a Cantacuzene still held the Ministry of the Interior. The rest had gone, and left their office vacant. Omer Pacha made a triumphal entry into Bucharest; proclamations were issued to assure the inhabitants that no political vengeance was intended; that, although the old treaties under which the suzerainty of the Porte was established had virtually been abrogated by a state of war, it was not the intention of the Porte to make any changes, and everything would remain as before until a quieter time should succeed to one of military trouble. Such measures were as wise as they were well meant; but they were admirably calculated to favour the indolence of Turkish officials. No attempt was made to reform the Government by filling up vacancies, and weeding out such men as had shown partiality to the enemy—men who were known to retain Russian sentiments, remained in place; whilst numerous posts, which might have been filled by friends of Turkey, remained vacant. The consequences of this indolence on the part of the Turks was instantly felt; and at the very time when Bucharest was full of Turkish soldiers, the authorities were foolish enough to send back to certain death as many Russian deserters as they could find. At the same time, there were no men more assiduous in courting Omer Pacha than those who had thus shown their partiality to his enemy. The mass of the Wallachians, however, were animated with the friendliest sentiments towards Turkey. They saw the difficulties under which the Turks were struggling: they were inclined to be patient until more favourable circumstances should enable them to reconstitute the Government, and give the Porte more leisure to attend to their wants and desires. The Russians, by their conduct in their retreat, were increasing the animosity of those who already looked upon them with no favourable eye. They seized and carried away with them the regiments of Wallachian and Moldavian militia, and deprived of their arms and clothing such of the men as expressed a resolution to remain in their own country. Fortunately, Mushar Pacha (Sir Stephen Lakeman) succeeded in a raid at Buzeo—led by Major O'Reilly, of the 2nd Guards—and carried off the equipments of a whole regiment of infantry, which the enemy had placed upon bullock-cart ready for departure. Six hundred Cossacks on this occasion fled ignominiously before a Turkish force of eighty-five men; but the artillery of the Wallachians and the whole of the militia of Moldavia was moved behind the Pruth without hindrance. Before their departure, the Russian Generals had emptied the treasures of the Principalities, so that when Omer Pacha arrived there was no money left to make the necessary repairs to the palace which he was to inhabit. Quantities of bonds on the Imperial treasury at St. Petersburg were left in payment of the vast amounts of grain and provisions which the Russian army took away; and the proclamations of the Generals thundered out against the Principalities, expressing dissatisfaction and disgust, are a sufficient proof that these bonds will never be liquidated. Everything, therefore, combined to raise a friendly feeling for Turkey throughout the Principalities, when it was whispered that the Austrian army on the Transylvanian frontier was about to move. The vague rumours which were heard for many days respecting the movements of the Austrians, the orders and counter-orders which followed the inflections of politics at Vienna gave time for public opinion to express itself relative to the threatened entrance. It was looked upon alike by all parties as unnecessary. The very pretexts under which the Cabinet of Vienna covered its proposed movement, were suspicious. Austria had not declared war against Russia; she was to march in, not for the purpose of moving onwards and invading the territory of Russia, but to restore order in Wallachia, or at best to preserve order from being disturbed. The futility of this avowed purpose was evident to all who had visited the country. If the Austrians feared lest the scenes of 1848 should be renewed in the Wallachian capital—if she suspected that the partisans of reform in the Principalities would take the opportunity to rise when the Russians departed, they reasoned as if the Turkish army of 80,000 men had not occupied the country. The movement of 1848 was repressed by Turkish soldiers; and a new one of the same kind would have been suppressed again had it been attempted. But there was no excuse for such fears—no pretext for such suppositions. There must have been some other reasons—some other aims in the Austrian occupation. The Wallachians were therefore in the utmost anxiety, and not a little annoyed at the probability of having to perform the same part for the Austrians that they had in 1848, when the passage of their army was marked by extortion and plunder. They recollected that they had on one occasion fed several thousand men for months, without receiving a farthing in return; and they feared a recurrence of the same evil. But they also reasoned very justly on another vastly important point. They asked, if it was not equally necessary to preserve Wallachia and Moldavia from Austrian as well as Russian encroachment. If Russia, in the lapse of years, had taken possession of Bessarabia and the mouths of the Danube, Austria on her part had walked into Transylvania and kept it. I firmly believe that the Cabinets of the West have been somewhat blind to this danger; and the conduct of Austria hitherto has not been of so open and frank a nature as to drown all suspicion of her motives. It is very easy to understand that Austria is desirous as long as possible to remain in her position, which gives her numerous advantages. The Western Powers, by their preparations, have shown that their desire is to strike speedy and decisive blows. If the capture of Sebastopol were to decide the question of peace, and Austria were to have taken a resolute step against Russia but a moment before, what can save Austria from the speedy effects of Russian revenge. The Czar, humiliated by England and France, might repent but would he ever have for Austria any other sentiments than those of revenge? Would he keep over the affront offered to him by one who he has assisted and cherished, and whom he would see so vulnerable if a speedy peace with the Western Powers enabled him to concentrate his forces in that direction? Austria, therefore, will be slow to declare against Russia, and will only do so in the end, if she sees that the war is likely to last, and Russia to be seriously weakened.

The movements of the Austrians into the Principalities had, therefore, no hostile character as against Russia. The Wallachians were the first to perceive it; and, if they had not done so before it commenced, they might have been convinced of it immediately after, for Baron Hess marked the moment of his entrance into the Principalities by an arrogance which showed itself in the proclamations issued to the people. The only supreme power in the country was then declared to be the Emperor, and the authorities were ordered to address themselves *in all matters* to the Austrian General Coronini. Equally clearly and logically did Austria proceed with the Russians. Daily were, and are, to be seen Austrian officers, in full uniform, crossing the Turkish outposts, and going into the Russian camp. The commi-sariat of the Austrian army is replenished with supplies purchased at Jassy; and the Czar, in a proclamation, says that the Principalities are occupied on his retirement by his old Allies the Austrians. The movement of the Austrians, in truth, has been more that of an ally than that of an enemy of Russia. Entering, as they did, without any avowed intention commensurate with the immensity of their preparations, their movements were so far a matter of supposition, that Omer Pacha, like a good General, thought it prudent to place his troops in such a position as to be safe from a sudden and well-directed blow. His army, placed in front of the Russians, might be taken in the rear by that of the Austrians; and, to avoid all chance of a mishap, it was prudent to withdraw nearer the Danube, and further from all chance of surprise. But what was the result of this movement? The Austrians, by their ambiguous conduct, have so acted as to render the Russians safe upon the Pruth. Whilst the Allies are attacking Sebastopol, the Austrians have annulled the Turkish army of 80,000 men. That army is in such a position at this moment that it can do nothing. To all intents and purposes, Russia has no enemy on this side the Pruth, and this is what we have gained by endeavouring to obtain the alliance of the Cabinet of Vienna.

It might have been expected that Austria would be in no very friendly mood from the first moment of her intention to move. Her pertinacity in the attainment of small ends, the virulence with which she pursues her smallest enemies, wherever she can find them, is well known. She spared none of her usual efforts on entering Wallachia. There were numerous refugees in the Turkish army. Some of them were officers, some soldiers; most of them were aides-de-camp of Omer Pacha. These men, I may say without contradiction, were like the most useful of all those at the disposal of the Commander-in-Chief. If he wanted a trusty officer to take despatches to Constantinople or Belgrade—if he required a redoubt to be made, a reconnoissance to discover where the enemy lay, no better officers were at hand than the aides-de-camp of Omer Pacha. Austria laid her veto on these men; and, to please that power, Omer Pacha was forced to send all his officers to Moustir. Prince Leiningen, in his celebrated mission—or, if not he, some more successful diplomatist—had obtained the signature of a convention by the Porte, according to the terms of which no refugee could serve nearer the Austrian frontier than seventy miles. Skender Bey, who was looked upon with most suspicion, was debarred from serving within a distance of 200 miles. Forcing the interpretation of this convention, the Austrians obtained the dismissal of the refugees, who have all taken their departure, with the exception of Skender Bey, who persists in remaining. If he also departs, there is no reason why Omer Pacha himself should not be dispatched to the army of Asia; and, in truth, his presence there is much wanted. In one instance, the complaisance of the Turks has gone still further; and a refugee officer, named Radomir, may be seen daily at the Austrian Consulate, in chains, taking the air in a courtyard, like a bear in the Zoological Society's Gardens. The only difference between him and the animal is, that the bear is likely to die naturally; whereas Radomir will probably be subjected to an ignominious death. I do not know for what supposed crime this unfortunate man has been given up; but was the present a moment for the exercise of a cruel right; and is not his imprisonment a strange comment on the alliance of Austria and Turkey?

Coronini was expected with dread; but, consequently, not received with enthusiasm. A question of etiquette on the day of his entrance showed the slight cordiality which existed between him and the Turks. The troops of Omer Pacha having occupied a position on the left of the promenade called the Chaussée, the Austrians marched past, and took the right, which the Turks considered themselves entitled to hold. The relative places of the two forces would have made the Turks march past the Austrians, instead of the Austrians defiling before the Turks. Omer Pacha sent to ask for half an hour's delay, that he might change the position of his men. General Allemand, to whom the message was brought, gruffly refused a moment's delay. Count Coronini, however—a better diplomatist—granted the request. The Turks moved to a place outside the road; and the Austrians—all adorned with sprigs of oak—marched past into the town, with all the pomp and circumstance of war. A regiment of Lancers, several battalions of infantry (mostly Croats and Italians), and a battery of artillery, paraded through the town. Count Coronini delivered a speech, containing such vigorous nonsense about his coming to restore peace and order, which had never for a moment been disturbed. With the exception of a few of the Boyards who appeared on the ground, none took Germain's address on the occasion; and they made a tolerable show, as Bucharest contains about 80,000 of them. The Austrian General did not conceal his discontent at the coolness of his reception. The troops were quartered at once, to the number of 17,000, upon the inhabitants—a measure which was felt the more, as the Turks had all been placed in camp outside the town.

The arrival of the Austrians, thus marked by haughtiness and displeasure towards the Turks and Wallachians was a prelude to still stronger annoyances and disgusts. Rumours had been afloat that they intended to restore Stirbey to the position which he had forfeited by flight; and although the rumour was at first disbelieved, it was soon confirmed by the arrival of a firman from Constantinople, which was read in council by Dervish Pacha, the Turkish Commissary-General, and by a declaration of the same purport from Count Coronini. Stirbey, you may recollect, was placed at the head of the Wallachians by a special clause of the treaty of Baltalimani, and was deposed by all his predecessors, he enriched himself by illegal means, and he carried favouritism further than most of them. Placed in the awkward predicament of obeying two contradictory orders—the first from the Czar, forbidding him to pay the usual tribute to Turkey; the second from the Sultan, ordering him to bring the tribute to Constantinople—Stirbey, in the autumn of last year, went to Vienna. The tribute, of course, remained in the hands of Russia; and Turkey was *loud* to a certain extent by his treachery. Forgetting all this, and ordering at once his disobedience and the loss which followed it; Turkey has yielded to Austrian pressure, and submits to his return. But by doing this, she has given the lie to her own expressed opinion. In all the discussions which have been carried on between the Porte, and the Western Powers, the declarations of the treaties by which the rights of Wallachia were affirmed to be abrogated by the state of war. The treaty of Baltalimani is one of these. Stirbey's reinstatement is therefore illegal, and founded on no right; but, on the contrary, tends to demolish the basis on which the present state of things rests. Can a more curious picture be witnessed than that of Turkey declaring that she will make no changes in the Principalities, notwithstanding the abolition of treaties, and yet asserting Stirbey's right, which only reposes on a treaty of which the terms are, according to them, virtually abrogated? But Stirbey's presence is necessary to the Austrians, their policy is triumphant at Constantinople, and the Wallachians must submit. What then have the latter to suppose, unless it be that Turkey is too weak to make head against the Cabinet of Vienna, and that their best policy in the end must be to make friends of the Austrians. This opinion cannot but be confirmed by other circumstances still more serious in their consequences than that already pointed out. In the early part of this letter I showed the necessity under which the Turkish General found himself—that, namely, of retiring from certain portions of the Principalities for motives of strategy. There seemed to be no reason, however, to prevent the Turks from occupying Ibrail and Galatz, where they might be rear their victualling places; but the Austrians have, it seems, put their veto upon that, also. In a letter addressed by Count Coronini to Omer Pacha, that General protests against any such occupation, on the ground that it might be calculated to injure the prospects of a future peace; that Austria intends to occupy those points herself; and that the Turkish army must return to the other side of the Danube. In consequence of this letter, it is decided that only twelve battalions of Turkish infantry and two regiments of cavalry shall remain in Bucharest, and the rest of the Ottoman force will retire behind the Danube This last success in Austrian policy completes what has already been said regarding the results of the Austrian occupation. Omer Pacha, in deep disgust, leaves this to-morrow; and though it is said that he will return for a short time, he must ultimately fall back to Rustchuk.

It is not difficult to say in what spirit the Turkish population will withdraw. Fear and retreat, before a power which is accused of connivance with Russia. The Turkish soldiers feel strongly the degrading character of the movement; they ask themselves why they fought? why they imperilled their lives at the passage of the Danube? and they discouragement has taken possession of their ranks. Will this sentiment last, or will it be followed by others? Discontent is passive, at present; but, if the Turkish population feel as the army does, I should be sorry to answer for the consequences, and the Wallachians, the Porte will have to look sharply to their places—nay, perhaps to their heads.

I conclude my letter by narrating an incident which occurred yesterday, in Bucharest. A Sardinian officer, named Gardino, was spoken to by an Austrian cavalry officer, in the coffee-room of an hotel. Gardino—unfortunately, a man who does not conceal his hatred for Austria—asked the officer if his regiment still had its colours. The other made no reply, but turned on his heel and left the room. Gardino knew that the Cathedral of Turin [illegible] of the scene, the man [illegible] returned, followed by [illegible]rs, and informed Gardino that he wished to fight him. [illegible] he thought he came somewhat overaccompanied to tell [illegible] swords were instantly drawn. Gardino, in a twinkling, [illegible] inded his immediate antagonist, by running him through the body; cut another across the forehead, and laid him senseless. [illegible] a third, by a terrible blow across the arm. The rest of the Austrians went away. Such is the account of this story that I [illegible] heard. In the evening, Gardino was safe at Rahcrach.

FIRING THE TOWER GUNS FOR THE GREAT VICTORY IN THE CRIMEA.

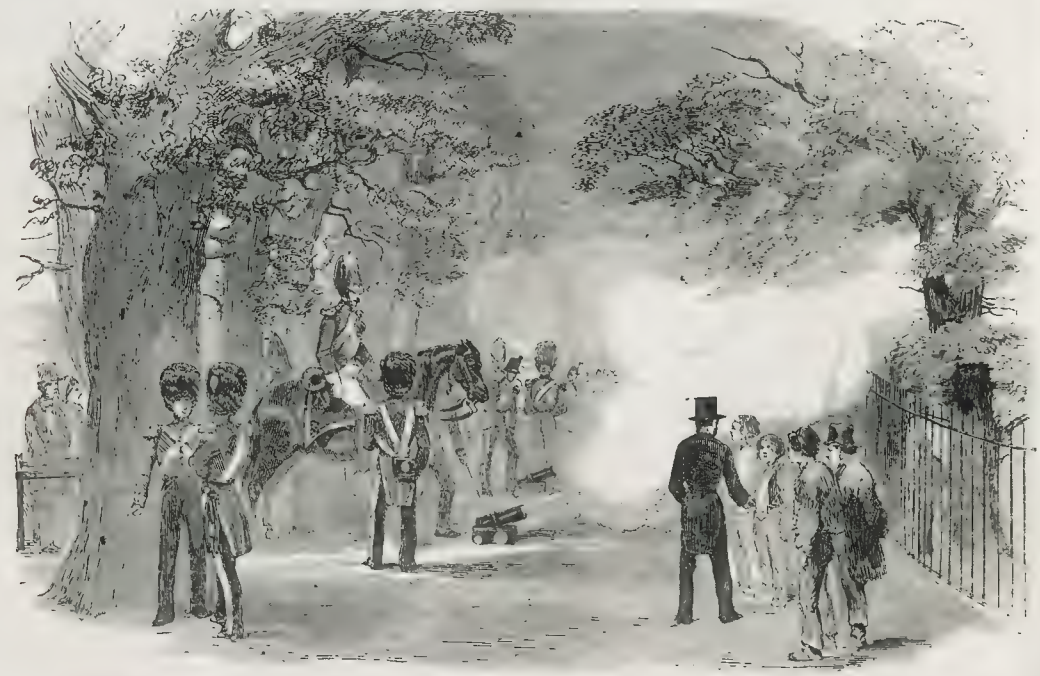
FIRING OF CANNON IN THE PARK AND AT THE TOWER.

It would be impossible to use any language which would exaggerate the high state of excitement which the metropolis exhibited on Monday morning. At the corner of every street were to be seen eager groups of men and women literally devouring the copious reports of the war which the newspapers had provided for them, and discussing (with a solemnity and anxiety which would impress any casual observer with an idea that the national fate depended upon the result of the conclusions at which they might arrive) the details of the conflict from which the Allied forces had just come out victorious.

At six o'clock on Monday morning the inhabitants of London were aroused from their slumbers to find that the happy news of victory was not all a dream. From the Tower at the east end, and from St. James's-park at the west, the cannons' roar announced the joyful fact that success had attended our arms. By direction of Lord Hardinge, twenty-five guns were fired in St. James's-park; and, as the Horse Guards clock commenced striking the hour of six, the first report was heard over the metropolis. Dark, foggy, and cold as London was at that hour, hundreds of people left their comfortable homes and wended their way to the Park; some in the expectation of hearing fresh news, others to communicate what they knew, to comment on the past, and speculate on the future. The precise reason why the guns were fired in the Park was to acknowledge the official communications received by the Commander-in-Chief from the Government. The subjects to be discussed were of too exciting a nature to allow the people to disperse, and the crowd increased during the whole of the morning. At twelve o'clock the guns were again fired, and the ceremony was repeated at intervals during the day.

When the news of the war reached the theatres on Saturday evening the excitement which prevailed was beyond description. At the Haymarket Mr. Chippendale read the official despatch; but, so eager were the people for correct information, that they had an encore. He read it again, therefore, amidst renewed applause. At the Adelphi Mr. Leigh Murray read the *Gazette*, amidst tremendous cheering. At Sadler's Wells the same important intelligence was communicated. At first the audience expressed disapprobation, supposing that the announcement about to be made was an excuse for non-attendance on the part of one of the actors; but when the real character of the information became known, the disapprobation gave way to unbounded exultation, and cheer broke upon cheer until actual exhaustion rendered any further demonstration physically impossible. At the Surrey side theatres similar manifestations were made.

"*The Tower Guns*" were fired from the new Saluting Battery, between the Chapel and the Waterloo Barracks. "*The Park Guns*" were fired from the Parade-ground, in St. James's-park.



FIRING THE PARK GUNS FOR THE GREAT VICTORY IN THE CRIMEA.

THE LORD MAYOR PROCLAIMING AT THE ROYAL EXCHANGE THE VICTORY ON THE ALMA.

THE PROCLAMATION AT THE ROYAL EXCHANGE.

The Right Hon. the Lord Mayor, on receiving from the Duke of Newcastle, on Saturday night, the important intelligence of the victory of the Allied armies over the Russians on the Alma, at once proceeded to make known the glorious news to his fellow-citizens. The letter accompanying the copy of the *Extraordinary Gazette* was dated "Eight p m., Downing-street," but the intelligence did not reach the Mansion-house until after nine o'clock. The Lord Mayor, hastily summoning two or three members of his household, immediately left the Mansion-house. His Lordship first proceeded to the London Tavern, where the leading members of the Corporation were partaking the hospitalities of the new Sheriffs of London and Middlesex; and here his Lordship, amid the cheers of the company, announced the gratifying intelligence to the assembled guests. The Lord Mayor then, accompanied by Mr. Alderman Wire, Mr. Millard, and several other influential gentlemen, proceeded to the Royal Exchange for the purpose of more publicly proclaiming the news. The civic trumpeter having sounded several times, a crowd of eager spectators soon surrounded the group, upon whose identity a flickering light was thrown by the bull's-eyes of half a dozen policemen's lanterns.

The Lord Mayor, speaking from an elevated position under the portico, said —

Fellow-citizens and Gentlemen—I have to announce to you the intelligence of a splendid victory obtained by the Allied forces over the Russians in the Crimea (Loud cheers). Before I commence reading to you the despatches which I have received upon the subject, and in order to give a little more time for our fellow-citizens to assemble, I beg to propose that we give, on this memorable occasion, three good and hearty cheers for the Queen.

This appeal caught the spirit of all present admirably, and her Majesty's name was greeted with three times three good and hearty cheers, which might have been heard in St. Paul's Churchyard. A call for a similar compliment to the Emperor Napoleon, by a person in the crowd, was readily responded to; and his Imperial Majesty's name, in the heart of the City of London, elicited manifestations as cordial and enthusiastic as could have greeted it in the centre of his own capital.

The crowd in front of the Exchange had by this time increased to some 400 or 500 persons, and the Lord Mayor again proceeded to address them. He said—

Fellow-Citizens,—I have this night received a most important despatch from his Grace the Duke of Newcastle, her Majesty's Minister of War, conveying intelligence of a great victory obtained by the Allied forces over the Russians in the Crimea (Loud cheers). Permit me to say that I feel my present a most delightful duty. Some few months since it fell to my lot, as the chief magistrate of this city, to announce to you that war had been proclaimed between this country and Russia. I have now the great satisfaction of making known to you that the Allied forces have taken the first step towards reducing that barbaric power against which they are engaged within reasonable limits (Cheers). I cannot help adding that I feel the interests of humanity and the happiness of the whole human race are all deeply concerned in this victory (Renewed cheering, and cries of "Bravo, Sidney!") I will now read to you the letter with which I have been honoured by the Duke of Newcastle.

The Lord Mayor here read the letter, which will be found in another column, and the accompanying telegraphic message, as it appeared in the *Extraordinary Gazette* published on Saturday night. The important

THE LORD MAYOR READING THE NEWS OF THE VICTORY ON THE ALMA, AT THE SHERIFFS' INAUGURATION DINNER, AT THE LONDON TAVERN. (SEE NEXT PAGE.)

passages in both documents were received with immense cheering by the crowd, amongst whom great excitement prevailed. Having gone through both communications, the Lord Mayor said:—

Gentlemen, I thank you for your attendance. I cannot but feel proud of this opportunity of addressing my fellow-citizens—the representatives of the freest city in the world—upon an occasion of such vast interest (Cheers). I believe this victory will do more to promote the civilisation and happiness of the world than anything which has occurred in Europe during the last fifty years (Loud cheers). I retire from office, I must tell you, with three times three good cheers for those brave, bold, and patriotic men who have left our shore to fight their country's battles.

This sentiment was received with a deafening burst of acclamations, and was followed by three good cheers for "The French—our Allies." The Lord Mayor now retired amid the applause of the crowd, having previously announced his intention of publishing immediately the glorious intelligence throughout every quarter of the metropolis.

THE LORD MAYOR AT THE SHERIFFS' DINNER.

The Inauguration Dinner of Mr. Alderman Muggeridge and Mr. C. D. Crossley, the recently-elected Sheriffs for London and Middlesex, took place on Saturday evening, at the London Tavern. An entertainment which in ordinary times is merely a convivial *réunion*, at which the civic officers receive their friends and their friends' friends, was rendered memorable on this occasion by the announcement to the assembled guests of the glorious victory obtained by the Allied armies in the Crimea. This joyful intelligence elicited demonstrations of enthusiasm, indicated by loud, general, and repeated cheering on the part of the company. More than 260 gentlemen were present, including the following:—The Cursitor Baron, the Lord Mayor elect (Mr. Alderman Moon), Aldermen Farnoomb, Sir John Musgrove, Bart., Salomons, Sir R. W. Carden, Wire, Carter, Kennedy, and Rose; the Recorder, the Town Clerk, Sir James Duke, M.P., Mr. Swift, M.P., Messrs. Frederick Ferrar and Alexander Crossley, Under-Sheriffs, &c. The hosts of the evening of course presided. Grace having been said, Mr. Sheriff Muggeridge proposed "The Health of the Queen," which was received with loud cheers. "The Healths of Prince Albert, the Prince of Wales, and the rest of the Royal Family," were also drunk with enthusiasm.

Mr. Sheriff Muggeridge said that, in Proposing "The British Army and Navy" he had a double duty to perform; he had the honour of coupling with them "The Army and Navy of France" (Loud cheers) And he had the still further satisfaction of including in the toast, "The Army and Navy of Turkey" (Renewed cheers). He felt that he was indeed most fortunate in being able to propose that toast under most auspicious circumstances, it having been intimated to him by a high authority that evening that the Allied troops had obtained a glorious victory in the Crimea (Loud cheers).

At this stage of the proceedings, the Lord Mayor entered the apartment

Mr. Sheriff Muggeridge was glad to observe that their excellent Lord Mayor had come in, as he was about to communicate to them the intelligence that had reached him (Cheers). His Lordship had done them the honour of bringing to them some despatches received by him in reference to this joyful event (Cheers). Before he sat down, he would ask his excellent and right honourable friend to read the despatches to them (Cheers).

The Lord Mayor: I beg to apologise for thus trespassing upon your kind attention, but I wish to intimate that I have received an important communication from the Duke of Newcastle (Cheers), written by himself to me as Chief Magistrate of the City of London, and my business to this house is to ask for the assistance of some of the public servants who are being regaled here, in order that I may proclaim the intelligence at the Royal Exchange without further loss of time (Cheers).

My Lord,—I have the honour and high gratification of sending your Lordship a proof copy of an Extraordinary *Gazette* containing a telegraphic message from my colleague, Ambassador at Constantinople, by which the glorious intelligence of the success of the Allied armies in a great battle in the Crimea has been received this morning.—I am, my Lord, your Lordship's obedient servant,

Lord and general cheering followed the reading of his Grace's note. The Lord Mayor then read the communication published in the *Gazette*, which will be found in another column.

Mr. Sheriff Muggeridge thanked the Lord Mayor for having come in on opportunity to confirm the intelligence he had received; and begged to give "The Armies and Navies of England, France, and Turkey" (Loud cheers). Song, "Rule Britannia."

Mr. Sheriff Muggeridge: I now beg to propose "The health of the Lord Mayor" (Cheers).

The Lord Mayor returned thanks, and expressed his satisfaction at being able to communicate, beyond all possible doubt, a circumstance so gratifying to them, and so honourable to the brave men who left their shores to defend a cause (Cheers). He could conceive no event more important than the fall of the Crimea at the present time, because he believed it would be fraught with blessings and advantages to the whole of the civilised world (Cheers). By that event not only would the prosperity of their country and the other nations be advanced, but by it the civilisation of the whole human race would be materially assisted (Cheers). He had then another duty to perform, and that was to impart to his fellow-citizens within the limits that had reached him (Cheers). He was truly glad that news so glorious should have reached the city of London during the year in which he had the honour to be Lord Mayor (Cheers).

The Lord Mayor, accompanied by some of the City officials, then withdrew.

Several other toasts were given in the course of the evening, and speeches made, in which congratulatory allusions were made to the important news from the Crimea. The Right Hon. Mr. Baukes, Cursitor Baron, in returning thanks, after his health had been proposed, expressed a hope that, before the close of their year of office, it would be the good fortune of their hosts to preside over a meeting at which thanks would be given for the achievement of a glorious, happy, and lasting peace.

Mr. Sheriff Crossley's gold chain and badge of office are very superb: the badge, which is of highly characteristic design, has its centre emblazoned with the arms of the city of London, surmounted by the Goldsmiths' Company, and the Sheriffs' arms; and around are the emblems of Power; figures of Plenty and Justice; and Shipping, with London Bridge and the Tower of London. The whole is beautifully executed at the establishment of Mr. Alderman Carter, Cornhill.

An Emigrants' Home.—A company, with a capital of £25,000 in £5 shares, is proposed for the purpose of establishing an Emigrants' Home at Tilbury, opposite Gravesend, at the terminus of the railway. It is stated that an establishment, affording every needful accommodation and comfort for 664 individuals, can be erected for £20,000, and that respectable persons have offered to lease such an institution at seven per cent on the outlay. Similar projects are referred to as having been carried out with great success at Hamburg and Bremen. By this means emigrants can be protected from the chief troubles and expenses as well as the serious deceptions to which they are at present exposed. The undertaking was suggested by Mrs. Chisholm to Mr. Samuel Sidney, by whom it will be managed.

Royal Panopticon of Science and Art.—This institution was reopened on Monday, having during the recess, undergone considerable revision and rearrangement, under the management of Dr. Biber. The most interesting addition to the attractions of the Panopticon is a series of panoramic and choramic views of Verona painted on glass, and displayed by means of a large lens on a gigantic canvas. The subjects comprise a general view of the city and environs, the interior of the Cathedral, the Piazza della Erbe, the Tomb of the Scaligers, and the exterior and interior of the Church of San Zenone. After these views a series of chromotropic effects was exhibited, in which an almost endless variety of singularly beautiful figures was produced. As a termination to this exhibition, during which the hall is darkened, the fountain in the centre was set in action, and the stream of water rendered luminous by means of optical apparatus. Some extraordinary and beautiful effects were thus produced, the fluid appearing now like a liquid stream of fire, and again resembling a sparkling shower of silver. Loud and prolonged applause greeted this, as well as the whole series of optical displays. Music forms an important feature in the programme; the gigantic organ (one of the finest in the country) being exhibited at frequent intervals during the day by Mr. Best, the organist to the institution. Other musical attractions are offered in the performances of the Messrs. Distin on the flügel horns, and some glees and madrigals by a vocal quartet. Amusement and instruction are so blended in this exhibition that no visitor can fail to find a source of great delight and improvement; and we hail the re-opening of the Panopticon as an addition to the sources of rational enjoyment and mental improvement for the people.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c

We can confirm a paragraph of our gossip of some few weeks, on the subject of the last survivor of the very many persons mentioned by name in Boswell's delightful biography. Lady Keith Hester Thrale, the *Queeny* of Dr. Johnson, is still happily among us. Lady Keith travelled in Wales with Dr. Johnson, in the year 1774—now more than eighty years ago. Lady Keith is the mother of the Baroness Nairne. Sylvanus Urban, in chronicling the recent death of Dr. Johnson's god-daughter, supplies a pleasant picture connected with the existing memorials of our great moralist. Miss Langton, we are told, always wore, as a brooch, a beautiful miniature of her illustrious godfather, and was fond of giving away specimens of her needlework on which she had interwoven the words "Worked by Dr. Johnson's god-daughter." On a bracket, near the mantelpiece, in her best sitting-room, stood the chinamug in which he used to mix his favourite lemonade; and on another bracket stood the small china tea-cup and saucer which blind Miss Williams used to fill and refill so frequently for him. Memorials of this kind should not be lost sight of. Where are they now?

One of our winter exhibitions—and one that will prove attractive—is to be, we observe, an Exhibition (in Pall-mall) of by very far the best collection of Mexican Antiquities that has yet been brought into this country. The collection has been formed with great care, and at a great cost, by Mr. Young. We have seen a portion of the collection, and were much pleased with some choice examples, revealing traces of an Etruscan origin, that will afford matter for discussion among antiquaries and artists.

Lord Brougham, better known as Mr. Hobhouse, and the friend of Lord Byron, is making his appearance once more as an author. He is revising and correcting his once popular "Journey through Albania during the Years 1809 and 1810." Another great traveller is also on the eve of re-appearing as an author. Mr. Borrow is to give us a sequel to "Lavengro," under the title of "Romany Rye," with this motto, "Fear God, and take your own part."

A correspondent who signs himself "An Author of several Volumes of Poems," has requested to be informed of the name of the famous trunk-maker, of the last century, to whose care so many volumes of poetry were finally entrusted, and whose pretty daughter is still commemorated in the celebrated toast, "All round St. Paul's, not forgetting the trunk-maker's daughter at the corner." We, it so happens, can satisfy our correspondent. His name was Henry Nickless, and his death is recorded under the 18th November, 1750, as "Mr. Henry Nickless, master of the famous trunk-maker's shop at the corner of St. Paul's Churchyard, worth twenty thousand pounds." Of the daughter we can tell him nothing. The trunk-maker himself is additionally commemorated in Hogarth's "Beer."

A house in London often looked up to with interest by all who care for Sir Walter Scott, is on the eve of demolition—it has probably gone by this time. We allude to the St. James's Hotel, in Jermyn-street, where the great novelist lay so long insensible, on his way from Italy to Abbotsford. We remember to have seen this carried from out this house to the carriage—surrounded by his children and grandchildren—his vacant eye is before us while we write. We still see his silvery hair, and his long upper lip. This was Scott's last day in London. He has gone—his children have gone too; and only one grandchild remains, and she childless, of the family of the Scotts, of Abbotsford.

Another London alteration (now in hand), which our American brethren will regret as much as ourselves, deserves to find a place in our column of Talk. The iron blinds, bullet proof, and with which the great Duke of Wellington fortified Apsley-house during the ferment of the Reform Bill, have all but disappeared. The great Duke has ordered their removal, and all that will remain, before this week is over, of the fortifications of Apsley-house, as the great Captain fortified it, will be the stonework in which the iron cramps were set. We must regret their removal; but, we confess, that the present Duke having to live in the house, has studied his own comfort in ordering the alteration.

A new monthly publication, started to represent "publishers and booksellers," and styled "The Intelligencer," has a clever paper on the lottery of a sale of books. "A knock-out" is a *something* which few people understand; but here it is described with an air of truth, which we can in some measure confirm, from our own experience. The sacrifices of property at country sales are only too common:—

Nearly all the old booksellers in London some time since received a catalogue, from a country auctioneer, of a library sold at a house (lately in the occupation of a gentleman) a few miles from London. Now, though it was a large and valuable collection, they had only made one day's sale of it; for the books were much damaged together in lots. Very many of the booksellers went on the morning of the day, and all saw each other at the train, and knew each other's errand. As soon as we got to the country station, an obscure one, where nobody got out but this lot of booksellers, we seemed by mutual consent to keep together. After a little signalling and whispering it was made known that a *knock-out* was destined. By-the-by, ought I not to explain the word? Some may not know its meaning. A knock-out is a combination of bidders at a sale, who, deputing one to bid, save the increase of price which further competition causes, and subsequently have a private sale among themselves, where all the money got on the sale of the books over the price they gave at the public sale is divided among every member as a dividend. This is the best explanation I can give. I am no hand at it. Well, sir, to go on. We walked up a green lane from the station; and then arranged the knock-out, who was to buy, where the books were to be brought, and where we were to meet after the sale, and have our dinner. The sale went on; some of the neighbouring gentry were there, wishing to buy; but what with the prices we could give, and a little cleverly-administered "chaff" (don't admit the word, sir, if you don't like it, it means banter)—we drove them from the room, or made them pretty quiet. (Allow me here to say that I disapprove now of the whole proceeding.) We bought very nearly all the books—a nice lot they were—and had them carried in a harvest-waggon to the village inn, or Public, and there, when we were all assembled, placed on a side table in a large square room. How the rustics stared at us through the windows! What shall we have? was now a question very generally raised. Tea—suggested some one. Immense laughter followed the mild suggestion. It was agreed at last everybody was to order what he liked, and then the business began. As satisfied hunger succeeded the orders, in which brandy formed a considerable item, and with the drink in no mean quantities before us, and the tobacco-smoke round us, we proceeded to select a person to act as auctioneer. This done, the sale went on in comparative quiet for some time. The dark came on, the lights were brought in, and we were fast getting to the end of our job. Now, sir, began our troubles. Those persons who had already traded, and bought to the extent of their capital, and who had little to do but to drink, could not be restrained from interrupting. The room was cloudy, very thick with smoke; we, some of us, were cloudier than the room. The selling went on slowly. An occasional song disturbed business. As the night came on the confusion increased. The horses in the van which we had ordered to come set to, to take the books to London, while we went by rail, were stamping with impatience, cold in the dark and damp. It was ten minutes to twelve. In answer to a summons for more brandy-and-water, we were answered that they were out of the chief ingredient, and could get none in the village. What, the water? Oh no! that would have been inconsequence the brandy. Well, not at the Parson's irreverently bawled out a small and dirty trader. The greater part of them, excited by previous drink, rose in great wrath, at this reception sought to be made of an immense noise over the house, to the annoyance and irritation of the landlord. The man with the van at the door began to curse and swear, and it was evident something must be done with the books and the men. Some of the more sober among us (there was only one entirely in that blessed state, you know who) consulted with the landlord, and arranged for the summary transport the night of *Books and Buyers*. Some went into the van without any trouble. Some were persuaded in, and some had to be carried in, like the books. First of all, two sturdy agents sought out the auctioneer, he was under his own chair, they lifted him into the waggon and so with the books and all else that was necessary. The books were safely covered and packed at one end of the large vehicle, and the buyers at the other. One by one, even the more sober, fell asleep, and after a short and pithy conversation with the driver, who fully enjoyed the circumstances of the party, I fell into the same state. After a long nap I woke, we were passing market gardens and dewy fields. It was very early in spring, half-past three. I was soon asleep again, but when I was next time I found, on looking round [illegible] hour and half since I last woke. And, [illegible] awake. I found our waggon was stock still in the side of the road, the horses quietly feeding by the hedge, the driver in a loud snore, and all my associates asleep. I was not long waking John, the waggon rattled on, the unhappy buyers began to wake, to crawl from the heap they lay in, and rub their eyes; and if you had been in the Old Kent-road at six o'clock that morning, you would have seen us, sir, sleepy and seedy, and slow, coming to business. It was my last knock-out.

Moveable property, such as books, if of any value, will sell better in London than in any other place in Great Britain. We recommend this description of "a knock-out" to executors and guardians—to all, indeed, interested in obtaining the best market price for what they have to sell.

OBITUARY OF EMINENT PERSONS.

JOHN BUTLER, SECOND MARQUIS OF ORMONDE, K.P.

The sudden death of this much-respected and deeply-lamented nobleman, which occurred from a stroke of apoplexy, on the 25th ult., is universally deplored. His Lordship had only recently completed his forty-sixth year, having been born 24th August, 1808. He was the eldest son of James, tenth Earl of Ormonde, K.P. (on whom a Marquisate was conferred, 5th October, 1825), and grandson of John Butler, of Garryricken, to whom the family honours of the illustrious house of Ormonde were restored in 1791. By his mother, Grace Louisa, Dowager Marchioness of Ormonde, who is still alive, the deceased nobleman was grandson of the Right Hon. John Staples; and through his grandmother, Lady Anne Wanderford, was representative of the Earls of Wanderford.

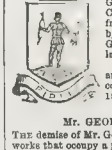
The Lord Ormonde married, 15th September, 1845, Frances Jane, eldest daughter of the Hon. Sir Edward Paget, G.C.B., brother of the late Marquis of Anglesey, and leaves four sons and one daughter; of whom the eldest son, James Edward William Theobald, Earl of Ossory, born 4th October, 1844, succeeds as third Marquis of Ormonde.

Few families in the Empire are so illustrious or so historic as that of which the Marquis was the heir. Deriving their surname from the office of Chief Butler of Ireland, conferred by Henry II. upon Theobald Walter, one of his companions in the Conquest of Ireland; the Butlers have ever since maintained the first position on the roll of Ireland's aristocracy. James, fifth Earl of Ormonde, was created Earl of Wiltshire, in England, in 1449. James, the second and great Duke of Ormonde, K.G., commanded, in chief, the forces of Queen Anne.

Lord Ormonde, whose death we record, was Hereditary Chief Butler of Ireland, Colonel of the Kilkenny Militia, a Lord in Waiting on the Queen, and a Knight of St. Patrick. He was also Vice-President of the Royal Dublin Society, was well known as an archæologist, and had gained distinction in literature by his "Autumn in Sicily."

The munificent room at his Lordship's splendid seat of Kilkenny Castle, is the richest in Ireland, in national and family records.

GEORGE LEITH ROUPELL, ESQ., M.D., F.R.S., PHYSICIAN TO ST. BARTHOLOMEW'S HOSPITAL.



This eminent physician died on the 29th ult., in Welbeck-street, London, after a few hours' illness. He was the elder brother of Mr. R. P. Roupell, the well known Queen's Counsel, and son of the late George Boone Roupell, Esq., one of the Masters in Chancery. The family of Roupell came originally from Hesse Cassel, and was first settled in England by Captain Roupell, an officer in William III.'s Guards, who accompanied that monarch from Holland in 1688.

Dr. Roupell was born 18th September, 1797, and succeeded to the estate of Chart Ham Park, co Sussex, at the death of his father, 19th January, 1838.

Mr. GEORGE FIELD, OF SION-HILL PARK.

The demise of Mr. George Field, the author of "Chromatics," and other works that occupy a prominent place in our artists' libraries, took place on the 28th ult., at his residence, Sion-hill Park, near Brentford. Mr. Field has succeeded in imparting to painters in elegant language, with opposite illustrations, a variety of important information upon various points of their art—especially on doubtful questions of science connected with optics, pigments, and chemical effects; and it is hoped that he has bequeathed to the world his unrivalled mode of preparing colouring substances; so that artists may still obtain Field's madders, Field's lemon yellows, Field's ultramarine, &c. One beautiful process he made known many years ago—his percolator by atmospheric pressure; for which he received a medal from the Society of Arts; an instrument which has been subsequently applied to the clearing of sugar, and, at our breakfast-table, to our improved cup of coffee. He was also the inventor of the Metrochrome, which enabled him so completely to explain the combinations, harmonies, and neutralising influences of the three primitive colours; also of the luminous cone or conical prism, which exhibits and explains so beautifully the phenomenon of the rainbow, and the principle of refraction producing colours. In all his works there was an exquisite admixture of science and of elegant taste; in all his writings, of knowledge and refinement.

Mr. Field was born of an old family, at Berkhampstead, in 1777. He died in his library, surrounded by his beautiful selection of literary, scientific, and artistic gems. He has desired to be buried beside his wife, at Isleworth, with a copy of his works in his coffin.—*From a Correspondent.*

Death of Mr. John Moore, the Publisher.—The well-known publisher of prints, illustrative of the turf and of our national sports, for the last thirty years, Mr. John Moore, of St. Martin's-lane, has fallen a victim to the prevailing epidemic. He died on Monday last, after an illness of ten days, of choleraic diarrhœa, at the age of fifty-nine years. Mr. Moore was born in Colchester in 1795, and was the architect of his own fortune. For some time he was a timber merchant, having a wharf on the Thames; but his chief business was in the publication of engravings of race celebrities, particularly the winners of the St. Leger, Oaks, and Derby. One of Mr. Moore's celebrated prints was the "Racing Creeks," which was engraved in the Illustrated London News. The late Mr. Moore was much respected; he was gifted with natural taste, and had great tact and energy.

The Cholera at Trinidad.—We regret to learn, by letters from Trinidad, that—after destroying Barbadoes, and greatly afflicting other islands—the cholera has at last visited Trinidad. On the 8th of September there were fifty deaths registered, and the panic among the inhabitants was at its height. The weather had been very dry and sultry; but the medical aid called in had been successful when administered in time.

"What a Falling Off!"—The fortifications of Bomarsund are now in the possession of a Swedish sailor, named Claes Berggren, who acted as an interpreter to the French Commander-in-Chief, Marshal Baraguay d'Hilliers, who made him a present of the ruins in acknowledgment of his services. He is now in treaty with some builders at Stockholm, for the purchase of the huge blocks of granite not destroyed by the British and French artillery.

An extraordinarily large field of white wheat has been grown this year in the parish of Sessay, near Thirsk, in the North Riding of the county of York. Some of the straws, when standing, exceeded six feet in length; the average length of the straws in the field would far exceed the average height of man; many of the ears were upwards of half a foot in length, and well filled, yielding betwixt five and six score full-grown corns. This field of wheat belongs to Mr. Smithson, of the Church Farm, Sessay, and upon the estate of the Right Hon. the Lord Viscount Downe.

Crystal Palace.—On Thursday week an elegant testimonial was presented to Mr. Henry Schallehn, the Director of the Crystal Palace Band, by the gentlemen who have been under his guidance, contributed so much to the gratification of the visitors. This testimonial, consisting of a baton of silver, richly chased and gilt, was designed and manufactured by Messrs. Lambert and Rawlings, of Coventry-street.

London and Staines Bridges.—These bridges cross the same river, and in the same counties, Middlesex and Surrey. They stand within the jurisdiction of the same city, the Corporation of London; they were designed by the same architect, Rennie. The [illegible] Sir Edward Lees, and [illegible] by Messrs. King and Queen, their late Majesties William and Mary.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A meeting of the Orange lodges of four counties was held in Belfast, on Tuesday, to express an opinion with reference to the recent outrage on the railway at Trelick.

M. de Kisseleff, ex-Ambassador of Russia at Paris, has just taken for a year an hotel in the Rue Ducale, at Brussels.

A "Sailors' Home" was opened at Leith, on Tuesday, by a public meeting of the influential merchants and shipowners of the place.

Cardinal Angelo Mai's library is likely to be brought to the hammer. It is valued at £16,000.

Mr. Rowland Hill has selected Mr. John Lowther Du Plat Taylor, of the General Post-office, to be his private secretary.

The King Regent of Portugal has sent the insignia of the Order of Isabella to the Duchess of Brabant.

By the demise of the 1st Marquis of Ormonde, a blue riband of the Garter of St. Patrick falls to the disposal of the Lord-Lieutenant of Ire and, also the Colonelcy of the Kilkenny Militia.

The late Mr. George Barron, of Drewton Manor, South Cave, near Hull, has bequeathed his valuable collection of coins and medals, worth above £2,000, to the Leeds Philosophical Society. The coins include Greek, Roman, Saxon, British, and Indian.

Mr. Edland, Professor of Chemistry at the University of Upsal, has just taken out a patent for an invention, by which messages can be sent by the electric wire simultaneously in opposite directions.

Lord Aberdeen has accepted an invitation from the Lord Provost and Town-council of Aberdeen to be present on the 9th instant at the public entertainment of his portrait recently painted by subscriptions from many of the citizens and the Town-council. An address is to be presented to the Premier, expressing approval of his policy with respect to the war.

The French Emperor has given 50,000f. from his privy purse for the establishment of lines of omnibuses between the camps and Boulogne-sur-Mer for the use of the soldiers. The omnibuses are to be gratis for the men, and are to leave each camp four times a day, and to return four times.

Archdeacon Denison has protested against the inquiry instituted by the Archbishop of Canterbury into the doctrines published by the Archdeacon respecting the real presence in the Eucharist, on the ground that he was formerly acquitted of the same charge by the late Bishop of Bath and Wells.

The King of the Belgians is expected at Vienna. It is not known whether he will visit any other spot of the Austrian dominions His journey excites great attention at Berlin.

The statistics of the Police Court of Newcastle-on-Tyne show incontestably an increase of drunken cases on the Sunday since the new Beer Act came into operation.

Great alterations will shortly be made in the subordinate members attached to the Russian Embassy in Vienna. It is said that the new Secretary and Attachés will be selected at St. Petersburg from the Old Russian party.

Viscountess Stratford de Redcliffe and family have arrived at Constantinople, and are at present residing at the British Embassy, at Therapia.

Dr. Cullen's ukase for contributions towards the new Roman Catholic University Fund was responded to on Sunday, in the Dublin chapels, to the amount of, nearly £1200.

The total yield of cotton in America during the season 1853-4 appears to have been about 2,930,000 bales; being a decrease over those of the two preceding years of—say about 392,882 bales less than it was in 1852-3, and 86,626 bales less than in 1851-2.

The specie arrivals of last week amounted to about £850,000. The exports included £300,000 on account of the Turkish loan, but were not otherwise considerable.

A proposed Cotton Spinning Company, at Bombay—the shares of which have risen from £100 to £250—has given an impetus to similar speculations there.

The Board of Guardians of the Barrow Union, Leicestershire, have resolved not to assist in obtaining the information necessary for forming agricultural statistics.

M. S. Lambert, who represents at Brussels the house of Rothschild Brothers in Paris, has been appointed Consul-General for Greece in Belgium.

In 1853, from May 15 to August 15, nearly 500,000 bottles of sparkling champagne were sent to Russia. This year, in the corresponding period, the number has not been 36,000.

The great composer, Rossini, has of late declined so much that there is no hope whatever of his recovery. A violent attack was lately near carrying him off, but he partially recovered, and was able to return to Paris. Even if he should live, it is said that he will never recover his clearness of ideas.

The average weight of the mails dispatched from London every evening is between 14 and 15 tons. The newspapers and bags weigh 12 tons 5 cwts.

Another claimant for the Earldom of Perth has emerged in the person of a pitman's son, who styles himself Thomas Drummond of Biddick, county of Durham, grandson and heir-male of James Drummond, sixth Earl of Perth.

The Cardinal Vicar of Rome has just published an edict, in which, after attributing the cholera to the sins of the Romans, he directs that the finger of St. Peter, the arm of St. Rocco, the heart of St. Charles, and other relics, shall be exposed to the adoration of the faithful, in order to avert the wrath of the Almighty.

The new Prussian Minister has withdrawn the Royal Arms of Prussia from the front of the mansion of the Legation, on Carlton-house-terrace.

Lord Cowley, who has returned to his villa at Chantilly, from Boulogne, has entered into a treaty for the Royal Château of Chantilly—late the property of the Duke d'Aumale.

The first section of the Bengal Railway was opened for traffic on the 15th of August.

Chevalier Bonelli has started the idea of having a Universal Exhibition at Turin, in 1857. It meets with great favour there.

The proposal of the Austrian Government to connect Wallachia with Austria by a telegraphic line from Cronstadt to Bucharest, has been accepted by the Wallachian Administrative Council, which has voted 7000 ducats to cover the first outlay

A few days ago, as the wife of a butcher, of Crossley, Wilts, was whitewashing their cottage, she pulled away an old board from the ceiling, when, to her astonishment and joy, a bag containing £370 in gold fell to the floor.

The Admiral of the Fleet, Sir Byam Martin, is now lying dangerously ill at his son's residence, Portsea. Admiral Giffard, the father of the late unfortunate Captain of the *Tiger*, is also lying dangerously ill at his residence in Southampton.

On Saturday last his Royal Highness Maharajah Dhuleep Singh, Prince of Lahore—at present the guest of the Right Hon. Sir G. Wood, at Hickleton-hall, Yorkshire—paid a visit to Doncaster, in company with the President of the Board of Control.

The Solicitors of Nottingham have agreed to allow their clerks a half-day holiday every week. The offices are to be in future closed at one o'clock on Thursday.

A Western American paper says that a short time previously a train, composed of nine waggons and fifty—Mormons—crossed the Missouri eastwardly in search of a new home. They had left the Salt Lake City on account of the oppression and immorality of their church.

A small number of bottle-nose whales made their appearance off the Priory Haven, Tynemouth, early on Saturday morning last. They appeared to be from twenty to twenty-five feet long, and spouted about, throwing up water for nearly half an hour; but were at length driven off the coast by a steam-vessel and other boats.

The Congregation of the Index at Rome has just prohibited a number of works, among which we find:—The "Civil History of Tuscany, from 1737 to 1848," by Zobi; the "History of the Despotism of the Popes, Emperors, and Kings," &c., by Delahiche and G. Latty; the "Most Celebrated Prisons of Europe, and especially of Italy," by Alhaize and Maquet; and "Visions and Inspirations, verified by various Priests," as having occurred to a Nun called Maria Gertrude; printed at Florence in 1853, with the approbation of the authorities.

The Grand Duke and Grand Duchess of Saxe-Weimar arrived at Stuttgart on the 22nd, for the purpose of being present at the high festivities held on the birthday of his Majesty the King of Wurtemburg. Her Majesty the Queen of the Netherlands had also arrived to be present on the anniversary of her Royal father's birthday, and was received with all the honours due to her station.

The silver produced from the mines of Great Britain and Ireland in 1853, is estimated at 200,000 ounces, worth, at 5s. 6d. the ounce, £109,660.

The St. Petersburg *Journal* publishes a decree forbidding the export of corn to Austria. The decree is to take effect from the moment a copy of it reaches the custom-houses.

A public park was opened at Macclesfield last week. A portion of the land necessary for the purpose was provided by private subscriptions. The Marquis of Westminster, as Lord-Lieutenant of Cheshire, and the Earl of Derby, the owner of Gawsworth, a neighbouring village, presided at the proceedings, which were attended by a vast body of the manufacturing population.

CHESS.

TO CORRESPONDENTS.

A. M., Richmond, Virginia.—Thanks for your attention. A copy, however, may be procured from Germany or France, for about one sixth of the sum you mentioned.

CHEMORGAN, In England, when the King Castles on his own side he goes to the K. Kt sq.; when on the Queen's side, he goes to the Q. B sq., and to no other squares.

CHESTER.—You should purchase one of Jaques' "Instructive" Chess-boards, in which the object you desire can be easily and economically effected. In these boards, by the aid of twelve small ivory knobs on the *external* edge, the Chessmen are instantaneously fixed in their respective squares, so that the game may be discontinued without any disturbance of the position being disturbed. Upon resuming play, you have simply to remove the knobs on the internal edge, and the men are all free again. This is a very ingenious contrivance.

F. STEVENS.—If the moves made subsequent to the Check are known, they should be printed.

B. W. D.—Such crude productions only give trouble. No. 1 can be solved in *three* moves.

No. 2 can by no form of words

J. P. N. The proposed move shall be examined

J. P. N. Right. Have attended.

JOSEPH.—In a week or two we have not room at present.

A Subscriber, Lancaster.—In the problem which forms the subject of dispute, we are of opinion with Mr. Kidd—with proper play, can win the game.

SPECTATOR.—Upon the terminus of Dr. Forbes's curious and learned dissertation on the Hyperborean Question.

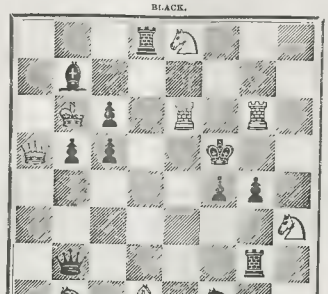
T. W., Hull.—We mentioned, last week, that the proposed Chess assemblage at Calstor was postponed to the 25th. Full particulars as to the distinguished players invited, the matches arranged, &c., may be obtained by applying to the Hon. Secretary, A. B. Skipworth, Esq., Calstor, Lincolnshire.

SOLUTIONS OF PROBLEM No. 553, by Orestes, Albert, Pickaxeguy, N. B., T. J. of Hexworth, Philip, Subaltern, Tooshetoon, Dr. Du Bourcon, A. Ko, R. St. Cosby, C. F. Q., Vernon, Major S., Curate are correct.

SOLUTIONS OF PROBLEM No. 554 by Dereven, F. H., Norwich, J. P., Dalston; T. A., Gerrans, J. L., Leith, R. F., Royal Artillery, H. M., G. P., Rev. T. M., Madras, D.D., are correct.

SOLUTIONS OF ENIGMAS, by Dereven, R. F., M. P., Sub, Ersesi, J. L., York, are correct. All others are wrong.

PROBLEM No. 555
By Mr. W. GRIMSHAW.
BLACK.



WHITE.
White to play, and mate in three moves.

MUSIC.

THE CONCENTORES SOCIETY.—To those who are acquainted with the various musical institutions of the metropolis, the Concentores Society is well known. But we may inform the more general reader, that it is an association of long standing and great distinction, formed, as its title indicates, for the cultivation of vocal harmony. All its members are composers; and the most eminent among our English musicians of the last thirty years stand on its rolls. At its meetings the members preside in rotation; and it is expected that the President of the evening shall bring forward a certain number of new vocal pieces—glees, madrigals, canons, &c., of his own composition. These are sung, and then criticised by the company in a good-humoured colloquial way, but with freedom and acuteness; and, as every person who takes a share in the conversation is himself an artist, many remarks are often struck out in these off-hand discussions which are of real value to the art. Some of our finest and most popular glees have been first produced and discussed in this way at meetings of the Concentores Society. But the entertainment of the evening is not confined to the performance of new pieces; they are intermixed with older compositions by the greatest masters. Hence an evening at the Concentores is one of the most intellectual, as well as agreeable, that the genuine lover of music can possibly spend. The Society held its first meeting of the season on Tuesday evening, at Gresham College. Mr. M'Murdie, Mus. Bac., was the President, and Prof. Taylor was Vice-President. Several new M.S. Glees and Canons, by the President, were sung with great effect, and received with great and well-merited applause; and many other compositions, by past and present members, performed alternately with those of the President, contributed to form a varied and most interesting entertainment.

THE THEATRES.

ST. JAMES'S.—"The King's Rival" is the name of the new drama by Messrs. Taylor and Reade, produced on Monday, as the opening-piece for commending Mrs. Seymour's highly laudable experiment to the public. It is in five acts, and concerns the marriage of the *Duke of Richmond* (Mr. Mead) with the *Miss Stewart* (Miss Glyn), a base portrait served for the Britannia on the English halfpence, and who was one of the flames of *Charles II.* (Mr. G. Vandenhoff). The authors have been ambitious to show their reading, and to exhibit the manners of that profligate reign in their scenes and situations; and to such an extent, that the immediate story is sometimes lost in the crowd of accessories. This sort of *drame* is frequent on the French stage; but the English public have yet to learn its proper limits, and, in the present instance, the difficulty was increased by the grossness of some of the incidents in which *Nell Gwynne* (Mrs. Seymour) is introduced as a participator. We have a further objection to this character as a second and worse edition of *Peg Woffington*. Authors seldom benefit by repeating themselves; and the inferiority of the new portrait is obvious. The exhibition of Court vices is not pleasing; and the satire, in these times, not needed. The historical references and colourings are, however, skilfully introduced; but, in their selection, the same judgment is hardly displayed. *Major Wildman* (Mr. Stuart), who excites the *Duke of Richmond* to conspiracy, is brought into Springgarden merely for the influence of the plague, and apparently dies on the stage, with the documents of the conspiracy about his person. Whatever may be the historical propriety of such an incident, the audience resented its introduction as esthetically revolting, and the curtain fell on the third act to no little sibilation. The play was indebted for its recovery almost entirely to Miss Glyn, who performed the latter scenes with a force and eloquence that literally "commanded success." Her part, indeed, culminates artistically to a climax; the earlier situations being scarcely more than preparations for the last. They are however, written with subtlety of intention; and were performed with a mixture of dignity and pathos, which proved the accomplished actress. But though in this manner saved, we fear that we are not justified in asserting that the new drama will become attractive; and we, therefore, cannot but regret that the authors have not chosen a subject more popular in its theme, and that they were not more happy in its treatment. The drama was succeeded by a farce from the pen of Mr. Charles Selby, under the title of "My Friend the Major;" in which Mr. Toole enacts a bailiff, who accompanies his captive, under the *soubriquet* of "Major," to the appellation of the piece, to a ball, and there astonishes the company with his eccentricities, somewhat after the fashion of "the dancing barber." Mr. Toole was much applauded, and provoked excessive laughter. His dancing, indeed, was encored. The house was full, and the performances lasted to a late hour. Abridgment would be beneficial to both productions.

DRURY-LANE.—Mr. Brooke commenced his parting performances on Monday, with the character of *Virginius*. On Tuesday he performed the *Hunchback*; and on Wednesday, *Richard III.* It is not needful to analyze the performer's merits in these or the other parts (a new one every night) set down for this brief an l farewell engagement. Mr. Brooke's style—whatever its merits or its faults—is now generally appreciated; and certainly no means have been omitted to ensure his popularity and success.

MARYLEBONE.—This theatre re-opens this evening with Shakespeare's "As You Like it," pictorially illustrated. We are requested to state that Mr Edward Murray has returned to the establishment, as acting manager. A new and original tragedy, by Joan A. Herand, Esq., is underlined as an active preparation, the subject being in British lore, derived from the chronicles of Geoffrey Monmouth. Its full title, as advertised, is "Vidina; or, the Mother's Tragedy—a Legend of Early Britain." Some extraordinary scenery and costumes are promised by way of appropriate illustration to this ambitious production; in which it is expected that Mr. and Mrs. William Wallack, in their respective characters, will both eve decided success.

PRINCESS'.—A new play, in three acts, by Mr. Douglas Jerrold, entitled the "Heart of Gold," will be produced on Monday.—The OLYMPIC also re-opens on the same evening.

THE LOWER CANADIAN AGRICULTURAL EXHIBITION.

(From a Correspondent.)

On the morning of the 13th September, Quebec and its environs presented a very gay appearance, reminding one of the industrial fêtes which are so popular in the agricultural counties of the Mother Country. Flags were flying from every available elevation; crowds of pedestrians and long strings of carriages blocked up the narrow approaches to the fortifications of Quebec, as they wended their way to the Plains of Abraham, on which the Annual Exhibition of the Lower Canadian Agricultural Society was held.

His Excellency the Governor-General arrived on the ground at two o'clock, attended by his staff. He was received by the President of the Lower Canadian Agricultural Association, the President of the Board of Agriculture, and the members of the Local Committee, who presented him with an address. Lord Elgin (who was enthusiastically received) replied, congratulating the Society on the success which had attended their exertions in promoting improved agriculture in Canada.

About 5000 persons received admission during the day, and it was impossible to walk among the assembly and hear its conversation carried on in English and French indifferently, and not be struck by the complete fusion of races which it has been the constant aim of Lord Elgin to effect, and in which he has so signally succeeded. In 1776 Wolfe and Montcalm fought and died on this very plain, which, in 1854, has become the scene of the friendly competition of a cattle-show!

The band of the 26th Regiment—the only corps which recent arrangements will leave in Canada—was in attendance.

The stock exhibited showed a marked improvement over former years; the horses especially were much and deservedly admired; but the Society have still much to effect in the improvement of other descriptions of cattle.

The various Fire Companies of Quebec, Montreal, and one from the neighbouring State of Maine, were present. Their friendly competition for a prize was not the least amusing feature in the day's entertainment; and their gay dresses added greatly to the picturesque character of the scene.

THE FAUSSETT COLLECTION OF ANTIQUITIES.

AT the recent Meeting of the British Association at Liverpool, Mr. Wright, M.A., F.S.A., read an important and interesting paper upon the Faussett Antiquities. As this Collection has been of late the subject of so much discussion, and as it is, in fact, an object of national interest, we will quote some extracts from Mr. Wright's lecture, with Engravings of a few articles from the Collection, which is described as the finest assemblage of Anglo-Saxon Antiquities of the pre-Christian age ever yet made. After an account of the researches of the Rev. Bryan Faussett, of Heppington, near Canterbury, who formed this Collection, and of Douglas, the author of the "Nenia Britannica," and of their conclusions and opinions on the subject, Mr. Wright proceeded to inform the meeting that they had now before them in the Faussett Collection alone, the contents of between seven and eight hundred graves, which had furnished an almost indefinite variety of articles; and this variety would no doubt have been increased but for the perishable materials of which many of those placed in the graves were composed. In these interments the body was usually laid on its back in the middle of the floor of the grave. In the case of a man, we almost always find close by the right shoulder the iron head of a spear, and in general we may trace by the colour of the earth the decayed wood of the shaft, until near the foot of the skeleton lies the iron-spiked ferule which terminated it at the other end. We sometimes also meet with one or more smaller heads of javelins, or arrows. Closer to the side of the skeleton lies usually a long iron broadsword, not much unlike the claymore of the Scottish Highlander, of which it is probably the prototype. Another article, peculiarly characteristic of the Saxon interments, is the knife, the length of which is generally about five or six inches, although at times it extends to from ten to eleven inches; and then from its shape it must have been a very formidable weapon, independent of its utility for other purposes. It has been pretended that it was from the use of this instrument, called in their language a *seax*, that our forefathers derived their name of Saxons. Over the breast of the Saxon warrior is generally found the iron umbo or boss of his shield. Such are the more common arms found, without much variation, in the graves of our Anglo-Saxon forefathers. The miscellaneous articles are much more varied. Of personal ornaments, the first that attract our attention are the fibulæ, or brooches, and the buckles. The latter are usually of bronze gilt, and are often very elaborately ornamented; and many of the fibulæ which are found upon male skeletons, as well as females, are extremely rich and beautiful. In the Kentish tumuli the prevailing form is circular, and they are often of gold, profusely ornamented with filigree work, and with garnets, or other stones, or sometimes glass or paste, set usually upon chequered foils of gold. The use of this fibula appears to have been to fasten the mantle over the breast, where it is most commonly found. Some of the finest examples of the Saxon gold fibulæ occur in the Faussett Collection. Their general size is from an inch and a half to two inches in diameter; but the Faussett collection possesses one of considerably larger dimensions, which was found in the grave of an Anglo-Saxon lady, on Kingston Down. This magnificent ornament is no less than three inches and a half in diameter, a quarter of an inch thick at the edges, and three-quarters of an inch thick at the centre, all of gold, and weighing between six and seven ounces. It is covered over with ornaments of filigree work, in concentric circles, and is set with garnets and with pale-blue stones. The sole use or pin on the back is also ornamented and set with garnets. It was found high on the breast, near the right shoulder. Other jewellery is found in abundance, and in a great variety of form. The most common material of beads is glass or variegated clay; the latter made with great skill, and often pleasing patterns. It may be observed that we sometimes find a string of beads round the neck of a man; and other circumstances show that there were Saxon *exquisites* who were vain enough of their personal adornments.

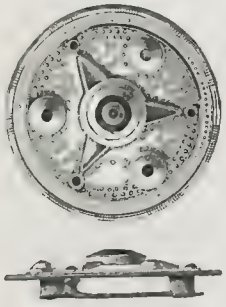
The interments of the Anglo-Saxon ladies are generally accompanied with a number of articles of utility as well as of ornament. By a lady's side, we usually find the remains of a bunch of domestic implements, somewhat resembling the article brought into fashion a few months ago, under the name of a "châtelaine."

A great variety of household utensils, of different kinds, are also found in the Anglo-Saxon graves. The pottery, when not Roman, is of a rude construction; and, in fact, it is not very abundant; for our Anglo-Saxon forefathers, for several ages after their settlement in this island, seem to have used principally pottery of Roman manufacture. But if the Anglo-Saxon earthenware was rude and coarse in its character, the case was quite different with the Anglo-Saxon glass, which is rather common in the graves of Kent. The glass of the Anglo-Saxons is fine and delicately thin. It is found chiefly in drinking-cups, though a few small basins and bottle shaped vessels of glass have been found. The form of the drinking cups will be best understood by a diagram. It will be observed that they are either pointed at the bottom or rounded in such a manner that they could not stand upright.—a form which it is supposed was given them to force each drinker to empty his glass at a draught. This practice is understood to have existed down to a much later period, and it is said to have given rise to the name *tumbler*, applied originally to a drinking-glass which was never intended to stand upright.

After describing various other articles found in the Anglo-Saxon graves, Mr. Wright went on to remark that a careful comparison of them showed how little we have hitherto really understood of the degree of civilisation existing among the Anglo-Saxons before their conversion

THE LOWER CANADIAN AGRICULTURAL EXHIBITION.—(SEE PRECEDING PAGE.)

to Christianity: that with one interment has been found a pair of compasses; and in several instances, scales and weights have occurred. Mr. Rolfe obtained from the interesting cemetery at Osengell a pair of delicately-formed bronze scales, with a complete set of weights, all formed from Roman coins. It is remarkable, also, that some of those graves contain cowrie shells—articles which are only found on the shores of the Pacific. Several of these are in the Faussett Collection.



ANGLO-SAXON FIBULA.

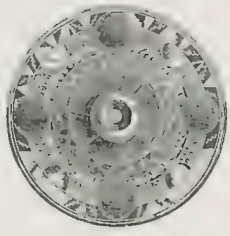
Mr. Wright proceeded next to dilate on the ethnological importance of these researches. It becomes interesting to us to know if there are peculiarities in the remains found in the Anglo-Saxon graves which correspond with the ethnological division given us by the historian; for it is in this manner that the science of archæology becomes serviceable to ethnology and to history. The lecturer enumerated certain articles which did present such peculiarities, according to the district in which they were found. Thus, the fibulæ of the people of Kent were almost all round; but, when we turn to the collections made from the graves of East Anglia, we find the fibulæ assuming a totally different form, which has been termed cross-shaped, because the general outline is that of a single or double cross. As far as observation has yet gone, these cross-shaped fibulæ prevail wherever the Anglo race settled.

Mr. Wright next pointed out the light thrown on the subject by discoveries made in the Teutonic cemeteries on the Continent; and deduced from this and other circumstances, some interesting views on the condition of our pagan Anglo-Saxon forefathers.

LARGE ANGLO-SAXON FIBULA.

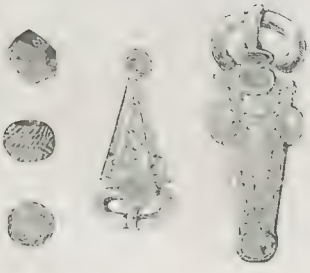
I need not say (Mr. Wright concluded), after these considerations, that the study of the interesting objects now exhibited to you is one of national importance, and that the collection made by Bryan Faussett, ought to be considered as, in the highest sense of the term, a national monument.

I cannot therefore help sharing largely in the regret felt by I believe every Englishman who has reflected on the subject, at the manner in which this Collection has been rejected by the Trustees of our great National Museum, and for the sort of an excuse which was made for that rejection, when its propriety was questioned in the House of Commons. It was not only from being transferred to the Continent, or from passing into the hands of some other collector, that this Collection was saved by the intelligent zeal of Mr. Mayer; for I have reasons to believe that Mr. Mayer actually stepped in between the British Museum and the public auction room, and that if he had not purchased them, the whole Collection might now have been scattered



ANGLO-SAXON FIBULA.

in small lots all over the world. I must add, that we are about to receive from that gentleman a benefit, for which we might probably have looked in vain but for the chance which threw the Collection into his hands. Mr. Mayer is already proceeding with the publication of the whole of the Faussett manuscripts, to be illustrated by engravings of the articles forming this Collection; and he has wisely placed it under the editorial care of an antiquary whom I consider the most capable of all our scholars to perform such a task efficiently—Mr. Roach Smith. Whatever Bryan Faussett's antiquarian knowledge may have been, he was a most careful observer and faithful recorder.



ANGLO-SAXON BUCKLES AND BEADS.

ANTIQUITIES, FROM THE FAUSSETT COLLECTION, AT LIVERPOOL.

PRESENTATION OF COLOURS TO THE CAMBRIDGESHIRE MILITIA, AT ELY.

NOOKS AND CORNERS OF OLD ENGLAND.

STONEY MIDDLETON, DERBYSHIRE.

THIS picturesque and truly rural retreat was the paternal home of the late Lord Denman. His Lordship was residing at Stoke Albany, in Northamptonshire, at the period of his death; but his family seat was at Stoney Middleton, in the valley of the Derwent. Here lived his Lordship's father, the celebrated Dr. Denman, one of the Court physicians of George III., and the author of several important medical works: he was the son of a farmer or tradesman at Bakewell, in which place for many generations the family had resided. Dr. Denman had three children—Thomas, the late Lord; and two daughters: one of whom married Sir Richard Croft, who attended the unfortunate Princess Charlotte during her accouchement; the other was married to Dr. Baillie. Dr. Denman usually resided at Stoney Middleton—then a farm-house of the better description, but greatly improved, and converted into a charming residence by Lord Denman, who generally passed here his legal vacations, and principally resided here subsequent to his retirement from the Bench. As the seat of the distinguished physician and lawyer, therefore, Stoney Middleton possesses a twofold interest. It is one of the most picturesque valleys of Derbyshire, its beauty being greatly increased by the precipitous character of the hills or rocks by which it is bounded. Here the Castle Rock rises to a vast height, and obtains its name from the singular and turret-like form which its craggy projections and points assume. Here are warm springs, from which the Romans are supposed to have established a bath: the temperature of the Middleton waters is two degrees higher than that of the warmest springs at Matlock.

In the *Derby Telegraph*, we find the delightful locality thus described:—

On entering the village, after leaving the quiet and secluded seat of Lord Denman on the right, we soon come into the opening into the dale, along which the high road to Buxton and Castleton passes. The village itself is irregularly built along the valley and up the sides of the steep rocky hill: the houses are built of the rough limestone in which the place abounds. In the valley, or dale, several good substantial houses, replete with comfort and convenience, and some good inns, are situated. The church is at the east end of the village, near the seat of Lord Denman, is an octagonal Grecian building, with a square tower on its west side. Near it are the Baths. But the glory of Middleton is its dale, at the opening of which the rocks gradually rise in all their nakedness on the right, towering above the houses; while, on the left, the rugged slopes are thickly wooded between the habitations.

STONEY MIDDLETON, THE SEAT OF THE LATE LORD DENMAN.

PRESENTATION OF COLOURS TO THE CAMBRIDGESHIRE MILITIA.

NEVER since the year 1847, when Sir Harry Smith, the hero of Aliwal, passed through Ely, and a public breakfast celebrated his return to his native Isle, has that ancient city presented so bustling and animated a scene as it did on the 26th ult., on the occasion of the Countess of Hardwicke presenting Colours to the Cambridgeshire Militia, previous to their leaving for Ireland. The villages within many miles of the city nearly emptied themselves; trains brought their living cargoes; the streets were alive with pleasure-seekers. The Earl of Hardwicke, the Countess, and family arrived at the Bishop's Palace on the previous day, when the officers of the Militia were invited to a sumptuous banquet.

On entering the Cathedral a novel sight presented itself. On a platform in the octagon were exhibited, resting on piled arms, the flags of the Cambridgeshire Volunteers of 1798, now to be superseded by their brighter-looking successors. About half-past ten o'clock, the new Colours were brought into the Cathedral, in the custody of an escort of a Grenadier company. They were then uncased, and mounted on the platform with the others. Passing and re-passing, with slow and measured tramp, were the military guard; thousands of both sexes were hurrying in. As the clock struck eleven, the Countess of Hardwicke walked up the aisle with the Bishop of Ely, followed by the Earl of Hardwicke, Lord Royston, and the Ladies Elizabeth, Mary, and Agnes Yorke; then came the Canons in residence, the Minor Canons, Lay Clerks, &c. The choir was filled.

At the conclusion of the service, the Lord Bishop ascended the pulpit for the purpose of consecrating the Colours. Time was given for the soldiers to march in, and for the vast assemblage to arrange themselves, and then his Lordship delivered an impressive prayer, concluding as follows:—

Grant, O Lord, that we may acknowledge Thine Almighty power, and Thy Sovereign will in all the events of that warfare in which we are engaged, and if Thou art pleased to bless us with victory, give us grace to use it with moderation, justice, and charity.

Grant, O Lord, that wherever these Banners are unfurled, they that guard them may put their trust in Thee, and remember that Thou art King, be the Earth never so unquiet. Shield them from all harm; inspire them with valour and patience; and teach them, amidst all their perils and hardships, to show forth in their lives the united graces and duties of Christian soldiers.

Grant, O Lord, to these Thy servants Thy gracious favour and protection; crown them, if it be Thy good pleasure, with success in their enterprise, that, together with us, they may enjoy the quietness and the plentcousness of peace; and with a thankful remembrance of Thy mercies, may unite in rendering praise and glory to Thy Holy Name through Jesus Christ our Lord. Amen.

At the conclusion of the prayer a hymn was sung. After which the Bishop pronounced the concluding blessing.

The Ladies Elizabeth and Mary then each took one of the Colours, the Countess being in the middle. His Lordship, Lord Royston, and the Bishop followed; then came the Clergy and the crowd. The procession, headed by the two lovely young ladies, then moved down the nave between the troops at present arms—the organ playing "God Save the Queen"—to the west entrance; from thence proceeding to the Palace-green just opposite, where a platform was erected, covered with crimson cloth, from which the presentation of the Colours was to be made. A very fine effect was produced by the organ playing "God Save the Queen."

The regiment being drawn up with arms presented, Colonel Duncombe being on horseback fronting the dais, the Countess rose from her seat, and, advancing towards the edge, supported by the Earl on one side, and her daughters on the other, read an eloquent address, concluding thus:—

Colonel Duncombe, officers, non-commissioned officers, and soldiers—I present you with these Colours—I call upon you to follow them—for, doubtless, in the hands of such officers, they will lead you to the path of glory! To respect them—because, in this favoured land, they represent honour, order, and freedom! And to die for them, if necessary

THE LATE MR. HENRY FOURDRINIER, THE PATENTEE OF THE PAPER-MAKING MACHINE.—(SEE MEMOIR, AT PAGE 356.)

In defence of your most beloved Queen and country. I now wish you a heartfelt farewell. And may God bless, direct, and prosper the Cambridgeshire Militia.

Colonel Duncombe replied, thanking her Ladyship in the name and on behalf of the regiment.

The band then struck up "God Save the Queen." The regiment then defiled in front of her Ladyship; and, as the colour-sergeants passed, the Colours were received by them from her Ladyship, and were borne to their proper position. The regiment then marched to their practice field, "The Oakery," on the Lynn-road; and the Earl and his family, and numerous guests, proceeded to the palace to lunch. The Earl, Countess, and family afterwards went to the field to witness the evolutions.

The 3rd company was put through the company's drill by Captain Bendyshe, with which his Lordship expressed his entire approbation.

The review being completed, Lord Hardwicke addressed the regiment, surrounded by from eight to ten thousand spectators. His Lordship spoke in high terms of both officers and men, their state of discipline, and efficiency, considering their training altogether of only eighteen or twenty weeks. The high praise of his Lordship, advice, and encouragement were forcibly given; and, no doubt, will make a lasting impression upon the mind of every soldier present. The address was received by the regiment with marked attention, and loud cheers from the civilians, echoed by the soldiers.

Lord Hardwicke dined with the officers. Colonel Duncombe gave a dinner and ball to the sergeants, about thirty in number—to whom the greatest praise is due for the manner in which they have trained the men; and every soldier had double rations of meat, a pound of plum-pudding, and a supply of beer.

NATIONAL SPORTS.

From twice one hundred thousand throats rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course of victory.
SIR FRANCIS DOYLE.

A LITTLE meeting at Ruthin, on Tuesday, and the Caledonian Hunt at Stirling (which hardly delights the Scottish chieftains as it was want to do in the General Chase-6 and Inheritor times), on Wednesday, Thursday, and Friday, are the only country fixtures of the racing world during the ensuing week—which will, however be a very great one at Newmarket. There are eleven matches here, during the five days, but none of them possess interest. Tuesday will be a very exciting day, as, although the Royal Stakes seem booked for Scythian, there are the Cesarewitch, the Whip, and the Clearwell in addition. Grecoules Esarient, Polydora colt, Strood, and Oulston are all in the last-named; and Stockwell will most likely meet Kingston for the Whip. Mr. Morris's horse must be very stale, but still we should doubt whether Stockwell can have done work enough this dry weather, to carry him over the beacon course successfully. Lords Derby and Glasgow never seem tired of watching with each other, and they have now arranged that the annual produce of their mares, Clarissa and Tour de Force, shall run at two years old against each other, at Liverpool, for 200 h. f. in 1856-57.

It seems a peculiarity of the Aviemore Coursing Meetings, that they begin on a Saturday, and the two fixed for this year are no exception to the rule. The second one of them, which begins on the day after the Caledonian Hunt, and the North Union (Antrim), are only public meetings advertised for any week. The Englishmen are to work in earnest the week after, at Market-Weighton, and then Wiltshire and Lancashire, put their dogs in the couples at Amesbury and Southport. The former of these meetings is at present a week in consequence of the very hard ground. Seventeen animals are entered for the Warwick Steeplechase, Bourton and British Yeoman being among the number.

Apropos of fishing, we may state that the past was the worst season ever known in the Nene, but that the Pitfour salmon fishing on the river Tay have just been let for the ensuing one, at an advance of £300, or nearly two-fifths. The Cheltenham people expect great things from Captain Weir and his stag-hounds; but, as yet, very few packs have advertised their meets. Much may be said to be over; but there are two rowing matches on the Thames next Monday.

On Thursday Lord Exeter's horses will be sold at Newmarket. Stockwell is not among them; but they include Natchell, seventeen animals in training, and sixteen yearlings. Strood, half-brother to Stockwell, is the only lot at all likely to create any great competition among the two-year-olds, as he is "warranted untried." While Lord Exeter thus virtually retires, Lord Anglesey is coming forward; and two of his colts, Astrologer and Red Fern Fum—purchased at Mr. Jacques's sale, and under W. Day's care—are entered in the Stockbridge Derby. The Duke of Beaufort is also taking a few nominations; and we hear no more whispers than the Duke of Bedford is likely to retire. The Turf could very ill spare him.

Mr. Greville and Mr. E James, Q.C., have, it is said, arranged the "Rous *v.* John Scott" affair; but it is not known for certain whether the charge and the withdrawal will be sent on the Jockey Club roll, or appear in the sporting journals. A Derby explanation, apparen ly on authority, has already been put forward by "Argus" in the *Morning Post*.

The defeat of Bonnie Morn by Rifleman gave the Ring a double chance of venting their feelings on the matter; and their cheers for "The Squire" were twice as lusty in consequence. The racing world is promised another work, on the plan of "Holcroft's Memoirs," as G. Boast, an ex jockey and trainer, is anxious to write his experiences, when a sufficient number of subscribers can be found. The *Sporting Magazine* has just commenced the "Recollections of the Late Sam Chifney," which extend over a period of sixty years, when George IV. was the light of Ascot and Newmarket. The first chapter treats of his pranks at "the little town in Suffolk" (A.D. 1790), as follows

Five harvest-moons had waned since the merry heart and splendid presence of "George Guelph" had ceased to enliven these revels. The Newmarket breakfast-tables were no longer on the *qui vive* for the news of some fresh practical joke, which had been played off by him at the club overnight. The French Princes had now to be coaxed vigorously for twelve hours, before he would forgive the Royal thrust which sent him suddenly overheard into the pond before its windows, as he bent over to examine *de beautiful fish of gold*; and even Bow-street Townsend had ceased to look grim and discomforted, when the wags would persist in asking him, if "*he had found that door key.*" The Royal stem; of twenty-five was no longer to be seen issuing out of the palace stables, with their lads in scarlet liveries, and streaming across the Flat or up the Bury-hill, in Indian file; and a massive but finely-formed outline in an overcoat with a fur collar, was no longer dimly descried at the ending post by samuel Chifney, as he rode the trials at five o'clock on a grey September morning.

CHESTER AUTUMN MEETING.—Tuesday.

Shorts Handicap.—Amy, 1 Horatia, 2.
Mostyn Stakes.—Orcon, 1. Mrs. Bigby 2.
Tradesmen's Welter Cup.—Bonhance, 1. Milkboy, 2.
Chester Nursery Stakes.—Maid of Cadiz, 1. Evangeline, 2.
Innkeeper's Plate.—Verulam, 1. Eulogist, 2.

WEDNESDAY.

Handicap Sweepstakes.—General Victor, 1. Shoreham, 2.
Wynnstay Handicap.—Lady Palmerston, 1. Sister of Mercy, 2.
Chester Handicap Stakes.—Jetty Pretty, 1. Medal, 2.
Plate.—Sir Agravaine.—Young Hack, 1. Pope Joan, 2.
Selling Race.—Louise, 1. Lady in Waiting, 2.

YORK RACES.—Thursday.

Juvenile Handicap. Connore filly, 1. Barods, 2.
York and Ainsty Handicap.—King of Trumps, 1. Snowdon Dunhill, 2

WREXHAM RACES. Thursday.

Wynnstay Handicap. Maid of Team Valley, 1. Spinner, 2.

FRIDAY.

Gold Cup.—Whalebone, 1. Maid of Team Valley, 2.

TATTERSALL'S THURSDAY.

CESAREWITCH STAKES.—7 to 4 agst Scythian; 5 to 1 agst B. O. (t); 9 to 1 agst Rattle (t); 25 to 1 agst Indian Warrior (t). 25 to 1 agst Redo-mell (t). 30 to 1 agst Radcliffe Hero (t); 30 to 1 agst La Belle (t); 33 to 1 agst Jack Spaniard (t); 40 to 1 agst Stampedo (t); 50 to 1 agst Blubelwolf (t). Ptolemy is struck out.

CAMBRIDGESHIRE STAKES.—5 to 1 agst Rattle (t). Alembic is reported "dead"

DERBY.—8 to 1 agst Gravesend Sentence; 14 to 1 agst St. Hubert (t); 15 to 1 agst Lord of the Isles (t); 16 to 1 agst Rifleman (t); 16 to 1 agst Oulston (t).

CALIGRAPHY.—We have lately seen a most laborious specimen of writing, executed by Mr. Robert Leech, of North-street, Leeds, during the leisure of many years. It consists of four volumes, of thirteen folios, each twenty-eight inches by forty-one inches, containing figure illustrations of Scripture history, the outlines being filled in with quotations from the sacred text, descriptive of the subjects illustrated. The whole has been drawn or written with the pen, and is vigorous as well as minute.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. F. A. Dawson, B.A., to Buscot, Berkshire; Rev H. Ashington, M.A., to Brancewell, with Dunsby and Alnwick annexed, Lincolnshire; Rev. J. Barrow, M.A., to Gateshead, near Newcastle, Isle of Wight. *Incumbencies*: The Rev. T. Fenton, B.A., to Hugil, or Ings, Westmoreland; Rev. W. Prince to Plehil.

MR. J. B. KINGDON, B.A., of Trinity College, and Mr. W. O. Cleave, B.A., Fellow of Jesus College, Cambridge, have been appointed Assistant-Masters at Bromsgrove Grammar School.

HEADSHIP OF ST. EDMUND HALL, OXFORD.—The Headship of this society having been declined by the Senior Fellow of Queen's the Rev. W. F. Audland, D.D., and by the Second Fellow on the list, the Rev. W. Monkhouse, B.D., was offered to the Fellow next in rotation, the Rev. John Barrow, B.D., Junior Bursar and Librarian of Queen's. Mr. Barrow immediately expressed his willingness to accept the office, and will undertake its duties at the commencement of the ensuing term.

CLAYGATE, NEAR ESHER.—On Sunday last, two sermons, appropriate to the occasion of the national "Thanksgiving for the late abundant Harvest," were preached by the Incumbent, the Rev. Thomas Sedger, M.A., in the village church of Claygate, Surrey; and a collection, after each service, was made. The total amount was £2 7s. 6d., which has been equally apportioned to three Church Missionary Societies, viz., the Society for Promoting Christianity among the Jews, the Church Missionary Society, and that for the Propagation of the Gospel in Foreign Parts.

ON Monday the first stone of St. John's Church, Deptford, was laid by the Archdeacon of Middlesex. The church is to be a large handsome Gothic structure, beautifully situated on a hill adjoining the Lewisham-road. A number of the clergy and gentry of the neighbourhood were assembled. Archdeacon Sinclair stated that a munificent individual had placed £2,000 in the hands of trustees to build a church, parsonage, and schools in the parish of Deptford; and that, to meet this contribution, another liberal friend of the Church (James Lucas, Esq.) had presented him with an eligible site and garden for a parsonage, and also with commodious sites for the church and for schools.

SIR W. MOLESWORTH IN EDINBURGH.—The Council met at eleven o'clock on Saturday, for the purpose of presenting the freedom of the city to Sir W. Molesworth, First Commissioner of Her Majesty's Works, in testimony of their admiration of his distinguished abilities as a statesman, and their recognition of his connection with the City and University of Edinburgh.

MR. JOSEPH HUME AT ABERDEEN.—Joseph Hume, Esq., M.P., and his daughter, Miss Hume, left Thurso on Thursday, and arrived at Aberdeen on Friday morning. The presentation of the freedom of the city to Mr. Hume took place on Saturday, in the Town-hall, at two o'clock; and the honourable gentleman received an address from the working men in the Mechanics' Hall, the same evening.

REPRESENTATION OF FORFARSHIRE.—Wednesday the 11th of October has been fixed for the nomination of a representative for the county of Forfar, when, to all appearance, Viscount Duncan will be elected without opposition. The 11th of October is the anniversary of the Battle of Camperdown, when Lord Duncan's grandfather, Admiral Duncan, so nobly distinguished himself.

WIGAN ELECTION.—The close of the poll on Tuesday at four o'clock, was as follows—Acton (Liberal), 339; Powell (Conservative), 334: majority for Acton, 5.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The news at hand in the early part of the week, to the effect that Sebastopol had fallen into the hands of the Allies, produced a slight advance in the value of most public securities; but as the intelligence has not been confirmed, the Market has since become inactive, and the improvement has not been supported. There has been a steady, though not to say brisk, demand for money and most of the discount houses have been well supplied with cash. Tue numerous failures in the provinces have, of course, induced great caution on the part of the bankers in making advances; hence, the discount accommodation has not been large.

There have been rather heavy imports of bullion—£2,93,000 having arrived from Mexico, Chili, New York, and £54,000 from other quarters. The shipments have been extensive, and amongst them is an export of £50,000 in gold and silver to India and China. It is supposed that, as about £200,000 in gold dust has been sent to the Bank this week, that the next returns of the stock of bullion will be more favourable than for some week's past.

Notwithstanding the peace with Russia, our export trade is in a very satisfactory state. The aggregate value of our shipments, during the first eight months of the present year, was £58,653,150, against £58,154,725 in the corresponding period of 1853. Compared with the same time in 1852 the increase is £12,134,601.

It is stated that the quantity of gold now on passage from Australia is 86,661 ounces; that is, a fair proportion of that metal is large, and that further heavy supplies will follow.

On Monday Consols were firm and higher. The Three per Cents, for Transfer, marked 95¾ to 96¾; and for the Account, 96 to 96⅝. India Bonds were 10s. ; and Exchequer Bills, 5s. to 8s. prem. Exchequer Bonds being 99¾. The market on Tuesday was very flat. The Three per Cents realised 96⅛ for Money; and 96⅛ for the Account. India Stock, 260; India Bonds, 10s. prem. Exchequer Bills, 5s. to 8 prem. Bank Stock, for Account, 215 to 213. Exchequer Bonds sold at 100 to 99⅞. There were very few dealings reported on the following day. The Three per Cents marked 95⅝ ⅛ for Transfer; and 96⅜ for the Account. Exchequer Bills, 8s. to 5s. prem. Exchequer Bonds, 100. Considerable inactivity prevailed in the Market on Thursday. Consols were 95⅜ to 95⅝ for Transfer; and 95⅝ for Account. Exchequer Bills were done at 5s. to 8s. prem.

As regards the Foreign House, we may observe that it has been devoid of animation. Prices, however, have not varied to any extent. About 27 000 dollars have come to hand on account of the Mexican dividends. Brazil Six New Five per Cents have realised 93; Danish Three per Cents, 70¾; Ditto, Five per Cents, 101; Mexican Three per Cents, 23¾; Peruvian Three per Cents, 68; Portuguese Four per Cents, 41; Spanish Three per Cents, 28; Ditto, New Deferred, 17¾; Ditto, New Scrip, 14 prem.; Dutch Two-and-a-Half per Cents, 62; Dutch Four per Cents, 92 ex div.; Buenos Ayres Six per Cents, 84; Sardinian Five per Cents, 87½; and Belgian Four-and-a-Half per Cents, 93.

Joint-stock Bank Shares have been firm, and prices, almost general, have had an upward tendency. Australasia have marked 83¾; Chartered of Australia, 22¼; London Joint-Stock, 17¾; Provincial of Ireland, 10; Union of Australia, 39; Miscellaneous Scrips have been very inactive, but there was a steady demand for Crystal Palace, which realised 28; Great Central, 1; Imperial Ottoman, 2½ ex div.; Realeiff, 70; United General, 20; Watchmaker Chartered, 3½; Ditto, New, 2½; Australian Agricultural, 11; Banks of Egypt, 2½ ex div.; Crystal Palace Parks have been firm. Arlington, 22 ex div.; County, 125; Crown, 15; European, 19½ ex div.; Gore, 17½; Grosvenor, 5; Hyde, 6; Gardens, 15; Imperial Park, 12; Lea, 18½; London, 27½; Phœnix, 3½ ex div.; Portman, 3½ ex div.; Railcliff, 70; Royal Exchange, 2·8; Sun Fire, 252; United Kingdom, 14 ex div.

There has been a fair demand for Railway Shares, yet as very few forced sales have been made, prices have varied but little. The following are the prices paid on Thursday,

ORDINARY SHARES AND STOCKS.—Caledonian, 82½; Dublin and Belfast Junction, 7; Eastern Counties, 11⅝; Great Northern, 83; Great Western, 72; Lancashire and Yorkhire, 7-8; London and Brighton, 103; London and North-Western, 103; Ditto, Fifths, 11⅛; Ditto, Eighths, 18. London and South Western, 89⅛; Midland, 70⅛; Norfolk, 50. North Eastern, Berwick, 77; Ditto, Leeds, 149; North Staffordshire, 16⅝; Shrop. hire Union, 6⅛; South Western, 64; South Wales, 32⅞.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, 101½; South Staffordshire, 73; Wilts and Somerset, 84.

PREFERENCE SHARES.—Eastern Counties Extension, No. 1, 1 prem.; Ditto, New Six per Cent, 15⅝; Lancashire and Yorkshire, £20, 6; North British, Four per Cent, 3; Oxford, Worcester, and Wolverhampton, Six per Cent, 112.

FOREIGN.—Great Luxembourg, Obligations, 8; Northern of France, 34½

Mining Shares have been dull. On Thursday, Agua Fria marked 1; Australian Consolidated, 3; Bolanos, 8; Cobre Copper, 58; Coconut Gold, 3; Fortima, 1½; New Granada, ½; Rhymney Iron, 23; United Mexican, 3.

Friday Evening.

Very little change has taken place in Consols to day; but the market has been in a very inactive state. The Three per Cents for money, have been 96⅛ to 96⅜; and for the Account, 96⅜ ⅜. All Foreign Bonds and Railway Shares have been dull.

THE MARKETS.

CORN EXCHANGE (Friday).—The arrivals of English wh at fresh up to our market today were very moderate and the show of samples was small Good heavy qualities were in fair request, at fully Monday's prices; but all other kinds moved off slowly, at late rates. The middling quality of the supply was good. Foreign wheat—the show of which was up no means large—was in fair request, but we have no change to notice in its value. Floating cargoes were held at extreme rates. Barley was in good request, and quite as dear as on Monday. The best samples of malt were firm and there was rather more doing in other kinds. We had a moderate supply for oats, at Monday's quotations. Beans, peas, and flour were unaltered in value.

ARRIVALS.—English: wheat, —qr; barley, 870; malt, 480; oats, —; flour, 1760. Irish: oats, 200. Foreign: wheat, 1040; oats, 8412; flour, —sacks.

English.—Wheat, Essex and Kent, red, 52s. to 55s.; ditto, white, 57s. to 59s.; Norfolk and Suffolk, red, 52s. to 55s.; ditto, white, —s. to —s.; rye, 32s. to 33s.; grinding, barley, —s. to —s.; malting, ditto, —s. to —s.; malting, ditto, 33s. to 34s.; Lincoln and Norfolk malt, 75s. to 77s.; brewing, 58s. to 62s.; Kingston and Ware, 63s. to 66s.; Chevalier, —s. to —s.; Hertford, Ware, and Londonthorpe feed oats, 24s. to 29s.; potato ditto, 25s. to 26s.; Yorkshire and Lincolnshire feed oats, 24s. to 28s.; Irish white, 24s. to 28s.; Irish grey peas, 35s. to 37s.; maple, 36s. to 40s.; white, 41s. to 46s.; boilers, 42s. to 47s. per quarter. Town-made flour, 50s. to 53s.; Suffolk, 48s. to 49s.; Stockton and Yorkshire, 47s. to 47s.; country marks, —s. to —s.; American, —s. to —s. per 280 lbs.

Irish.—Oats, new, 21d. to 23d. per 45 lbs.

Foreign.—The principal seeds our markets rather inactive. In the general quotations no material change can be noticed.

Linseed.—English, sowing, 56s. to —s.; Baltic, crushing, 52s. to 56s.; Mediterranean and Odessa, 52s. to 53s.; bumpseed, 49s. to 44s. per quarter. Coriander, —s. to —s. per cwt. Brown mustard seed, —s. to —s.; white ditto, 7s. to 9s. 6d.; and tares, new, 10s. per bushel. Rapeseed, £36 10s. to £39 per last of 10 quarters. Linseed cakes, English, 10s. 5d. to £12 5s.; ditto, foreign, £9 15s. to £10 10s. per ton. Rapeseed cakes, £5 5s. to £12 5s. ditto, foreign, £9 15s. to £10 10s. per ton. Rapeseed oil, £34 per tun. Coarse ditto, Canary, 40s. to 50s. per quarter. English clover seed, white, —s. to —s.; ditto, red, —s. to —s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 9½d.; of household ditto, 7d. to 8d. per 4 lbs. loaf.

Imperial Average Prices of Corn.—Wheat, 55s. 9d.; barley, 32s. 9d.; oats, 21s. 1d.; rye, 35s. 3d.; beans, 34s. 1d.; peas, 37s. 1d.

Seven Years' Average.—Wheat, 57s. 0d.; barley, 33s. 6d.; oats, 21s. 7d.; rye, 37s. 1d.; beans 42s. 6d.; peas, 37s. 6.

The late deficient state of Calcutta has had considerable influence upon our market this week. A full average business has been transacted in all kinds of tea, the prices of which have had an upward tendency. Common congou was realised 10d. per lb.

Sugar.—Abscs an average business has been transacted in most kinds of raw sugar, on former rates. Barbadoes has realised 30s. to 37s.; Mauritius, 32s. to 40s. 6d.; and Bengal, 32s. to 40s. per cwt. Refined goods have been in steady request, at fully former rates. Grocery lots have been sold at from 41s. 6d. to 42s. per cwt. Lumps, 44s. to 46s. per cwt.

Coffee.—Good and ordinary native Ceylon has been sold at from 41s. 6d. to 43s. per cwt. In the value of low kinds of coffee, very little change has taken place.

Rice.—The market has been firm, and rather an extensive business is doing in it at various rates.

Provisions.—There is a steady inquiry for most kinds of Irish butter, the prices of which are on the advance. Foreign qualities are firm, and rather dearer than last week. English qualities are in moderate request, at full currencies. There is less activity in the sale of bacon, the prices of which are not supported. In other kinds of provisions, very little is doing.

Tallow.—P.Y.C. is firm at 52s. on the spot, but with little variety. All P.S. fat to 6's 9d. per cwt. For forward delivery, very few transactions have taken place. Town tallow, 62s., rat cash. Rough fat, 3s. 3d. per 8 lb.

Oils.—Linseed oil is firm at 32s. 6d. per cwt. on the spot. In other oils about an average business is going, at lower rates. Turpentine moves off slowly, at late quotations.

Hops.—The new markets is very sparingly supplied, and sales of price. Lowestoft have been made at from 2s. 4d. to 3s. 5d. per gallon. Bandy quality is dear as last week. British spirits have advanced to 2s. 1d. per gallon. Rum under proof, 2s. 3d.; and 17 Ditto, 2s. 8d. per gallon

Hay and Straw.—Meadow hay, 43 10s. to 74 10s.; clover, 53 10s. to 56; and straw, £1 2s. to £1 10s. per load. Trade dull.

Wool.—Owing to the near approach of the public sales, the demand for nearly all kinds of wool is quiet, at late rates. In one state, yet we have no alteration to notice.

Potatoes.—The supplies continue large, and in excellent condition. A steady business is doing, at from 70s. to 90s. per ton.

Coals (Friday).—Our markets is very firm, but the business doing in new hops is limited, owing to the high rates now demanded. Very few sales are reported, and East Kent realised from 8 10s. to 9 10s. per cwt. Weald of Kent, 6 12s. to 7 10s.; Sussex, 6 8s. to 6 10s. per cwt. Yaw Duty is called £45,000.

Potatoes.—Supplies large, and in excellent condition. A steady business is doing, at from 70s. to 90s. per ton.

Coals (Friday).—Our markets is very firm, but the business doing in new hops is limited, owing to the high rates now demanded. Very few sales are reported, and East Kent realised from 8 10s. to 9 10s. per cwt. Weald of Kent, 6 12s. to 7 10s.; Sussex, 6 8s. to 6 10s. per cwt. Yaw Duty is called £45,000.

Wool (Friday).—Our markets is very firm, but the business doing in new hops is limited, owing to the high rates now demanded. Very few sales are reported, and East Kent realised from 8 10s. to 9 10s. per cwt. Weald of Kent, 6 12s. to 7 10s.; Sussex, 6 8s. to 6 10s. per cwt. Yaw Duty is called £45,000.

Potatoes.—The supplies continue

CENTRAL ASSOCIATION in AID of the WIVES and FAMILIES, WIDOWS, and ORPHANS of SOLDIERS ORDERED on ACTIVE SERVICE

UNDER THE JOINT PATRONAGE OF
Her Majesty THE QUEEN,
Field-Marshal his Royal Highness the PRINCE ALBERT, K.G.
and her Royal Highness the DUCHESS of KENT

PRESIDENT.
His Grace the Archbishop of Canterbury.

TREASURER.
Sir John Kirkland, Bart.

HONORARY SECRETARY.
Major the Hon. Henry Leslie Powys, 3rd Regt. Light Dragoons.

ASSISTANT.
Frederick Hayley [illegible]

The following Report was unanimously passed at the GENERAL COMMITTEE MEETING, on the 3rd of SEPTEMBER, 1854. The Right Hon. the Earl of BEAUCHAMP in the Chair.

FIRST HALF-YEARLY REPORT OF THE CENTRAL ASSOCIATION.

This Association originated at the National Club on the 26th of February, 1854, and was formed on the 8th of February by a Deputation from the Army and Navy Club. It was first formally instituted at a public meeting held in Willis's Rooms on the 7th of March, 1854 (the Right Hon. the Earl of BEAUCHAMP in the Chair, and Sir JOHN KIRKLAND in the chair), and has now completed the first half-year of its operations. The vast amount of unlooked-for misery that the war has created has been the means of alviating during the past six months, but the Central Committee to make a full-yearly report of their proceed ings, and this, not before they know that the noble effort made by the country on behalf of the gallant sufferers has not been a fruitless one but also to direct attention to the necessity of adopting some such measure for the establishment of some permanent National Provision for the Wives and Families, Widows, and Orphans of our Soldiers and Sailors, during a war that has been said and written on the subject, to be fat all regardless of the sufferings that for the most part, fall on the widow and orphan, or our best-hearted soldiers, whether non-commissioned officers or private, in the event of their decease whatever it may be under. Nothing has been done to keep them from paupe rism when their husbands and fathers are taken away. The vast ranges of the Union Workhouses are filled by military pauperism; it is even gained as a reward for good conduct, and you should they be ordered to the seat of war, or die in the service of their country, their families are cast on the parish to obtain subsistence. To prove that this is no over-set ement the Committee have selected a few cases from the many thousands to which the terms of wives of non-commissioned officers and privates, who have left their homes with their regiments and died upon the field, have placed in the strength of the regiment.

Case 1.—Wife of a private in the 38th Regt.—Married with leave. Left destitute with six children after she had spent the amount she had received, which left her four, age of every child, and was signed by the Duke of Cambridge, the colonel of the regiment, it may very fairly be considered that the Association has been the means of saving the country from the necessity of maintaining this family.

Case 2.—Wife of a private in the 38th Regt.—Married with leave. Left destitute with five children. A weekly allowance of seven shillings was granted. A weekly allowance of seven shillings.

Case 3.—Wife of a private in the 38th Regt.—Married with leave. Left destitute with five children. A weekly allowance of seven shillings.

Case 4.—Wife of a private in the 38th Regt.—Married with leave. Left destitute with five children. A weekly allowance of seven shillings.

Case 5.—Wife of a private in the 38th Regt.—Married with leave. Left destitute with five children. A weekly allowance of seven shillings.

Case

THE ARCTIC EXPEDITION.

On Thursday morning week the *Phœnix*, screw, one of the last expeditions fitted out by the British Government for the expedition in search of Sir John Franklin, dropped anchor at Queenstown, having on board Captain M'Clure, the hero of Arctic navigation, and several of the crew of his vessel. It will be remembered that in the May of 1850 an expedition was sent, for the double purpose of ascertaining the fate of Sir John Franklin, and of continuing the exploration of the long-sought North-West Passage. This expedition consisted of two vessels—the *Investigator*, commanded by Captain M'Clure, and the *Enterprise*, under the command of Captain Collinson: the first of which succeeded in proving the existence of a sea passage along the northern coast of America. Up to the year 1852 no account had arrived of the fate of those vessels, and, accordingly, an expedition was fitted out under the command of Sir Edward Belcher—consisting of his own ship, the *Assistance*; the *Resolute*, Captain Kellett; the *Intrepid*, Captain M'Clintock; and the *Pioneer*, Captain Osborne—to go to their assistance. Thus, there were then altogether six ships engaged in prosecuting the investigation, in which alone Captain M'Clure has been successful. In the May of this year the *Phœnix*, screw, and the *North Star* and *Talbot*, store-ships, were sent out to the relief of those vessels; and on their arrival they found the whole of the two former expeditions, with one exception, the *Enterprise*, completely blocked up in the ice in the district embracing Lancaster Sound, Beechey Island, and Wellington Strait. In Melville Bay the ice was found to be worse than it had been for forty-seven years before, and everything gave promise of a winter unprecedentedly rigorous, while there was no prospect whatever of getting the ships free this summer. Under these circumstances, Sir Edward Belcher, on his own responsibility, ordered the abandonment of the entire five vessels, which were accordingly left to their fate, and the crews distributed among the store-ships. It was at Beechey Island the latter landed, and the crews of the abandoned vessels had to proceed a distance of 200 miles overland to reach them. The *Phœnix* has brought home the greater part of the crew of the *Resolute*, a few of that of the *Assistance*, and one officer and one man, besides Capt. M'Clure, of the *Investigator*. The vessels sailed together until they met with adverse winds, off the Orkney Islands, when they parted company: the *Phœnix* steaming for Queenstown, where she could coal; and the others obliged to beat up as well as they could for London. The *Phœnix* has, unfortunately, brought no decided intelligence of the only ship of the late expedition now missing, the *Enterprise*; but Captain M'Clure stated that he feels confident of her safety. It is conjectured that the ship had got into one of the numerous creeks or bays on the western coast of the North American continent; that she had been abandoned by the crew, and that the latter were making their way over the land.

Of the proceedings of the search we have as yet only gathered that the division under Captain Kellett effected all that was anticipated; Commander M'Clintock having completed a very extended sledge journey to the westward from Melville Island, occupying about 100 days, during which he found abundance of musk oxen and reindeer; the movements of Sir E. Belcher appear to have been limited, since the date of his despatches received last year, to his retreat upon Beechey Island; and the promising lands to the north and north-east of Wellington Channel remain, therefore, unvisited.

CAPTAIN M'CLURE, IN HIS ARCTIC DRESS.—FROM A PHOTOGRAPH BY CAPTAIN INGLEFIELD.

But amidst all the gloom which hangs over the search for Franklin and his unfortunate companions, we may heartily congratulate the friends of Captain Collinson upon his presumed safety, notwithstanding the detention to which Sir Edward Belcher's return has probably consigned him. It appears that his course was precisely that of Captain M'Clure's, whose first winter resting-place was attained in the following year by the *Enterprise*, four days only after it had been vacated by M'Clure. Failing, as his predecessor had done, to accomplish the North-West Passage through Investigator Strait, Captain Collinson ultimately found his first winter harbour, in 1851-2, in Walker Bay, on the south side of Prince Albert Land; and he is known to have pursued in the following summer an easterly course along the North American shore, through Dolphin and Union Strait. He may thus possibly be able to carry his ship through Victoria Strait and Peel Sound into Barrow Strait; which would be effecting the North-West Passage, though not by the channel that has been sighted, and so nearly accomplished, by Captain M'Clure. Our knowledge of these circumstances is derived from the records deposited by Captain Collinson, and discovered by Lieutenant Meecham. They further develop the singular facts that the same places were visited the same season by parties from the *Investigator* and from the *Enterprise*, starting from widely different positions, and that the same point was actually seen by both within a few miles of each other; the spot where these records were deposited having been repeatedly, yet unconsciously, traversed by parties from all the searching ships. Such facts as these cannot but shake any inferences drawn from the absence of records.

The following are copies of the documents found:—

RECORD FOUND ON PRINCESS ROYAL ISLAND.

Her Majesty's ship *Enterprise* reached the east end of Prince of Wales Straits on the 30th of August, 1851, and found the sea closely packed off the mouth of the Strait; and, not finding a suitable winter quarters, she will be found near the south-west end of baring's Island; or, if there is no harbour there, in the bight of Prince Albert's Land, 70 miles south of this island. All well on board. R. Collinson.

Her Majesty's ship *Enterprise*, Winter Quarters, lat. 71° 05′ north long. 117° 28′ west, 1851-52.

We wintered here, arriving on September 14, and were finally frozen in October 24. In the interval several natives visited the ship, eventually leaving us on the 9th of November. They are a quiet people, but have little to spare. Needles, knives, and saws are the articles principally in requisition.

Almost throughout the whole of the winter we obtained hares, ptarmigan, &c. The weather has been exceedingly mild; the monthly average never below 20°. Little or no sickness has occurred, and we are in fit condition for hard work. Travelling parties will start early in April—one following the coast southerly, the others will pass through Prince of Wales Strait, and then part—one for Melville Island, if possible; and the other along the north side of Prince Albert's Land, in search of the missing Expedition.

Intelligence respecting the movements of the *Enterprise* will be deposited on an islet (10 feet magnetic north of a mark) in lat. 71° 49′ north, long. 119 west, subsequent to the return of the travelling parties.

April 15, 1852. R. Collinson.

RECORD FOUND ON RAMSAY ISLAND.

The provisions on *Princess Royal* Island were safe on the 22th of May, except what our travelling parties consumed. The *Resolution* sledge ported company May 4th for Melville Island, and has not yet returned. All well, and no traces of missing Expedition. I shall proceed southerly, along Prince Albert's Land, immediately I am extricated.

FOUND ON RAMSAY ISLAND.

Her Majesty's ship *Enterprise*, Aug. 27, 1852, lat. 71° 25′, long. 119° 0′.

We left our winter quarters at the eastern end of this bay on the 5th inst., and have been prevented by the ice from any progress until this day. It is my intention to pursue the channel separation, Wollaston, from Prince Albert's Land, the entrance to which is in lat. 70° 25′ close in with the shore, nor have we by pursuing a westerly route along the south end of Baring Island. All well. R. Collinson.

RECORD FOUND ON PRINCESS ROYAL ISLETS.

This post was erected by her Majesty's ship *Investigator*; wintered in the pack off it in 1850-51, and then pursued her way to the westward.

The Strait was visited on the 30th of August, 1851, by the *Enterprise*, who pursued the same course.

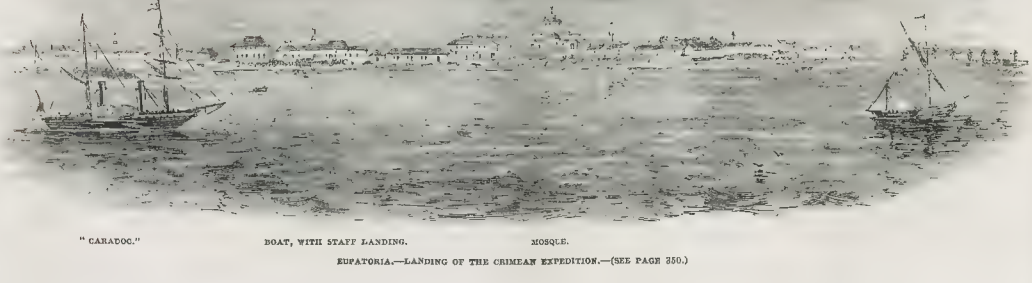
This post was visited by travelling parties from her Majesty's ship *Enterprise* and another; traced the north coast of Prince Albert's Land, and found a deep inlet or strait, eighty miles to the south-east of the mark erected by the *Investigator*.

At the north end of the Strait another party, which has not yet returned, went across with orders to reach Melville Island if possible. We have taken 30 lb. of preserved meats, a case and a half of potatoes, half a cask of sugar, half a cask of cocoa, and seven gills of rum.

May 29, 1852. R. Collinson.

The *Phœnix* arrived at Woolwich on Monday evening. Captain Inglefield was telegraphed to attend at the Admiralty on Tuesday morning, and immediately proceeded to town.

The accompanying portrait of Captain M'Clure, in the costume which he wore when he discovered the North-West Passage, is from a photograph taken on board H.M.S. *Phœnix*, by Capt. E. A. Inglefield, commanding the Relief Arctic Expedition; and in which ship Capt. M'Clure came home a passenger. In the costume, the "nose-bag" is worn to prevent frost-bites; and the spectacles to prevent snow-blindness.



"CARADOC." BOAT, WITH STAFF LANDING. MOSQUE.

EUPATORIA.—LANDING OF THE CRIMEAN EXPEDITION.—(SEE PAGE 350.)

VARNA BAY.—THE ALLIED EXPEDITION FLEET GETTING UNDER WAY FOR THE CRIMEA

THE CRIMEAN EXPEDITION.

The narrative of the voyage and landing of the Crimean Armada will form one of the most remarkable chapters in military history. That so formidable an expedition should have been allowed to assemble and embark at Varna, sail 200 or 300 miles across an open sea and land quietly on a hostile coast, is what not even the most sanguine friend of Turkey could have anticipated. As the correspondence received by the mail which arrived on Saturday last contains full particulars of the proceedings of the Allies up to the 16th, we have given such portions of it as seemed most interesting.

THE VOYAGE.

From the Island of Serpents, where the English, French, and Turkish fleets rendezvoused, the passage to Kalamita Bay was performed without a single accident to any of the ships. With a fleet of 700 vessels altogether, this was certainly surprising. All accounts represent the men as eager for action and in the highest spirits. Every manœuvre that was performed—weighing anchor, making sail, &c.—was done with a degree of alacrity and enthusiasm utterly indescribable. The French convoy was ready on the 5th, and it was not till the 8th that the English fleet joined her. When all were assembled, a conference took place on board the *Caradoc* between the Admirals and Generals of the Allied forces. The result of this conference was that, before determining in a definite manner the point of landing, a commission, composed of general officers (sea and land) should proceed to the shore of the Crimea, from Cape Chersonesus to Eupatoria, to ascertain what preparations for defence the enemy might have made there.

THE CARADOC.—RECONNOITRING THE COAST.

Accordingly the vessels had no sooner taken up their moorings on the evening of the 9th, than Sir John Burgoyne, Sir Edmund Lyons, and Sir George Brown joined Lord Raglan on board the *Caradoc*; and, after a short consultation, signal was made to the flag-ship of Sir Edmund Lyons, the *Agamemnon*, off Cape Chersonesus to Eupatoria, to attend upon the *Caradoc* during her expedition. They were accompanied by the *Primaquet* steamer, having on board General Canrobert, General Martimprey, General Thierry, General Bizot, Admiral Bouet-Willaumez, and Colonels Trochu and Lebœuf. The *Caradoc* leading, steered straight for Kalamita Bay, and ran slowly along shore at about a mile distance. All the Generals had thus an admirable opportunity of surveying, not only the coast, but the general capabilities of the country farther inland. They could also form a good idea of the preparations which had been made to resist them, from the fact that before they had well run five miles along the shore, large parties of horse artillery made their appearance, and kept abreast of them at full speed while they remained inland.

On the morning of the 10th, these four vessels got in close to land on the peninsula of Chersonesus, where they found a pretty extensive Russian camp. They ran along the whole of the shore, at a little distance from the land, from Cape Chersonesus to Cape Lookout. Nothing was changed in the anterior situation of the port of Sebastopol and of the Russian fleet; but since the preceding reconnoissance, new camps and some artillery had been established on the principal positions of the Chersonesus and of the river Katcha and Alma. The officers estimated at not less than 30,000 the troops encamped on all this part of the coast, which was explored very attentively, and at a short distance from the land, by the commission.

The four vessels continuing to go up the coast from the Alma to Eupatoria, perceived towards the middle of the coast which separates these two points, a beach situated in 45° of latitude, and exceedingly favourable for the landing of troops. In addition, after having gone round the bay of Eupatoria, the exploring officers perceived that the occupation of the place would be very useful as a point d'appui for the armies and fleets, and that a large and well-enclosed lazaretto which existed there could, if necessary, serve as a shelter for the troops when landed. In consequence, Lord Raglan having assembled the general officers (sea and land) mentioned above, the following decisions were come to, subject to the approbation of the Marshal, who had remained on board the *Ville de Paris*, and of the two Admirals-in-Chief:—

1. That the landing, in place of being effected under the fire of the enemy, in the bays of Katcha and Alma, should take place on the beach between these rivers and Eupatoria, at the point marked on the map, viâ Fort.

2 That on the same day the occupation of Eupatoria should take place with the aid of 3000 Turks, a French battalion, an English one, two Turkish ships of the line, and a French one. If the town has no kind of defence, and it is not even certain that a garison is to be found there.

That in three or four days after its landing, the army should march towards the south, with the right flanked by the sea and by a numerous support of fifteen steam-ships of the line or frigates, which should follow the troops along the shore to protect them with their artillery, and ensure their food and supplies.

On the 12th preparations were made for landing; but, owing to some mi-understanding, the fleets did not unite, and the day was lost.

RECONNOITRING OFF EUPATORIA.

At [illegible] on the 13th all the fleet weighed anchor, and stood along the [illegible] of Kalamita Bay towards Eupatoria; yet it was near ten o'clock [illegible] all the vessels were in motion, as many of them had [illegible] to their fathoms water, and were consequently a long time in getting [illegible] their cables. All the shipping was collected into one dense mass [illegible] the English line-of battle ships leading, and the French and Turkish fleets on the off shore side, with a flying squadron of sailing and steam frigates in advance of all. In this order the whole fleet advanced for some hours, passing along a shore which seemed flat, marshy, and unhealthy. It seemed literally covered with cattle, and stack upon stack of hay and barley.

About noon several English vessels approached Eupatoria Point, a long, low, sandy spit of land, which runs out far into the sea, and the *Spitfire* was signalled to go ahead and sound. She did so, and reported the water "shoally and dangerous, bottom rocky, with soundings varying from three to nine fathoms." All vessels were accordingly ordered to give a wide berth to the point, while the *Agamemnon*, *Samson*, and *Caradoc* went forward round the cape to reconnoitre the town of Eupatoria. By three o'clock the whole fleet was well in the bay, though anchored about five miles from the shore, until the *Spitfire* had reconnoitred and ascertained the depth of water. As the fleet took up its moorings a small coasting vessel, of about fifty tons, very coolly run up the Russian flag—a piece of impertinence of which our men took no notice. The *Spitfire* was [illegible] and as soon as she had completed her task the fleet [illegible] these its movements were watched with intense interest by the good citizens of Eupatoria. The town itself is situated in a little nook of land under the point to which it gives its name. The whole place is low and marshy, apparently not rising more than four or five feet above the level of the sea. To the south the whole coast is covered with multitudes of windmills, between which and the shore are also immense stacks of what appear to be wheat and hay. To the north of the stacks comes the town, like all other little seaports, it has its dirty and its clean parts. The former belong to the Turks, though the houses appear far cleaner than any belonging to the same class in Turkey Proper. The more northerly and fashionable quarter of the town was a consolation to see.

All this part of the town was like the best neighbourhoods of Milton and Gravesend—one locale, indeed, bears a strong resemblance to the Marine Parade at Brighton. As the *Spitfire* went close in, the people flocked out by thousands. Even the Turkish population seemed to have shaken off their hereditary *nonchalance*, and manifested the lively interest they took in the proceedings by looking out of windows, and in one or two instances [illegible] the doors of their houses. Four or five hundred Russian soldiers, in their long grey coats and caps, also sauntered [illegible] on shore, laughing and talking to one another, and throwing [illegible] in the water. These fellows occasionally stopped to gaze [illegible] at the fleet—and well they might, for by this time the [illegible] with them. The *Spitfire* continued surveying, sounding, [illegible] the shore, keeping a sharp look-out for batteries at [illegible] but was entirely unsupported the rest of the vessels [illegible] four miles off. As it went closer in, those on board had [illegible] ty of seeing the superiority, and in a manner the opulence [illegible] the third in the Crimea. The houses were large and [illegible] ed with or built of stone—had many windows in their [illegible] each opening to the door led into balconies overlooking the sea. One building, which evidently belonged to the governor of the town, or some other influential personage, was in truth a fine palace, with a stately portico, like that of Covent-garden theatre. There were many others of less pretensions to beauty, but all large and spacious. Further in shore, the houses of the [illegible] quarter appeared equally good; but the shore was too level to permit our seeing the whole extent of the town. On Eupatoria point, at the end close to the town, is a fine pier, of timber, strongly and handsomely built. Near to this are the quarantine buildings and barracks, with a large old fort. The latter mounts no guns, nor did its small garrison of soldiers evince anything but curiosity as we approached it. Satisfied on this head, the *Spitfire* returned, and moved past the town, within a quarter of a mile of the beach, so that, drifting very slowly, and sounding every minute, there was ample time and opportunity to admire the handsome gardens and houses which are near the sea. The balconies of the latter were crowded with ladies and gentlemen—Russians of course—who, sitting in chairs, were laughing, chatting, and talking, with the most marvellous *sang froid* and good humour. Some of the gentlemen were in uniform, but the majority were in the plain morning dress of London or Parisian society. The ladies were handsomely dressed; nearly all of them, however, in that peculiar *négligé* which in private balls so much at this time of the year at Southend, Boulogne, or Margate. Some of them were eating cakes or fruit, pointing out the colossal line-of-battle ships (37 of which were now in the bay), and occasionally laughing immoderately. They evidently were at a loss to understand the movements of the *Spitfire*, though in no dread of her—the singular little instruments in the officers' hands for surveying; the eccentric runs which the vessel took, for the sake more of getting angles; the number of men in the chains sounding every minute, and singing out each time their monotonous cry, "half seven, shell," surprised and amused the worthy Eupatorians. As the vessel was passing under the Governor's house, five or six ladies and gentlemen on horseback were talking to a party in the balcony, and all seemed in the best of spirits, and wrapped in astonishment at the enormous extent of the fleet. At this part of the town also were carts, precisely like English butchers' carts, driving up and down the streets, one or two private carriages, and about a dozen bathing machines upon the beach.

SURRENDER OF EUPATORIA.

After reconnoitring the whole shore, the *Spitfire* signalled the result of her observations to the flag-ship; and, in a few minutes after, the *Caradoc* hoisted a flag of truce, and stood in towards the town. To enforce upon the enemy the value of the maxim that "discretion is the better part of valour," the steam-frigates *Retribution*, *Sidon*, *Samson*, and *Tribune*, accompanied the *Caradoc*. As the latter vessel approached the shore, with a white gun-room tablecloth flying at the masthead, the Eupatorians flocked down to the pier in thousands. Turks, Greeks, and Russians made as indiscriminate rush, and swarmed about the pier and landing-place like bees. After a delay of five minutes the *Caradoc* returned, and all our vessels proceeded to anchor for the night off the enemy's coast. And thus Eupatoria was taken; not only without firing a cartridge or losing a man, but as if we were conferring a positive obligation upon the inhabitants in condescending to summons their town first in the ever-to-be-remembered invasion of the Crimea in 1854. The town having surrendered at discretion, and placed all its stores of flour, corn, cattle, &c., at the disposal of the Allies, two thousand Turks, 1000 Zouaves, and the 20th Regiment, disembarked and took possession next morning at daybreak.

PREPARATIONS FOR LANDING.

In the evening of the 13th all the vessels were drawn up in immense lines, with a front extending over nine miles, and with an unknown depth—for the rigging and sails of the distant transports belonging to the expedition were lost far below the horizon, and straggliers arrived every hour for two or three days. All were in expectation of a gun from the *Agamemnon*, and signals for landing. No such signals were made; but a short conversation by signal took place between Generals and Admirals, and towards eight o'clock the *Agamemnon* sent off boats to the transports with the following order to the Quartermasters-General of the divisions:—

ORDERS FOR SAILING. Wednesday Night.

The Light Division to be actually under way at one a.m. to-morrow morning.
The 4th division to sail at two a.m.
The 1st division to sail at three a.m.
The 3rd division and the 2d division to sail at four a.m.
Steer S.S.E. for eight miles. Rendezvous in lat. 45 deg. Do not go nearer to shore than eight fathoms.

The place thus selected for landing was a low strip of beach and shingle, cast up by the violence of the surf, and forming a sort of causeway between the sea and a stagnant salt-water lake—one of those remarkable deposits of brackish water so frequent along this shore of the Crimea. The lake is about one mile long and half a mile broad, and when the fleets first arrived, its borders and surface were frequented by vast flocks of wild fowl. The causeway is not more than 200 yards broad, and it leads, at the right or southern extremity of the lake, by a gentle ascent, to an irregular table-land, or plateau of trifling elevation, dotted with kurnuli, or barrows, such as are seen in several parts of England, and extending to the base of the very remarkable chain called, from their shape, the Tent Mountains. Towards the sea this plateau presents a precipitous face of red clay and sandstone, varying in height from 200 to 300 feet; and it terminates by a descent almost to the sea, level, at the distance of nearly two miles from the shores of the lake. Thence towards the south there is a low sandy beach, with a fringe of shingle raised by the action of the waves above the level of the sea, and from inundation. This low coast runs as far as the eye can reach, till it is lost beneath the base of the mountain ranges over Sebastopol. The country inland, visible from the decks of the ships, was covered with cattle, with grain in stack, with farm-houses, and seems capable of producing enormous quantities of live stock and fodder. The stubble fields were covered with wild lavender, southernwood, and other fragrant shrubs, which the troops collected for fuel, and which filled the air with an aromatic perfume.

Now and then some Cossacks were visible, scouring along the roads to the city of Simferopol, the capital, and down south towards the menaced stronghold of the Czar, but they were not numerous. The daybreak of Thursday (the 14th) gave promise of a lovely morning, but the pledge was not fully fulfilled. The sun rose from a cloudless sky. Towards noon the heat of his midday beams was tempered by a gentle breeze, and by some floating fleecy vapours, which turned speedily into showers of rain, and the afternoon was dark and gloomy. The vast armada, which had moved on during night in perfect order, now studded the horizon with a second heaven of stars, and covering the face of the sea with innumerable lights, advanced parallel with the coast till it gradually closed towards the shore near Lake Saki.

At seven a.m. most of the fleet were in shore near their prescribed positions; but it was found necessary to send the *Firebrand* and some other steamers to sea, in order to tow up the slower transports and men-of-war. The *Emperor*, which was the guiding star, did not keep exactly in her position, or the places taken by the leading steamers of the rest of the fleet were wrong, and some doubt and a little confusion arose in consequence, but the absence of an enemy rendered any slight deviations from order of comparatively trifling importance. The only offender against the prescribed order of disembarkation was the Admiral himself, who, instead of filling the place assigned to him in the centre of his fleet, anchored four miles from the shore.

DISEMBARKATION OF THE FRENCH TROOPS.

On Thursday the 14th, at half-past two in the morning the French Admiral sent up rockets to intimate to Admiral Dundas that he was about to move. This signal, agreed on before hand, was immediately followed by the order to move, given to the whole squadron, and shortly after ships of the line and frigates, united together by hawsers, set out in the greatest order for the beach where the landing was to be effected, and leaving in the meadows of *Primaquet* the all the vessels of the convoy, which were not to join until later in the day. The *Ville-de-Paris*, towed by the *Napoleon*, took the lead, followed by the other line-of-battle ships, and attended by the *Ajaccio*, the *Berthollet*, and the *Dauphin*, ready to carry to every part of the line the orders of the Admiral. The *Primaquet*, the *Caton*, and the *Mouette* were ordered to go forward for the purpose of laying down at a short distance from the beach buoys of different colours designed to point out the position to be taken up by each of the three columns, as fixed by the *Primaquet* the day before. When daylight broke, these long flies of vessels of all sizes, ploughing their way in silence, offered a most imposing spectacle—officers, soldiers, and sailors had their eyes turned towards the shore. At seven in the morning Admiral Hamelin gave the signal that the squadron would anchor according to the plan agreed on, and at ten minutes past seven the *Ville-de-Paris* dropped her anchor. The boats of all sizes of the various vessels were at once lowered, and at forty minutes past seven the 1st division began to enter from all the vessels on which the troops belonging to that division were on board. Although no movement was made on the land, and although no forces of the enemy appeared on the beach, the long boats of the four French three-deckers, fully armed and provided with Congreve rockets, were sent forward to the shore the moment the anchor touched the bottom. Two of them took up a position at the northern angle of the beach, and two others at the southern angle, so that their fire should cross with that of the *Descartes*, of the *Primaquet*, and of the *Caton*, to whom orders were given to go in as close to land as they could, so as to sweep with their shells the beach to the south, where the enemy, it was thought, might appear. The position of the vessels thus permitted them to completely command any artillery of the enemy, which might attempt to oppose our operation. The landing was then assured, particularly as the men on the look-out from the top of the masts gave no signal of an enemy making his appearance.

It was a little after seven o'clock when the first French boat put off from one of the men-of-war; not more than 15 or 16 men were on board her. She was beached quietly on shore at the southern extremity of the Red Cliff. The crew leaped out; they formed into a knot on the strand, and seemed busily engaged for a few moments over one spot of ground, as though they were digging a grave. Presently a flag-staff was visible above their heads, and in a moment the tricolour was run up to the top, and fluttered out gaily in the wind. The French were thus the first to take possession and seizin of the Crimea. There was no enemy in sight. The most scrutinising gaze at this moment could not have detected a hostile uniform along the coast. The French Admiral fired a gun shortly after eight o'clock, and the disembarkation of their troops commenced. In twenty-two minutes they had got 6000 men on shore. The instant the French had landed a regiment a company was pushed on to reconnoitre, skirmishers or piquets were sent on in front. As each regiment followed in column, its predecessors deployed, extended front, and advanced in light marching order, *en tirailleur*, spreading out like a fan over the plains. It was most curious and interesting to observe their progress, and to note the rapid manner in which they were appropriating the soil. In about an hour after their first detachment had landed nearly 20,000 troops were on shore, and their advanced posts were faintly discernible between three and four miles from the beach. like little black specks, moving over the corn-fields, and darkening the highways and meadow paths.

The French army were on board line-of-battle ships, and were at once carried from their decks to the land by the men-of-war's boats. The *Montebello* carried upwards of 1400 men, in addition to her crew. The *Valmy* had in all 3000. The *Ville de Paris* and *Henri Quatre* were laden in proportion; and all the line-of-battle ships and steamers had full cargoes of troops. In fact it was found that their small brigs and schooners were neither safe nor comfortable, and that they were better suited for carrying stores and horses than men. The fleet of French men-of-war carried more than 20,000 men. Their whole force to be landed consisted of 23,600 men. Our army amounted to 27,000 men, and were embarked in a vast number of transports, covering a great extent of water. But they were carried in comfort and safety; and, though there was still much sickness on board, it was nothing compared to the mortality among the closely-packed French. Perhaps no army ever was conveyed with such luxury and security from shore to shore as ours in the whole history of war.

About half-past twelve the Chief of the staff announced that, with the exception of a very few men, all the three divisions of the French army had landed, as well as eighteen pieces of artillery and all their *matériel*. The Marshal, on the quarter-deck of the *Ville-de-Paris*, watched the progress of the operations; saw his army increase in form, and put itself in movement, and then prepared to land, in order to place himself at its head. The unloading of the steam frigates continued without interruption; and the remainder of the artillery, the horses of the officers, and those of a squadron of spahis, were soon landed.

DISEMBARKATION OF THE ENGLISH INFANTRY.

About nine o'clock a.m., one black ball was run up to the fore of the *Agamemnon*, and a gun was fired to enforce attention. This meant divisions of boats to assemble round those ships, for which they were told off, to disembark the troops. The Light Division got on shore very speedily, and were all landed, with the exception of a few companies, in an hour. The First Division landed simultaneously with a portion of their friends of the leading division, the Duke of Cambridge and his staff being early on the beach with their men, and the Brigadiers Sir C. Campbell and Major-General Bentinck preceding their respective brigades. As soon as the light division was formed in contiguous columns at quarter distance. The Light Division on the left, the First Division the next, and so on in order towards the right. The Second Division was under way ere the whole of the Light or of the First Division had landed. Sir de Lacy Evans got on shore with his staff about half-past ten. By eleven the Rifles and Fusiliers had been inspected, and were marching from the left of the line, along the front of the other regiments, towards the right. They ascended the slope of the hill, under the cliffs, passed by the pickets and sentries which had been placed on outpost duty by Sir George Brown, and marching straight on over the plain inland. By twelve o'clock on the plateau that bares and desolate beach, inhabited but a short time before only by the seagull and wildfowl, was covered with life. From one extremity to another bayonets glistened, and red coats and brass-mounted shakos gleamed in solid masses.

The air was filled with English speech, and the hum of voices, mingled with loud notes of command, cries of comrades to each other, the familiar address of "Bill" to "Tom," or of "Pat" to "Sandy," and an occasional shout of laughter. Very amusing was it to watch the landing and unloading of the boats. A gig or cutter, pulled by eight or twelve soldiers, with a paddle-box boat, fish, or Turkish pinnace in tow (the latter purchased for the service), would come up alongside the steamer or transport in which troops were ready for disembarkation. The officers of each company had descended, each man in full dress. Over his shoulder was slung his haversack, containing what had been, ere it underwent the process of cooking, ½ lbs of salt meat, and a hunky mass of biscuit of the same weight. This was his ration for three days. Besides this each officer carried his great coat rolled up, and fastened in a hoop round his body, a wooden canteen to hold water, a small ration of spirits, whatever change of underclothing he could manage to stow away, his forage cap, and, in most instances, a revolver. Each private carried his blanket and great coat strapped up into a kind of knapsack; inside which was a pair of boots, a pair of socks, a shirt, and, at the request of the men themselves, a forage cap; he also carried his water canteen and the same rations as the officer; a portion of the mess-cooking apparatus, a firelock and bayonet, of course, cartouche box and fifty round of ball cartridge for Minié, skirt with smooth bore arms. As each man came creeping down the ladder Jack helped him along tenderly from rung to rung till he was safe in the boat, took the firelock and fixed it, and received his knapsack and packed it snugly under the seat, patted him on the back, and told him "not to be afeered on the water;" treated "the sojer," in fact, in a very kind and tender way, as though he were a large but not very ingenious "pet," who was in danger of drowning or lost sight of on any account—and did it all so quickly, that the large paddle-box boats, containing 100 men, were filled in five minutes. Then the latter took the paddle-box in tow, leaving her, however, in charge of a careful coxswain. And the same kind of scene was said to greet the "sojer" on shore that was evinced in getting him into the boat, the sailors (half or wholly naked in the surf) standing by at the bows, and handing each man and his encumbrances down the plank to the shingle, for fear "he'd fall off and hurt himself." Never did men work better than our blue-jackets—especially valuable were they with horses and artillery, and their delight at having a horse to hold and to pat and to chastise was extreme. When the gun carriage stuck fast in the shingle, half a dozen herculean seamen rushed at the wheels, and with a "Give way, my lads—all together," soon spoked it out with a run, and landed it on the hard sand. No praise can do justice to the willing labour of these fine fellows. They never relaxed their efforts as long as man or horse of the expedition remained to be landed; and many of them, officers as well as men, were twenty-four hours in their boats.

THE SCENE AT OLD FORT.

To any quiet inhabitant of that remote region, the change produced in the course of a few hours, on that memorable Thursday, must have seemed like a piece of magic. Hundreds of launches, pinnaces, and cutters from the men of war were coming in every moment laden deep with bags of biscuit and beef, or hay, and buckets of fresh water. As two came in, sailors with life-belts on jumped overboard, and, with a hawser, struggled through the surf to land as they best could. Threefourths of the men near the shore were as naked as they were born, having stripped off all their clothes, and left them on the sand to dry. Some were bathing in the sea, others, who seemed to like the excitement of the scene and the freedom of "undress," were galloping up and down the shore like savages. Many were ill from cold and exposure, and lay about with a quiet listless indifference, pitiable to behold. A large crowd was gathered round the great water tub, clamouring fiercely for a drink, while others wandered up and down eagerly searching among the stones and sand for sufficient rubbish of any sort with which to make a fire. Every now and then men would arrive from other divisions farther inland, with alarming accounts of the approach of Russians, or their defeat and capture, and such news would for a time absorb all interest,

and lead to discussion regarding the length of time necessary to take Sebastopol, for none of us then had the faintest doubt but that it would be taken, and that speedily. The Duke—the very idol of the soldiers and officers, rather thinner than formerly, but all sunburnt and hearty—was busy as a bee, cheering up the men, and toiling knee deep through mud and sand, trying to make all comfortable. Commissaries were looking after the landing of supplies; artillery officers, the guns and ammunition; and officers—English and French, naval and military, of all ranks and varieties—were galloping, shouting, and gesticulating for working parties, amid a ceaseless roar from the sea, which alone was enough to deafen every one. Yet, amid all this, guns, waggons, artillery, horses, cows, casks of rum and cartridges, cases of shell and bags of biscuit, trusses of hay and sacks of flour, buckets of water and hogsheads of beef, officers' luggage, ropy, trenching tools, ambulances, light carts, tents, hospital stretchers, bags of rice and coffee, boxes of spare ammunition, saddles and harness, medicine-chests and oats, spars and camp kettles, bales of clothes, and, in fact, all the indispensable necessaries for a large force, were being deposited every minute all along the shore for a distance of nearly three miles.

Some of the soldiers endeavoured to open a conversation with the natives, soon this unexpected invasion had surprised; and although the conversations in themselves were limited, they were successful in making both parties laugh and shake hands. The Native Tartar—of course not one Russian, the dominant race, dare show himself here—much resemblance with the Turk. His religion, language, and mental development are the same—his costume alone is different. The Russians have done their utmost to transform him into a Russian peasant. The Turban and flowing garment have been proscribed in favour of the brimless lambskin hat and shapeless gown; but through this disguise the Tartar face is recognisable. The arrival of the Allies has given them much satisfaction, which they openly express. One man came from his village to say that two Russian families of great wealth were preparing to leave, and demanded a few soldiers to be sent to arrest them. The soldiers and sailors were soon on the best of terms with them. Probably, from ignorance of their family names, and fearful that this trifling circumstance might interrupt their cordiality, the inhabitants have been indiscriminately christened by the soldiers by the name of "Joey." Consequently, if a slow, native Tartar lies in danger of being ridden over by a hasty dragoon, he is requested to "Look out for your eye, Joey;" and should another hesitate to take British coin in payment for an unripe melon, he meets the reproach of "You are an ass, Joey." Joey Tartar has, therefore, become as historical a character as Johnny Frenchman, or John Turk.

SHELLING A RUSSIAN CAMP.

At one o'clock most of the regiments of the Light Division had moved off the beach over the hill, and across the country towards a village, near which the advance of the French left had already approached. The second battalion of the Rifle Brigade led the way, covering the advance with a cloud of skirmishers; and the other regiments followed in order of their seniority; the artillery, under Captain Anderson, bringing up the rear. By this time the rain began to fall pretty heavily, and the wind rose so as to send a little surf on the beach. The Duke of Cambridge, followed by Major Macdonald, led off his division next in order; and many of the staff officers, who ought to have been mounted, marched on foot, as their horses were not yet landed.

While the troops were disembarking, the report of cannon was heard in the Bay of Katcha, three leagues to the southward of the landing-place. It was a feigned attack made in concert on that point by five French steamers, having the Fourth Division on board, and three English frigates, the *Samson*, *Fury*, and *Vesuvius*. They found a camp of about 6000 men formed at a mile's distance from the sea. The steamers opened fire with shell at 3000 yards. The French shells burst in the air, or fell short. The *Fury* and *Vesuvius* were little more successful: but the *Samson* pitched shell after shell right in among the tents, knocking them over right and left, and driving the soldiery in swarms out of the camp, which was destroyed after less than an hour's firing.

THE BIVOUAC.

No tents were sent on shore the first night, partly because there had been no time to land them, partly because there was no certainty of being able to find carriage for them. Towards night the sky looked very black and lowering; the wind rose, and the rain fell. The showers increased in violence about midnight; and early in the morning the water fell in drenching sheets, which pierced through the blankets and great coats of the houseless and tentless soldiers. It was their first bivouac—a hard trial enough in all conscience—worse than all their experiences of Bulgaria or Gallipoli, for there they had their tents, and now they learned to value their canvas coverings at their true worth. Old Generals, and young Lords and gentlemen, were exposed hour after hour to the violence of pitiless storms, with no bed but the reeking puddle under the saturated blanket or bits of useless waterproof wrappers; and the twenty odd thousand of poor fellows, who could not get "dry bits" of ground, had to sleep, or try to sleep, in little looks and water-courses—no fire to cheer them, no hot grog, and the prospect of no breakfast. Sir George Brown slept under a cart tilted over. The Duke of Cambridge had some similar contrivance. Sir De Lacy Evans was the only General whose staff had been careful enough to provide him with a tent. In one respect the rain was of service—it gave them a temporary supply of water; but then it put an end to the question, even if the men could have scraped up the wood to make it, which was no easy task, as the country is nearly destitute of timber. Sir George Brown was very nearly paying dearly for the luxury of sleeping under an araba. The bottom of the cart not being in very good condition, two or three pickaxes, belonging to the Engineer department, protruded; and, as the prince of Generals raised his head, the point of an axe struck, happily not the eye itself, but just above it. The blow even there was a severe one, and left a speaking mark.

On the following day the signal was made for all ships "to land tents"—an order which was most gratefully received. The miseries of the night before were indeed too great to be lightly honnred. Our French allies, close at hand, deficient as they best in means of accommodation and stowage and transport, had yet managed to land their little scraps of tents the day they disembarked. Whilst our poor fellows were soaked through and through—their blankets and great-coats saturated with wet, and without any chance of raiment—the French, close at hand, and the Turks (whose tents are much more bulky than our own) were lying snugly under cover. The most serious result of the wetting was, however, a great increase in illness among the troops on the 16th. Several cases of cholera occurred; and one officer of the 23rd died, after a few hours' illness. As the order was not given to land the tents till the afternoon, the men appeared to have made up their minds to another night without cover, and various were the contrivances they had hit upon. A hole dug in the sand, and covered with a great-coat, was contemplated with looks indicative of great approval by many a man who, a few months ago, was bored with invitations in town.

CAPTURE OF STORES.

A fine capture was made of 84 carts of flour (Government property), on their way to Sebastopol, on Thursday; these were taken by some of the 7th and a party of Rifleman, but more than the number captured escaped, owing to a want of cavalry. Some cartloads of plums were also intercepted, and 160 oxen; but the capture that excited the greatest admiration was that of several dromedaries—fine, strong, aristocratic-looking brutes, which, treating the weight attached to them as nothing, appeared as though they would say, "We are the fellows to drag your siege train for you."

On Thursday evening a lengthened dark line was seen approaching along the sea-coast. As it came nearer it was resolved by the telescope into a train of Spahis under the command of some cavalry officers, driving in immense flocks of sheep and cattle for the use of their troops in the camp situate on the extreme right of our lines. First came a drove of some hundreds of sheep, captured natives, drivers and all, guarded on the rear by some Spahis, flourishing their long lances in high delight. Then came a mighty herd of cattle tossing their horns and bellowing, and circled like drovers' dogs around them. Next came the French officers in command of the party. They were followed by a string of country carts driven by sea-looking Cimmerians, who seemed very anxious to be out of the hands of their Gallic captors. Lastly followed, with all the gravity of their race, a few camels, which the Spahis had laden heavily with grain.

A NARROW ESCAPE.

Sir George Brown had a near escape of being taken prisoner. He was the first to land, and pushed on without sending videttes or men in front, though he took the precaution, very fortunately, to bring up a few soldiers with him. Long before the French had landed their first boat's cargo the figure of a mounted officer, followed by three Cossacks, had fallen within the scope of many a glass. The Russian was within about 1100 yards. He rode slowly along by the edge of the cliff, apparently noting the number and disposition of the fleet, and taking notes with great calmness in a memorandum-book. He wore a dark green frock-coat, with a little silver lace, a cap of the same colour, a sash round his waist, and long leathern boots. His horse, a fine bay charger, was a strange contrast to the shaggy rough little steeds of his followers, "the Cossacks"—stout, compact-looking fellows, with sheep-skin caps, uncouth clothing of indiscriminate cut, and high saddles. Each of these Cossacks carried a thin lance of some fifteen feet in length, and a heavy-looking sabre. At times they took rapid turns by the edge of the cliff in front of us—now to the left, now to the rear, of their officer, and occasionally they dipped out of sight, over the hill, all together. Then they came back, flourishing their lances, and pointing to the accumulating masses of the French, on their right, not more than half a mile from them, on the shore, or scampering over the hill to report progress as to the lines of English boats advancing to the beach. Their officer remained for an hour within range of a Minié rifle, and when the *Highflyer* stood in close to shore, he was coolly making a sketch in his portfolio. Suddenly a Cossack crouched down and pointed with his lance to the ascent of the cliff. The officer turned and looked in the direction. A cocked hat rose above the horizon. Another figure, with a similar head-dress, came also in view. The first was Sir George Brown, on foot; the second was Quartermaster-General Airey. It was evident that the Russian and the Cossacks saw Sir George, but that he did not see them. A picket of Fusiliers and Riflemen followed the General at a considerable interval. The Russian got cantered to the left to see that the French were not cutting off their retreat, while the others stooped down over their saddle bows and rode stealthily, with lowered lances, towards the Englishmen. Sir George was in danger, but he did not know it. Neither did the Russians see the picket advancing towards the brow of the hill. Sir George was busy scanning the country, and pointing out various spots to the Quartermaster-General. Suddenly they turned, and slowly descended the hill. Cossacks and officers then dismounted, and stole along by the side of their horses. In about five minutes two or three tiny puffs of smoke rose over the cliff, and presently the faint cracks of rifles were heard. In a few minutes more the Cossacks were visible, flying like the wind on the road towards Sebastopol, and crossing close to the left of the French lines of skirmishers.

PLAN OF THE RELATIVE POSITIONS OF THE RUSSIANS AND OF THE ALLIES (ON THEIR LANDING IN THE CRIMEA).

DISEMBARKATION OF THE ENGLISH CAVALRY AND ARTILLERY.

On the 15th, at daybreak, preparations were made to land the cavalry and artillery, but had to be delayed in consequence of the violence of the surf. Towards mid-day the impediment diminished, and the bay soon became a scene of great activity. Barges, laden with horses and artillery, lined the whole beach, lazily waiting to be conveyed by the surf on shore. Similar boats were hovering around them, guiding their progress, lest they should be washed beam ends on the beach. This caution was necessary, for two or three battered hulks testified on the shore to the violence of the surf. Smart men-of-war boats crossing to and from the flag-ship added to the gaiety of the scene; while the forest of transport-ships and steamers carried the spectator in imagination far from the Euxine to smoky London and the East India Docks. The *Britannia* was anchored at a considerable distance from the beach, surrounded by the *Retribution*, the *Vesuvius*, and other steamers. The *Agamemnon*, bearing the flag of Sir Edmund Lyons, lay, on the contrary, close to the shore.

Some three hours elapsed before a fortunate lull permitted the men to land. Each barge, towed by a man-of-war's boat, on approaching the shore, dropped anchor, and allowed itself to be washed forward by the surf. The anchor's rope was but very gradually let out, in order that the barge might approach stern forward. At the moment she appeared about to strike, a dozen sailors—chiefly, if not all, crews of merchantmen—dashed into the water, and, seizing her ropes, dragged her high up on the beach, with all the strange cries and noisy energy peculiar to sailors on shore. A flap hanging on to the stern then formed a platform, over which the cannon were landed, and where the horses were coaxed to pass. To land the latter was rather a difficult task; for the poor animals, notwithstanding their long imprisonment on board ship, one and all declined to walk the plank, although *terra firma* was the reward. By dint of pushing and pulling, the sailors managed to land the horses, and this part of the programme seemed to afford them immense delight. It certainly enabled them to display that equestrian science and profound knowledge of horseflesh, which, as everybody well knows, is a characteristic of the naval profession. If now and then a horse missed his foot on the plank into the water it was unfortunate, but this certainly did not occur more than three times out of six. The only result was a ducking for man and horse, which did neither any harm: the horse would have a comfortable roll on the dry sand, and join his place in the rank. But if, as sometimes would occur, a stiff artilleryman, with a straggling moustache, missed his footing and fell plump into the water, then matters became tragic. The surrounding sailors and his very comrades would burst out into that delicate and pleasant laugh peculiar to Englishmen; whilst the sympathising crowd on the beach, composed of English, French, and native Tartars, would re-echo the jeer, and welcome the poor wight to Russian ground.

Lord Cardigan and his staff landed from the *Himalaya* at six o'clock in the evening. Lord Lucan also disembarked the same evening. Lord Cardigan started on a reconnoissance next morning, with a portion of the 8th Hussars, 13th Light Dragoons, 250 Rifles of 1st battalion, and two Horse Artillery guns. They went twenty-five miles—saw no Cossacks, returned very much fatigued, and suffered severely from want of water. The horses had nothing to drink from the time they left the ship till Sunday morning—more than thirty hours.

PLAN OF LANDING.

A sketch drawn on the spot, from which the plan we have given has been taken, gives a pretty fair notion of the position occupied by the Allied armies on the 14th, after their disembarkation in the Crimea. The English first was on the left, towards Eupatoria: then came the French fleet forming the centre; and then the Turkish fleet, placed on the right. The English army and the French army were disposed in such a fashion as to form a triangle, of which the base was the sea, and the point Vieux Fort, which is situated across the road from Eupatoria to Sebastopol. The English army formed the side of the triangle looking towards Eupatoria, the French army that looking towards Sebastopol.

Behind Vieux Fort, and near the great headquarters, was the Turkish corps, a little behind the French park of Artillery. The English park of artillery was a little on the left; and, still further to the left, the English cavalry. The French army had its 1st division supported on Vieux Fort, then the 2nd division, and then the 3rd. The 4th division was behind all the others. The 3rd division, commanded by Prince Napoleon, was thus the nearest to the sea, and was consequently the advanced guard on the march to Sebastopol. The French park of artillery was to the left of the 4th division. No French cavalry is marked on the Sketch; it was to form part of the 2nd division.

THE TARTAR POPULATION.

From the first moment a good impression—which has constantly increased—was made by the British army on the inhabitants of the surrounding villages and districts. Sir George Brown, the moment he landed, very properly detached small parties of the Rifles in every direction to protect the natives from being ill-used or imposed on. This had an excellent effect. The people were invited to bring in supplies to the army, and were assured that they would be paid punctually for whatever the troops might require. They evinced the most friendly and trustful disposition, and willingly afforded every accommodation in their power. According to all accounts, they are rather an amiable and kindly-disposed race. They gladly gave some of our officers lodgings in their cottages and farmhouses. The Countess of Erroll, who went on shore amid the plaudits of the army, was provided with comparatively cleanly and comfortable quarters in one of their houses; and their pecuniary charges are on a scale so moderate as to form an agreeable surprise after the systematic extortion of the Turks.

It may be that the Crim-Tartars have yet to learn a secret in this particular, and that when they learn it, they will prove equally dexterous in putting it to use. They were found very serviceable in procuring water, which was about the scarcest commodity—wood being probably next to it in point of non-come-at-ability. Provisions were, at soon as they were convinced of the fairness of our mode of dealing, brought forward and offered at reasonable rates, and their relations with our troops assumed quite a friendly and confidential tone. Eggs were twenty-five for 6d.; a good fowl cost 5d. or 6d.; a turkey could be had for 18d.; a sheep was readily exchanged for a Turkish piece of six piasters, or 1s. Such was the account brought from the officers of a foraging party, who ventured a few miles into the interior, to one of the native villages. The inhabitants brought plentiful supplies, and parted with them readily.

On the 16th "the mayor and corporation" (the principal inhabitants and head men of a village near Eupatoria) waited on Lord Raglan

THE LONDON GAZETTE EXTRAORDINARY.

SATURDAY, SEPT. 30, 1854.

The *London Gazette* Extraordinary of Saturday, September 30, 1854, publishes the following despatch:—

Downing-street, Sept. 30, 1854.

Two despatches, of which the following are an extract and a copy, have been received by the Duke of Newcastle from General Lord Raglan, G.C.B.:—

Extract of a despatch from General Lord Raglan, G.C.B., to the Duke of Newcastle.

The embarkation is proceeding rapidly and successfully, thanks to the able arrangements of Rear-Admiral Sir Edmund Lyons, and the unceasing exertions of the officers and men under his orders. It is impossible for me to express in adequate terms my sense of the value of the assistance the army under my command derives from the Royal navy.

The same feeling prevails from the highest to the lowest—from Vice-Admiral Dundas to the youngest sailor an ardent desire to co-operate by every possible means is manifest throughout; and I am proud of being associated with men who are animated by such a spirit, and are so entirely devoted to the service of their country.

Camp above Old Fort Bay, Sept. 18, 1854.

My Lord Duke,—I do myself the honour to acquaint your Grace that the combined fleets and their convoys appeared in the Bay of Eupatoria on the 13th inst., and in the course of the following night proceeded some miles to the southward, where the Allied armies commenced disembarking early in the morning of the 14th—the French in the bay below Old Fort, the English in the next bay nearer to Eupatoria; and before dark the whole of the British infantry, and some artillery, and most of the French troops were on shore.

Shortly before dark, the weather unfortunately changed, and it became hazardous to attempt to continue landing either troops or guns.

The surf on the beach impeded the operation on the following morning; and since, on more than one occasion it has been found necessary to put to sea, in consequence of the heavy swell, and to prevent accidents to the boats. But, thanks to the great exertions of the navy, under the able and active superintendence of Rear-Admiral Sir Edmund Lyons, who was charged with the whole arrangement, every obstacle has been overcome, and I am now enabled to report to your Grace that the disembarkations have been completed.

I should not do justice to my own feelings, or to those of the troops I have the honour to command, if I did not bring prominently to the knowledge of your Grace the deep sense which I entertain of the invaluable services rendered by her Majesty's navy.

The spirit by which both officers and men were animated made them regardless of danger, of fatigue, and, indeed, of every consideration but that of performing an arduous and important duty; and that duty they discharged to the admiration of all who had the good fortune to witness their unceasing efforts to land horses and carriages, with the utmost expedition and safety, under frequently the most trying circumstances.

I have, &c.,
(Signed) RAGLAN.

His Grace the Duke of Newcastle, &c

War Department, October 1, 1854.

GENERAL ORDERS BY LORD RAGLAN.

Old Fort Bay, Sept. 15

The Commander of the Forces desires that the Commissary-General will furnish rations of food and forage to the men and animals of the army as had been practised before the army left Turkey. Officers commanding divisions, and others under whose command any of the natives may happen to be placed, will look well to their punctual provisioning and payment. It is of great consequence that this should be punctually and liberally done.

The Commander of the Forces calls upon the soldiers of this army to give all possible protection to the inhabitants of the country, as well as to their property of every sort. The people must be taught to understand that they have nothing to fear from the presence of this army; and that, if they will come in and furnish the different supplies required, they will be able to establish for themselves a profitable market. The Commissary-General will purchase the spare forage and provisions in the villages where he can, taking care to pay at once for whatever he requires.

DESPATCHES FROM MARSHAL ST. ARNAUD.

The Minister of War has received from the Marshal Commanding-in-Chief of the Army of the East, the following report on the disembarkation of the Allied troops in the Crimea:—

From the Bivouac at Old Fort, Sept. 16.

Monsieur le Mareschal, I have the honour of confirming to you my telegraphic despatch, dated this day.

Our disembarkation was performed on the 14th, in the happiest circumstances, and without the enemy being perceived. The moral impression which the troops have received is excellent, and it is to the cry of "Vive l'Empereur!" that they stepped ashore and took possession of their bivouacs.

We are ere camped upon steppes, where water and wood are deficient. The necessity of effecting a difficult disembarkation, and one which was accomplished beyond all that I can tell you on the subject, thwarted by the sea wind, which rendered the sea-board often unapproachable, has retained us to this day in the land bivouacs.

I had in the first instance, wished to occupy Eupatoria, of which the narrow road is the only refuge open to us on this difficult coast. But I found the disposition of the troops unfavourable to marching, in that I contented myself to establish a naval station and some agents there, who will be employed to collect the resources which they will meet with.

The Tartars commence to arrive at the town. They are very quiet, very inoffensive, and appear very sympathetic towards our enterprise. I hope we shall obtain from them cattle and means of transport. I take care to pay for all the resources which they offer us, and I neglect nothing to render them favourable to us. It is a very important point.

On the whole, our situation is good, and the future presents itself with fresh guarantees of success which seem very solid. The troops are full of confidence. The passage and the disembarkation were assuredly two of the most redoubtable eventualities, offered by an enterprise which is almost without precedent as respects distances, season, and the innumerable uncertainties which surrounded them. I judge that the enemy which allows such a storm to collect at the distance of a few leagues without doing anything to disclose it in its origin, is placing himself in a disgraceful position, of which the least inconvenience is that of appearing in presence of the inhabitants as of struck with impotency.

I have the honour of addressing you, subjoined, the order of the day that I ordered to be read to the troops at the moment of disembarkation.

A. DE ST. ARNAUD,
Deign to accept, &c.,
Marshal and Commander-in-Chief.

GENERAL ORDER.

14th September, during the disembarkation on the Coast of the Crimea.

Soldiers,—You have been seeking the enemy for the last five months. He is at length before you, and we are about to show him our eagles. Prepare yourselves to undergo the fatigues and privations of a campaign which will be difficult, but during which will rise the presence of Europe the reputation of the army of the East to the level of the highest military glories of history.

You will not permit that the soldiers of the Allied armies, your companions in arms, shall surpass you in vigour and in solidity before the enemy, or in constancy in the trials which await you.

You will recollect that we are not in a country of the peaceful inhabitants of the Crimea, whose dispositions are favourable to us, and who, reassured by our excellent discipline, by the respect which we will show for their religion, their manners, and their persons, will not delay coming to us.

Soldiers, at this moment, when you plant your standards on the soil of the Crimea, you are the hope of France—in some days you will be her pride. "Vive l'Empereur!"

A. DE ST. ARNAUD,
Marshal and Commander-in-Chief.

THE BATTLE OF ALMA.

The despatch from Lord Raglan, relating to the landing of the army, is dated September 18, at which time the English troops were still encamped at Old Fort Bay. From that place the Allied army must have marched in the direction of Sebastopol on the following day. This was all that was known at Constantinople when the mail was made up. One Correspondent, writing from there, says:—

The Russians, 50,000 strong, are intrenched on the southern bank of the Kalaetch (Alma) for six miles, following. The precipitous bank is said to be crowned with their cannon, and their flanks are well defended by redoubts. This seems the spot where they are determined to make their grand stand, and no doubt a victory will be followed by the retirement of the enemy within the lines which encircle Sebastopol itself, and the operations against the place will begin.

Other accounts, including telegraphic despatches from Lord Stratford de Redcliffe and Lord Raglan, speak of the Russian army as only 45,000 to 50,000 strong. Be that as it may, there can be no doubt as to the fact that the intrenched camp of the Russians was attacked on the 20th by the Allied troops under Marshal St. Arnaud and Lord Raglan, and carried with a loss of above 3000 men killed and wounded, according to the latest intelligence.

Private letters received in Paris state that the Russians kept their ground for several hours, and that they had even obtained an advantage over the English in a charge of cavalry, when the latter, seconded by their dragoons, recovered their advantage. During that time the Russian intrenchments were carried at the bayonet, and the overthrow of the Russians had become a *sauve qui peut*. Such a victory could not have been gained without the Allies suffering great loss. The French General of Brigade, Thomasson, who has been recently promoted to that rank, is spoken of as being dangerously wounded. It is also said that Canrobert has received a slight wound, and that Prince Napoleon had a horse killed under him.

A telegraphic despatch from Constantinople of the 25th September, received on Thursday morning, says:—

At the battle of the Alma, on the 20th of September, the Russians numbered 45,000 men, and 100 cannon. The Prince had 1600 rank and file, 66 officers, 114 sergeants, and 23 drummers killed and wounded. The loss of the French was 1400 men and 60 officers.

The strongly intrenched position of the Russian army, on the precipitous bank of the river Alma, which was crowned with their cannon, well account for the great slaughter of the Allied troops. The loss of the Russians is variously stated at from 3000 to 6000.

The *Vulcan* and the *Andes* had arrived at Constantinople with 620 of the wounded men belonging to our army. The 7th, 23rd, and 33rd Regiments are said to have suffered most.

The following copy of a telegraphic despatch from General Lord Raglan, G.C.B., to the Duke of Newcastle, transmitted through Belgrade (not dated, but evidently written from the Crimea, on the 21st of September), is from a Supplement to the *London Gazette Extraordinary*, of Saturday, September 30.—(Sunday, October 1):—

The Allies yesterday attacked the position of the enemy on the heights above the Alma, and carried it after a desperate battle, about one hour and a half before sunset. Nothing could exceed the bravery and excellent conduct of the troops. The position was very formidable, and defended by a numerous artillery of heavy calibre. Our loss I regret to add, is very considerable; but no General Officer has been wounded. The main body of the army of the enemy was estimated at from 45,000 to 50,000 infantry. A few prisoners—amongst whom are two General Officers—and two guns have been taken by the English army.

(Signed) RAGLAN.

The Duke of Newcastle feels it his duty, in publishing this telegraphic despatch, to caution the public against expecting any details for several days. He fears none can be received before the 4th of October.

Everything which is received by the Government will be published immediately.

War Department, September 30, 1854.

The following important intelligence was published in the *London Gazette* Extraordinary on Saturday night and on Sunday last:—

War Department, September 30, 1854.

His Grace the Duke of Newcastle has this day received a letter from the Earl of Clarendon, accompanied by the following telegraphic despatch from Viscount Stratford de Redcliffe, her Majesty's Ambassador at Constantinople:

Copy of a telegraphic Despatch from Viscount Stratford de Redcliffe to the Earl of Clarendon, dated Constantinople, September 23, 1854, and transmitted by her Majesty's Consul-General at Belgrade, under date September 30, 6 o'clock a.m.

"The intrenched camp of the Russians, containing 50,000 men, with a numerous artillery and cavalry, on the heights of the Alma, was attacked on the 20th inst., at one p.m., by the Allied troops, and carried by the bayonet at half-past three; with a loss, on our side, of about 1400 killed and wounded, and an equal loss on the side of the French. The Russian army was forced to put itself in full retreat."

The *Moniteur* of Monday morning contained the following despatch from Marshal St. Arnaud, relating to the battle of Alma:—

Bivouac on the Alma, Sept. 20

We encountered to-day the enemy on the Alma. The woody ravine through which the river runs, studded with houses, passable only at three points, and having very steep slopes on the left bank, was occupied by the enemy in great force. These slopes were strongly intrenched, and covered by a powerful artillery. The attack presented considerable difficulties, which were unparalleled vigour. Our soldiers advanced to the assault with cries of "Vive l'Empereur!" and carried all that was before them. The battle lasted four hours, and our loss was 1400 killed and wounded. I am as yet ignorant of the loss sustained by the English army, which fought valiantly against an obstinate resistance.

LIST OF KILLED AND WOUNDED.

In order, as early as possible, to relieve the minds of the relatives of soldiers now serving in the expedition to the Crimea, the *London Gazette*, the numbers of such non-commissioned officers and soldiers, as well as of officers, who may fall in action, as soon as the returns shall have been received at the War Office. Until these returns have been received no information can be given.

War-office, October 2, 1854. By order of the Secretary-at-War.

PATRIOTIC FUND.

An *Extraordinary Gazette* will be published as soon as the names of those who have fallen in action or have been wounded in the Crimea shall have been received; and the Royal Commission, authorising the collection and control of a "Patriotic Fund," for the relief of the widows and orphans of soldiers, sailors, and marines killed or dying in active service in the present war, will also be published at the same time, if not previously promulgated.

War Department, October 3, 1854.

[The remainder of the narrative of the invasion of the Crimea, including the proceedings at Katcha and Sebastopol, will be found in page 334.]

THE LATE MR. HENRY FOURDRINIER.

PATENTEE OF THE PAPER MACHINE.

(*See the Portrait at page 345.*)

In the ILLUSTRATED LONDON NEWS for September 9th, the death of this ingenious gentleman was announced in a single line—a brevity disproportionate to the memory of the man by whose means a machine has been given to the world, which, in the simplicity and ingenuity of its contrivances, is not surpassed by any other in the whole range of British machinery. This eminent service to so important an art as that of Paper-making, has been ill requited by the age which it has so largely benefited; and, although to be honoured after death is poor recompense for being treated with neglect whilst living, it will be an act of justice to individual merit, as well as a useful addition to the memorials of ingenuity, to present our readers with some account of the patentee and perfector of the Paper-making Machine—of the attention which it has received, and materially to the diffusion of knowledge and the progress of civilisation, and without which the art of printing could hardly have arrived at that perfection which it has now attained.*

Henry Fourdrinier was descended from an ancient family in one of the northern provinces of France—whence, by the storm of religious persecution, they were driven into Holland. The subject of this sketch was born in Lombard-street on the 11th of February 1766; and succeeded his father as a paper-maker and wholesale stationer. In conjunction with his brother, he patented the invention of the Paper-making Machine, in the perfecting of which he expended a considerable fortune. It may suffice here to state that the Paper-making Machine is constructed in such a manner as to imitate, and in some respects to improve, the processes used in making paper by hand; but its chief advantages are, that paper can be made of any size which can practically be required, and with a degree of rapidity which leaves the other mode of making it at an immeasurable distance. The invention was perfected at the patentee's paper-mill at Two Waters, a village in Hertfordshire, situated at the union of the river Gade with Bulborne Brook. Here, nearly half a century since, the machine might be seen working. We have a schoolboy recollection of the place, with its crystal stream, its wealth of paper, and the neighbourhood endeared to memory as biding-places of the poet Cowper.

The process, with the improvements now conducted, of Paper-making by Machinery, may be thus briefly described:—The pulp is first made to flow from the vat upon a wire frame, or sifter, which moves rapidly up and down. Having passed through the sifter, the pulp flows over a ledge in a regular and even stream, and is received upon an endless web of wire gauze, which moves forward with a shaking motion from side to side, assisting to spread the pulp evenly, and allow the water to pass through the wire, by which means the pulp solidifies as it advances. Before the pulp quits the plane of wire, it is pressed by a roller covered with felt; and is then taken up by an endless web of felt, which, gradually movin forward, absorbs a further portion of the moisture. It is again presse. tween rollers, and, being passed over cylinders heated by steam, it is then cut by machinery into sheets of the required length. Thus, in two or three minutes, the pulp, which is introduced upon the wire web, at one extremity of the machine, is delivered at the other in the state of perfect paper.

A working model of this self-acting machine, constructed by Mr. Bryan Donkin, for the patentees, Messrs. Fourdrinier, was erected at Frogmore, in Hertfordshire, in 1803; in 1804 he put up the second machine at Two Waters, which was completely successful; and the manufacture of continuous paper became one of the most useful discoveries of the age. The exertions of Messrs. Fourdrinier to render perfect this invention had, however, commenced in the year 1800, between which year and 1807 they expended upwards of £60,000 on account of the machine. In the latter year the terms of their letters patent were extended by Parliament fourteen years; but the losses incurred by the patentees in their business as stationers, through the withdrawal of capital for completing the machine, and defending the patent, which had been grossly pirated, led to the exhaustion of the patentees' funds before they could establish their rights; in 1810 they became bankrupt; by which means all the fruits of the invention, on which they had expended their capital, were lost to them; and but little accrued to their assignees.

Another act of injustice to the patentee soon followed. In 1814, on the visit to England of the Emperor Alexander of Russia, hearing of Mr. Fourdrinier's machine, he commissioned a person to purchase the right of using it in the Imperial Paper Exhibit at Peterhoff. A property attested agreement was, accordingly, concluded with Mr. Fourdrinier for the use of two of his machines for ten years, at £700 a year; and they were erected at Peterhoff, under the superintendence of Mr. Fourdrinier's agent, who went to Russia for that purpose. The workmen employed were paid directly from the Imperial Treasury; but, Mr. Fourdrinier himself never received any portion of his stipulated reward. From 1816 to 1824 he repeatedly asserted his claims; and, in the latter year, a promise was made to his son in Russia that the debt should be speedily liquidated. Seven years later, Mr. Fourdrinier presented a memorial through the Russian Consul, but with no result. In 1839 the patentee addressed a letter to the Emperor Nicholas, who repudiated the transaction as a private transaction with M. Wistinghausen (the Emperor's agent). At the age of seventy-five, Mr. Fourdrinier, attended by his daughter, set out for St. Petersburg; and, on his arrival there, placed his petition in the hands of Count Benkendorf, by whom it was passed it over to Prince Wolkonski, who referred him to Wistinghausen for payment. Fourdrinier was not, however, to be thus defeated: and he applied to Lord Stuart de Rothsay, the English Ambassador at St. Petersburg, who laid before the Russian Government full proof of their agreement with the patentee in 1814: but Lord Stuart de Rothsay was informed, through Count Nesselrode, that he "considered the affair settled." The sufferer, however, was of a different opinion. He next placed his petition, with his own hands, to those of the Emperor, as his Majesty was walking into the Imperial Gardens of Peterhoff, in the month of June, 1843; the result was not more fortunate than his previous efforts, and, after some weeks' further suspense, the enfeebled patentee and his daughter turned their backs upon the city of the Czar. But the will that, through years of patient toil, had battled against mechanical difficulties, and finally overcome them, was not to be arrested by any obstacle. Returned to England, Mr. Fourdrinier renewed his application to the Russian Government; and once, success seemed probable. The Emperor of Russia came to England, where his princely liberality suggested to Mr. Fourdrinier another application, through some influential person, but he was put off with excuses and broken promises. the Emperor heard nothing of the matter, and the debt remains to this day unpaid.

Meanwhile, Mr. Fourdrinier and his brother, had again petitioned Parliament upon their patent, fully proved by evidence to be their property. The Report on the Petition being recommitted to a Select Committee, was ordered by the House of Commons to be printed 16th June, 1837. This Report concludes as follows:—

It is only by this great sacrifice of property on the part of the patentees that the public are now in possession of this extraordinary invention, by which the community obtains paper of a better quality at a lower price, whilst the manufacturer is enabled to supply whatever demand is made for paper of any size, quality or description, at a very short notice. This invention has enabled the earthenware manufacturers to increase the beauty and accuracy of their patterns by the aid of a superior kind of tissue paper; it has enabled lithographers and other engravers, paper-stainers and publishers greatly to improve their respective arts, and has led the way to many new inventions of the greatest importance, which could never have been contemplated or rendered useful, had not the art of paper-making by this machine been brought to perfection by the patentees. Independently of these benefits this conferred on the public, it appears that a very considerable sum in the revenue has taken place in consequence of this invention. The evidence adduced before your Committee, which proves the almost universal application of this machine to the making of paper at the present time, induces them to hesitate in recommending any extension of the patent, even if it were practicable; but in consequence of the losses incurred by the patentees, as stated in their petition, and proved in evidence before your Committee, and of their being reduced to comparative poverty in the evening of a long life spent in the execution of a great national object, without having derived from it the slightest personal benefit to themselves, your Committee beg to call the attentive consideration of Parliament to the hardship of the case of the Messrs. Fourdrinier, who, by the introduction of this valuable machine, have conferred such great benefits on the public, and on various branches of trade, have effected such savings in the Stationery Department of Government, and have occasioned an increase in the public revenue, with a serious loss to themselves.

On the 25th of April, 1839, some very interesting details of this case of unprotected and unrequited ingenuity were elicited during a debate in the House of Commons; when the evidence of Mr. Brunel and of Mr. Lawson, the printer of the *Times* newspaper, was read to prove that the machine of the Fourdriniers was one of the most splendid discoveries of the present age. Mr. Lawson stated that the conductors of the metropolitan press could never have presented to the world such an immense mass of news and advertisements as we now contained in them, did not this invention enable them to make use of any size required. One of its chief advantages was the prevention of all risk of combination among the workmen: the machine being so easily managed that the least skilful person can attend to it. The increase to the revenue was then stated to have been £500,000 a year; and the positive saving to the country effected by it, £8,000,000. At length the patentees' claim was recognised: and in May, 1840, the sum of £7000 was voted by Parliament to Messrs. Fourdrinier, as some compensation for their loss by the defective state of the Law of Patents.

This "compensation" was, however, considered so disproportionate to the benefits which have accrued to science, literature, civilisation, and religion, by the introduction and perfecting of the Paper-machine, as to be inadequate to the hopes held out to the patentees during their arduous and expensive struggle to obtain their rights, that in November last, some influential firms of the Paper trade proposed to raise a subscription to purchase annuities for Mr. Henry Fourdrinier (the surviving patentee) and his two daughters (both unmarried), or to invest (under trustees) the amount subscribed, so as to produce a comfortable income for each individual during their respective lives. The result of this good work had been accomplished, Mr. Fourdrinier died, in his 89th year, at Mavesyn Ridware, near Rugeley, Staffordshire; where he had retired, in the possession of the cheerful, hopeful, pious, and benevolent spirit of his former years, and contented in his humble cottage as he was formerly in his spacious home. His personal appearance and habits two years since are thus affectionately described, in a volume of graceful feeling and happy thought,* written by his daughter, Harriet E. Fourdrinier, and dedicated to her "beloved father," as a tribute of grateful veneration on the completion of his eighty-sixth year":—

His form is spare, his hair is white, he has passed that age of "four-score years" which the Royal Psalmist so touchingly describes; but at present, we rejoice to say, the strength is not "labour and sorrow." His walk is firm, his eye is bright, his health is good, his spirits buoyant, and his piety firm. He is the delight of his children, and his "children's children," the latter of whom, to the number of some twenty-four, make his cheerful home their companion. He will talk with the elders, or romp with the young ones; drive his daughters out in the carriage, or take long walks with his sons; play at cricket with the boys, and dance with the grace and more than hospitality to his friends, does his duty as a master, is a loyal and devoted subject, and makes a capital churchwarden! Many worldly troubles still oppress him, but he bears the yoke as knowing by Whom it is laid on.

Now that the venerable octogenarian has been gathered to his fathers, let us hope that the generous spirit in which it was proposed to mark the sense of the vast benefit he insured to his art will not be withheld from his surviving daughters. We hear much of inventors' claims and of the wrongs inflicted upon merit, which form a dark chapter in the history of civilisation; but if ever solid recompense was rightfully asserted for individual exertion, it is surely due to the perfector of a process by which the full benefits of printing have been realised to the civilised world.

* Our New Parish: its Privileges and Progress. Pickering, 1852.

CENTRAL ASSOCIATION in AID of the Wives and Families of SOLDIERS ORDERED to the EAST, in Waterloo-place, Pall-mall, London. Instituted the 7th of March, 1854. Under the Joint patronage of

Her Most Gracious Majesty the QUEEN,
His Royal Highness Prince ALBERT, K.G., and
Her Royal Highness the Duchess of KENT.

9, Waterloo-place, Pall-mall, September 1st, 1854.

Extract from a Letter from the Black Sea written by a Sergeant of Artillery to another Sergeant at Woolwich.

"Balaclava, August 18, 1854.

"We had lost two of our men from cholera; and, on the 15th August, we received orders (being on board ship) to order the other ships in the Black Sea. We left Varna on the 15th, all well. During the day we came up to some of the fleet; and, that the pestilence had reached them, and immediately laid hold of us. Then commenced scenes [illegible] of the most awful description. The cries arising from the agony; the morning light saw with haggard and anxious looks, each one splasher told the awful tale that six or one fellows, gunners, had gone to the bourne from which no traveller returns. I was one that was not long exempted the Sacred Word of God anxiously reading. May God grant, poor fellows, that they may find the consolation they and all mankind want. Lieutenant William Scott, our worthy driver, was acting in pilot sergeant, kindly and anxiously fulfilling his duties, and pouring comfort into their ears, as far as he was capable of, in dying circumstances. A sergeant and [illegible] were in the hospital, and [illegible] the cholera. The sergeant was dying in the morning, and then sat down; ten hours of agony, and he was numbered with the dead. Then, in two short days, two sergeants, two bombardiers, [illegible] and [illegible] were

CHAPPELL'S FOREIGN MODEL PIANOFORTE, Drawing Fifty Guineas.—This instrument has (unlike the ordinary Cottage Pianoforte) Three Strings, and the fullest Sound and Compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. Its workmanship is of the best description, the tone is round, full, and rich, and the power equal to that of a Sixhord Grand The case is of the most elegant construction, in rosewood (vide the Sketch), the touch elastic, and the repetition very rapid Every possible precaution has been taken to insure its standing well in tune. Mr. Chappell especially invites the attention of the public, the profession, and merchants to the Foreign Model, feeling assured that no Pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within twelve months of the purchase.—50, New Bond-street, London.

London Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid. SATURDAY, OCTOBER 7, 1854.

THE ILLUSTRATED LONDON NEWS

No. 707.—VOL. XXV.] SATURDAY, OCTOBER 14, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE BATTLE OF THE ALMA.

THE full details of the heroic battle of the Alma have, ere this, been read with the intensest interest in every country in Europe. To thousands of homes in Great Britain and France the glorious news has brought sorrow and lamentation; but in every home in both nations, even in those of the mourners themselves, it has excited, at the same time, the warmest feelings of pride and patriotism. Not only Great Britain and France, but every civilised nation in the world, to which the recital has penetrated, has shared the exultation of the victors, and formed prayers for the final and irretrievable downfall of the sanguinary despot upon whose head lies the guilt of all the blood that has been, and is yet to be shed.

Last week the victory o. Alma was, to some extent, overshadowed

THE LATE MARSHAL ST. ARNAUD, COMMANDER-IN-CHIEF OF THE ALLIED ARMIES. (SEE NEXT PAGE)

by the vague but splendid fiction of still greater victories at Sebastopol. This week, though the fiction is destroyed, a marvellous fact remains, which predicts, prepares, and more than half accomplishes the expulsion of the Russians from the Crimea. France and England have proved themselves worthy of the cause they have undertaken. Their gallant armies have made manifest that the ancient glory is not dead; and that an unflinching sense of duty, an invincible love of right, and a courage that fears no human obstacle, animate the two foremost nations of the world. The calm, precise, and soldierly pen of Lord Raglan, and the more vivid and curt, but not less soldierly, pen of the lamented St. Arnaud, have told how the battle was fought and won; while the vigorous and beautiful narratives of the Correspondents of the principal London journals have filled in the colour and given the proper light and shade to these broad and striking outlines. The details are none too ample. The fuller the information that we receive from day to day, the greater is the admiration excited by the devoted gallantry of the brave men, who sacrificed their lives to achieve a victory, so great in itself, and the precourser of others so much greater. History records no battle that excels or can compete with it, either for rapidity or for daring. Prince Menschikoff was so sure of his position, that he declared he could hold it against two hundred thousand men, and drive them into the sea. Nothing could be more admirably chosen. The heights of the Alma were strong by nature, and made still more strong by art. They were defended by a vast force of infantry, of cavalry, and of artillery—the very pick of the Muscovite army. Overlooking the Alma (henceforth a classic and illustrious river) from an apparently impregnable height of four hundred feet, concealed in brushwood, and behind walls and intrenchments, the Russians were enabled to sweep the plain beneath them with unerring precision and deadly effect. They literally mowed down their assailants like grass or standing corn. But the gallant French and English knew their work. If they gave way for a moment under a murderous fire, it was only to rally again, and renew the assault with fresh energy. Though there was not a tree to shelter a man, though everything that could have afforded the least cover had been burned and swept away; though they were dazzled by the glare, and blinded by the smoke, of a burning village, that, in accordance with Muscovite tactics, had been sacrificed to prevent its falling into their hands; though they had to ford a river full of pits and holes; and though they had to climb a breast work of rock and earth as high as the cross of St. Paul's Cathedral, the Allies—nine-tenths of whom had never before found themselves face to face with the stern realities of actual warfare—marched full of hope and energy to the encounter. Men of inferior pluck would have considered the attempt a desperate one; but these men—true heroes of more than antique valor—carried the position in the short space of three hours and a half. The loud British cheer that rung from those well-won heights struck terror into the hearts of the retreating Russians. Homer never sung of a more brilliant exploit, and painter or sculptor never devoted the resources of his art to illustrate a grander achievement. The Russian soldiers proved themselves to be no contemptible foes, and their Generals, both before and during the conflict, showed that they possessed military skill in the highest degree. But the bravery of the soldiers, and the skill of the Generals, was met by bravery still greater, and by military genius superior, to their own. It cost the Allies the very flower and chivalry of their youth to defeat the foe in the first encounter that he had courage enough to risk; but, great as was the loss, and deeply as it is to be deplored, history will hold it cheap, when it considers the immense advantage which it secured. The result filled the armies of the Allies with renewed hope, and gave them faith in their own invincibility; with to the Russians it communicated a fatal discouragement, if not despair.

Although the Allies, in consequence of the deficiency of cavalry, were not able to follow up their victory—a fact which is dwelt upon with much natural regret by the brave St. Arnaud, in almost the last words he ever wrote—the discomfiture of the Russians was signal enough to prevent them from contesting another inch of ground. On the Katscha and the Belbec—strong positions, almost as formidable as that of the Alma, if they had been held by a foe determined to make an obstinate resistance—they were either unable, or unwilling to offer battle; and the British troops—flushed with their victory, marched unimpeded to the east and south; and, after forcing fifteen thousand Russians to take flight, and capturing a large quantity of ammunition and baggage, established themselves in the commanding position of Balaclava. The French army followed them after the interval of a day; and the Russians in Sebastopol, foreseeing from this manœuvre the downfall of the fortress, and the consequent capture of the fleet, scuttled at the mouth of the harbour no less than five of their line-of-battle ships, and two frigates. By this desperate act they doubtless prevented Admirals Dundas and Hamelin from executing summary vengeance upon that arm of their service; but, by the same means, they prevented their own egress; and, without saving their fleet from destruction, merely rendered it necessary for the Allies to annihilate or capture it from the land side. That the object will be accomplished—unless the Russians sink the whole fleet to prevent a more humiliating catastrophe—we cannot permit ourselves to doubt.

All France and England—all the civilised world—look upon the fall of Sebastopol as virtually included in the victory of the Alma. If the Russians can recover from such a reverse, they will not only be far braver than they have yet proved themselves, but far more fortunate than they have any right to expect. They have more to contend with than ever. The blood that has been shed has effectually roused the spirit of two great nations. The British and French not only fight for Turkey, but for themselves. The personal element has got into the quarrel, and will nerve the arms of every surviving soldier of both armies. The brave men who lost the lives on the blood-stained heights of the Alma will be avenged by their comrades. They know what they have to do, and they will do it. They have a thousand incentives, while the Czar has but one. They have not only to vindicate the justice of Europe and the rights of humanity, but they have to prove that their valour is equal to their disinterestedness and their virtue, and that they can maintain by their arms the high position which they have assumed as the arbiters of the destiny of Europe, against whose command no Potentate, however absolute and mighty, can make the least aggression upon his neighbour, without being called to account and punishment. Their happy alliance has been hallowed by a just cause, cemented by blood, and crowned by victory. Sebastopol will, in due time, yield to their valour; or the world will retrograde, and Cossackism will tread out freedom and civilisation under its relentless hoofs. But of such a result, is there a man in France or Great Britain who has the least fear? If there be, let him turn to the history of the great and glorious Battle of Alma, and take comfort from the perusal.

THE LATE MARSHAL ST. ARNAUD.

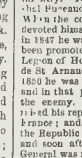
The distinguished position of the late Marshal St. Arnaud in the Allied expedition to the East, and in the victory on the Alma, will be found detailed in the Supplement published with the present Number

Of the deceased Marshal we gave a memoir in the Illustrated London News for April 15, 1854. We now append a few additional biographical details.

The Marshal was born in Paris, on the 20th of August, 1801. At the age of fifteen he entered the *Gardes du Corps*, and was soon a sub-Lieutenant in the infantry of the Line; but he quitted the Army, and did not return to the service until 1831, when he entered the 64th Regiment of the Line as sub-Lieutenant; and, a month afterwards, was raised to the grade of Lieutenant. He took an active part in the war of La Vendée; and, on the pacification of that province, was attached as Orderly Officer to Marshal Bugeaud. At a time he was charged with a mission to the Duchess de Berri, which he executed in such a way as to acquire her esteem. M de St Arnaud was rapidly promoted at Algiers, to the rank of Captain. At the siege of Constantine he distinguished himself greatly, and received the decoration of the Legion of Honour. In 1840, after having displayed great courage in a series of battles, he was raised to the rank of Commandant in the 18th Regiment of infantry, which he quitted for the Zouaves. In 1842 M de St. Arnaud attained the grade of Lieut.-Colonel, and as such joined the 15th Regiment of infantry. His services obtained for him the warm approbation of Marshal Bugeaud, and in 1844 he was made Colonel of the 32nd department. When the country had become more tranquil, Colonel de St. Arnaud devoted himself to the task of colonisation, and succeeded so well that in 1847 he was raised to the rank of Major-General. He had previously been promoted successively to the rank of Officer and Commander in the Legion of Honour. The country becoming again the theatre of war, M. de St Arnaud acquired a high reputation by his bravery and talent. In 1850 he was appointed to the command of the province of Constantine, and in that post obtained great distinction by his proceedings against the enemy. Having, by a brilliant campaign against the Kabyles, added his reputation to the highest point, M. de St. Arnaud returned to France; and, as General of Division, was appointed by the President of the Republic to the command of the 2nd Division of the Army of Paris, and soon afterwards was appointed Minister of War. In 1852 the General was made a Marshal of France, named Senator, and received the Grand Cross of the Legion of Honour. The Marshal left the Ministry of War to command the Army of the East, and died, *en gâte patriotic*, on the 29 h ult.

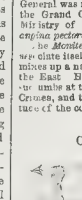
The *Moniteur* in announcing the sad event, says:—"All France will sympathise itself to the deep regret felt by the Emperor. This cruel loss mixes up a national mourning with the joy caused by the last news from the East. Having rendered such great services, Marshal St. Arnaud succumbs at the very moment he had assigned, by the expedition of the Crimea, and the signal victory of the Alma, glorious claims to the gratitude of the country."

OBITUARY OF EMINENT PERSONS.



SIR WILLIAM YOUNG, BART.

This young Baronet, one of the gallant 23rd Regiment, who met so glorious a death on the heights of the Alma, was the eldest son of the late Sir William Lawrence Young, Bart., by Caroline, his wife, daughter and co-heir of John Norris, Esq., of Hughenden House, Bucks. He was born 15th January, 1833, and had, consequently, only recently completed his majority. The Baronetcy, to which he succeeded in 1842, was conferred in 1769, on his great-great-grandfather, Sir William Young, Lieut.-Governor of Dominica, whose wife Elizabeth Taylor, of Bifrons, was cousin of the late distinguished Sir Herbert Taylor, G.C.B.

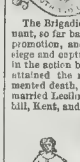


BRIGADIER-GENERAL TYLDEN.

The death of this eminently-distinguished officer, the Commanding Royal Engineer at the battle of the Alma, is thus referred to in Lord Raglan's Despatch:—"Brigadier-General Tylden was always at hand to carry out any service I might direct him to undertake. I deeply regret to say that he has since fallen a victim to cholera."

William Burton Tylden, the gallant subject of this brief notice, was younger brother of the present Major-General Sir John Maxwell Tylden, Kt., of Milsted Manor, Kent, and younger son of the late Richard Tylden, Esq., of Milsted, by Jane Auchmuty, his second wife, sister of Lieut.-General Sir Samuel Auchmuty, G.C.B. His ancestors, the Tyldens of Milsted, are a family of great antiquity.

The Brigadier-General entered the Royal Engineers as 2nd Lieutenant, so far back as 19th Nov., 1806. The following year he obtained promotion, and in 1812 became Captain. In 1814 he served at the siege and capture of Fort Santa Maria, and was commanding Engineer in the action before Genoa, under Lord William Bentinck. In 1837, he attained the rank of Lieutenant-Colonel, and at the time of his lamented death, was full Colonel and Brigadier-General. Colonel Tylden married Leolina, eldest daughter of William Baldwin, Esq., of Steedhill, Kent, and leaves issue.



LOUISA, COUNTESS OF HOPETOUN.

Louisa, Countess of Hopetoun, died on the 1st instant, at Edinburgh. Her Ladyship was born September 16, 1802, the daughter of the late Lord Macdonald, and married, June 4, 1826, John, fifth Earl of Hopetoun, by whom, who died April 8, 1843, she had an only surviving son, John Alexander, present Earl.

Died, on the 5th inst., Mr. George Garrett, many years connected with the parish of St. James's, Piccadilly, where he had four years filled with zeal and integrity the office of Churchwarden: during this time and previously, he had been presented, on more than one occasion, with a handsome testimonial, by his brother parishioners. Mr. Garrett and his colleague, Mr. Crane, superintended the restoration of the handsome St. James's Church Organ, of which we gave an Engraving in the Illustrated London News for Oct. 16, 1852.

Wills.—The will of the most noble the Dowager Duchess of Beaufort has been proved under £12,000 personalty, Francis George Coleridge, £16,000; Archibald Trotter Buchanan, Esq., £17,000, with the province of Canterbury; Peter Bellinger Brodie, Esq., £13,000; William Stroud, Esq., Banker, Swansea, £12,000; Stephen Brunskill, Esq., Polesiow-park, Devon, £140,000.

Marshal St. Arnaud's Successor.—General Canrobert, who succeeds the Marsha, is forty-four years of age. He is a man of great judgment as well as bravery, and of undoubted probity. He entered the army as a private soldier, but is of an excellent family in Brittany, where he has a small estate of about 5000 francs a year. With this small patrimony Canrobert, when receiving only the pay of a commandant, lived honourably, never incurring debts, and from time to time opening his purse to relieve comrades in distress.

THE WAR.

INVESTMENT OF SEBASTOPOL.

We have given, in this week's Supplement, an account of the march of the Allied Army to the heights on the south side of Sebastopol, where they arrived on the 27th. On the morning of that day, the transport steamers, taking in tow the vessels containing siege implements, began to go down in the direction of Balaclava. On the following day several of the transports were towed into the harbour, and commenced discharging. As the transports lay quite close to the shore, the guns, lowered on barges provided with a kind of drawbridge, had only a few yards to go. A dozen sailors and artillerymen put their shoulders to it, and the huge machine was landed. A dozen horses then took the place of the sailors, and the cannon was moved towards Sebastopol. The greatest difficulty was to get the transports into the bay, on account of the narrowness of the entrance; but this obstacle was soon overcome by the use of steamers, which towed them in one by one. In the course of a few days between 120 and 130 large guns were landed.

On the 28th an enormous fire appeared to be raging in the heart of Sebastopol; and as the Allied armies were in sight, and were to summon them on that day, it was thought that possibly the Russians were pursuing the usual Russian plan of burning, blowing up, and destroying everything, rather than surrender. All the Polish and other deserters agree that they were prepared to do so. The ships which they have sunk at the entrance of the harbour are the *Holy Trinity*, 120 guns; *Rostislaff*, 84; *Sisepoli*, 40-gun frigate; *Zapodiesh*, 84; *Oorial*, 80; *Silistria*, 80; *Koskevche*, 60. These ships, with one exception, had all their rigging standing, all their guns and stores of every description on board. Parts of their hulls are still visible, but the masts and rigging have now been cut away. Quantities of their ornamental and other gear have been picked up outside the harbour, washed out of them by the waves.

It has since been ascertained that the flames were caused by the burning of a quantity of stores; from which it is inferred that the Russians have made up their minds to the worst.

From the encampment of the Fourth Division, in front of Sebastopol, the whole town and forts can be perceived. The latter are most formidable, but are dominated by the position occupied by the Allies. The town is small, and apparently deserted by the greater part of its inhabitants. It has a dreary appearance, unrelieved by shade or trees, owing to the white stone of which the forts and houses are constructed. Figures can be distinguished by the naked eye on the other forts. On the 28th a Russian column issued from the town, and the Fourth Division, under Sir George Cathcart, advanced to meet it. The Russians instantly withdrew, with an evident view to entice the English under the range of their heavy cannon. This ruse had, however, no effect; for Sir George retired on the enemy's having declined to accept battle. In consequence of this step of the Russians, the three other British divisions, which had previously been at some distance, were ordered to advance.

Telegraphic reports, which must be received with caution, as they are not from official authorities, state that on the 2nd of October Sebastopol was completely invested on the south, and that the aqueduct was in the hands of the Allies. The bombardment of the forts was said to have begun on the 4th, and was to be continued till the 8th, on which day it was expected that an assault would be made. The Russians, who had been working night and day, had formed sand batteries, and armed them with ships' guns, but the range of the Allies' artillery was greater than that of the enemy.

Eight thousand cavalry, belonging to the reserve, are stated to have been safely landed in the Crimea. Omer Pacha is said also to have sent 8000 Turks to Varna, as additional reserves, in case of necessity.

From Kaffa, Kertch, and Perecop, Prince Menschikoff is reported to have received a reinforcement of 15,000 infantry, 8000 cavalry, and thirty guns.

THE THREATENED DIVERSION IN BESSARABIA.

Reports from Bucharest state that skirmishes have already commenced on the Bessarabian frontier. A Russian brigade occupies the passes of the Danube in the Dobrudja, and patrols of Cossacks are regularly sent across the fords on short foraging incursions, and to plunder the wretched defenceless villages. In order to put a stop to the system, Achmet Pacha, the Commandant of Silistria, has sent a body of 800 horse and some field-pieces to Matschin. This force patrols in smaller detachments the Dobrudja in quest of the Cossack marauders. Since the 16th of September slighten counters have been of almost daily occurrence

It is said that Omer Pacha immediately after the receipt of the brilliant news from the Crimea, sent orders to the Turkish troops concentrated near Matschin to advance towards the mouth of the Pruth. The Marshal will, it is said, conduct in person the operations against Bessarabia, and enter the Russian territory at the head of 50,000 men. This intention of Omer Pacha has been merely quickened by the victories of the Crimea.

The regiments of Russian cavalry and artillery stationed on the Russo Gallician frontier have received orders to proceed by forced marches to the Moldo-Wallachian frontier It is supposed that these troops have been ordered up to prevent the Turks from crossing the Sereth.

THE FLEETS IN THE BALTIC.

No news of any interest has been received from the Baltic during the last few days. The mail-steamer *Buldog*, which arrived at Dantzic on the 5th, reported that the greater portion of the fleet (all steamers), under the orders of Sir Charles Napier and Admiral Martin, were at anchor near Revel. A part was cruising in the Gulf of Bothnia, and a number of ships were to sail to Ledsund. No attack had been made; but the ships of the fleet on the way to England were under orders to wait at Kiel, &c., for further instructions.

OFFICIAL DESPATCHES.

The following were received at the Admiralty on Tuesday, Oct. 3:—

(No. 493.)

Britannia, off the Katscha, Sept. 28.

Sir,—I beg you will acquaint the Lords Commissioners of the Admiralty, that, by the request of his Excellency General Lord Raglan, I have ordered 1000 Marines of the fleet to be lent to the *Agamemnon* in the harbour of Balaclava, to relieve a similar number of the British forces now employed in guarding the heights overlooking that port.

The *Albion* and *Vesuvius* returned last night from off the Alma river, having brought down from the coast Army and embarked on board the *Avon*, transport, about 340 wounded Russians, whom I immediately sent on in charge of Commander Rogers of the *Albion*, with a letter to the Governor of Odessa, of which the enclosure No. 1 is a copy.

From the state of the country Captain Lushington was obliged to use every precaution in protecting his people employed on this service; and yesterday afternoon he was forced to embark all his men under the guns of the *Vesuvius*, as a body of about 6000 Russians had advanced rapidly upon him.

The Allied armies are in position to the south of Sebastopol, and the English cavalry and French reinforcements are expected hourly, but a strong N.E. wind is now against them.

Marshal St. Arnaud has been obliged by ill-health to resign the command of the French army to General Canrobert, and the Marshal has left for France.

The cholera is still showing itself occasionally among the ships of the fleet, but the crews generally are healthy.

The army is still suffering considerably, but the change of temperature this morning will, I hope, prove beneficial: fortunately the rains have not yet set in. I have, &c., J. W. D. Dundas, Vice-Admiral.

The Secretary of the Admiralty.

(Enclosure to 493.)

Britannia, off the Katscha, Sept. 26.

Sir,—I have the honour to inform your Excellency that, in consequence of the advance on Sebastopol of the Allied armies after the battle of the Alma, on the 20th inst., a number of wounded Russian officers and soldiers were left in the rear, in the small villages near the places where they had fallen, and by the request of his Excellency General Lord Raglan, I have collected as many as I could (about 340).

In order to shorten the sufferings of these gallant soldiers, which a long sea voyage must necessarily increase, I have sent them to Odessa, rather than to Constantinople, the distance to the former being so much less.

Commander Rogers, of the Royal Navy, has charge of them, under a flag of truce; and I trust your Excellency will, in the same feeling of humanity, receive and consider them as non-combatants until regularly exchanged, granting to the officers in charge an acknowledgment of the numbers and grades of the prisoners delivered over by him to your Excellency. I have, &c., J. W. D Dundas

Vice-Admiral and Commander-in-Chief.

His Excellency the Aide-de-Camp, General Annenkoff.

(No. 77.)

GENERAL LETTER.

Canterbury, Constantinople, Sept. 20.

Sir,—Her Majesty's steam-vessel *Beagle* arrived yesterday morning from England and Malta, and went on in the evening to join the fleet off Sebastopol, completes with coals and water.

The *Vulcan* sailed last evening for the Crimea; and the *Industry*, *Cambria*, *Andes*, *Colombo*, and *Kangaroo* steam-transports are ready. Some of these vessels take up colliers, with about 1700 tons of fuel for the fleet, besides several coal-ships sent on to Varna.

The *Industry* will be employed as a steam-collier, and carries between 700 and 800 tons.

The *Cadmus* transport arrived on the 28th from the Crimea, with 270 sick from the army, having lost a great number on the passage down. The *Courier* transport, also with sick, came down yesterday, but got ashore some miles up the Bosphorus, but I have removed all the sick to Scutari by steam-tenders.

The Turkish Government having kindly given every assistance in their power in complying with our wants, I have also applied to them for more bedsteads for the hospital, and am myself contracting for 300 wooden trestles, they being much required.

I have pleasure in co-operating with the military authorities, with a view to the care of the sick and wounded, and, from the unremitting attention of the staff, they are made as comfortable as possible under existing circumstances.

A Russian Brigadier-General died of his wounds last night at Scutari, and will be buried to-day with military honours. Another General has also arrived from the Crimea, who will be sent on to Malta, by direction of the Commander-in-Chief, by the first opportunity.

I beg to enclose a statement of the sick and wounded soldiers, made out as correctly as can be ascertained during the present press of duty.

I have, &c.,

EDWARD BOXER Rear-Admiral, Superintendent.

To the Secretary of the Admiralty, London.

A party from the British fleet have established themselves in the lighthouse of Cape Chersonese, which forms the extreme eastern corner of the promontory to the south of Sebastopol; and have relit the light which the Russians had extinguished.

No. 487.

Britannia, off the Katscha, Sept. 23, 1854.

Sir,—I beg you will inform the Lords Commissioners of the Admiralty, that since my letter to you of the 21st instant (No. 485), the men of the boats of the fleet have been employed in bringing from the field (about four miles distant), and carrying on board the transports, the English and Russian officers and men wounded in the battle of the Alma, as well as the sick of the army.

2. All the medical officers of the different ships have been zealously and usefully occupied in attending them, and I have been obliged to send several assistant-surgeons in the vessels with the wounded to Constantinople.

3. The *Vulcan* and *Andes*, with 800 wounded and sick, sailed for Constantinople yesterday; and to-day the *Orbisco* and *Colombo*, with 900, including some sixty or seventy Russians, will follow. Another vessel (by the request of Lord Raglan) with about 500 wounded Russians, will also proceed, under charge of the *Fury*, to land them at Odessa.

4. On the night of the 21st inst., the Russians made a very great alteration in the position of their fleet in Sebastopol. I enclose a report made by Captain Jones, of the *Samson*; and I propose attacking the outer line the first favourable opportunity.

5. Captain Jones also reports that great exertions appear to be making to strengthen the land defences, as well as those by sea. New batteries on both sides of the port have been erected, defending the entrances and line of coast. One, to the north, has heavy guns, of a range of 4000 yards, two shots having passed over the *Samson* when nearly at that distance.

6. Provisions for the army have been landed, and the forces move on to-day towards Sebastopol, accompanied by the fleets, which have anchored off the Katscha.

I have, &c.,

(Signed) J. W. D. DUNDAS, Vice-Admiral.

The Secretary of the Admiralty.

OBSERVATIONS ON THE FLEET IN SEBASTOPOL, MADE ON SEPTEMBER 22, 1854, BY CAPTAIN L. T. JONES, C.B., R.M.S. "SAMSON."

MOORED ACROSS THE ENTRANCE OF THE HARBOUR.

From north to south, are the following vessels:—

1st—A frigate, at northern extreme.
2nd—A two-decker.
3rd—A three-decker, with round stern.
4th—A two-decker.
5th—A two-decker
6th—A two-decker, without masts, quite light, and appears to be newly coppered.
7th—A large frigate.

ARTILLERY CREEK.

The top-gallant masts of these are on deck and sails unbent.

The ship without masts is lying across Artillery Creek; inside is a two-decker ready for sea, and bearing an Admiral's flag at the mizen.

HEAD OF HARBOUR.

The ships at the head of the harbour, which had hitherto been lying with their broadsides to the entrance, are now lying with their heads on:—

No. 1—On the north a two-decker
2—A two-decker.
3—A two-decker.
4—A two decker
5—A two-decker.
6—A three-decker at the entrance of the Dockyard Creek.
7—A three-decker bearing an Admiral's flag at the fore.

Above these are two ships; one appears to be a line-of-battle ship, and the other a frigate.

STEAMERS.

Five steamers under the northern shore. Three small steamers at the head of the harbour, and four in Careening Bay.

GENERAL OBSERVATIONS.

Dockyard Creek shuts in with Northern Fort, bearing S.E. ½ E. Observed about 500 infantry marching toward the town, from the direction of Balac ava.

Noticed about 60 men employed on brow of signal hill, carrying mould from brink of cliff to Square Fort.

2.45 P.M.—Cape Constantine and ships in one bearing S. ¾ W.

SINKING OF THE RUSSIAN SHIPS AT THE ENTRANCE OF THE HARBOUR OF SEBASTOPOL.

No. 489.

Britannia, off the Katscha, Sept. 24, 1854.

Sir,—In my letter of yesterday (No. 487) I regret to the extraordinary change that had taken place in the position hitherto maintained by the enemy's fleet in the harbour of Sebastopol, and I now beg you will acquaint the Lords Commissioners of the Admiralty, that the same afternoon, on the appearance of the Allied fleets in sight of Sebastopol, the whole of the vessels moored across the harbour were sunk by the Russians leaving their masts more or less above water, and I went last evening to the north of the harbour to examine myself of this singular event. Captain Drummond has examined the harbour this morning, and reports that the lower mast heads of the ships are generally above water, that the passage is closed, except, perhaps, a small channel, near the wharf off the North Battery, and the double booms inside are thus rendered more secure. Eight sail of the line are moored east and west, inside of the booms, and three of the ships are known to have their guns more elevation to the steep over the land to the northward.

2. An intelligent seaman, a deserter who escaped from Sebastopol on the 22nd, the night previous to the scene extraordinary mentioned. He had informed me that the crews of the ships moored across the harbour (to one of which he had been attached) had been landed, with the exception of a very few in each ship; that the vessels were plugged ready for sinking, that the guns and stores were all on board; and that the other ships were moored under the south side to defend the harbour from attack from the northward. He reported that the battle of Alma had greatly dispirited the Russians, that the troops had retreated on Sebastopol without a halt; that he believes the whole Russian force not to exceed 40,000. The man's statements were clear, and on points that came under my own observation were mostly corroborated, and I consider reliance may be placed on his information generally, considering the means his station in life afforded of enabling him to obtain it. At the request of Lord Raglan I have sent him on shore to act as a guide to the army on their approach to the environs of Sebastopol.

3. The Allied armies moved this afternoon to take up a position to the south of the port of Sebastopol, and the fleet will move so as to meet their arrival there.

I have, &c.,

(Signed) W. D. DUNDAS, Vice-Admiral.

To the Secretary of the Admiralty.

THE FRENCH CHARGE D'AFFAIRES AT CONSTANTINOPLE TO THE MINISTER OF FOREIGN AFFAIRS.

Therapia, Sept. 27.

Demoralised by the courage of the Allied troops, the Russians, who have had 8000 men killed on the Alma, neither stopped on the Katscha nor on the Belbeck, which were formidable positions. They have entered Sebastopol, the entrance of which they have blocked up by sinking three of their line-of-battle ships and two frigates. On the 24th the Allied armies were in march to take up a position before the town. The English had 1600 men put *hors de combat* at Alma. An Aide-de-Camp of Lord Raglan proceeds to Paris and London, the bearer of despatches from the Commanders-in-Chief.

* Not at sea.

(From the *London Gazette*, Tuesday, Oct. 10.)

War Department, Oct. 10, 1854.

His Grace the Duke of Newcastle has this day received two despatches, of which the following are copies, addressed to his Grace by General the Lord Raglan, G.C.B.:—

THE ENGLISH FORCES AT BALACLAVA.

Balaclava, September 28, 1854.

My Lord Duke,—I have the greatest satisfaction in acquainting your Grace that the army under my command obtained possession on this important place on the 26th inst., and thus establ shed a new and secure base for our future operations.

The Allied armies quitted their position above the Alma on the morning of the 23rd, and moved across the Katcha, where they halted for the night, and on the following day passed the Belbec.

It then appeared that the enemy had established a work which commanded the entrance of the river, and debarred its use for the disembarkation of troops, provisions, and material; and it became expedient to consider whether the line of attack upon the north side should not be abandoned, and another course of operation adopted.

It having, after due deliberation, been determined by Marshal St. Arnaud and myself that we should relinquish our communication with the Katscha, and the hope of establishing it by the Belbec, and endeavour, by a flank march to the left, to go round Sebastopol and seize Balaclava, the movement was commenced on the 25th, and completed on the following day by the junction of this place by her Majesty's troops, which led the advance. The march was attended with great difficulties. On leaving the high road from the Belbec to Sebastopol, the army had to traverse a dense wood, in which there was but one road that led in the direction it was necessary to take. That road was left, in the first instance, to the cavalry and artillery; and the divisions were ordered to march by compass, and make a way for themselves as well as they could; and, indeed, the artillery of the Light Division pursued the same course as long as it was found possible; but, as the wood became more impracticable, the batteries could only proceed otherwise than by getting into the road above-mentioned.

The head-quarters of the army, followed by several batteries of artillery, were the first to clear the forest, near what is called, in Major Jarvis's map, Mackenzie's Farm, and at once found themselves on the flank and rear of a Russian division, on the march to Bagtcheserai.

This was attacked as soon as the cavalry, which had diverged a little into a bye and intricate path, could be brought up. A vast quantity of ammunition, and much valuable baggage fell into our hands, and the pursuit was discontinued after about a mile and a half, it being a great object to reach the Tschernaya that evening.

The Russians lost a few men, and some prisoners were taken, amongst whom was a pair of artillery.

The march was then resumed by the descent of a steep and difficult defile into the plains, through which runs the Tschernaya, and this the cavalry succeeded in pas-ing shortly before dark; followed in the course of the night by the Light, First, Second, and Third Divisions: the Fourth Division having been left on the heights above the Belbec till the following day, to maintain our communication with the Katcha.

This march, which took the enemy quite by surprise, was a very long and tedious one, and, except at Mackenzie's Farm—where the wells, yielding a scanty supply, were found—the troops were without water; but they supported their fatigues and privations with the utmost cheerfulness, and resumed their march to this place on the morning of the 26th.

As they approached Balaclava, nothing indicated that it was held in force; but a resistance was offered to the advance of the Rifle Brigade, and guns were opened from an old castle as the head of the column showed itself on the road leading to the town, I deemed it prudent to occupy the two flanking heights by the Light Division and a portion of Captain Brandling's troop of Horse Artillery on the left; movements terminated by the surrender of the place, which had been occupied by very inconsiderable numbers of the enemy.

Shortly after we had taken possession we were greeted by Captain Mende, of the *Agamemnon*, and soon after by Sir Edmund Lyons him-elf.

His co-operation was secured to us by the activity and energy of Lieutenant Maxse, of her Majesty's ship *Agamemnon*, who reached my camp on the Tschernaya, on the night of the 25th, with despatches, and who volunteered immediately to retrace his steps through the fleet, and to communicate to Sir Edmund the importance I attached to his presence at the mouth of the harbour of Balaclava the next morning, which officer (from the intricacy of the country, intended by the Russians) he accomplished so effectually, that the Admiral was enabled to appear off this harbour at the very moment that our troops showed themselves upon the heights.

Nothing could be more opportune than his arrival; and yesterday the magnificent ship that bears his flag cast red this beautiful harbour; and the Admiral, as has been his invariable practice, co-operated with the army in every way possible.

We are busily engaged in disembarking our siege train and provisions, and we are most desirous of undertaking the attack of Sebastopol without the loss of a day. I moved up two divisions yesterday to its immediate neighbourhood, where I was enabled to have a good view of the place; and Lieut.-Gen. Sir John Burgoyne and Gen. Bizot, the French Chef de Génie, are occupied in reconnoitring it closely to-day.

The march of the French army on the 26th was still more fatiguing and prolonged than ours. Being behind our columns, they could not reach Tschernaya till the next day, and I fear must have suffered sadly from want of water.

I regret to have to acquaint your Grace that Marshal St. Arnaud has been compelled, by severe illness, to relinquish the command of the army. I saw him on the 25th, and, finding myself unable to act in concert with me, he felt his duty to resign the next morning. I view his retirement with deep concern, having always found in him every disposition to act in concert with me. He has since become much worse, and is, I fear, in a very precarious state.

Fortunately he is succeeded by an officer of high reputation, General Canrobert, with whom I am satisfied I shall have great pleasure in acting, and who is equally desirous of maintaining the most friendly relations with me.

I have, &c.,

(Signed) RAGLAN.

His Grace the Duke of Newcastle, &c. &c.

Balaclava, Sept. 28, 1854.

My Lord Duke,—In continuation of my despatch of the 23rd inst., I beg leave to lay before your Grace the name of the officers whose names have been brought to my notice by the Generals of Divisions and the Heads of Departments.

Lieutenant-General Sir George Brown speaks in the highest terms of Lieut.-Col. Yea, of the Royal Fusiliers; Lieut.-Col. Chester, of the 23rd, who was unfortunately killed, and of Capt. Bell, who succeeded to the command, and brought the regiment out of action; and Lieut.-Col. Blake, of the 23rd; Lieut. Col. Saunders, of the 19th, who was severely wounded; Lieut.-Col. Egerton, of the 33th, and Lieut.-Col. Shirley, of the 88th; also of Lieut. Col. Lawrence and Major Norcott, of the Rifle Brigade, each commanding a wing of that corps; Lieut.-Col Lake, commanding the Artillery; of Capt. Brandling, commanding a portion of General's Department; and Capt. Hallowell, of the latter; and Capt. Whitmore and the other officers of his personal staff; and Capts. Glyn and Mackenzie, the Brigade Majors serving with the Division.

Lieutenant-General his Royal Highness the Duke of Cambridge recommends Colonel the Hon. F. Hood, of the Grenadier Guards; Colonel the Hon. George Upton, of the Coldstream Guards; and Colonel Sir Colquhoun Hamilton, of the Scots Fusilier Guards; Lieut.-Colonel Cameron, of the 42nd; Lieut.-Colonel Douglas, of the 79th; and Lieut.-Colonel Amelie, of the 93rd; Lieut.-Colonel the Hon Alexander Gordon and Lieut.-Colonel Cunyngham, the Assistant-Adjutant and Quartermaster-General; Captain Butler and the Hon. Arthur Hardinge, the Deputy Assistant Adjutant and Quartermaster-General of the Division; and Major the Hon. James Macdonald, and the other officers of his personal staff; also Lieut.-Col. Dacres, commanding; and Captains Paynter and Wynyard, of the Royal Artillery; and Capt. Chapman, of the Royal Engineers; and Lieut.-Col. Stirling and Capt. the Hon. Percy Fielding, the Brigade-Major of the Division.

Lieutenant-General Sir De Lacy Evans eulogizes the conduct of Lieut.-Col. the Hon. P. Herbert, of the Quartermaster-General's Department, who was wounded, I hope not severely; Major Lysons, of the 23rd, acting as Assistant-Adjutant-General, in the absence, from sickness, of Lieut.-Col. Wilbraham; Capt. Lane Fox, and Capt. Thompson, Deputy-Assistant Adjutant and Quartermaster-General, and Capt. Aitkin and the other officers of his personal staff. He also praises the exertions of Lieut.-Col. Hoey, of the 30th; Lieut.-Col. Warren, of the 55th; and Lieut.-Col. Webber Smith, of the 95th, who was severely wounded; Lieut.-Col. Carpenter, of the 41st; Lieut.-Col. Daly, of the 47th; and Major Dalton, of the 49th; Lieut.-Cols. Fitzmayer and Dupuis; and Capts. Turner and Swinton, of the Royal Artillery; and to these I may add Capt. Lovell, of the Royal Engineers. Brevet-Majors Thackwell and Armstrong, the Brigade-Majors of the Division.

I consider it my duty especially to recommend Captain Adye, of the Royal Artillery, the principal staff officer of that branch of the service, and Captain the Hon. Edward Gage, Brigade Major of Artillery, and Major Tylden, Brigade Major of the Royal Engineers, and Major the Hon. Edward Talbot, and Captain Weare, who was wounded, of the Adjutant-General's; and of Captains Wetherall, Woodford, Sankey, and Hamilton, of the Quartermaster General's Department.

Mr. Commissary-General Filder and Dr. Hall, the principal medical officer, were in the field the whole time, and merit my approbation for their exertions in discharging their onerous duties.

I have, &c. (Signed) RAGLAN.

His Grace the Duke of Newcastle, &c.

THE HEROES OF THE ALMA.

[FOR MUSIC.]

I.

RING the joy-bells—chime on chime!
England conquers as of yore!
Ring for Alma's heights sublime,
Union Jack and Tricolor!
And let the people's voice
O'er all the land rejoice,
That in the great, immortal fight,
The glorious living and the dead,
For Freedom armed, for Justice bled,
And conquered in the Right!

II.

Sound the requiem—deep and clear!
England weeps her children slain,
Mourns with sympathy sincere
Heroes lost, but not in vain.
And let the solemn peal
A nation's grief reveal.
Yet—be the tears of sorrow dried!
We owe their babes a glorious debt;
And grief is vain if it forget
The claims of those who died.

III.

Ring the joy-bells! light the blaze!
And let the deep-voiced cannon roar;
Join all hands in pray'r and praise;—
England conquers as of yore.
Our England and our France
In Freedom's advance,
And fight for truth and humankind!—
Their ancient glories are surpassed;—
Long may their generous friendship last—
To brave a world combined! C. M.

EARL GRANVILLE ON THE WAR.—At the dinner succeeding the review of the Staffordsh re Yeomanry on Friday (last week), Earl Granville, in replying to the toast, "Her Majesty's Ministers," de ended the pacific policy which Government had pursued in the negotiations with Russia. When they found, however, that peace was no longer possible, they resolved that the war should be carried on with vigour. "I believe I may say that the finest army has gone to the East which was ever sent to a foreign country. Lord Raglan has under his command 10,000 guns of very heavy calibre. When you compare these with the six guns which Wellington was able to collect in battle array, it does show that, as all events, we have not in fen into that great error which characterised the Government of that day when the greatest Commander which this country ever knew was in command. I am almost afraid to state the great amount of ammunition which has been sent out. If I were to state it to you it would almost sound like the tales of Baron Munchausen. I may, however, say that, little as I used, it will astonish you were one those 102 guns to which I have referred. Government did not conceal from themselves the great responsibility of their urging on the commanders of both services an attack on Sebastopol. They were not ignorant of the opinion entertained by many distinguished officers of every country in Europe that, if not impracticable, the attempt was of a most difficult nature; but they did feel that the integrity and independence of Turkey was a mere joke so long as that fortress was deemed impregnable—situated, as it is, in the very centre of the Black Sea, as the only port from which we can come in or go out with safety they felt that that was the very key of the position; and they did think that, with the assistance of the French (of whose straightforward and loyal conduct it is impossible to speak in too high terms), these two forces, acting in general operation, could achieve all that it was possible for men to accomplish."

COMTE BUOL has charged the Minister of Austria, in London, to express to the English Minister for Foreign Affairs, the sincere joy which the Austrian Cabinet feels at the success obtained in the Crimea.

RUSSIAN PRISONERS AT LEWES.

IN THE ILLUSTRATED LONDON NEWS for the 23rd ult., we engraved a set of characteristic illustrations of the Russian Prisoners at War, at Sheerness—a portion of whom (150 captured at Bomarsund) were removed from thence, last week, to Lewes. Here the building, hitherto used as the county gaol, had been purchased and altered, to receive the new tenants. The prison is under the charge of a staff of officials—viz., Lieut, Mann, the Governor; Mr. Patch, the Purser; Mr. Burton, R.N., Surgeon; and Mr. Routenfield, who acts as interpreter. The whole place bears an altered aspect. The external wall has been considerably lowered, and the entrance-yard has been cleared and laid with turf. The front entrance to the building, which also serves for that of the Governor's house, has its prison-like appearance modified: the chapel has been converted into a dining-hall, capable of seating about 600 persons; while that which was the Debtor's side of the prison has been fitted up as an infirmary, with warm baths, nurses' and other dormitories, dispensary, &c. The doors have been removed from the cells of the interior of the building, and appliances for washing, &c., put up at convenient points. It is intended that each cell shall serve as a bed-room for three prisoners. At the rear of the prison-house is a tennis-court, with a covered yard, for recreation during wet weather: together with sheds, beneath which the prisoners can work, in making toys or other articles for sale to the public. A spot is also to be appropriated as a market-place for the sale of vegetables, and other trifling comforts, which the prisoners may have the means of purchasing. "Our Own Correspondent at Aberdeen," even in the present unfinished state of the building, ample has been done to render the domicile of these poor victims to the ambition and criminality of the Emperor of Russia, as comfortable as is possible under the circumstances." Let us hope that similar consideration may be extended to such persons as, by the fortune of war, may chance to fall into the hands of the Russians.

The removal of the prisoners to Lewes from Sheerness, on Thursday week, excited considerable interest in the ordinarily quiet county town, which, however, has a castle of its own. The prisoners were expected to arrive by railway, by three o'clock; and a large number of visitors from Brighton and the surrounding district, flocked to the station, to get a glimpse of the captives of Bomarsund. They arrived at two o'clock, owing to some change in the railway arrangements: the train was first stopped at the Newhaven platform, to which only the railway officials and the officers of the prison were admitted. The prisoners, about 170 in number, comprised fifteen officers, and the wives of two of them; three other women, and one child. Their appearance was anything but imposing, and, if such be the staple of the Russian army, they are but sorry figures. The men were dressed in long, loose, dirty, drab over-coats, reaching almost to the ankles. Upon one shoulder was sewn a piece of dark green or blue cloth, bearing the initials "T. C.," denoting the wearers to be of the Finnish Infantry; for these men are not Russians, but Finns. They were small flattish cloth caps, and loose leather boots. They are mostly young fellows, and some mere lads; low in stature, with light hair and complexions. There appeared to be scarcely a fine man amongst them. The description generally agrees with the appearance of the Russian prisoners represented in the second sketch upon the next page, taken by our own Correspondent at Sohamis, early in the war.

On leaving the Lewes station, Lieut. Mann gave the word of command, and the prisoners, having been formed into detachments, four abreast, proceeded through School-hill, Albion-street, and East-street, to the prison. Lieut. Mann offered one of the officer's ladies his arm, which she accepted, her husband accompanying her on the other side. The officers followed the men. The pensioners acted as a kind of formal guard, walking with fixed bayonets, and a body of the East Sussex constabulary were in attendance. A large crowd of persons followed the captives to the prison; but there was no expression of any feeling on the occasion. The officers are intelligent-looking persons; and their ladies of attractive appearance.

The "prisoners at-war" already appear reconciled to their new

GAOL AT LEWES, IN WHICH THE RUSSIAN PRISONERS ARE CONFINED.

abode. They eat well, and sleep well: their diet—of good beef, bread, soup, and tea—suits them well They are very orderly in their conduct, and before their meals sing a short hymn as grace. On Saturday, we understand, a young Finn was born somewhat unexpectedly. The mother and child are progressing well, under the care of the surgeon of the prison.

GIGANTIC WATER-WHEEL.

The starting of a stupendous Water-wheel, recently added to the works of the Laxey Glen Mines, in the Isle of Man, was attended with an interesting ceremony, on the 27th ult. The mines, we understand, are held under lease from the Crown, at 1-12th Royalty. They produce about 90 tons of silver-lead ore per month, yielding 50 ounces of silver to the ton; and also about 200 tons of zinc ores monthly. The works include eight large water-wheels, and one steam-engine; and the company are about to erect three additional water-wheels: one 16 feet in diameter, and two 50 feet. The starting of the gigantic Wheel recently added was commemorated by an industrial fête by between 3000 and 4000 persons, from all parts of the island, to witness so great an achievement as (according to the *Manx Sun*) the completion of the "largest wheel in Europe." We have only space to describe the naming ceremony.

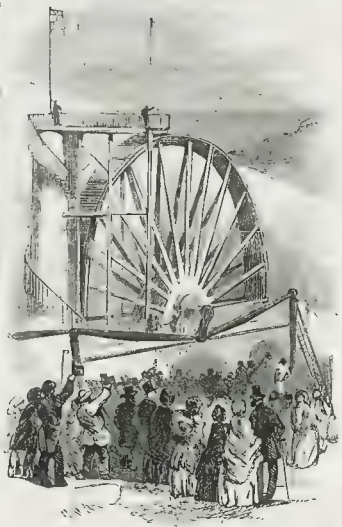
The workpeople—between 500 and 600 in number—dressed in holiday clothes, accompanied by two bands of music, walked from the washing-floors to the large Wheel, headed by the Chairman of the Directors, George W. Dumbell, Esq; and the Agent of the Mines, Captain Rowe; who, on their arrival at the Wheel, conducted the Governor and his lady, the Lord Bishop and his lady, and Mrs. Dumbell, to the first platform, where his Excellency, by means of a small handle, let on the water to the Wheel, which immediately commenced moving. Simultaneously with the first motion of the Wheel Mr. Dumbell, gracefully threw the bottle, ornamented with lace and filled with champagne, and named the Wheel "Lady Isabella," in honour of the Governor's lady. At the same moment a flag at the top of the wheel was unfurled, and made known the title to the assembled crowds, who greeted it with loud cheers, while the shouts from the strong lungs of the workpeople vied with the booming of the cannon in proclaiming the satisfactory accomplishment of a great undertaking.

The workpeople were then regaled upon a neighbouring green with substantial fare; after which they enjoyed themselves in various games. The guests of the Mining Company were entertained in a building which had been erected upon the green for the occasion. A variety of toasts were drunk, not forgetting "The Miners," proposed by his Excellency the Governor of the Island.

The day's rejoicing concluded with a display of fireworks from the viaduct near the new washings.

The new Wheel forms a conspicuous object in the picturesque glen of Laxey. Its vast dimensions are first noticed by the visitor, when descending the new road from Douglas. A host of little white cottages now stud the slopes on each side of the glen, many encircled by a clump of trees; at the bottom of the glen is a neat little church recently erected, and the new washings, where some hundred men and boys are busily employed attending to the machinery which crushes and washes the ore; further up, the mine is entered by a level, where all the ore passes out; towering above is the large Wheel sitting on its handsome case, on the end of which the Manx Arms figure in gigantic proportions; several other wheels and engine houses are seen still higher up the glen, and forming a background to all stands Snaefell, the monarch of the Manx mountains. On coming to a closer inspection of the Wheel, next to surprise at its great dimensions and majestic motion, an apparent want strikes the eye of the unscientific visitor, viz, the absence of any aqueduct to the top, or even in a line with the centre of the Wheel; a long row of white arches are certainly seen approaching it, but they are found merely to bear the long connecting rod which moves backwards and forwards applying the power of the Wheel to work the pump at the mine shaft, which is distant some two hundred yards from the Wheel. If, however, the visitor will go to the top of a neighbouring elevation, a large reservoir will be found, filled by a small stream of water; from the reservoir an iron tube about two feet in diameter passes under the surface to the foot of the Wheel, whence it rises perpendicularly in the centre of a slender white tower to the level of the reservoir, then passes under the platform over the Wheel, and pouring on to it, returns in the opposite direction; for the Wheel is what is termed a "breast-shot," and the water does not pass right over the top as an "over-shot." The axle of the Wheel rests on the top of a substantial oblong erection in which the lower half revolves; this casing is not merely an enormous stone building, but shows great taste of design, the lower part being pierced by arched openings, which give it a light appearance, and allow the Wheel to be seen.

The Wheel is 72 feet 6 inches in diameter, and 6 feet broad clear in the water way. The burthen is moved from the centre, giving 10 feet stroke at the crank, and 8 feet in the engine shaft. The axle of the Wheel, from the Mersey Iron Works, is made of malleable or hammered iron 17 feet long and 21 inches diameter, and weighing 10 tons. The arms are of wood with cast-iron rim, supplied by Galloway's Foundry, Douglas. The line of rods extending from the wheel to the top of the pit is 600 feet in length. They are made of solid oak, strapped with plates of wrought iron. The mine is 200 fathoms deep, which depth is being constantly increased. It was this that rendered so large a wheel necessary to keep the mines clear of water. The Wheel, if required, would pump 250 gallons of water per minute from a depth of 260 fathoms.



THE STARTING OF THE GREAT WATER-WHEEL, AT LAXEY GLEN, ISLE OF MAN.

We should add that, beside the new church lately built for the miners, there are schools for their children, superintended by a competent master from Battersea; all which has been mainly accomplished through Mr. Dumbell, Chairman of the Directors, and supported by the Mining Company.

RE-OPENING OF THE PARISH CHURCH OF ST. MARY, AT WALLINGFORD.

The ancient parish church of St. Mary, at Wallingford, having been taken down, and entirely rebuilt, with the exception of the tower, was re-opened for the purposes of Divine worship on Tuesday, the 26th ult., when the Lord Bishop of the Diocese preached a sermon appropriate to the occasion.

The old Church consisted of a nave, north and south aisles, and chancel, and a large square tower, which had been rebuilt in the year 1653. The structure has been taken down and rebuilt, except a portion of the chancel and the tower. The east window has been re-arranged so as to provide additional accommodation for 150 persons. The two aisles have been widened considerably, and the south one extended eastward, so as to afford the required amount of accommodation. The interior presents an open roof of high pitch, and well proportioned to the general area of the building. The floor is laid with black and red Staffordshire tiles. The seats are low and open; those appropriated to the Corporation being distinguished by stall ends, having carved finials bearing the Corporation Arms. The east window has been filled with stained-glass, by Wailes, of Newcastle; the figure in the centre compartment being appropriated from a previously-existing window. The Communion-table is covered with a handsome crimson velvet cloth, with a monogram presented by some of the ladies of the town. The chancel-stalls are of oak, with admirably-carved finials. On each side of the east window are tablets—one bearing the Creed, and the other the Decalogue—presented by I. E. Payne, Esq., of Wallingford. The building is warmed with hot air by Messrs. Haden, of Trowbridge. The walls are built of flint, with Bath-stone windows, quoins, and mouldings. The whole of the work has been successfully

ST. MARY'S CHURCH, WALLINGFORD, RESTORED.

RUSSIAN PRISONERS AT SCHUMLA.—(SEE PRECEDING PAGE.)

FUNERAL OF THE LATE MARQUIS OF ORMONDE.—THE PROCESSION LEAVING KILKENNY CASTLE.

carried out by Mr. Castle, builder, of Oxford, from the designs of Mr. D. Brandon, the architect.

Too much praise cannot be bestowed upon the exertions of the Rector, Curate, Churchwardens, and others interested in this excellent work, for the indefatigable attention they have paid to it. The restoration has been most economically carried out; but, notwithstanding, there is a deficit of about £400, which it is hoped will soon be collected.

FUNERAL OF THE MARQUIS OF ORMONDE.

THE removal of the remains of this much-lamented nobleman, from Lofter's-hall to Kilkenny Castle, took place on the 20th ult.; and on Monday morning they were deposited in their last resting-place.

From an early hour, the tenantry from the Kilcash, the Garryricken, the Dunmore, and Kilmacshane estates began to pour into Kilkenny, to pay the last melancholy tribute. The concourse of the gentry of the county was also immense; and as eleven o'clock, the hour fixed upon for forming the funeral procession, drew nigh, the citizens might be seen approaching the Castle *en masse*. The coffin was laid out in the hall, with pall and coronet; the suite of apartments adjoining was appropriated, for the occasion, for the purpose of robing rooms. The military officers and clergy intending to take part in the procession were received in the library; the members of the Corporation, the Masonic bodies of Kilkenny, and the gentry of the county and city waited in the picture gallery; and the tenantry, in their white scarfs and hatbands, were marshalled in the court-yard. At half-past eleven o'clock the procession began to move.

In the advance was a body of tenantry, wearing the insignia of mourning.

These were succeeded by the officers of the garrison in uniform, and wearing crape upon the arm.

Next came the County Inspector, and other local officers; and after these, the clergy, in a large body—those of the county wearing scarfs and hat-bands, the city clergy also having on their gowns and bands.

After the clergy came the coronet of the deceased Marquis, borne on a crimson velvet cushion, by Mr King, his Lordship's butler.

The Coffin followed, borne on the shoulders of a picked body of stalwart young men, selected from the tenantry. The lid showed a large electro-plated breast-plate, engraved with the Ormonde arms impaling those of Paget, and beneath, the inscription:—

JOHN BUTLER, the Most Honourable Marquis of Ormonde, Earl of Ormonde and Ossory, Viscount Thurles and Baron Arklow, K.P., Hereditary Chief Butler of Ireland, Colonel of the Kilkenny Militia, and Lord-in-Waiting on the Queen. Obiit. 24th September, 1854; Ætat 46 years.

On each side of the coffin was a row of noblemen and gentlemen, acting as pall-bearers; on one side, these were led by the Earl of Desart, on the other by the Earl of Besborough. The coffin was followed by the relatives of the deceased, as mourners.

The household servants and dependants of the noble Marquis came next, arrayed in the livery of mourning. These were succeeded by the Corporation of Kilkenny, before whom the civic sword and massive silver mace—a present to the Municipal Council from the Duke of Ormonde in the latter end of the seventeenth century—draped in crape, were borne reversed. The members of the Council walked two and two; led by the Mayor, Michael Sullivan, Esq., M.P. for the city; and the city High Sheriff, Thomas Hart, Esq., J.P. They were attended by the Corporation officials.

Then followed, in a long double line, the members of the Masonic Lodges of Kilkenny; mustering nearly a hundred in number, and wearing crape weepers and the usual emblematic blue-ribbon badge in the button-hole.

Next were marshalled the pupils of Kilkenny College, an endowment of the Ormonde family.

The gentry of the county of Kilkenny succeeded, comprising the Ponsonbys, the Butlers, the Langrishes, the Connellans, the De Montmorencys, the Floods, the Cuffes, the Powers, the Blundens, the Wemysses, the Rookeys, the Izods, the Greenes, the Stannards, the Milwards, the Wheelers, the Aylwards, the Warrens, the Lanes, the Hamiltons, the Cookes, and all the names and lineages that are identified with the property and respectability of Kilkenny, in a vast multitude.

The citizens of Kilkenny followed in equally large numbers, and the procession was closed by another body of the Ormonde tenantry.

As the procession wended through the streets to the Cathedral, the bells tolled from the belfries of all the churches. The shops were shut up; even the banks were closed for the occasion; and business was totally suspended. Immense crowds lined the streets.

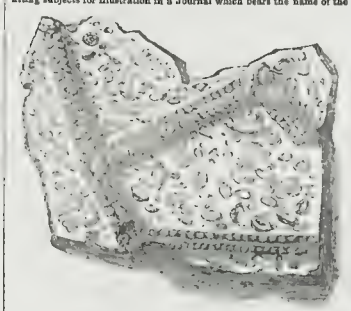
Arriving at the Cathedral precinct, the procession was met by the Lord Bishop of Ossory, and the members of the Chapter, in full canonicals. As the procession entered the Cathedral the organ played the Dead March in "Saul." The Cathedral was hung with mourning. It was densely crowded with spectators. The choir chanted the service, and the Bishop preached an eloquent and impressive sermon, from St. Mark, c. xiii., v. 33, 37.

At the conclusion of the sermon the procession again formed, and proceeded from the chancel towards the south transept, where the grave had been prepared, and the Bishop concluded the ceremony; when the sorrowing tenantry, and sympathising spectators retired from the sacred edifice and separated.

The accompanying Illustration is from a sketch taken from the Victoria Hotel, by E. Fitz Patrick.

VAULTED CHAMBER IN THE CITY.

STRANGE are the mutations which the hand of improvement from time to time effects in the aspect of large towns—in the vista of ages, draining the moor, and covering it with palatial houses; and widening the narrow and tortuous street of crazy old buildings into spacious thoroughfares, flanked with edifices which may be termed so many temples of industrial art, wonderfully exemplifying "the potentiality of growing rich." The latter change is now in progress from St. Paul's Cathedral to Eastcheap, along the ancient line of Watling-street, which dates from a period before the Roman conquest and civilisation of Great Britain. In this great work of improvement memorials of twenty centuries since have been turned up; and it is in such periodical *rummagings* (we borrow the word from Sir Christopher Wren) that "the age of great cities" is to be read, and the indices of their antiquity are to be successfully sought. Graphic records of such discoveries are fitting subjects for illustration in a Journal which bears the name of the capital itself; and the interest which they possess affords a welcome relief to the more stirring scenes with which they may sometimes be seen in juxtaposition in our pages.



PORTION OF CHILING, OLD FISH-STREET.

The addition to this collection of olden art we are about to describe has been brought to light in a principal thoroughfare nearly parallel to Wasling-street, namely—in Old Fish-street, described a century and a half since, as "a considerable and pleasant street between Bread-street and Old Change West." In Roman Catholic times, this was the great London Fish-market. Henry III., in order to increase the Queen's Customs at Queenhithe, prohibited any fish being landed from fishing-vessels, except at that port; which caused the great Fish-market to be established in Bread-street-ward, between the Thames and West Cheap, or on the spot now called Old Fish-street and Old Fish-street-hill. Stow describes the fishmongers' houses of his time as at first but moveable boards our talis, set out on market-days with fish; "but, procuring licenses to set up sheds, they grew to shops, and by little and little to tall houses of three or four stories in height, and now are called Fish-street." Sir William Davenant has left us a lively picture of the place: "Oh! the goodly landscape of Old Fish-street! which, if it had not the ill luck to be crooked, was narrow enough to have been your founder's perspective; and where the garrets, perhaps not for want of architecture, but through abundance of amity, are so narrow, that opposite neighbours may shake hands without stirring from home." This passage has lasted to our day as the most expressive illustration of a narrow-built city; indeed, these few descriptive lines have outlived many a more pretentious page by their author—the first to adulterate the English drama with the French heroic play.

SEAT IN CHAMBER, OLD FISH-STREET.

SUBTERRANEAN CHAMBER OLD FISH-STREET, ST. PAUL'S.

The precise boundaries of this old fish-market are given in an Inquisition in Latin, among the records of the Fishmongers' Company, 13 Henry V., when certain citizens deposed on oath that fish had been from ancient time sold "in the way of Old Fysshe-street, that is to say, from the north part, lengthwise, direct to the western corner of the same street, where the shop is seen that John Trige, late citizen and fishmonger of London, held and occupied, adjoining the shop which Richard Dykes, dock-fishmonger, now holds, towards the east, and from the southern part of the same, direct to the western corner of the same,

way," &c. * * * "They moreover say, that all, and all manner of fish, called *shell-fish*, and taken in the Thames, were sold, from ancient time, and ought to be sold, from the way of London-bridge towards the west, unto the corner of the wall of the Church of St. Mary Magdalen." Stow also tells us that Knightrider-street, which, as above expained, became the Fish market, was "famous for fish and fish dinners;" so that the "Fish Ordinary," has precedent of centuries since. We should, by the way, explain that Old Fish-street had formerly a sort of *Middle row* of shops and tenements; the removal of which after the Great Fire explains the present width of the street. We have been thus minute in reference to the *fishful* allocation of the district, from its having to do with the strange place we are about to describe.

It appears that during some recent alterations in the house at the corner of Lambeth-hill, at the west end of Old Fish-street, the rubbish of many years accumulated in the cellar was cleared out, and a quantity of the soil removed, when some vaults were discovered. Their existence had been known for some time: the former tenant of the house termed them "the chapel," although he used them for the ordinary purposes of a cellar; and here it should be remarked that the trade of the old fishmongers in this part of the town was often carried on in *cellar-shops*. The place thus discovered consists of a suite of vaulted chambers, communicating with each other. First, we have a large chamber, partitioned into two compartments of unequal size. The inner chamber, which is the smaller of the two, contains a raised seat, canopied in, and in part perfect. In the side recesses are stone slabs, which a writer in the *Literary Gazette* of last Saturday considers "to have formed cupboards or lockers, being firmly fixed with strong iron clamps. In one of these recesses a marble trough was discovered, which, from its peculiar shape, suggests the notion that it was used for the total immersion of the infant in baptism. It is without ornament, by which its age might be judged."

The roof is curiously groined, and with the walls, and the canopied seat or "throne," is richly decorated with polished marine shells, fragments of antique glass, pieces of quartz crystal and calcareous spar, formed into patterns or devices, of which we have engraved specimens. The employment of shells was, in all probability, suggested by the trade of a former tenant of the dwelling-house. The place resembles a grotto, in the rococo taste of the last century; but tradition points to the appropriation of the vaults at a much earlier period. Bishop Bonner is said to have lived in the house, but we think there is no any authority for such a supposition, unless it be the suspicion that these vaults were a secret chapel of the bigoted prelate. The house was originally of the better class, and had a large staircase, which has been removed.

A Correspondent has suggested some elucidation from the following passage in a volume entitled "The Antiquities of London and Westminster:"—"Upon Paul's wharf-hill, within a great gate, and belonging to that gate next to Doctors' Commons, are many fair tenements, that in the leases went by the name of 'Camera Diane,' or Diana's Chamber—so denominated from a spacious building, that in the time of Henry II. stood in Ship-place. In the camera, or arched and vaulted structure, full of intricate ways and windings, Henry II., as sometimes he did at Woodstock, kept (or was supposed to have kept) that jewel of his heart, Fair Rosamond—she whom there he called 'Rosa mundi and here Diana, and hence had this house that title. To the day are remains and some evident (notable) tokens of tedious turnings and windings; as also a passage underground to Castle Baynard, which was, no doubt, the King's way to his Camera Dianæ." Now, a passage has been traced into an adjoining vault, in the direction where Baynard Castle formerly stood. The walls of this adjoining portion are of great thickness and strength. We are compelled to add that "Fair Rosamond" is even a more speculative guess than "Bishop Bonner," as the tenant of this fantastic place; but the above quotation is not without its value. We rather incline to the opinion expressed in the *Literary Gazette*—that these vaults were the scene of the Roman Catholic rites, when the priests of the old religion were proscribed, and were forbidden to harbour them under heavy penalties. The decoration of the roof and walls may be of later date; or, probably, some devoutly-disposed fishmonger of the Roman Catholic times may have executed the shell-work design, the material for which lay at hand, of its had ready means of procuring. Be this as it may, the place is curious and suggestive, especially when we recollect that there scarcely exists in the metropolis a more interesting locality than the above spot. The house is No. 1, Old Fish street. No. 26, built in 1668, immediately after the Great Fire, has a boldly-sculptured sign-stone of a bell on the exterior.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 15.—18th Sunday after Trinity. Murat shot, 1815.
MONDAY, 16.—Parliament Houses destroyed by fire, 1834.
TUESDAY, 17. Sir Philip Sidney killed, 1586.
WEDNESDAY, 18.—St. Luke, the Evangelist.
THURSDAY, 19 Tyan fever died, 1716. Henry Kirke White died, 1816.
FRIDAY, 20.—Battle of Navarino 1827
SATURDAY, 21.—Battle of Trafalgar, Nelson killed, 1805.

SKETCHES OF THE WAR.

WE continue to receive from the Seat of War Sketches of the various points of the

BATTLE ON THE ALMA,

which we shall Engrave next week. These Illustrations will include a Large Engraving of the BATTLE.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 14, 1854.

GLORIOUS and memorable as was the victory of the Alma, the subsequent march of the Allied armies upon Balaclava was an achievement worthy to rank with it for daring and success. Finding, after the hard-won battle of the 20th, that Sebastopol was weaker on the southern than on the northern side, and aware that Menschikoff and the remnant of his host had fled northwards, Lord Raglan held a brief consultation with Marshal St. Arnaud, and decided upon a manœuvre, which showed him to be a man of genius, and a hero worthy to command heroes. Successively relinquishing their positions on the Katscha and the Belbec—positions which, if the Russians had not been cowed, and utterly bewildered by the headlong impetuosity and triumphant success of our armies on the first encounter, they might have effectively contested—Lord Raglan and Marshal St. Arnaud commanded a flank march around Sebastopol, with the object of seizing upon Balaclava. The march of the armies was through a thick jungle, which had only one practicable and narrow road. This was left to the artillery and the cavalry, while the infantry—forming the main body of the Expedition—had to find their way through the dense brushwood, and direct their course by the compass. As soon as they had cleared the forest, near a place called Khutor Makenzia, they found themselves upon the flank and rear of a Russian division of 15,000, on the march to Bagtcheserai. A company of cavalry, amounting to scarcely twenty men, first caught sight of the foe, and, with characteristic energy, dashed upon them and commenced the attack. The Russians were fairly puzzled. Their bewilderment might be considered ludicrous, were it possible, in so terrible a war, to look with derision upon the distresses even of an enemy. Evidently they did not expect to find the British and French in such a place. They no sooner beheld the advancing columns of our men than they fled precipitately, and were heard of no more, leaving a few prisoners, and a large and most welcome supply of ammunition and baggage to reward the victors. This was upon the 25th of September. The way to Balaclava was now open; and though the troops suffered severely from want of water, they held on their way, not only without a murmur, but with a cheerfulness and courage "above all Greek, above all Roman, fame." It was necessary to the complete success of the movement that a communication should be opened with the British fleet in the Bay of Kalamita. A volunteer was at hand in this emergency to undertake the perilous service. Lieutenant Maxse, of H.M.S. *Agamemnon*, who had arrived, with despatches, at the camp on the 25th, immediately started with a verbal message to the gallant Sir Edmund Lyons, through the thick jungle to Belbec, from Belbec to the Katscha, and from the Katscha to the Alma, heedless of the difficulties and dangers of a forest infested by Cossacks, and likely to be overrun by some remnants of the exasperated Russian forces, who had fled the day before. He arrived safely, and delivered his message at his destination, so that Lord Raglan, after seizing Balaclava, on the 26th, had the satisfaction of finding the *Agamemnon* in the mouth of the harbour and of shaking hands with the gallant Sir Edmund Lyons. This officer, who has made himself "the idol of the fleet," and who has endeared himself to the army by his zealous and indefatigable co-operation, beheld from his ship—as did the whole fleet—the heroic achievements of the Allies at the Alma. It has since transpired that the spectacle so stirred the blood, and excited the spirits of the crew of the *Agamemnon*, that they sent a deputation to the Admiral, requesting, as a particular act of kindness and favour, that they might be allowed to participate in the dangers and glories of the next battle. Let us hope that the gallant fellows will be indulged in the wish, and that the army will not monopolise all the glory of routing the Russians. Having possession of the commodious harbour and commanding position of Balaclava, the landing of the heavy guns and of the reinforcements of cavalry, and infantry, from Varna and elsewhere, was immediately commenced, and carried on with such uninterrupted energy, that in seven days afterwards—as we are informed, and no doubt truly, by the electric telegraph—everything was ready for the bombardment of Sebastopol. Accordingly, at five o'clock on the 4th of October the operations began; and it is probable that ere this sheet reaches the eyes of our readers the great Crimean fortress will have surrendered to the irresistible arms of France and Great Britain.

Little reliance is, in general, to be placed on the reports of spies and deserters, or even of prisoners of war; but we think there is reason to believe in the accuracy of some of the statements which have been made, on such authority, of the discouragement that prevails in Sebastopol; and of the number of Poles who form part of the garrison, and whose loyalty to the Czar is not to be depended upon. In addition to these grounds of surmise, that the garrison is not able to make a prolonged resistance, we know that the invaders have it in their power to deprive them of their supplies of water; and we also know that our ships can fire red-hot shot into the place, from a range where the Russians guns cannot touch them. We also know that, *coute qui coute*, Sebastopol must be taken, and hope that at the present moment the British Union Jack and the French Tricolor float in triumph over the Russian fortress.

From the Baltic there is no news. It has been already reported more than once that Sir Charles Napier was on his way home; and that there was no probability, or even possibility, of further operations in that quarter. It may be that these reports were mere dust thrown into the eyes of the Czar, to blind him as to the real intentions of the Allies. It may also happen that they are quite true. We shall offer no opinion upon the subject further than to say that we shall resolutely disbelieve the return of the Baltic expedition until we see it stated on official authority, or until we see its arrival reported from Spithead. The winter has not yet set in in those regions; but, if the season be too far advanced for further operations, it will be of no use for the public to quarrel with a bygone and irreversible fact. It will find consolation in reflecting that if the nation have no greater warlike achievement to boast of than the capture of Bomarsund to reward it for all the expense of that gallant and formidable fleet; it was not altogether idle, or even uselessly employed, in forcing the Russian fleets to skulk behind the walls of Cronstadt, and in utterly destroying the maritime commerce of the Russian Empire.

In reviewing the whole progress of the war, up to the present day, we find that the achievements of Russia amount to three only: the seizure of a small naval detachment of the British at Gamba-Karleby; the brutal and treacherous massacre of the Turks at Sinope; and the capture of a British ship, lying hopelessly stranded before Odessa. They have nothing else for which to chant "Te Deums." On the other side, we have to place the annihilation of their commerce; their defeat by the Turks at Oltenitza, Citate, and Silistria; their forced retreat beyond the Prath; the capture of Bomarsund and the Aland Archipelago; and, last of all, the crowning victory of Alma, and the gallant seizure of Balaclava. The next blow, we fervently hope, and as confidently believe, will be more memorable and more effective than all which have preceded it.

It is be a splendid thing to read of great victories achieved by our armies, it is a highly satisfactory thing to know that we are able to pay the cost. The Revenue Accounts for the Quarter, which have just been published, prove that the great war in which we are engaged has not as yet overtaxed our resources, and that we have a pecuniary as well as a moral and physical advantage over our foes. The present balance-sheet of the nation is the first that has been prepared under a new system, which the country owes to Mr. Gladstone. Formerly it was not the custom to include the revenue for Ireland in the Quarterly Returns, by which the accounts were incomplete to the amount of £4,000,000 of net annual revenue. This anomaly has been removed. The second improvement has been, to institute not only a quarterly, but a half-yearly comparison of Income and Expenditure; and the third is, to give a complete debtor and creditor statement of the net revenue and other receipts for the quarter, the application of the same, the charge of the Consolidated Fund, together with the surplus or deficiency upon such charge." These are all set forth in as plain, systematic, and complete a form as any mercantile establishment would employ in the transaction of its business. Thus the nation is enabled to see exactly how it stands in money matters; and the same information is patent to all whom it may concern—an immense advantage, when we are as prosperous as we are at present; and when we have an enemy that dreads the power of our wealth and solvency as much as he dreads the force of our arms. The total Income of the Quarter ending on the 10th of October, is £15,870,096; and of the financial Year ending on the same day, £56,723,415. Owing to the excellent harvest, there has been an almost total cessation of the importation of corn; so that the non-receipt of the merely nominal duty of one shilling per quarter has diminished the Revenue by £95,000. There is also a diminution in the revenue derived from tea to the extent of £190,000—caused by the reduction of duty now in progress. The decrease of Tobacco-duty to the extent of £10,000, and of the Wine-duties to the extent of £55.000, are, perhaps, to be accounted for by the pressure of the doubled Income-tax, which has led to a diminished consumption of these articles of luxury. Upon the Customs, the decrease for the year from these causes, but mainly from the fiscal reductions which have operated so beneficially upon the trade of the empire, amounts to £839,255. To counterbalance this, and some less important items of decrease, there is an increase for the year of £128,163 on the Excise; of £1,351,241 on the Property and Income-tax; and of £299,000 on the Post-office—making a net increase on the quarter of £550,188, and on the year of £16,580.

It should be stated that the augmented Income-tax has, up to the present time, only been collected on dividends and public salaries, and counts for only £267,000 in the above return—a fact which may be recommended to the especial attention of the Czar Nicholas, that he may see that we have scarcely drawn as yet upon our war resources.

THE REVENUE.

An Abstract of the Net Produce of the Revenue of Great Britain, in the Year and Quarter ended 10th Oct., 1854, showing the Increase or Decrease thereof.

THE COURT.

The Queen and the Prince Consort, with the youthful branches of the Royal family, left Balmoral on Thursday last, on their return to the South. Her Majesty and the Royal party rested on Friday night at Holyrood Palace, and came on yesterday (Friday) to Hull, where the Royal yacht had been prepared for the reception of the Sovereign. This day (Saturday) her Majesty is to visit Grimsby Docks, in the *Fairy* Royal yacht, returning by the Great Northern Railway to London this evening. The concluding week of the Court's sojourn at Balmoral has been marked by the usual routine of annual events. On the 4th instant her Majesty, attended by the Countess of Desart, arrived at Balmoral from Aitnagulach. The Prince Consort returned through the deer-forest.

On the evening of the 5th instant, the annual ball given to the tenants, gamekeepers, and gillies upon the estates of Balmoral, Abergeldie, and Birkhall, and the Royal servants, took place in the Iron Hall-room. At about a quarter past nine o'clock, her Majesty the Queen and his Royal Highness the Prince accompanied by their Royal Highnesses the Prince of Wales, Princess Royal, Princess Alice, Prince Alfred, and Princess Helena, and attended by Sir James Graham, and the ladies and gentlemen of the household, entered the ball-room. Her Majesty and his Royal Highness, with the Royal children, remained until eleven o'clock, whilst dancing was gaily carried on.

The Queen and the Royal Family reached Edinburgh on Thursday evening at seven o'clock on their return from Balmoral; and left at half-past ten on Friday (yesterday) morning, for Hull.

Her Royal Highness the Duchess of Kent is in the enjoyment of excellent health, and has taken her daily carriage airings, since her arrival at Frogmore.

The Earl Craven experienced a slight attack of paralysis, while out shooting, a few days since, on his estate at Combe-wood.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. H. F. Radford to Broughton Astley, near Lutterworth, Leicestershire; the Rev. G. L. Maltby to Newton Wold, near Great Grimsby, Lincolnshire; the Rev. G. B. Yeoman to Marholme, near Peterborough. *Vicarages*: The Rev. W. F. Sanders to Watford, near Daventry; the Rev. W. Bey to St. Helen, Stonegate, in the city of York; the Rev. E. Dawkins to Weston Zoyland, near Bridgewater; the Rev. A. G. Moore to Romsey, Hampshire. *Incumbencies*: The Rev. S. N. Smith to Thurlston-end, near Huddersfield; the Rev. B. Hurst to Colliery, near Lancaster; the Rev. M. Thompson to Lucker.

NEW COLONIAL BISHOPRIC.—As soon as the Bishopric of the Mauritius is duly formed, and the Rev. Mr. Ryan, the Bishop designate, consecrated thereto, arrangements will be set on foot for the division of the diocese of Toronto, out of which two new sees will be formed, the seat of one of which will be at Kingston, for the seven eastern districts; and the other at Toronto or Woodstock, for the seven western districts. The fund locally raised for this purpose already amounts to upwards of £3000, and it is expected that the two sees will require for their endowment a capital sum of £10,000 in addition to what may be derived from local resources, or spec ally contributed by persons interested in the particular dioceses. It is also intended to extend the episcopacy in India by a subdivision of the present enormous diocese of Calcutta. This, however, will be left in a great measure to the wisdom and liberality of the Indian Government. The erection of a new see at Perth, for Western Australia, is under consideration. The Society for the Propagation of the Gospel in Foreign Parts has appropriated out of its Jubilee Fund £3000 towards the endowment of a see at Perth, and the Society for Promoting Christian Knowledge has also made a liberal grant for the same purpose. The Bishop of New Zealand, who is at present in England, is taking steps for the subdivision of his diocese, by the erection of a see at Lyttleton or Christchurch. When all these arrangements are completed, there will be thirty-four bishoprics in the colonies and dependencies of the British Crown.

THE IRISH MILITIA ENROLLED.—At a Privy Council held in Dublin Castle, on Thursday, the Lords Justices made the order for enrolling the Irish Militia.

LATEST INTELLIGENCE.

THE SIEGE OF SEBASTOPOL.

BERLIN, Friday.—The following Russian official despatch was published in St. Petersburg on the 11th:—"Nothing fresh had occurred before Sebastopol up to the 6th. Prince Menschikoff still retained his for poe tion on the north side."

The following telegraphic despatch is from the Vienna Correspondent of the *Morning Chronicle*, dated Vienna, Thursday :—

"A private despatch from the Black Sea, dated the 5th inst., states that the bombardment of Sebastopol commenced on the 5th inst. Two breaches were made at the Quarantine Fort on the 6th.

"Advices from Odessa, of the 7th, state that Prince Menschikoff's right wing was at Baktchi Serai, his left wing at Aivpis, his centre at Simferopol, where reinforcements from Perekop will concentrate.

"Report says that the Russians have sunks 22 ships in the Temkaki Straits."

PRUSSIA GIVING WAY.

The *Berlin Correspondance* of the 9 h, states that the Austrian Note compelled the Prussian Government to dee ire its intentions as to the maintenance of the defensive and defensive alliance with Austria. The propositions of M. v. Manteuffel, intended to preserve a good understanding, not having been favourably received, he tendered his resignation, and left town on Friday week. He was recalled, and returned on the evening of the 8th The King arrived next morning, and presided at a Council. All that has transpired respecting the deliberations is, that M. v Manteuffel withdrew his resignation; that 'conciliatory declarations are to be addressed to the Cabinet of Vienna; and that eventually Prussia is to adopt a policy perfectly in accord with that of Austria."

THE BALTIC FLEET.

ADMIRALTY, Oct. 12.—The following is an extract from a despatch received from Vice-Admiral Sir Charles Napier, dated from H.M.S. *Duke of Wellington*, Nargen, October 1 :—

The *Stallion* joined yesterday from Ledsund, bringing seven of the *Vulture's* men (J. Dunstan, leading stoker; J. Litton, stoker; J. Dart, private, R.M.; J. Dowling, ditto; W. Billing, ditto; W. Herring, stoker; J. Amery, ditto), who had been prisoners in the vicinity of Abo. Orders have been given to forward to the squadron the ten men belonging to the *Vulture* who are in the interior of Russia, and that the remaining two men, who are near Abo, will be sent as soon as convenient.

The *Vulture's* men speak in high terms of the very kind treatment they have received during their imprisonment.

THE LOSS OF THE "ARCTIC."

PROBABLE LOSS OF THREE HUNDRED LIVES.

The United States mail steamer *Arctic*, Captain Luce, was lost on Wednesday, the 27th ult., on her voyage from Liverpool to New York, about sixty five miles from Cape Race, on the coast of Newfoundland. The terrible event was the consequence of a collision with the *Vesta* steamer, from St. Peter's, bound to Granville, in a dense fog. There were from three to four hundred persons on board the *Arctic*, including passengers, officers, and crew; of whom only fourteen passengers, three officers of the ship, and twenty-eight seamen, are known to have been saved, having arrived at Newfoundland; but it is possible that some others may have been picked up.

List of the *Arctic's* Passengers.—H. Arbuckle, W. Adams, G. F. Allen and lady, A. Benedict and lady, Mr. Bedford and friend, E. Burch, Mrs. Bryan, Mr. Brady, Mrs. Bridge and friend, Miss Brun, W. Barber, Mr. Barry, Mr. Barnes, P. Bush and son, Miss Benjamin, J. L. Bazill, Mr. Bauche, Mr Beverley, Mr. Bowen, Mr. Babcock and lady, Mr. Babcock, jun., G. Brown, Miss Brown, W. B. Brown and lady, Mr. Brown and family, E. Collier, Mr. Collins, Mrs. Child and daughter, Mrs. Craigie, Mr. Culman, W. Coop, H. Christian and friend, Mrs. E. A. Collier and daughter, J. B. Cook, Mr. Cooke, Mr. Comstock, T. Catchwood, S. Culner, Miss A. Carter, Mr. Dunsen and lady, Dunsenur and friend, Mrs. Drew, P. Durant, lady, and child, W. Day and family, Mr. Delgrat, Mr. Dennison, Mr. Douriss, G. Dodds, Mr. Eggers, Mrs. Edgecombe and child, C. Fashbrath, Miss Ford, John Fryer, Mr. Frank, Gaulian, W. Gilmore, E. Gardner, Mr. Guinets and family, Mr. Green and lady, P. T. Graer, D. Gemmat and family, E. Guynett and family, Mr. Gibson, Mr. Hollub, Mr. Hindi and friend, Mr. Ernest and family, Mr. Herbert and lady, J. Holtrick, J. B Hogg, Mr. Hilger and friend, Mr. Hillbrown, Mrs. M. Hudson and infant, F. Heuney, W. J. Hennessey, Mr. Harrison, Miss Hayes, Mrs. Holmes, Mr. Hollerds, H. Jenkins and lady, C. F. Jackson, T. C. Jones, Miss Jones, Mr. Kean, Mr. Kelly, F. Kiane, Mr. Lenorre and family, John Lindsay, Thomas Ladimand, Miss Lewis, Mr. Morris, Mr. Mayer, Mr Mayer, R. Madison, H. Moon, G. C. M'Cracken, Mr. M'Glynn, D. Madder, Dr. Mayoer, F. C. Mitchell, Mr. Mitchell and friend, J. Maitland, James Maith, Mr. Major and friend, Miss Maunders, Miss Major, friend, and child, Mrs. Mainger, Mrs. Mainger, Mr. Millett e, Mr. Niven, W. Nicolas, S. L. Nookes, T. Newman, Mr North, Mrs. Ferth, Mr. Pascoe and four children, J. F. Pearson, W. Perkins, Captain D. Pratt and lady, Mr. Pratt, Mr. Petrie and lady, Mr. Pue and friend, Mr. Paterson, Mrs. Hopes and son, Mr. Ravensnorth, Mr. Robinson, Miss Revell, Mr. H. R. Roon, W. F. Robbins, Mr. H. Read, Mr. T. Robson, Mr. Sheburn, Mr. C. Springer, Mr. Sheldon, Mr. D. Stewart, Mr. Scherbler, E. Sandford, C. St. John, Mr. Schiller, Mrs. Stone and family, Miss Smith, James Smith, Lady J. Smith, J. G. Smith, Baring Ferguson, Mr. Schmidt, F. Thompson, James Thomson, Mr. Theodore, H. Thomas, J. M. Woodruff, Mr. Woodruff and lady, Mr. Watteman, B. C. Ward, Mr. Walace, Mr. Waring, S. C. Williams, lady, and son, Mr. Winterburne, Mr. Webory and friends, J. Young.

PASSENGERS SAVED.—Messrs. C. de Passier, W. A. Young, W. W. Gilbert, J. Bonnet, E. F. Mitchell, S. M. Tees, W. Rathbone, J. Heuney, H. More. De Meyer, W. Gibon, jun., J. M'Math, G. Dobbs, and servant to the Duke de Grammont.

Crew Saved.—Mr. Gelb, purser; Mr. Bushlam, second officer; Mark Graham, fourth officer, and twenty-eight seamen.

THE PREMIER AT ABERDEEN.

THE Earl of Aberdeen, according to invitation of the Provost, Magistrates, and Town-council of Aberdeen, attended at the Town-hall there on Monday last. There was a large and respectable company assembled, who gave his Lordship a hearty reception. The Provost, having read an address to his Lordship, approving most heartily of the home and foreign policy pursued by Government,

The Earl of Aberdeen, in returning thanks, defended the course which he had pursued throughout the negotiations on the Eastern question. The policy of the Government had been a policy of peace, and to that policy they endeavoured firmly to adhere as long as possible—

But could his Lordship, when war was declared, stand at the moment when it became necessary to declare it, then—although I can truly say for myself that I clung to the hope of peace with almost a desperate tenacity—yet, when war became inevitable, I declared that, so far as I was concerned, it should be carried on with the utmost vigour and energy of which the country was capable. Gentlemen, perhaps the moment is not inopportune to ask whether that pledge has now been fulfilled? (Loud and prolonged cheering). If, gentlemen, you will only consider what has been done in the course of six short months, I think you will admit that this country never was in a position at all comparable with that which she has just made. An army has been collected and transported from the shores of this country such as never left them in preceding history—an army such as the Duke of Wellington never commanded—and appointed in all its parts in a manner which—humanly speaking—is calculated to ensure its success (Cheers). Gentlemen, conceive what the extent of preparation must have been, when you are told that not less than seven hundred vessels are engaged in the same operation. The difficulties connected with it, and the time required indispensably for such an undertaking, must strike every man of common candour; and yet we hear delay talked of, as if there had been delay (Cheers). I will venture to say that such an effort was never, in the history of the world, made in so short a time as this has been made. This army has gone forth, and has achieved its first great victory, in conjunction with our gallant allies—the strict union and concert with whom has been fully established from the very first moment, and holds out the most encouraging prospect to all Europe (Cheers). We know not the details of this event; but they appear to me to be most important, and, I trust, deceive; for after all, by the general impression of the public, in which I myself partook, we were led to believe the reports from different quarters of the consequences—the immediate consequences—of this victory which are now said to have been exaggerated, and I hope that what had been reported without foundation may in a short time become realty (Loud cheers). At the very moment I am addressing you there is no reason not to hope that that event which in the course of last week was erroneously reported has now become a fact (Cheers). I have said that the war would be continued with the utmost vigour and energy of which the country was capable, but in this I am speaking in pacific policy. I believe that to carry on the war in this manner affords the best prospect of arriving at an early and a satisfactory peace. I believe that peace, although sought by different means, is sought as effectually, under present circumstances, by the course, as it would be by written negotiations or diplomatic discussions (Cheers).

At the conclusion of the noble Earl's address, the Provost proposed three cheers for the Queen, which were followed by the like compliment to the noble Premier; three cheers were also given for the Army and Navy, and three cheers for the Provost. The meeting was an enthusiastic one.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(*From our own Correspondent.*)

PARIS, Thursday.

The death of the Maréchal St. Arnaud, the fact of which was held in doubt here, after being stated and credited in England as positive, has created a marked and painful impression, though the state of his health, both before and since the commencement of the campaign, rendered the event but too probable. The news of the victory of Alma has been received with comparatively little interest, and hardly any enthusiasm. The whole of the circumstances in the recent events of the war have been strongly illustrative of the French character. On the discovery that the intelligence of the taking of Sebastopol was a fiction, the public disappointment was such as might have been caused by the news of a defeat; the subsequent successes at Alma were treated as a matter of small interest and importance; and are already almost passed over in the breathless anxiety that awaits the announcement of the final victory of Sebastopol itself. It is true, also, that the number of the dead and wounded, though less than those of the British, and infinitely smaller than those of the enemy throws a gloom over the whole affair, and awakes feelings of dread and anxiety for the future that seemed never to have arisen till the grave realities of war were brought home to the hearths and hearts of so many hundreds of families. As may be supposed, this subject is one of such engrossing interest as to swallow up all others, and to leave us hardly anything worth chronicling.

The release of Barbès has in general excited much satisfaction, and has, among all parties, aroused more attention and comment than any matter unconnected with the engrossing one of the day, though, of course, less than a measure of such importance and signification would at another period have done.

To return to the subject of Sebastopol, we may cite the existence of an absurd rumour which, in the face of the facts, gained some credit—namely, that the report was entirely a *coup de Bourse*, concerted in various parts of Europe at once! One of the results of the contradiction of the news has been the speedy withdrawal of a *pièce de circonstance*, got up with all due speed and splendour, at one of the Boulevard theatres; and which now remains shut up in its shell, anxiously awaiting the real announcement of the fact to make its appearance. A *marchand de nouveautés* of the Boulevard du Temple has been less cautious, and broadly displays on his shop-board the device and title "A la prise de Sébastopol!"

The removal of the site of the Turkish Embassy from the Rue des Champs Elysées to the Rue de Grenelle, St. Germain, has not been caused, as was stated, by the intention of employing the former for the sittings of the Commission of the Industrial Exhibition, but for the use of the new club, the Circle Impérial. This club, formed some time since, under the special patronage of the Chef de l'Etat, finding great difficulties in the way of establishing an *emplacement*, applied to the Emperor in person to aid them in the matter, and then received a promise that, should the difficulty not be satisfactorily resolved, the hotel in question should be given them for the purpose—a promise which is about to be carried into effect.

The light rains of the last few days, though wholly insufficient for the necessities of agriculture, are welcomed as the precursors of more abundant ones. In many of the provinces, the southern ones more especially, the long-continued droughts are being painfully felt, and the price of grain and flour, which had fallen, is again rising. With regard to the vintage, the general reports state that the quantity will be smaller than has been known within the century, but the quality of the wine will be unusually excellent.

The grandson of the Prince Jérôme, by his marriage with Miss Patterson, has been honoured with the title of Prince Jérôme Napoléon Bonaparte, and is gone to the East to join his regiment, the 7th Dragoons, in which he has entered as *Sous-Lieutenant*.

The great literary interest of the day is in the "Memoires of Madame George Sand," which are appearing in the *feuilleton* of the *Presse*. This remarkable work, as far as it has yet appeared, in no way disappoints the expectations that were formed of it. The style is simple, and elevated; there is a marked absence of littleness, of prejudice, of self-conceit; an honesty of purpose, a soundness of judgment, and a tone of amenity running throughout, that give the reader a no less exalted idea of the heart than of the head of this gifted woman. If we had a criticism to make, we should say that the style was somewhat too digressive, rendering it frequently difficult to follow the course of the narrative, and to identify the personages: but the digressions themselves are, in all instances, so full of interest, that it is difficult to find fault with them.

AMERICA.

The *Pacific* steam-ship, which left New York on the 30th ult., arrived at Liverpool on Wednesday. Great excitement prevailed regarding the elections.

A religious disturbance had taken place at Cincinnatti between the Protestants and German Roman Catholics, in which several persons were wounded.

One hundred and nine deaths from cholera had occurred at Pittsburgh on a day which had been set apart for fasting and prayer, being a great increase on previous days; subsequently it was declining.

The bark *Mary Morris* had reported having passed the hull of a large iron vessel, apparently Clyde-built, painted black, with a bright red bottom; had three or four compartments in her hull, and all the woodwork was entirely destroyed by fire. She also had some machinery in her. From various circumstances it was conjectured that she was the unfortunate *City of Glasgow*.

INDIA AND CHINA.

The steamer *Calcutta*, which arrived at Trieste on Thursday morning from Alexandria, announces the arrival of the *Indus* at the latter port, with dates from Calcutta, Sept. 6; Madras, Sept. 10; Shanghai, August 7; Amoy, August 18; Canton, August 21; Hong-Kong, August 22; Bombay, Sept. 11. India was perfectly tranquil. At Calcutta trade was depressed. Shanghai was still in the hands of the rebels. Canton continued in a state of siege. Ningpo, Fulchan, and Amoy were quiet. No tea had arrived at Canton, and business was quite suspended there.

THE FIRST RAILWAY IN THE HIGHLANDS OF SCOTLAND.—The formal commencement of the construction of the Inverness and Nairn Railway took place in a field contiguous to the town of Inverness on the 21st ult., under the auspices of the Countess of Seafield, who performed the ceremony of turning the first turf. This is the first step toward connecting the northern counties of Scotland in railway communication with the south. The line will be nine miles in length; and when completed, the little seaport of Nairn will become the port of embarkation for all steam-passenger traffic, by which nearly twelve hours will be saved in the passage south, and the tedious navigation of the Firth avoided. An extension of this line from Nairn to Elgin is already projected, which will leave but thirty miles between that town and Huntly—to which latter place the Great North of Scotland will, we particularly opened their line. In the evening a dinner took place at the Town-hall in honour of the occasion; the Provost of Inverness presiding. The contractors of the line are Messrs. Brassey and Falshaw. The country through which the line is to pass presents scarcely a difficulty, and it is estimated that the cost of the line will not exceed £6000 a mile, and that it will be opened for traffic in little more than twelve months.

PEWS IN CHURCHES.—The Bishop of Manchester intends to take steps for doing away with the system of letting pews. Mr. Peel, of Knowlesmere Manor, possesses, or claims to possess, a number of pews in the church of Church Kirk, near Blackburn. The churchwardens, under the direction of the Bishop, have taken possession of one of these pews and let it. Mr. Peel, in a correspondence which he has published, denounces this as an act of "lawless spoliation," and threatens to resist it at law.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

ENGLISH authors of reputation have been prominent in the glorious triumph of the Allied armies on the banks of the Alma. Mr. Kinglake, the author of "Eöthen," has been a welcome volunteer on the staff of Lord Raglan; and, we are happy to add, has escaped, like his Lordship, the shower of Minié balls which, on more than one occasion, were heard to whistle and shoot by him. Mr. Layard, the discoverer of Nineveh, witnessed the battle from the mast-head of the *Agamemnon*, and is the able Correspondent of the *Times*, who has given so graphic an account of what he saw from his giddy position. Mr. Russell, the able Correspondent of the same paper, is said to have had his horse shot under him in the fight—and is looked upon with as much wonderment from the narrowness of his escape as Sir George Brown himself. Gibbon found his Hampshire militia service of great account, when he came to describe the movements and triumphs of the Roman legions; and Mr. Kinglake, when he commences his history of the Crimea, will find, like Gibbon, that his presence on the Alma has been of essential service to the due understanding of the great victory he will have to describe.

Critics at clubs are divided about the excellence of the despatches of Lord Raglan and Admiral Dundas. They are looked at (we suspect) with too literary a turn, and are contrasted unfavourably with the Duke's Despatches and Sir Harry Smith's admirable Aliwal Despatch. This is unfair. But is not the best despatch ever written that of Admiral Sir George Walton, who died in 1739? The brave George Walton was knighted for his skill and valour in capturing the Spanish fleet in the expedition to Sicily, in August, 1718. His ship was the *Canterbury*, and he had five other ships with him. He served under Admiral Byng, and the service on which he was ordered was of no light kind. Like an English seaman of the Blake and Raleigh school, he did his work, and did it unostentatiously. Of course (he was indeed a sea captain) he took the fleet.

His despatch announcing his conquest was in good mercantile language :—

Taken.—Admiral Mari and four men-of-war; 60, 54, 40, and 36 guns; a ship laden with arms, and a bomb-vessel.

Burnt.—Four men-of war, 54, 44, 40, and 36 guns; a flu-ship, a bomb-vessel.

Sir,—We have taken and destroyed all the Spanish ships and vessels which were upon the coast. The number as per margin.

I am, &c.,
G. WALTON.

Canterbury, off Syracuse, Aug. 16, 1718.

Cæsar's "Veni, Vidi, Vici," must fade before this. How English it is in spirit, and what more can be said of it? Old Lord St. Vincent called it a model despatch.

In our last week's column we fell into a slight error, which we are glad to correct. Mary Monica Hope, born last year, is still living. She is the daughter of Mr. Lockhart's sole surviving child—Charlotte; and the sole surviving grandchild of the author of Waverley.

There is a passage in one of Dean Swift's letters which curiously illustrates the present state of the copyright law between England and America :—

The cruel oppressions of this kingdom by England are not to be borne. You see what books you please hither, and the booksellers here can send nothing to you that is written here. As this is absolute oppression, if I were a bookseller in this town I would use all the safe means to reprint London books, and run them to any part of England I could, because whoever offends not the laws of God, or the country he lives in, commits no sin.

But I am too incensed against the oppression from England, and have so little regard to the laws they make, that I do, as a clergyman, encourage the merchants both to export wool and woollen manufactures to any country I please, or anywhere else, and conceal it from the Custom-house officers, as I would hide my purse from a highwayman if he came to rob me on my road, although England had made it a law to the contrary; and as I would encourage any other bookseller here, and send them to sell the town in England, if I could do it with safety and profit; because (I repeat it) it is no offence against God, or the laws of the country I live in. Mr. Faulkner hath dealt so fairly with me, that I have a great opinion of his honesty, although I never dealt with him as a printer or a bookseller; but, since my friends told me that those things called mine would certainly be printed by some hedge bookseller, I was forced to be passive in the matter.

"FIX your day," writes a Dublin bookseller to a London bookseller, of the year 1745, "and I will wait until you are ready, that we may both come out on the same day." Letters of a like nature, from the booksellers of London have been sent to Boston and New York, to some effect last year;—to what effect now?

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS.

TAKEN DURING THE WEEK ENDING THURSDAY, OCTOBER 19.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer (corrected) decreased from 29.49 inches at the beginning of the week, to 29.46 inches by the afternoon of the 8th; increased to 30.01 inches by the 8th, decreased to 29 64 inches by the 9th, and increased to 30.46 inches by the end of the week. The mean for the week, at the height of 8 feet above the level of the sea, was 29.890 inches.

The mean daily temperatures have varied from 7½° above to 2½° below their average daily values. The mean daily temperature of the 9th was 59·2°, and is the highest mean temperature recorded on that day since the year 1839, when it was 59·7°.

The mean temperature of the week was 54·2°, being 2·7° above the average of the corresponding week during 38 years.

The range of temperature during the week was 24°, being the difference between the highest reading of the thermometer on the 9th, and the lowest on the 12th.

The mean daily range of temperature during the week was 14½°. The least was 7½°, on the 6th; and the greatest 23 4°, on the 12th.

Rain fell, during the week, to the depth of nearly 7-10ths of an inch.

The weather, on the 8th, 11th, and 12th, was fine, and the sky generally free from cloud; the rest of the week was dull, and the sky overcast.

Lewisham, October 13, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, the births of 1409 children were registered within the metropolitan districts: of these, 711 were boys, being 10 above the average of the nine corresponding week of the nine preceding years; and 691 were girls, being 4 below the average number. The deaths during the week were 1235; the numbers in the three preceding weeks being 2386, 2504, and 2216 respectively. This improvement in the public health is generally visible in the metropolis, the Eastern and Southern districts being slower in showing it than other parts. The returns of cholera for the last two weeks give, respectively, 113 and 59 for the Western districts, 50 and 26 for the Northern, 63 and 31 for the Central, 146 and 86 for the Eastern, and 383 and 200 for the Southern districts. The number of deaths from cholera alone, this week, were 411; of which 116 occurred below the age of 15; 226 between 15 and 60 years; and 97 above 60 years of age. The deaths from diarrhœa were 36, of which 67 occurred below the age of 15. To zymotic diseases, 42 deaths are referred. To tubercular diseases, 193—being 28 above the average. To diseases of the brain, &c., 95—being 23 below the average. To diseases of the heart and blood vessels, 42. To diseases of the lungs and the other organs of respiration, 114. To diseases of the stomach, &c., 61. And to violence, privation, cold, and intemperance, 15 deaths are attributed—being 56 below the average number.

EVANGELICAL ALLIANCE ASSOCIATION.—On Monday evening the eighth annual conference of this association was held at the Freemasons' Hall, Great Queen-street; Mr John Corderoy in the chair. The association was described to be in a prosperous condition. Addresses were delivered by the Revs. J. Gawtille, J. R. Rule, J. Whitty, W. Brock, and Mr. Racine Brand, secretary of the French branch of the Alliance; and the doxology having been sung, the proceedings terminated.

NEWCASTLE-UPON-TYNE AND GATESHEA

THE RECENT CONFLAGRATION.—(SEE PAGE 368.)

MUSIC.

THE TONIC SOL FA ASSOCIATION.—This time twelve months we gave a full account of the nature and objects of this society; it having at that time given its First Public Chapel, several performances of choral music, in illustration of the system of vocal instruct on introduced by the Reverend Mr. Curwen, of Finsbury, and adopted by the society. It is now giving a course of subscription choral meet ngs at the same place; two of which have already been held, and the remaining four are to take place in the course of the next four months. We again recommend the proceedings of the society to the attention of those who take an interest in the cultivation of vocal harmony, and the general diffusion of its knowledge and practice as a popular art. In addition to the ample details which we have already given, it is only necessary for us at present to mention the progress of the Association during the past year. In this period, it has had under the instruction of its teachers at least three thou-and persons in London alone. In Bristol, Leeds, Newcastle, and other places, it has been, in proportion to the population, still more useful. It has introduced the art of sight-singing into many congregations, public and private schools, so tal circles, and families; and it has given numerous "People's Concerts," both in the metropolis and in other places. During the year, too, ten central meetings have been held in Finsbury Chapel, and the double design of raising the standard of good singing among the people, and of heightening their interest in the object of the Society's lessons. The preparation of these great central meetings is necessarily attended with some expenses, such as the charges of rooms hired for rehearsals, advertisements, &c. These have hitherto been borne by the members of the association; and it is for the purpose of defraying them in future that the subscription meetings are being opened as above intended. This being their only peculiar object, the rate of subscription is so low that the performances are very easily accessible; and the consequence is, that they attract large as well as most respectable assemblages. At these meetings the choir generally consists of about two hundred voices, all the singers being persons taught entirely on the Society's system. It being the object of the performances to test the efficacy of the system, many friendly offers from skilled amateurs to give their assistance have been courteously declined. We have in each of the three most recent of these performances with the greatest satisfaction. They have given evidence of progressive improvement, and have convinced us more and more of the great efficiency of Mr. Curwen's new system of "Tonic Sol-fa" Notation, from which the Association has taken its name. We must add that, since last year, the Association has engaged M. de Lucien, a German musician of great intelligence and skill, and especially conversant with the vocal institutions of the north of Germany, to train the singers, and conduct the performances—a measure which has been attended with the most beneficial results.

THE THEATRES.

MARYLEBONE.—This theatre re-opened on Saturday, according to announcement, enlarged, embellished, and improved, to the satisfaction of a numerous audience. A new act-drop has been painted by Mr. Shalders, with the image of Shakespeare in the midst of classic ruins, the sunlight pouring its full rays on him, as the one immortal, surviving the wreck of cities. The play was "As You like It," profusely illustrated with pictorial scenery, beautifully painted. The performance was preceded by a new overture, composed by Mr. J. F. Duggan, illustrative of the comedy; and *entr'actes* also are being provided, to carry on the spirit of the drama, while the curtain was drawn. All this is in good taste, and indicative of a management disposed to be liberal and alive to elegance. Mrs. Wallack performed *Rosalind* with wonderful vivacity and point. Evidently "more than common tall," she became "the doublet and hose" to admiration. Mr. Wallack's *Jaques* was in that elaborate style of excellence which might have been expected from his traditional training and well cultivated powers. Musical, as well as melancholy, were the philosophical utterances which the poet had confided to the representative of his sententious sage; and Mr. Wallack may be truly said to approach the ideal of the character more nearly than any other modern performer of the part, while those of *Audrey* and *Touchstone*, are Shakspeare's own creation. He has not been indebted to Lodge or Euphues for either The latter found a fitting exponent in Mr. Shalders, whose comic humour is exceedingly rich. Mr. Cooke also deserved much praise for his *Adam*, which was a finished portrait of the old and faithful servitor Miss Cleveland (a young and rising actress) impersonated *Celia* very charmingly; and the whole performance was terminated by an Arcadian dance, prettily executed by some well-favoured mythologists, whose faces were as commendable as their ancles—which is not always the case with the votaries of Terpsichore. The inauguration of this laudable experiment was perfectly successful.

PRINCESS'.—Two new pieces were produced on Monday, when the theatre re-opened for the winter season. The first was by Mr. Troughton—a comedietta, in one act, entitled "Living too Fast,' which was perfectly successful, and deserved to be so. The dialogue was lively, pointed, rapid, full of verve; and the action intelligible, moral, and comical. *Mr. and Mrs. Peter White* (Mr. W. Lovell and Miss Murray) have passed, what is aptly called in the sub-title, "a twelve-month's honeymoon," regardless of expense; making, all the while, a Manchester uncle believe they are putting by money. Old *Cotton*, however, sees through the thin disguise; and makes a sudden visit, pretending first that he wishes to borrow seven hundred of their savings, and next that he is ruined, and thus discovers that not only are they not to help him, but are deeply in debt, and the lady herself in danger from the addresses of a money-lending acquaintance. Of course, the generous manufacturer soon puts all things to rights. The next new drama was a three act production, by Mr. Douglas Jerrold, entitled "The Heart of Gold," written in the author's best style, full of fine things, but rather too recondite in its plan and meaning for a mixed audience. The purpose of the play was, apparently, to show that wealth and happiness are not necessarily connected; and that an undue reliance on money, in fact, must be followed by misery. The leading character, *John Dymond* (Mr Ryder), is an Essex yeoman, cursed with a thousand guineas and a passion for *Maude Nutbrown* (Miss Heath), who loves another—*Pierce Thanet* (Mr. J. F. Cathcart). The man of gold now works himself up to such a pitch of excitement, that a trance supervenes—the approaches of which he mistakes for those of death; and, in that belief, gives over, in the presence of witnesses, the box of a thousand guineas to *Pierce Thanet*, with some good counsel on the power of gold, and its many money-power, which the young man cannot forget when his benefactor returns to life. *Thanet* naturally wishes to keep the money, and incurs for his dishonesty the temporary loss of *Maude*, who promises to become the wife of *Dymond*; but fortunately she is not bound by her word, and, at length *Thanet* restores the bequest to the living testator, she is enabled to return with a good conscience to her first love. The acting of the piece was throughout indisputably good; and when the sum of the author began to be perceived by the audience, the displeasure which was at first manifested was converted into applause. The drama will be better appreciated on a second visit; and, as a literary production, may be accepted as one of the best of Mr. Jerrold's works.

DRURY-LANE.—On Monday, Mr. Brooke terminated his engagement with his benefit: the character of *Macbeth*, being the part in which his originality is most apparent, was selected for the occasion. The house was excessively crowded. The tragedian has since, however, acted for the benefit of Mr. Bowyer, of Chatham; and was also consulted to a requisition, signed by some hundreds of merchants and bankers, soliciting his performance for several nights at the City of London Theatre, previous to his departure.

A VISIT TO THE "VICTORY."—A monologue entertainment, with this title, has been produced by Mr. Charles Cotton, in Benjamin West's Gallery, in Newman street: one end of which has been *set* as a resemblance of Nelson's flag-ship the *Victory*. The capstan in the foreground serves Mr. Cotton for a rostrum, upon which he recites Nelson's spirit-stirring career, interspersed with thirteen sea-songs, composed by Dibdin, Braham, Loder, and others; while a series of effective pictures of incidents in Nelson's life passes in the background, terminating with the quarter-deck flying to pieces, and discovering a pair of huge vessels, English and French, symbolising the Western Alliance. Mr. Cotton sings with characteristic vigour, the tone of the entertainment is well-timed, and the visit to the *Victory* has already become very popular, and deservedly so.

There is a rumour in Paris in the Court circles, that the Emperor has resolved to confer the Grand Cordon of the Legion of Honour on Lord Raglan.

It is contemplated by the Liverpool Town-council to open St. George's Hall for people's concerts; the admission to be as low as three pence.

CHESS.

TO CORRESPONDENTS.

VON HAUD L., Brussels.—The additional Variations certainly go far to confirm your opinion that the Kt may be taken. We have ourselves, too, discovered a mode of play by which black may prevent the White queen's capture.

WELL-WISHER.—It is quite true that there will be a great assemblage of Chess-players of all nations in Paris next year, on the occasion of the GREAT EXHIBITION and probably we may join in some steps taken towards a general revision of the Chess Code.

C. L. F.—Your "first attempt" is a very pretty one. The very same position may be found in a little work by Lieutenant-Colonel "Der Schachkünstler," published at Berlin in 1847.

HASTINGS JOURNAL.—R. L. J. M., of Sherburn, and Others.—Mr. Grimshaw's excellent Problem (No. 555) cannot be solved in the way you propose.

ROSWORTH.—Many thanks; a copy has been placed at our disposal. If any reader has a "Sarvis" (Edition 1614) to dispose of, we shall be glad to communicate with him.

M. R. A. M.—There is a translation of "Deutsch" (omitting the "Feist-auch") and the "Ghost-ballad-parody" to, as to say, all the Problems by MM. Cerlin and Dr. Giovaschini, with Notes by Kieseritzky, which appeared in *La Régence* for 1843. This French version is much superior to the English one by Sarratt.

H. O., Queenstown, is thanked for the Problems which are in the examiner's hands.

J. B., of Bridport.—They are both very pretty, and deserve insertion.

ALPHA.—Solver is quite up to the standard though both have some merit.

J. J. N. S. Ashgrove.—The amended version is under consideration, and shall be reported on shortly.

CHESSICK.—The finest player in India (native or foreign), beyond all question, is our correspondent, Mr. John Cochrane. Next to him we should place the Brahmin Monochander Bhimsen.

CHAMPION.—The President of the Liverpool Chess-club is Mr. George Sorocklay.

W. C. C., of Streatham.—The request is a very unusual one. Any communications you have to make, if addressed to the Editor, will meet with due attention.

A. K. Lambeth.—In your last problem, suppose Black for his second move play P take K Kt P, how is your mate to be effected?

ORIENTAL.—1. You should join the St. George's Club, 38, St. James-street. 2. The *Bombay Gazette*.

E. B. C., Hoboken.—Safely received, and since acknowledged by letter

M. de J., Havre.—More problems than we can find room for. The last we have surely seen in print. 2. La Bourdonnais was not more than forty three years of age when he died.

J. W. M.—The blank diagrams in question we find are from No. 1 to No. 60, per hundred, according to their size.

SOLUTIONS OF PROBLEM NO. 554, by Patrick, O. P. Q., Phiz-Barney, S. N., Cantab, Schmul, Etonian, Anna, Orlando, F. A. S., T. R. R., Stuttgardt, are correct.

SOLUTIONS OF PROBLEM NO. 555, by Perseus, Schmul, R. F. F., Caniab, R. F., Royal Archer, T. J., Hanworth; Admiral, O. P. Q., Rhodian, Will-o'-the-Wisp, Mercator, are correct. All others are wrong.

SOLUTION OF PROBLEM NO. 554.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to Q 6th	R to Q 4th (best)	3. R from Kt 4th to K 4th	Anything
2. Q takes R	B or P takes Q		

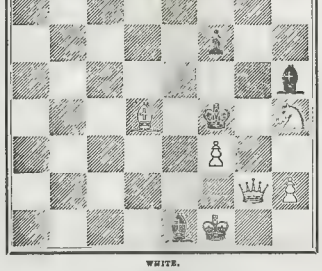
4. B mates.

N.B.—If Q takes Q at the 1st move, White moves R from Kt 4th to K 4th, and mates next move. If R takes Q at the 1st move, White plays his Kt to Q B 8q, and mates with the Bishop next move.

PROBLEM NO. 556.

By J. B., of Bridport.

BLACK.



WHITE.

White to play, and mate in three moves.

CHESS ENIGMAS.

So much interest has lately been awakened for the works of the Chess authors of Spain and Italy, that it will probably be an acceptable service to the amateurs of the game, if we occasionally diversify and enrich our column with selections from the many beautiful and hitherto untranslated studies which are to be found in those treatises. The three following positions are taken from the huge collection in Cozio's second vo ume. This collection comprises about 200 End-games; but, from the scarcity of the book, it is doubtful if more than twenty of them have ever been seen in this country.

No. 889.

White: K at his R 5th, Kt at K B 3rd, Ps at K R 7th and K B 5th.
Black: K at his B 8q, B at K 2nd, Kt at K B 3rd, P at K Kt 2nd.
White now played Kt to K 6th. How did Black proceed to draw the game

No 890.

White: K at Q B 2nd, B at Q Kt 5th.
Black: K at K B 7th, B at K 8 6th, P at K 6th.
B. ack to move, and win the game.

No. 891.

White: K at Q B 4th, R at K R 6th, P at Q 5th.
Black: K at Q 2nd, B at K Kt 8th.
White had the move (for, be it observed, Conte Cozio gives these as the terminations of actual games) but Black made a drawn game.

NAVAL AND MILITARY INTELLIGENCE.

CAPTAIN G. BRYAN MILMAN, 5th Fusiliers, has been appointed Assistant Military Secretary to Major-General Hay, Commander of the Forces in Mauritius. It will be remembered that this gallant young officer performed an extraordinary exploit in saving the lives of five brother officers in Mauritius. General Hay has been appointed to succeed General Sutherland in that island.

COURT MARTIAL ON SIR EDWARD BELCHER.—The Lords of the Admiralty have ordered a series of full investigations to take place into the manner in which Sir Edward Belcher has failed to carry out the instructions under which he proceeded to the Arctic Seas. A Court-martial will be held on Sir Edward, for the loss of her Majesty's ships abandoned in the ice.

ALREADY active preparations are being made at the dockyards with a view to place our naval forces in the most efficient condition for undertaking any operations that may be thought advisable in the spring. The *Centurion*, 70; *Cornwallis*, 70; *Hastings*, 72; *Pembroke*, 72; the *Hawke*, and *Dauntless*, are all ordered to be raised and fitted with screw propellers for service as block ships. Four other 70-gun vessels are ordered to be brought forward in like manner.

LAUNCH OF GUN-BOATS AT DEPTFORD.—On Saturday the *Ruby* and *Gleaner*, light draught gun-boats, were launched at Deptford. They have been three months in building, and are similar to those already built by Mr. Pitcher, of Northfleet.

A LARGE HOWITZER.—One of the finest howitzers ever cast, weighing 6½ tons, is now in progress of being mounted at the Royal Arsenal, Woolwich, on a solid bed, for service on board a war steamer, where, from its appearance, it will be fitted in the same manner as bombs are. The howitzer has a bore of ten inches, and an elevation which will give it a very long range. Howitzers of the above powerful na ure, it is stationed on float on batteries, with attendant steamers, or fitted with steam means of propulsion, would soon destroy the strongest fortifications they might be brought against the spherical solid shot fired from that description of ordnance being upwards of 100 lb. weight.

UPWARDS of 700 tons of fleecy hosiery, consisting of underwaistcoats, drawers, &c., have been shipped on board the screw steamer *Prince*, for conveyance to the troops in the Crimea. A complete telegraphic apparatus, with several hundred miles of wire to be laid down in the Crimea; and also several sets of diving apparatus, to remove underwater obstructions, will be taken out by the *Prince*.

PERMANENT EDUCATIONAL MUSEUM.—At the suggestion of the Sec etary of Arts, the Lords of her Majesty's Treasury "have decided that it will be desirable to establish a Permanent Educational Museum. The nucleus of such a museum has been already contributed by a large proportion of the exhibitors at the recent Educational Exhibition at St. Martin's Hall.

NATIONAL SPORTS.

From twice one hundred thousand throats rushes the Yorkshire roar,
And the name of the winner proudly floats a league from the course, or more.
SIR FRANCIS DOYLE.

A FORTNIGHT more will bring us to the end of the "legitimate racing season;" but there is still some heavy work to be done before the thoroughbreds are put by for the winter. Warrick Autumn comes off on Tuesday and Wednesday; and, on the latter of the two days, the steeplechase season of 1854-5 will be inaugurated. Boarton has been kept hard at work for these ten months past, that we can hardly fancy him appearing with 12 st. 10 lb. till he has had a few weeks of quiet for his infirm-looking legs. Richmond is fixed for Wednesday and Thursday; and Lord Zetland's stable, whose cracks are in waiting for the Newmarket Houghton, is not likely to be so omnipotent as it was last year. The lucky Grapeshot (8 st. 7 lb) is top weight for the Handicap; and Sarabaud and Ellermire are names of dread to Fandango. Brighton Club have a day's sport on Friday, and then racing in toat quarter will give way for three quiet weeks to the "currant-jelly dogs." Six coun-ing-meetings are also appointed for next week: to wit, Market Weighton, on Tuesday, &c.; Blackpool, on Tuesday and Wednesday; Belsay, on Wednesday; Baron-hill (Beaumaris), and Bramley (open), on Wednesday and Thursday; and the Caledonian (open), on Thursday, &c. The sale of Mr. Arnold's stud—which comprises one three-year-old, four two-year-olds, and two yearlings—is fixed for Monday, at Tattersalls; as well as that of Mr. Knowles's seven mares, among which are the dams of Talmor and Kingston. Lord Exeter's sixteen yearlings will not be sold till the Houghton meeting.

Two rowing-matches come off, early in the week, on the Thames; but the crack Athenian one will be on November 20, when T. Cole (the Thames champion) rows Messenger, from Putney to Mortlake, for £200 a side.

The racing at Newmarket has been rather more abundant than brilliant during the week, but still it has had some very interesting points. Just three weeks from the day on which the wooden stand, "*closely resembling*" (as a private's letter remarks), "*what I have seen at Epsom*," was erected on the heights of Lake Alma, to enable the Scha-topol fashionables to witness the triumph (?) of the *Muscovite*, Mr. Greville's stable representative of h m achieved one, in verity, for the Cesarewh tch Stakes, almost without an effort. Rattle, who was tried to give 21 lbs. to Catsman, gave away a year, and had not a chance with him, but his runn ng was sufficiently good to make him a strong Cambridgeshire favourite. Muscovite is a remarkably fine animal, and always runs very true to his trials. Mr. Payne's Polydora colt has plenty of size, and was purchased at Lord Spencer's sale, for 365 guineas; while Sarabaud—who is, perhaps, a higher-class horse, fetched considerably under 100 guineas. Stilton was also one of the Althorp yearlings; and the three do no small credit to his Lordship's especial favourite—Cotherstone. Of late the Whip Race has resumed the place it held a mong racing events, when Cadland and Mameluke respectively beat Zingaree and Lamplighter for it, and when the Ascot Cup winner was invariably a challenger. After being placed *hors de combat* for th last year, from fever in the feet, Stockwell appeared for the first time since the Ascot Cup day of 1852, and dealt out poetic justice unto Kingston, who, it will be remembered, broke down Teddington and Weathergage by the pace in which he brought them over this 4 miles 1 fur. 173 yards course, under 10 stone, last year. Kingston's break-down is pretty certain to prevent his ever racing again; and in him and Various Messrs. Morris and Stebbings will posse-s two of Voltaire's very finest stock-descendants. Although he was never very speedy, there has seldom been a handsomer horse seen on the English turf, but ever since his heart-breaking finish with Teddington, for the Doncaster Cup of 1852, he has been rather an uncertain runner. This last race, the Good-wood Cup 1855, the Northumberland Plate 1853, and the Epsom Cup of the present year—when he defeated Ratap'an by a head—are his best performances. He was bred by Col. Peel, who sold him to Lord Ribblesdale, out of whose hands he suddenly passed into those of Mr. Morris, at, as the Newmarket gossips had it, a £2500 valuation. He has only walked over for one stake, and won fifteen out of his thirty-nine other races, besides dividing one, after two dead heats, with Chief Baron Nicholson. Taking no account of "second money," his winnings amount to £5490, besides a Goodwood Cup. We trust that this triumph with his favour-te horse may tend to keep Lord Exeter on the Turf, and that Stockwell may be able to give Virago the challenge which West Australian failed to do. The Duke of Bedford, too, has every inducement to stay on, as his luck this week has been very great

Lord Clifden has lost Alembic; but he may think himself lucky to have won £2600 with such a very fourth-rate horse; and The Hermit, who won Sir Gully and Queen's Vase, last year, has passed into Lord W. Powlett's hands, for £1200, or £300 below his advertised price. Talfourd and Marble Hill will be sold on Monday next, and Newminster is either for sale or hire.

Doncaster Spring Meeting has secured an entry of sixty-two for its five sovs. Hopeful Stakes; and we are glad, not only to see that one of them is in John Scott's name, but that there are several new nominators on the list. *Apropos* of names, Lord Anglesea (who won a race this week in the Emperor of Russia's livery) is among titles, Alma; and defaulters are duly warned that if they do not pay up stakes, their names will be published, after the Houghton week, in the *Racing Calendar*.

NEWMARKET SECOND OCTOBER MEETING.—MONDAY.

Match: 200, h. ft.—Huinboldt, 1. Domino, 2.
Renewal of the Sweepstakes of 50 sovs.—Delia, 1. Apropos, 1.
Match: 100, b. ft.—Dionedia, 1. Exact, 2.
Handicap Sweepstakes of 20 sovs.—Nicholas, 1. Merry Monk, 2.
Second Class, £50.—Pyrrhic, 1. Berezina, 2.
First Class, £50.—Para, 1. Kingston, 2.
Sweepstakes of 10 sovs.—Thessaly, 1. The Duke of Lancaster, 2.
Match 100, h. ft.—Pugnator, 1. Parchment, 2.
Match: 200, h. ft.—The Trapper, 1. Filbert, 2.
Fifty Pounds.—Knight of St. George, 1. Domino, 2.
Match 500, h. ft.—Invasion, 1. Barbatus, 2.
Match: 200, b. ft.—Pantaloon received forfeit from Alembic.

TUESDAY.

Handicap Sweepstakes.—Liar, 1. Woodle, 2.
Selling Hand cap Sweepstakes.—Lizzie, 1. Ruby, 2.
Clearwell Stakes.—Polydora c., 1. Almond, 2.
Produce Match: 200, h.—Sea Kawed over.
Cesarewitch Stakes.—Muscovite, 1. Rattle, 2. D.D., 3.
Match: 200, b. ft.—Kaffir, 1. Physalis c., 2.
Sweepstakes, of 10 sovs.—Bobby, 1. Cable, 2.
Koya. Stakes.—Soy hian, 1. Quince, 2.
Challenge for the Whip.—Stockwell, 1. Kingston, 2.
Sweepstakes of 5 sovs.—Swordsman, 1. Gay Mannering, 2.

WEDNESDAY.

Oatlands Plate.—Roebuck, 1. Economy, 2.
Handicap Sweepstakes of 15 sovs.—Chalice, 1. Redemption, 2.
Town Plate.—Knight of St. George, 1. Domino, 2.
Sweepstakes of 10 sovs.—Shoreham, 1. Orson, 2.
Handicap Sweepstakes of 10 sovs.—Bobby, 1. John o' Bruges, 2
Bedford Stakes.—Para, 1. Beatka, 2.

THURSDAY.

Match.—Invasion beat Fact.
Handicap Sweepstakes.—Kennyside Hero, 1. Falcon, 2.
Sweepstakes for Two-Year-Olds.—Brother to Twinkle, 1. Donald, 2.
Sweepstakes for Two and Three-Year-Olds.—Filly by Eglaru, 1. Henrietta, 2.
Bristby Stakes.—Hebens, 1. Antoinette, 2.
£100 Plate.—Hangerford, 1. Scarecrow, 2.
Match.—Nathan beat Old Rowley.

FRIDAY.

Handicap Sweepstakes.—Ephesus, 1. Nicotine, 2.
Ferdeyne-st Stakes.—Claret 1. Kingstown, 2.
Sweepstakes of 10 sovs.—Cimicina, 1. Vulcan, 2.
Handicap Sweepstakes.—Antonia, 1. Palmerston, 2.
Sweepstakes of 10 sovs.—Donald, 1. Zeltes, 2.
Handicap Two and Three-Year-olds.—Orphrey, 1. Duke of Lancaster, 2.

FORFARSHIRE ELECTION.—Lord Duncan was elected member for the county of Forfar, without opposition, on Wednesday last.

FACTORY TURN-OUT.—About one hundred of the self-acting winders at the mill of Kennedy and Sons, cotton-spinners, Manchester, turned out, on Monday last, in consequence of a slight dispute between one of the men and the firm. One of the operatives, either by carelessness or accident, spoiled a quantity of work, and Messrs. Kennedy deducted 2s from his wages. This was considered by the men as an infraction of some agreement entered into with their employers some time since, and upwards of one hundred have turned out. This is the sole case of the strike.

NOTES OF A RAMBLER.—No. VII.

PERTH TO DUNKELD.

We had scarcely time to get placed comfortably on the seat behind the coachman, when we were addressed by a gentleman seated beside him on the box; and knowing the offence we had unwittingly committed, by keeping the restless horses of the good coach Wellington impatiently champing the bit for twenty minutes beyond their time, we were prepared to receive with equanimity any amount of censure that might be uttered. To our surprise, however, instead of any sentence of complaint, he mildly complimented us on our good luck, as well as our good management, in catching the coach, and quietly inquired how far we were going, and very politely offered us a cigar. While declining the latter civility, we replied that the distance was immaterial, so long as the company was agreeable, and the coachman willing to be our guide. We then recounted our adventures at Dundee, and our misfortune on the journey, with which our friend on the box-seat was deeply interested. We found he was a member of the Town-council of Dundee, and a leader in what is known as the Party of Progress. He was well acquainted with the scenery we passed through, and saved us the trouble of referring to our "Anderson's Guide to the Highlands"—one of the best books of the sort ever compiled. Without solicitation, he quietly and politely pointed out all objects of interest on the journey; and what we now write must be considered more as the information of a stranger than the result of our own observation.

"There, sir," said he, "is the ancient Palace of Scone, so prominent in Scottish history, and so dear to every Scottish heart. They sail it the ancient, but, in truth, there is little of the old palace left, and it now belongs to the Earl of Mansfield. The mansion, you observe, is nearly a square, with a great court-yard in the centre. From this palace was secretly conveyed the stone which, for centuries, had been the coronation seat of the Kings of Scotland, and still forms part of the official throne of England, which partly satisfies our national pride, and reconciles us to the loss of that relic of antiquity. If you are loyal, sir, here you will find enough of historical incident to satisfy your appetite. If you are excited by the relation of deeds of arms, and the heroic prowess of men struggling for the right, you will find writers on every field, engraved on every rock, and flowing in every stream of this district, facts and circumstances sufficient to excite your wonder and secure your approbation. On the other hand, if you have a touch of the romantic in your constitution, and are fond of the pastoral, here is the river Almond, on whose banks you may find the graves of

Bessie Bell and Mary Gray,
Who were twa bonnie lasses;

and whose history, as given in one of the sweetest of the ballads of Scotland, forms one of the most charming episodes of which any country can boast. There, sir, on your right is a stone pillar, showing where the battle of Lunearty was fought, and where the Hays won their laurels and their nobility. No great occasion ever occurs, sir, without there being also prepared a man equal to the emergency; and often, sir, it is found where men never thought of looking for it. There is a Providence in all this. The event was prepared; the spark fell; and the peasant Hay, supported by his brave sons—though their weapons were but the rakes from the hay-ground—rushed to the rescue, and turned the tide of battle in favour of Kenneth III. of Scotland—whose reward to Hay was all the lands his falcon should fly over before resting. The width of the district so flown over is not related; but the ready-witted Hay procured a falcon from the nest in Kinnoul Hill, carried it to a distance, and set it free. The consequence was, its rapid flight to its native rock; and all the land between became the property of the Hays for ever. If you look to the right, sir, you will observe the summit of Kinnoul Hill rising above the eastern shoulder of that barren one, which, seen from this point, seems to form a part of a range united with the Hill of Kinnoul. The distant hill, sir, is the Hill of Dunsinane, celebrated by your English poet, Shakspeare. Some people say in his mad humour, and, I dare say he never was. Be that as it may, it is wonderful how accurately he describes the peculiar features of the landscape. The hill straight before us, and running nearly due east and west by-and-by, is Birnam Hill; and the celebrated wood being cut down by *Macduff's* army and carried to Dunsinane, accounts for the barrenness of the hill on this, its southern side. And, sir, it is said—although I cannot vouch for the fact—that, going at the usual pace, a horse and rider could not ride round the hill to that of Dunsinane, by way of Glammis, you will find, detached or in clusters, numerous trees peculiar to that locality; and the belief is (perhaps it is a superstitious and erroneous opinion), that *Macduff's* army, in its progress, when it rested, stuck the branches in the ground; and some being left, grew, flourished, and have continued until this day. Certain it is that a similar legend attaches to this great Linden-tree at Fribourg, in Switzerland, which is guarded so well, and said to have been planted by the youngest of the three, self-running herald, as a token of victory, who, on reaching the market-place, fell and expired; but, as he fell, the branch was struck in the ground, took root, and there it stands—propped up, and annually decorated—almost an object of reverence. You seem to doubt me, sir? I dinna say it's true as to the Birnam tree—I ken it's true as to the Linden-tree; but, true or false, it's a wholesome principle to encourage faith; it does nobody any harm, and may do many much good."

The great attention of our loquacious and communicative friend induced a similar disposition on the part of his travelling companion, who inquired what hotel we proposed to stop at in Dunkeld. Having informed him, he replied, "If is, I believe, a very good hotel; but it is in the town; and if you will take my advice you will stay at the Birnam Hotel." "The Birnam Hotel," we rejoined, turning to our "Anderson," "is not mentioned here; "and I have understood that it is very preskie and scarcely on these points." "That may be, sir; but the hotel may not have been worth naming when that book was first written, and in later editions the omission may not have been supplied. All I can tell you is that you will find it one of the best-conducted hotels you ever entered. Besides, you have two chances of getting a good dinner, for you will proceed to the village; if they have rooms disengaged, you have, when you start on Monday, the first chances of seats on, or in the coach. The last argument settled the question; and in a few minutes we were quietly reclining on a sofa in Birnam Hotel, our apartments on the Birnam Hill, and our ears refreshed by the gentle murmurs of the Tay as it swept past the end of the garden, and lost itself in the shady groves and pleasure grounds of Murthly Castle, the property of Sir William Drummond Stewart.

After our refreshment, we learnt that all visitors staying at the hotel have the privilege of enjoying the walks connected with the Castle, which, by a new arrangement, are made to communicate with those of the hotel; so that from the garden at Birnam Hotel, all the way to the fine terrace on which Murthly Castle stands, you have a broad walk of green sward regularly mown and kept in excellent order. Few drives in Scotland are more varied or agreeable than that through the plantations of this beautiful estate, which, although the property of Sir William Drummond Stewart, can hardly be said to be occupied by him. When he is in the neighbourhood, we were informed that he takes apartments in the house of his steward; and he always does so, together with the shooting, &c., was understood to be let for a period of years to the celebrated railway contractor, Mr. S. M. Peto. The old house has nothing in its appearance of a castellated character; while the new house, or rather the new walls, covered in, and with windows of paper, remains, and has remained, we believe, for years, in that unfinished condition. There seems to be a fashion in such matters, forsooth. The late Duke of Athol commenced a grand structure, to supersede the mere shooting-lodge which constituted his residence in Dunkeld. The Castle was unfinished at his death, and the works suspended, and now the walls are being torn down, and a part of the stone is being used in the construction of a school in the neighbouring village of Dunkeld. Of this, we shall have more to say by-and-by. Meantime our attention is devoted to Murthley, whose owner seems to be a hero of romance—in hunting, love, and goodness: he follows the chases and promptings of real sentiment without consulting the rules and regulations which are supposed to fetter the independence of the British aristocracy. He has enjoyed the prairies of the Western world; he wooed and married the lady of his heart, without reference to birth; and to his dependants, his conduct seems such that he lives in the core of their hearts.

We drove through these lovely grounds, and, as we drove, learnt—without asking—the popular position of the owner of the property. Wandering through the gardens, we longed to gather a few of the roses, whose falling leaves covered the ground at least an inch thick; but felt deeply the injunction given by way of notice at Hampton-court-gardens:—"The public would protect what is intended for the public enjoyment;" and so we, flowerless, left the garden, regretting that the new house had ever been begun, if the property was insufficient to complete it. The drive through the lanes, enclosed by hedges of sweetbriar and blackberry, down to the water's edge, over the river in a ferry-boat, and through the woods, to our present temporary abode at Birnam Hotel, we felt more than surprised and annoyed, that its name was not even mentioned in Anderson's "Guide to the Highlands."

Dunkeld is placed so exquisitely in regard to local ty, that the visitor cannot fail being gratified: but none have seen the neighbourhood properly, or enjoyed it thoroughly, unless they have had the good-fortune to stay at Birnam Hotel: the worst we can say of which being that the comfort within is equal to the beauty without—at least, so found

A RAMBLER.

FREE-TRADE IN FRANCE.—Two further instalments of free-trade were announced in the *Moniteur* of Saturday last. Salt meat, which hitherto paid ten francs the 100 kilogrammes in French bottoms, and eleven francs in foreign, is now to be admitted until further orders at the nominal duty of fifty centimes; and *vins de liqueur* (imperfectly translated "sweet wines") are to pay only twenty five centimes the hectolitre, instead of 100 francs. Paris is in a way to become a perfect paradise to English residents. They have already written to London for a stock of English gin and whisky for the winter, and now they have a chance of getting better sherry and madeira than that made at the universal wine manufactory of Cette.

CANADIAN COMMERCE.—It appears from the trade and navigation returns of Canada for 1853, recently submitted to the Canadian Parliament, that the exports for the last year amounted to 21,931,000 dollars; and the imports, to 31,981,486 dollars. The exports to Great Britain were 11,465,408 dollars: and the imports therefrom, 18,488,121 dollars: exports to the United States, 10,729,485 dollars: imports from ditto, 12,781,744 dollars. The increase of the aggregate imports and exports since the preceding year was 37 per cent.

DESTRUCTIVE FIRE AT MEMEL.—A fire broke out at Memel on the 6th inst., which destroyed nearly the entire town, and the churches, and property valued at about £2,000,000. Of the fire-engines used on the occasion, three were burned. The flames, which in some places set fire to the shipping in the harbour, extended from the river and sea fire to the buildings on the other side. It is in this way that the fire spread to the Altstadt. In order to diminish the great scarcity of house-room, in connection with the great demand for accommodation, the authorities have called upon all persons now staying at Memel, and not occupied in urgent business there, to leave the place.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The amount of money business transacted this week in the Consol-market has been very moderate. Prices, however, have ruled steady, and the fluctuations in them have not exceeded one quarter per cent: no change, consequently, has been in request, and we have no change to notice in the rates of discount. The leading feature may be considered the commencement of the Dividend payments, and the falling due of the last instalment on the letter B issue of Exchequer-bonds, amounting to £480,000. There will be another instalment of £140,000 on the letter A issue, due on the 17th inst. The payment of the 20 per cent, £600,000, due on the Turkish loan on the 20th inst., the demands upon the Money-market this month will, therefore, be £1,140,000. We may observe, however, that a large portion of the money to be raised upon Exchequer-bonds has already been paid under discount, and that the Turkish loan is equally divide between London and Paris. The drain, therefore, will not be sufficiently large to have any material influence upon Consols.

We have again to report very large supplies of gold: viz., 1,700,000 dollars from New York, £50,000 from the Brazils, and £40,000 from other quarters. As the demand for gold continues to be for the Turkish loan, it almost wholly ceased, and as large parcels have been sent into the Bank, the stock is now likely to increase.

On Monday the Consol-market was inactive. The Three per Cents marked 95⅛ ⅜ for Transfer, and 95⅛ ⅜ for the Account. The New Three-and-a-Quarter per Cents were 95⅜; and the New Two-and-a-Quarter per Cents, 83. India Stock, 220. Exchequer-bills, 2-. Exchequer-bonds, 1858, 99⅜ ⅞; Ditto, 1859, 99⅜ ⅞. There was very little business transacted on Tuesday. The Three per Cents Reduced were 95⅛ ⅜ for Money, and 95⅜ ⅞ for the Account. India Bonds, 6s. to 10s. premium. Exchequer-bills, 4s. to 7s. premium. Bank Stock for Account, 215 to 218. On Wednesday the Three per Cents Reduced marked 95⅛ ⅜ ⅝ ex div.; the Three per Cent Consols, 95⅛ ⅜ ⅝; Consols for Account, 95⅜ ⅞. Ditto for the New Three-and-a-Quarter per Cents, 95⅛ ⅜ ⅝ ex div. Long Annuities were 4⅝. Exchequer-bills 4s. to 7s. premium. Exchequer-bonds, 99⅜ ⅞. The Market on Thursday was dull. The Three per Cents were 95⅛ ⅜ ⅝ for Money; and 95⅜ ⅞ for the Account. The New Three-and-a-Quarter per Cents were done at 95⅛ to ⅜; and the Three per Cents Reduced, 95⅜ to 95⅝. Exchequer-bills, 4s. to 7s. India Bonds, 10s. prem.

The transactions in Foreign Bonds have been devoid of interest. In the general quotations very little change has taken place. Brazil Five per Cents have been done at 89 ex div.; Ditto, Small, 99½; Mexican Three per Cents, 24½; Spanish Three per Cents, 37½; Ditto, New Deferred, 19⅜; Ditto, Passive, 4⅜; Turkish Scrip ¼ prem.; Venezuela Dee per Cent Deferred, 10⅜; Sardinian Five per Cents, 88½; Dutch Two-and-a-Half per Cents, 62⅜; Ditto, Four per Cents, 92 ex div.; Russian Five per Cents, 95; and Austrian Five per Cents, 78.

The market for Joint stock Bank Shares has been tolerably firm; but the business doing has been very moderate:—English, Scottish, and Australian Chartered have marked 13; London Chartered of 1853, 21⅜; London and County, 36; London Joint-stock, 29⅜; New South Wales, 6⅝; Oriental, 6⅜. Miscellaneous Securities have commanded very little attention:—Canada Six per Cent Bonds have realised 110¾. Crystal Palace, 3; Electric Telegraph, 10⅜; North British Australasian, 2⅛; Peninsula and Oriental Steam, 61; London Dock, 109. Canal Shares have ruled steady:—Ashton and Oldham, 240; Birmingham, 83½; Coventry, 209; Derby, 80; Grand Junction, 57; Grand Surrey, 45; Leicester, 76; Loughborough, 875; Neath, 160; Oxford, 110; Peak Forest, 86; Regent's, 10¾; Rochdale, 67; Staffordshire and Worcester, 425; Stourbridge, 285; Worcester and Birmingham, 32. In Waterworks Shares, very little has been doing:—Berlin, 3; East London, New, 13 prem. Grand Junction, 97; Kent, 80; Lambeth, 97; New River, 95. Southwark and Vauxhall, 89½; West Middlesex, 100; Ditto, New, 20. Gas-light and Coke Companies' Shares have mostly realised extreme rates:—British Provident, 2½; City of London, 109; Equitable, 26; Great Central, 12; Imperial, 85, ex div.; Ditto, New, 20 prem.; Ditto, New, 12; Ratcliff, 70; United General, 20; Westminster Chartered, 39½; Ditto, New, 8. Insurance Companies have marked the annexed quotations:—Alliance, 70, ex div.; Atlas, 40; Argus Life, 22; City of London, 34; County, 125; Crown, 18; European Life, 19½; General, 5½; Globe, 128; Guardian, 8½; Imperial Fire, 338; Ditto Life, 18½; Law Fire, 55½; London, 29½; Phœnix, 183; Provident Life, 22; Sun Fire, 222. Miscellaneous Shares have ruled:—European Life, 19½; General, 5½; Globe, 128; Guardian, 8½; Imperial Fire, 338; Ditto Life, 18½; Law Fire, 55½; London, 29½; Phœnix, 183; Provident Life, 22; Sun Fire, 222. Miscellaneous Shares have ruled steady, but the business doing has been very moderate:—Australasian Steam, 12; Australian Chartered, 13; Bank of Australasia, 21½; Bank of Egypt, 8; Bank of Hindostan, 23; Bank of New South Wales, 6⅝; Bank of Western Australia, 3; Canada Company, 125; Crown, 18; Crystal Palace, 3; Electric Telegraph, 10⅜; North British Australasian, 2⅛; Peninsula and Oriental Steam, 61; London Dock, 109. Canal Shares have ruled steady:—Ashton and Oldham, 240; Birmingham, 83½; Coventry, 209; Derby, 80; Grand Junction, 57; Grand Surrey, 45; Leicester, 76; Loughborough, 875; Neath, 160; Oxford, 110; Peak Forest, 86; Regent's, 10¾; Rochdale, 67; Staffordshire and Worcester, 425; Stourbridge, 285; Worcester and Birmingham, 32. In Waterworks Shares, very little has been doing:—Berlin, 3; East London, New, 13 prem. Grand Junction, 97; Kent, 80; Lambeth, 97; New River, 95. Southwark and Vauxhall, 89½; West Middlesex, 100; Ditto, New, 20. Gas-light and Coke Companies' Shares have mostly realised extreme rates:—British Provident, 2½; City of London, 109; Equitable, 26; Great Central, 12; Imperial, 85, ex div.; Ditto, New, 20 prem.; Ratcliff, 70; United General, 20; Westminster Chartered, 39½; Ditto, New, 8. Insurance Companies have marked the annexed quotations:—Alliance, 70, ex div.; Atlas, 40; Argus Life, 22; City of London, 34; County, 125; Crown, 18; European Life, 19½; General, 5½; Globe, 128; Guardian, 8½; Imperial Fire, 338; Ditto Life, 18½; Law Fire, 55½; London, 29½; Phœnix, 183; Provident Life, 22; Sun Fire, 222. Miscellaneous Shares have marked 12; Southwark, 8; Waterloo, 4⅛; Ditto, Old Annuities of 43, 31½; Ditto, New, of 47, 28; and Vauxhall, 22.

As regards the Railway Share-market, we may observe that the dealings in it have been trifling, and, in some instances, prices have ruled rather lower. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 21⅛; Caledonian, 61⅜ ex div.; Eastern Counties, 11⅛; Great Northern, 89; Ditto A Stock, 21; Ditto B Stock, 123½; Great Western, 71⅞; Lancaster and Carlisle, Thirds, 19; Lancashire and Yorkshire, 79⅛; London and Blackwall, 8⅜; London and Brighton, 104; London and North-Western, 102; Ditto, Fifths, 11⅛; Ditto, M and B C, ⅜; London and South-Western, 89⅜; Manchester, Sheffield, and Lincolnshire, 24; Midland, 79⅛; North-Eastern, Berwick, 76; Ditto, York, 54⅜; North Staffordshire, 13⅜. Scottish Central, 94 div.; Shropshire Union, 48; South Eastern, 65⅛; West London, 6.

LINE LEASED AT FIXED RENTALS.—London and Greenwich, Preference, 32⅛; Wilts and Somerset, 94.

PREFERENCE SHARES.—Caledonian, 97 ex div.; Eastern Counties, 5 per Cent, 7 prem.; Ditto, New 6 per Cent Stock, 13; Great Northern, 5 per Cent, 114⅜; Great Western, 4½ per Cent, 93⅛; Ditto, Birmingham Guaranteed, 97 ex div.; Ditto, Chester, 14½ ex div.; Midland, 4½ per Cent, ⅜ dis.; North-Eastern, Berwick, 4 per Cent, 93½; Oxford, Worcester, and Wolverhampton, 112; South-Eastern, 4½ per Cent, 100.

FOREIGN.—Antwerp and Rotterdam, 6⅝; Dutch Rhenish, 6⅛; Grand Trunk of Canada, 9½; Great Luxembourg, 2 prem.; Namur and Liege, 7⅞; Paris and Lyons, 35⅝.

Mining Shares have been exceedingly heavy:—On Thursday, Cobre Copper marked 43; Linares, 6⅝; Nouveau Monde, ½; South Australian, 1.

Friday Evening.

A very limited business has been doing in the Consol-market to-day, and prices have been almost nominal. Bank Stock, 208 to 209 ⅛ ex div. The Three per Cents Reduced have been 95⅛ to 95⅜; the Three per Cent Consols, 95⅜ ⅞; the New Three-and-a-Quarter per Cents, 95⅜ ⅞ ex div. Long Annuities, 4 5-16 ⅜ ex div. India Bonds, 7s. to 10s. Exchequer Bills, 4s. to 7s. prem. Foreign Bonds and Railway Shares have been quiet.

THE MARKETS.

CORN EXCHANGE, (Friday.)—Very moderate supplies of English wheat have arrived up to our market this week, sometimes and by land carriage. To-day the show of samples was small. The sale demand for buyers was not large; so the demand for all kinds of wheat of home produce ruled steady at 2 to 3 advance. Scarcely any foreign wheat but cargoes from to hand. Picked samples were firm, and, to some extent, 2s. to 3s. dearer than on Monday. The value of the qualities was by supply and demand. The barley trade was steady, at very full prices. Wheat a fair demand for malt, at full quotations. Good sound oats in demand, at extreme rates. In other kinds very little was being done. Beans, peas, and tares sold at full currencies.

ARRIVALS. English: wheat, 6201; barley, 2901 malt, 2501 oats, 3901; beans, 1201; flour, 1953. Irish: oats, 1650. Foreign: wheat, 570; barley, 3400; oats, 3810.

Average prices of wheat, Wheat: Essex and Kent, red, 78s. to 82s.; ditto, white, 80s. to 71s.; Norfolk and Suffolk, red, 75s. to 80s.; ditto, white, 78s. to 82s.; rye, 52s. to 53s.; grinding barley, 42s. to 44s.; distilling ditto, 45s. to 47s.; malting ditto, 50s. to 53s.; Lincoln and Norfolk malt, 65s. to 67s.; brown ditto, 55s. to 60s.; Kingston and Ware, 66s. to 69s.; Chevalier, 68s. to 72s.; Scotch beer and Lincolnshire feed oats, 24s. to 28s.; potato ditto, 25s. to 29s.; Youghal and Cork, black, 18s. to 20s.; ditto, white, 22s. to 23s.; tick beans, 41s. to 43s.; grey peas, 35s. to 37s.; maple, 38s. to 40s.; white, 41s. to 43s.; boilers, 43s. to 47s. per quarter. Town-made flour, 45s. to 48s.; Suffolk, 41s. to 43s.; Scotch and Yorkshire, 41s. to 44s.; country marks, 40s. to 42s. per sack.

Seeds.—We have very little change to notice in our market. The general demand is steady.

Linseed, English sowing, 52s. to 54s.; Baltic crushing, 46s. to 48s.; Mediterranean and Odessa crushing, 46s. to 48s.; to the per quarter. Coriander, 8s. to 9s. per cwt. Brown mustard, 11s. to 12s.; white, 12s. to 13s. per bushel. Tares, English, 40s. to 42s.; winter tares, 40s. per quarter. Hempseed, 42s. to 44s. per quarter. Canary, 48s. to 52s. per quarter. Linseed cakes, Scotch, 12l. 10s. per ton; Baltic, 11l. 10s. per ton. Rapeseed cakes, 9l. to 9l. 5s. per ton. Coriander, 11l. per ton. Rapeseed oil, 38l. per tun. Linseed oil, 30l. per tun. English clover seed, white, 44s. to 50s.; red, 40s. to 44s. per cwt.

Average prices of wheaten bread in the metropolis are from 8½d. to 9d.; of household ditto, 7d. to 8d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 76s. 7d.; barley, 39s. 11d.; oats, 25s. 6d.; rye, 53s. 8d.; beans, 39s. 7d.; peas, 39s. 3d.

The Gazette Average.—Wheat, 76s. 7d.; barley, 39s. 10d.; oats, 25s. 1d.; rye, 53s. 4d.; beans, 39s. 7d.; peas, 39s. 3d.

The Seven Years' Average.—Wheat, 74s. 1d.; barley, 36s. 10d.; oats, 25s. 1d.; rye, 39s. 4d.; beans, 37s. 8d.; peas, 37s. 8d.

Tobacco.—The market for rum is active and prices continue to advance.—Proof Leewards, 2s. 6d. to 2s. 8d.; East India, 2s. 4d. to 2s. 5d.; strong Demerara, 2s. 3d. to 4s.; low to fine clean ditto, 1s. 4d. to 2s. 2d. per gallon. Brandy, corn-spirits, and genova, command very full prices.

Hay and Straw.—Meadow hay, £3 3s. to £4 17s.; clover ditto, £3 10s. to £6 6s.; rod straw, £1 5s. to £1 13s. per load.

Coals (Friday).—Monday's market was fairly supplied with boats as to number but their general quality was inferior. For most lots we had a fair demand, at Monday's prices, by which many of them were somewhat exceeded. To-day's supplies were moderate, for the whole the mission trade was firm, at full rates of currency. A few cargoes were on sale, the demand for which at that description of wood ruled steady, at late rates. Fine coals sold slowly, at from 14s. to 15s. per ton. Second smoky, at late rates. Main coals were dull, at from 14s. to 15s. 6d. per ton, including primes at 15s.

Fat Stock to Smithfield.—Coarse and inferior beasts, 3s. 6d. to 4s. 2d.; second quality ditto, 4s. 4d. to 4s. 8d.; prime large oxen, 4s. 10d. to 5s. 0d.; prime Scots, &c., 4s. 8d. to 5s. 0d.; coarse and inferior sheep, 3s. 8d. to 4s. 4d.; second quality ditto, 4s. 6d. to 5s. 0d.; prime coarse-woolled sheep, 5s. 0d. to 5s. 4d.; prime Southdown ditto, 5s. 4d. to 5s. 8d.; large coarse calves, 3s. 6d. to 4s. 4d.; prime small ditto, 4s. 6d. to 4s. 8d.; large pigs, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 4d. per 8lbs. sinking offal.

Newgate and Leadenhall Markets.—The general average business was transacted in each kind of meat, as follows:—

Per 8lbs. by the carcase:—Inferior beef, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d. to 3s. 10d.; prime large ditto, 4s. 0d. to 4s. 2d.; prime small ditto, 4s. 4d. to 4s. 6d.; large pork, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 6d. to 3s. 8d.; prime ditto, 3s. 10d. to 4s. 0d.; small ditto, 4s. 2d. to 4s. 4d.; veal, 3s. 4d. to 4s. 4d.; small pork, 4s. 6d. to 5s. 2d.

THE LONDON GAZETTE.

TUESDAY, OCT. 10.

BANKRUPTCIES ANNULLED.

F. BURROW, Redruth, Cornwall, tailor and draper.—W. BECKETT, Gillingham, Norfolk, cattle dealer and victualler.—H. KERFOOT, Manchester, tailor, cabinet, silk manufacturer.

BANKRUPTS.

H. CHATTERIS, Ledbury, Cty, merchant.—T. CRITHIAN, Lothbury, Bucklersbury, Tower-wharf, Rotherhithe, and Deptford, timber-merchant.—J. WAGHORN, Reading, Berks, draper.—G. FOX, Crewkerne, grocer.—J. JUGHES, Bangor, Carnarvonshire, innkeeper.—D. LONDON, Manchester, bookbinder.—J. B. GODFREY, Taunton, Somersetshire, coach-maker.

FRIDAY, OCTOBER 13.

WAR OFFICE, Oct. 13.

5th Dragoon Guards: T. P. Gudgeon to be Major, vice Cooper.

15th Light Dragoons: Brevet Lieut.-Col G. S. Blashford to be Major; Lieut. T. R. Crawford to be Captain; Cornet G. Reid to be Lieutenant.

16th Lieut. J. E. Kearns to be Captain: Cornet J. Stewart to be Lieutenant.

1st Foot: J. W. Gubbins to be Adjutant.

6th: A. Angelo to be Ensign.

19th: J. H. Hamilton to be Ensign.

23rd: Lieut. R. H. Somerville to be Ensign.

34th: Lieut. J. Wyatt to be Captain.

49th: Lieut. T. Trafford to be Lieutenant.

57th: Lieut. A. Smyth to be Captain, Ensign E. G. E. Atherley to be Lieutenant; W. J. Saul to be Ensign.

63rd: Lieut. J. W. Dimond to be Lieutenant; R. H. Somerville to be Ensign.

64th: Lieut. H. B. Hussee to be Lieutenant.

76th: G. G. Gealer to be Ensign.

77th: J. F. B. P. Dodd to be Ensign.

79th: W. G. C. Gether to be Ensign.

97th: W. B. H. Steele to be Ensign.

Rifle Brigade: A. Evans to be Lieutenant.

60th: J. Evans to be Ensign.

89th: H. L. Harvey to be Ensign.

Memorandum: J. Livingston to be Lieutenant.

Cornet J. Newman to be Lieutenant; R. K. Little to be Ensign.

Lieut. C. T. Harvey to be Ensign.

Memorandum.—The appointment of W. Bond to a Cornetcy in the 3rd Light Dragoons has been cancelled.

BANKRUPTS.

J. and J. Dempsey-street, St. James's, Horsted victualler and tavern-keeper.—W. H. H. HAWES, Strand, Middlesex, and Bishop's Stortford, Herts, grocer.—J. PEARD, Gt. Sutton, Derbyshire, grocer and farmer.—T. ROUGHTON Colyhurst, Manchester ironmonger.—J. DYSON, Huddersfield, Yorkshire, grocer and provision-dealer.—J. BURDETT, Sheffield, Lancashire, bobbin-maker and grocer.—J. COBBETT, Stourbridge, Worcestershire, steeller and victualler.—J. HOWITT, Leamington Priors, Warwickshire, brickmaker.

BIRTHS

On the 5th inst., at Peterborough, the wife of J. and Edwin Palmer, Esq., of a son.

On the 6th inst., at Clifton-wood-house, Clifton, the wife of Herbert Mackworth, Esq., of a son.

On the 6th inst., at Barrick park, Lady Woolmore, of a daughter.

On the 6th inst., at Waterloo-terrace, Dover, the Lady Elizabeth Osborn, of a daughter.

On the 3rd inst., at Stadlo-hall, Essex, the wife of Lieut.-Colonel S. Brise, of a daughter.

On the 5th inst., at Bournemouth, Hants, the wife of the Rev. J. Gullemard, Vicar of Kirkington Orton, of a son.

On the 6th inst., the wife of Rear-Admiral Murray, of a son.

On the 30th ult., at Florence, the Baroness de Hagel, of a son.

On the 8th inst., at Lanham Rectory, Hants, the wife of the Rev. H. F. Smith, of a son.

MARRIAGES.

On the 3rd inst., at St. Pancras Church, London, by the Rev. C. H. Andrews, Mr. Henry Brook, Gravesend, to Miss Mary Ann Winkley, of Harrow-on-the-Hill.

On the 5th inst., at Matlock, Mr. Thos. Henry, second son of Thomas Henry Maudsley, Esq., of Lamb-street, Spitalfields, Surrey, to Miss Anne Wood, youngest daughter of John Russell, Esq., of Wyelands, Monmouthshire, by the Rev. G. Ellis Cleather, brother-in-law to the bride, assisted by the Rev. T. L. Wilcocks, Vicar of Matlock.

On the 29th ult., at Convamore, county of Cork, A. Macnamara, Esq., of Caddington Hall, Bedfordshire, to the Lady Sophia Ellen Hare, third daughter of the Earl and Countess of Listowel.

On the 4th inst., at Norwood Chapel, the Rev. W. S. Rust, to Mary Susannah Spicer, of Norwood.

On the 28th ult., at the Cathedral Church of the Holy Trinity, Gibraltar, Lieut. Chas. C. H. Young, R.N., to Ellen Smith, only daughter of the late C. Young, Esq., M.D. of that city.

On the 7th inst., at Old Charlton, Kent, Lieut.-Col. F. Browne, R.E.I.C.S., to Mary Elizabeth, eldest daughter of W. Nokes, Esq., solicitor, of Woolwich.

DEATHS.

On the 27th ult., at Agra, J. Vidler, Esq., Vice-Consul for France, Sweden, and Norway, and the Hanse Towns, and many years a Magistrate and Member of the Municipality.

On the 30th ult., at the Battle of the Alma, Capt. H. W. Coat, Coldstream Guards, Aide-de-Camp to Major-General Bentinck, second son of Lieut.-Col. the Hon. F. W. Coat, aged 33.

On the 1st inst., Maria, wife of Mr. John Watts, and daughter of the late B. Walters, Esq., Horsey.

On the 2nd inst., at the Rectory, Sutton Veney, Wilts, the Rev. W. D. Thring, D.D., Master of that parish, aged 73.

On the 5th inst., at Anson hill, Fordell Collieries, Mr. George Robertson, son of Thomas Robertson, Esq., Kenny-end, 18.

On Aug. 6th, at Bombay, Dinapoia, the beloved daughter of Lieut.-Col. Horsbrogh, H.M.

On Sept. 20th, aged 18, of inflammation of the lungs, in his passage home from the Baltic fleet, Henry Alfred Reginald Lascelles, second son of Mr. and Mrs. Edmund Ross Mills, Newton Lees.

On the 20th ult., killed in the battle of the Alma, F. De Pre Mondegy, Lieutenant 33rd Regiment, only son of the late Lo d W. Montagu, aged 20.

On the 20th ult., in the battle of the Alma, Major Ross, 95th Regiment, of Kilravock Castle, Na rnshire, N.B.

On the 20th ult., in the battle of the Alma, whilst in the gallant discharge of his duty, F. E. Evans, Captain in the 33rd Regt. Welsh Fusiliers, second son of T. B. Evans, Esq., of Dene House, Carbridshire, and North Tuddenham, Norfolk.

On the 20th ult., in the battle of the Alma, aged 21, A. Walsham, First Lieutenant in the Royal Artillery, and third son of Sir J. Walsham, of Knill Court, in the county of Hereford, Bart.

On Sunday, the 8th inst., at the Rectory, West Horsley, the Rev. G. J. Ridley, only surviving brother of the late Sir M. W. Ridley, Bart., and of the late Lord Colborne, aged 83.

On the 8th inst., in Hanover-street, London, J. Scott, Esq., of Ryehope, son of her Majesty's Justices of the Peace for the Parts of Lindsey, in the county of Lincoln, aged 74.

On the 10th inst., at Vauxhall-place, South Lambeth, A. F. Fearon, Esq., late of the Stamp and Tax Office, Somerset House, aged 60.

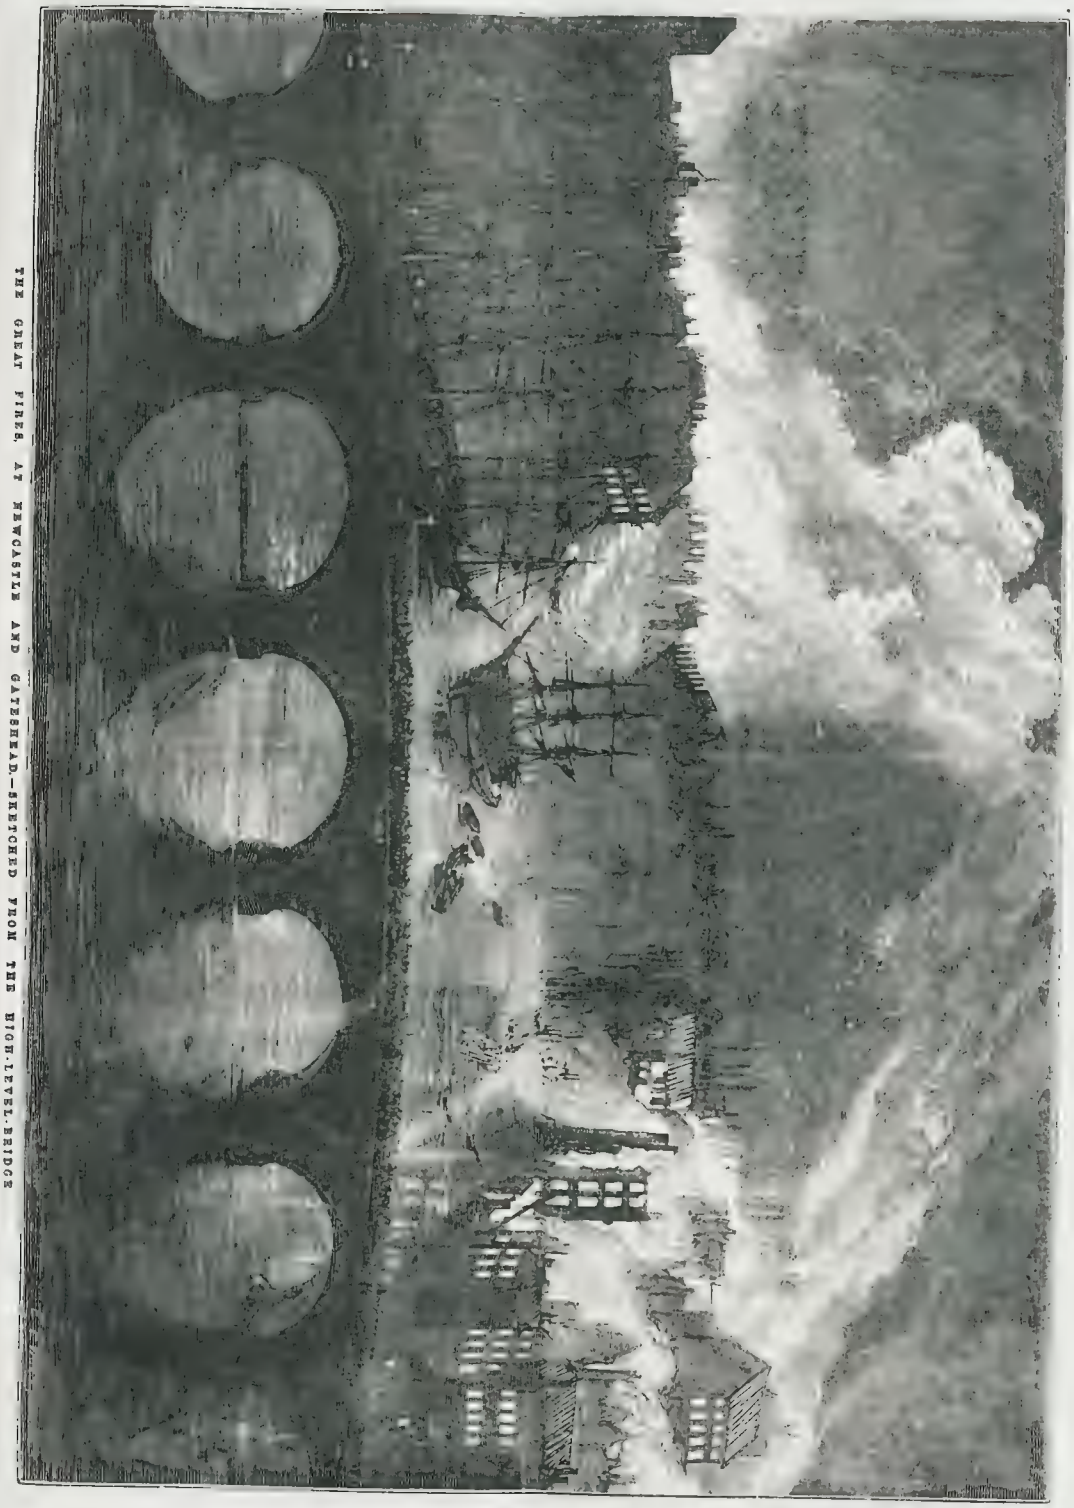
REMAINS AT GATESHEAD.—SITE OF THE EXPLOSION.

GREAT CONFLAGRATION AND EXPLOSION AT NEWCASTLE AND GATESHEAD.

On the morning of Friday, the 6th inst., between twelve and one o'clock, a fire broke out in the worsted manufactory of Messrs. Wilson and Sons, in Hillgate, Gateshead. After raging with great fury for about two hours, the roof fell in, and the heat became so intense that it melted the sulphur which had been stored in an adjoining bond warehouse. It came out in torrents, like streams of lava, and as it met the external air, began to blaze: its combustion illumining the river and its shipping, the Tyne, the High Level Bridge, and the church steeples of Newcastle—spreading over every object its lurid and purple light. The flames towered far above the masts of the ships moored at the neighbouring quays. From the various floors of the warehouse huge masses of melted tallow and lead flowed in copious streams. The eight storied edifice was one mass of flame, and from every landing melted sulphur and tallow and fused lead were descending in luminous showers. It resembled a cataract on fire. At length the walls fell. Burning brands were then scattered over the roofs of the adjoining houses, had widely extended the conflagration. The ships were taken from their moorings, and placed in safety. A few smart explosions were now heard, but no suspicion was entertained of the astounding catastrophe which was about to ensue.

In the immediate neighbourhood of the fire was another bonded warehouse, filled with the most combustible materials—naphtha, nitrate of soda, and potash, as well as immense quantities of tallow and sulphur; and it is also said that a large quantity of gunpowder was contained in it. To this building all eyes were directed, because, although a "double fireproof" structure, and supported on metal pillars and floors, it seemed impossible to prevent the flames from communicating with the dangerous materials within its walls. These fears were too well founded. No sooner had the flame reached this compound, which was in fact nothing but a huge fulminating mixture, than an explosion took place, which no pen can describe, and which made Newcastle and Gateshead shake to their foundations. The bridge shook as if it would fall to pieces, and the surface of the river was suddenly agitated as if by a storm. The shock was felt in every street. The front doors of many private persons' dwellings were violently opened, and the shutters of the shops, particularly towards the quay, were shaken from their fastenings, and strewed about the pavement. Broken glass was under your foot at every step. Every family was suddenly aroused, and their various members rushed together or into the streets to inquire the cause of so frightful an explosion. The sight was best witnessed from the High Level Bridge, which was crowded at the moment with anxious spectators. Suddenly, as the explosion took place, that triumph of engineering skill began to vibrate like a piece of thin wire, and the first thought of those upon it was, that that magnificent erection was about to fall. The projectum of the flaming materials across the river was a wonderful sight for those who had coolness enough to witness it, but there were very few in that condition. A universal stupor seems rather to have prevailed everywhere, first broken by the screams and wailings of women and children, and

VIEW IN GATESHEAD



THE GREAT FIRES AT NEWCASTLE AND GATESHEAD—SKETCHED FROM THE HIGH-LEVEL BRIDGE

by the ignition of the houses on the Newcastle side of the river It was some time, however, before the minds of the spectators awoke to the full extent of the calamity.

The shock of the tremendous explosion was felt over the whole eastern seaboard, from Blyth, in Northumberland, to Seaham, six miles to the south or Sunderland The concussion shook all the buildings in the large manufactories on the shores of the Tyne between Newcastle and Shields, extinguished the lights, and caused the greatest alarm to the workmen, who rushed into the open air in terror and excitement. In the seaports of Shields nine miles off, it produced all the effect of an earthquake, rocking the houses, "thudding" against the doors, shaking the windows, and causing the inmates to jump out of bed in alarm and astonishment. In detached dwellings and lone farmhouses the watch-dogs commenced a violent barking and noise, which, with the concussion and shaking of the doors and window-, produced an impression that an attack was contemplated by buglars In the pit villages the impression was that an explosion had taken place in the bowels of the earth. Papers and books, partially burnt, were picked up in the fields at the Felgate, near the Brockley-whins railway-station six miles off; and a master of a sailing-vessel, on his passage to the Tyne, felt the shock ten miles off at sea.

The streets in the neighbourhood of the explosion presented a most melancholy spectacle. Men, women, and children in their night dresses

might be seen rushing from their abodes in search of shelter, they knew not whither. In Gateshead particularly the scene was most distressing – mothers were vainly trying to return for a child, forgotten in the suddenness of escape—and children were searching for their parents. The quay on the Newcastle side of the river was literally strewed with burning staves and rafters, covered with sulphur, and burning like matches. Adults and children, confused by the awful catastrophe, went staggering to and fro as if intoxicated, uttering lamentable and piercing cries. At one time the whole town seemed to be devoted to the rampant agency of fire. It passed with the greatest facility from house to house. Some houses were left gutted, whilst others were almost levelled with the ground. The crackling timber of the old houses, and the noise from the falling of gable-ends and stacks of chimneys, produced its progress. The tenements of the poor who lived in the vicinity of the warehouses, fell like houses built of cards, and, in some cases, it is said, buried their inmates in the ruins. All the houses in the Church-walk, and Cannon-street, Gateshead, have been either partially or wholly destroyed, amounting to nearly fifty. About fifty soldiers from the garrison were advancing with the fire-engine, when the explosion met them, killing two and wounding thirty out of the remainder. Mr. Robert Fatherun, a member of the New sella Corporation, an active gentleman, who had rallied out to witness the fire, was suffocated by the fumes, as was Lieutenant Paynter and eight other persons—including Mr. Davidson, jun. (miller); a barber, named Hamilton; a sergeant of the Cameronians; Scott, a Gateshead policeman: the rest were so burnt and mutilated as scarcely to be recognised. Mr. Davidson, father of the young man who is killed, and who owned a neighbouring steam-mill, has lost his eyesight.

Numbers of policemen on duty were severely injured by the falling débris. Mr. Ralph Little, an inspector, had one of his legs broken, and several of his ribs fractured. The surgery of Mr. Rayne, surgeon to the forces, was literally besieged by the sufferers. The infirmary was crowded at an early hour. Fully fifty in door patients were received, and more than double that number had their wounds dressed. Mr. Craster, of the Gateshead Dispensary, was called to upwards of 100 cases, and most of the surgeons in Newcastle and Gateshead were attending sufferers at their own houses. Altogether, not less than 500 persons were more or less injured by the explosion. The total number of lives lost is not yet known, as many persons are said to have been buried in the ruins. Twelve bodies have been identified.

The loss of property is very great; some estimates say upwards of £1,000 000. The interior of St. Mary's Church, Gateshead, is a ruin. Many of the grave-stones in the church-yard were removed by the force of the explosion, and thrown to a considerable distance, knocking in the walls of some of the adjoining houses. There is scarcely a house, office, or public building, within a radius of a hundred yards of the explosion, which has not been injured—either unroofed, or its windows broken. The flames spread with great rapidity; and special engines were dispatched from the central station to bring the fire-engines from Hexham, Sunderland Shields, and other towns. There was, for a time, no want of water, the Tyne being so close at hand; and the water of the Whittle Dean Company, which is always at a high pressure, was served with admirable effect on the flames, which were not thoroughly subdued, however, for some days.

In Gateshead the extraordinary scene—extending several hundred yards—from Bridge-street and Church street, eastward, and from Church-walk to the river, is entirely consumed Church-walk was hardly passable; and Hillgate was completely choked up with the ruins. On the Newcastle side the devastation is fearful. Along the Quay, and towards the head of Butcher-bank, the thoroughfare was blocked up on Saturday by the heaps of rubbish, and the danger of dilapidated property falling in the streets From the corner of the Sand-hill to within a house or two of the Custom-house—or half the length of the Quay—the property extending backwards, including shops and offices in front, and warehouses behind, lay a mass of calcined ruins.

An inquest has been held on the bodies, eleven in number, which, up to Saturday morning, had been extricated from the ruins on the south side of the river; but no clue has yet been obtained as to the cause of the explosion. The inquiries were principally directed to the point whether gunpowder was stored in or about the bonded warehouses. Mr. T. Large said they were not had, to his knowledge, any gunpowder stored there; though it would be possible for some to be there without his knowledge, as the warehouseman had a key. Other occupiers of the premises gave similar evidence, and put in lists of goods in their respective stores. Some of the witnesses thought the explosion had been caused by the nitrate of soda, of which there were large quantities in the bonding warehouse.

In consequence of a communication from the Mayor and Corporation of Newcastle, on behalf of the inhabitants, requesting the aid of a Government officer to the inquiry, the Secretary of State has directed Captain Bruce, of the Ordnance, to be present, and to assist in the investigation. The owners of any large amount of gunpowder in the district have been communicated with by the Mayor, and the magistrates to levy penalties. It seems to be the opinion that the disastrous calamity has been caused by explosive materials now in a partially manufactured state. In the face of such an appalling calamity, however, the strictest investigation is considered necessary.

On Tuesday a meeting of the representatives of the various fire insurance companies having offices or agencies in the town was convened in the Central Exchange Hotel, in order to adopt the best measures for ascertaining the losses sustained by the late calamitous fire, and for carrying out all necessary proceedings connected with the same: W. Woods Esq., of the Newcastle Fire office in the chair. The following were appointed a committee to enter into the necessary details—namely, the agents respectively of the Newcastle, the Phœnix, the Sun, the Royal Exchange, the County, the Manchester, the Leeds and Yorkshire, the North British, the Norwich Union, and the Ancient offices; five to be a quorum, and Mr Woods to be convener. Resolutions to the effect that the committee be authorised to take such steps as may be considered judicious to investigate the cause of the explosion; and that they endeavour to estimate the loss of life and injury sustained by those who had suffered in the discharge of their duty, were severally put from the chair, and unanimously adopted.

THE ILLUSTRATIONS.

In order to enable our readers the better to understand the localities of this great conflagration, annexed is a Key to the large Engraving at pages 364 5.

The next Illustration shows the Ruins of the Bonded Warehouses at Gateshead, the site of the explosion, with St. Mary's Church in the background: the white smoke shows the effect of the burning sulphur.

The lower Engraving is a View in Gateshead.

Opposite is a general View of the Ruins at Night, sketched from the High Level Bridge.

Lastly is the large Painted Window of St. Mary's Church, which was blown into the position here represented.

TRAVELS IN CALIFORNIA AND IN THE OREGON. Par M. De St. Amant.—A work has just been published in Paris, which, notwithstanding the all-absorbing interest excited by the war has created a considerable sensation. The work to which we refer is entitled "Voyages en Californie et dans l'Oregon, par M. de St. Amant," Consular Agent of the French Government in 1851-52. These "voyages" are full of highly instructive matter, and are interspersed with amusing episodes, having a bearing on the subject in hand. The principal object of the author, throughout this work, has been to depict the manners of the primitive inhabitants of these distant regions; and, at the same time, to give the reader an idea of the influence which European emigration has upon them. Such a work as this is of universal interest, and we hope soon to see it translated into the English language. Amongst the principal documents from which the author has quoted, are several that have never been published, and which have reference to the politics of the last few years, in which the author became an agent, as Governor of the Tuileries, during the Republic. Several letters, by the Prince de Joinville, on the political character of his father's (King Louis Philippe's) reign, have also been turned to account.

SIR JOHN BOWRING.—We have been favoured with the translation of a curious document, being the address of a large body of Chinese scholars to Sir John Bowring, on her visiting and examining their seminary in the province of Kiangsoo. We understand it was chanted by the principal scholar, a descendant of the famous Sen, who was converted to Christianity in the time of the Emperor Kanghi:—"We respectfully greet your Excellency, the British Plenipotentiary, whose fame has reached this land, and who has charge of an important Government. Your Excellency's ability is so lofty as to be compared to a bird perched on the summit of a hill, all sufficient to make return for the favours bestowed upon you by your Sovereign. Your Excellency has honoured the borders of Kiang with your presence. You will certainly satisfy the hopes of all. Fortunate do we consider ourselves in that you have condescended to visit us. We look up and adore the splendour of your pleasing like appearance. At the sea of giving offence, we express our feelings, and with much respect wish you golden happiness. Bending prostrate, we hope you will throw a glance on this. Presented by the Hiwan scholars."

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

On Saturday evening Sir George Grey, Governor of the Cape of Good Hope, took his departure from Bristol for the colony over which he is about to preside

A free library and museum is about to be established in Preston.

The King of the Belgians passed through Bellinzona, in the Canton of Tessino, on the 30th ult., on his way to the Lake of Como.

The fund raised in Bristol up to the present time, on behalf of the famishing Jews of the Holy Land, exceeds £800

The Czar has engaged a young Prussian artist to paint for him the "Battle of Navarin," for which 10,000 dollars are to be paid.

Dr. Cullen, Roman Catholic Archbishop of Dublin, has left that city for Rome.

A drama on a Russian subject, written by M. Scribe, has been accepted at the Français. The principal characters are to be performed by M. Bressant and Mdlle. Rachel.

The Federal Council at Berne has rejected the demand of the Swiss Trade Association that a third exhibition of Swiss industry should be held next year

Numbers of deluded people are still leaving comfortable homes in the counties of Carmarthen and Glamorgan, to join the Mormons at the Salt Lake.

Mr. G. J. R. Gordon, Consul-General at Monte Video, has been appointed Minister Plenipotentiary at Berne, in the room of the Hon. Charles A. Murray, now Her Majesty's representative at the Court of Persia.

Prince Woronzoff, ex-Governor-General of the Russian Transcaucasian provinces, arrived at Antwerp, a few days ago.

Lady Raglan, with the Misses Somerset, landed at Dover, on Wednesday afternoon, from the Continent; a large concourse of persons had assembled alongside the steam packet, and gave three hearty cheers for Lord Raglan as her Ladyship landed.

Kiss has completed his large model of "St. George and the Dragon." It is to be exhibited in his atelier for the benefit of the Silesians.

The consecration of the columnar monument raised in the garden of the Invalides, Berlin, in honour of the soldiers who fell during the revolution of 1848, will take place in the presence of the King upon the 18th of October.

Nine hundred and forty sea apprentices have been enrolled at the port of Shields this year, up to the 30th September, which number exceeds, by ninety, the number enrolled at the same port to a similar date during last year.

M. Jerome Napoleon Bonaparte, grandson of his Imperial Highness Prince Jerome, and who is now a sub-lieutenant in the 7th Regiment of Dragoons of the French army, arrived at Marseilles on Thursday week.

The railway from Wurzburg to Aschaffenburg (Bavaria) was opened to the public on the 1st inst., without any ceremony.

The last census shows that in the free states of America there were 177 daily papers, and 1632 weekly, &c., printed; while in the slave states there were only 79 daily, and 645 weekly papers.

The Countess of Erroll, who followed the Earl her husband, and shared his fate, is said to have made herself most useful during the campaign in the East.

Four bronze figures, by Kreling, of the size of life, in the costume of old German heralds, are to be erected in the Castle-court at Nuremberg.

A society has recently been formed, under the auspices of the Duke of Wellington, the Duke of Manchester, and a number of noblemen and gentlemen, for the purpose of exploring Central Africa, with a view to its evangelisation.

The shipments of gold from California are on the increase. Whilst the total shipments in preceding years were £6,700,000 in 1851; £9,360,000 in 1852; and £10,160,000 in 1853, the amount shipped in the first eight months of the present year have reached £7,075,000.

The day before the departure of the Emperor and Empress of the French from Boulogne, their Majesties inspected an allegorical composition, in basso-relievo, by Mr. Carew, representing union between the fleets of France and England, and expressed their approbation of the work.

Symptoms of discontent have recently been manifested by the Northumberland pitmen, at the amount of their present earnings, which, in many cases, as shown by the books of the collieries, have reached the fabulous height of £5 per fortnight per man; while putter lads, sixteen years of age, earn from 6s. to 8s. per day.

The German Art papers speak in terms of high eulogy of a silver tablet which the city of Berlin has just presented to the Prince and Princess of Prussia. The design, by Professor Fischer, presents a singular compound of mediæval costume, genii with torches, and the usual allegorical paraphernalia.

The wires of the magnetic-telegraph communicating with Ireland, Liverpool, and Glasgow, are maliciously cut last week, about twenty miles from Carlisle, on the road to Penrith.

From the Government Immigration returns at Quebec, it appears that 43,148 passengers had arrived in Canada this year, against 28,256 at the same time last year; being an increase of 14,264 souls. The emigrants from the north of Europe this year (Norway, Sweden, and Germany) are counted to 10,286.

Geneva continues to be overwhelmed with strangers. In one of its suburbs, Eaux-Vives, a chapel is in course of construction for Greek Russian worship; together with a Greek school for the educating of clergymen and the choristers.

The 14th of September has become memorable:—First, for the retreat of the Russian army from Moscow, and the entry of the French into the city, when it was burnt, in 1812; second, for the death of the Duke of Wellington, in 1852; third, for the deliverance of the Allied Forces in the Crimea, in 1854.

The reminiscences of the poet Heine are about to be published by a Hamburg bookseller.

The Roman Catholics of Cranagh and its vicinity have offered a reward of £10 for information that shall lead to the discovery and arrest of the parties who burnt and destroyed the recent Classical College on the Lord Gardiner and Enniskillen Railway.

Count Rossi, married in 1838 to the Duchess of Lucca, daughter of the Duke Louis I. of Parma, and mother-in-law of the present King of Saxony, has died suddenly of cholera at Venice.

The ancient Church costume is exciting much interest among German antiquaries. Herr Bock has discovered at Anagni, near Frosinone, in Italy, some old priests' robes, which he believes to be of the age of Pope Innocent the Third

An Imperial decree orders that the funeral of Marshal St. Arnaud shall take place at the public expense. The ceremony will take place at the Invalides, and his remains will be deposited in the vaults of that church.

The number of children who attend the parochial schools of Berlin amounts to 47,000, which, taking the whole population at 470,000 souls, gives an average of one ten ninth of the population receiving instruction in divers schools, of which there are 188, employing 1353 teachers of both sexes.

In consequence of the reductions in the Russian tariff, the smuggling trade along the frontier has extended to a considerable degree. The smugglers find their account in evading the payment of the high duties now paid for land transit. Russian merchants, in their turn, avail themselves of their knowledge of the Russian trade with Germany to elude the custom-house officers.

Only seven men, privates of the 5th Division of the City Police, have signified their readiness to avail themselves of the order of the Secretary of State for the Colonies to enlist into the Cape Corps, for the purpose of augmenting the police in that country; the number of men required by the Government is 100.

This year's vintage will be of unusually excellent quality in Vaud, Geneva, Neufchatel, and Valais, but owing to the small quantity of grapes, and the almost entire failure of the potato crop, wines in France, the latter are become very dear. In Geneva alone the destruction above-mentioned are overrun by Frenchpeople, who buy up the cheapest wines at any price.

Lieutenant-General Sir Harry Smith, who succeeds Earl Cathcart in the command of the Northern and Midland district, has arrived at the Queen's Hotel, Manchester, and is preparing to take up his permanent residence in that neighbourhood.

The Spanish revenue returns for August, show a decrease of 38 millions of reals (about £303,000), compared with the same period last year. This great falling off is attributed to the convulsed state of Spain in August last.

The Duke de Larochefoucault is about to address a letter to the French papers, denying in the strongest terms the charge brought against the party of Montijo of sympathy in the success of the French army in the East, and of regretting the defeats endured by the Russians.

The Quebec papers announce that on the 20th his Excellency the Governor-General proceeded in state to the Council-chambers, and being seated on the throne, assented in the Queen's name to the Reciprocity Treaty Bill

The pro-Legate of Bologna has issued an edict against frequenting theatres. The public are forbidden to take refreshments in the boxes, to bowl, to drum with their feet or sticks, to keep on their hats, to pass from box to box with lighted pipes or cigars, to jump from one gallery to another or from bench to bench, or keep their hats on.

Admission, 1s.; Evening, a large invalid enjoyment. Time (except). Admission, 1s.; Schools and Children (under Ten), Half-price.

CRYSTAL PALACE.

GENERAL ARRANGEMENTS.

The Palace is opened on Mondays, at 9 a.m., and on Tuesdays, Wednesdays, Thursdays, and Fridays at 10 a.m. On these days the gates will be open for admission at 8a.

It is opened on Saturdays at noon, on which day the charge for admission is 1s.

Tickets admitting each person from London-bridge and admission to the Palace, may be obtained at the London-bridge Terminus and at the several Stations on the Line.

Season Tickets, including conveyance by railway, £4 4s. each without conveyance by railway, £3 3s (the usual discount allowed to families, may be obtained at the London-bridge Terminus.

By order.

August.

THE BIRMINGHAM POULTRY SHOW, 1854. THE SIXTH GREAT ANNUAL EXHIBITION of LIVE STOCK, &c., will be held in BIRMINGHAM, on the 17th, 18th, 19th, & 20th of December next. Open for the reception of Stock on Saturday and Monday, the 16th and 18th.

In addition to the Prizes on account in the last Schedule, Earl Derby has just the season. Prizes are also offered by the Council have resolved to offer First Prizes of £5, and Second Prizes of £2 for each Cock and Hen of any of all the following varieties, viz., Dorking, Spanish, Cochin-China, Game, Bantam, Polish, Sebright, Hamburg, Game, and Polish, and that the same shall be entered under the same A to Z as the ordinary competition exhibits separately.

Seven Silver Vases, of the value of six guineas each, will also be awarded, instead of money prizes for the best pen of pencilled Hamburg, Golden, Silver, Dorking, Polish, Game, Spanish, and Game Fowls.

Plate, one 5s, and Third Prizes, of £3, £2, and £1 respectively, are offered in all the classes for Fowls, as well as for Turkeys, Ducks, and Geese. Literal Prizes will also be awarded to good specimens, even in the Classes, where entries must be made on a form of certificate duly signed by the Secretary of the several Classes

The Entries Closes on SATURDAY, the 11th of NOVEMBER.

JOHN MOUNSEY, Jun., Secretary.

Offices, 36, Bennett's-hill, Birmingham, Oct. 2, 1854.

MR. FRANK MORI begs to announce that he has Returned to Town, and has RESUMED TAKING PUPILS for SINGING at 17, Mill-street, Dorset square.

GYMNASTICS and FENCING.—Early in OCTOBER, Captain CHOSSO and SON will open the finest room in London for the above beautiful accomplishments, at No. 7, CARBALL-STREET, near Regent's Circus, where they respectfully solicit a share of the support of their numerous patrons. Terms, at 31, New-road, 36, Baker-street, and 154, Oxford street.

BY PURCHASING at MERRY'S FANCY REPOSITORY, 280, Oxford-street, his highly amusing GAME OF THE HARE and SPORTSMAN-ORAMA, now in its 2nd Edition, will always be able to display most Every other Novelty in Games, Puzzles, French, German, and English Toys; and an endless variety of Fancy Articles utterly impossible to catalogue, for selection or reward from all parts of the world, all sold for presents. Orders, combining a munificence, instantly attended to. Samples taken on for return stamps. A Merry, 280, Oxford-street. Fancy fairs, bazaars, and charities supplied, at a suitable per centage.

TO TOURISTS.—CALLAGHAN'S CRYSTAL PALACE PERSPECTIVE GLASSES possess such extraordinary magnifying power, combined with portability of form (less than of most three-draw ones), as to render them treasures for the viewing scenery, marking birds, and many other useful purposes. Price 12s. 6d. May be had at the Manufactory of the Inventor, 4, railway stations, or will be sent, post free, on receipt of stamps or money order payable to Wm. Callaghan, Opticien, 43, Great Hemmel-street, Bloomsbury.

SHAKSPERE.—The admirers of the immortal Bard will be pleased to learn that W. F. Kerr, Burns, and Co., have obtained permission from Mrs. Fletcher, of Gloucester, to publish, in fac-simile, the celebrated and curious MS, proved to have been used by the Poet. An engraving, pamphlet, given with each. The Jug may be obtained of most respectable dealers, or at the Manufactory (late Chamberlain's), Royal Porcelain Works, Worcester. Price 7s. 6d. each; or, covered, 12s. 6d., by enclosing a Post-office order.

TEETH.—By her Majesty's Royal Letters Patent.—Mr. HARRINGTON, Surgeon-Dentist, respectfully informs the nobility and public in general, that he has invented and obtained Her Majesty's Royal Letters Patent for a most important improvements in Artificial Teeth. Also, for a new mode of adapting them to the mouth in a manner entirely different from all others, thereby saving much trouble to the patient, and avoiding all unsightly artificial appearance. Mr. Harrington's Teeth are unrivalled for beauty, and combine every advantage that can be made under any other system.—3, Hanover-square, Corner of Hanover-square, London.

FOR STOPPING DECAYED TEETH.—Patronized by her Majesty the Queen and H.R.H. Prince Albert, Sir J. Clark, Bart., M.D., and the Faculty generally. Sheargold's tooth, however large the cavity. It is placed in the mouth in a soft state, without any pressure or pain, and in a few minutes becomes as hard as the enamel. All persons use the Sheargold Powder, 1s., to be procured only of Mr Howard, Surgeon-Dentist, 17, George-street, Hanover-square, who will send it free by post, with full directions for use enclosed. Price 8s. 6d. and 5s., in Postage Stamps.

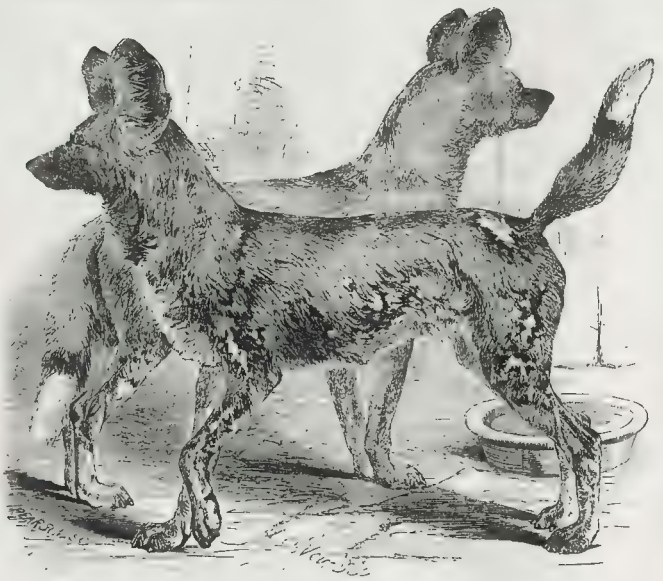
SMART'S WRITING INSTITUTION, 5, Piccadilly (next to the Haymarket), [illegible] Lessons one hour each. [illegible] Lessons one hour each. [illegible] Lessons one hour each.



CAPE HUNTING DOGS, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

NEW CAVALRY CORPS FOR THE CRIMEA.

On Saturday week this new Corps, which is destined for special service in the East, was inspected upon the parade-ground in St. James's-park; and in the afternoon nearly 100 men—the greater part of the corps—embarked at Hungerford pier, on their way to Woolwich, whence they were to sail on Wednesday for Gibraltar, in a vessel called the *Joseph Shepherd*. They are designated the Mounted Staff Corps, and consist of men selected for their intelligence and good conduct from the Irish Police and Constabulary Force principally, and also from the Metropolitan Police. They all appeared to be men in the very prime of life, above the average height. They are accompanied by Major Grant, their commanding officer; Captain Baynes; and two subalterns, namely—Cornets Burgen and Hunton. Their appearance is novel and picturesque. The uniform is a handsome scarlet Hungarian tunic, the front sleeves and collar richly braided, Royal blue facings (the officers' tunics richly and tastefully laced); blue trousers, with two scarlet stripes, and leather strappings and cuffings; handsome helmet, mounted with brass; a poncho of grey cloth, made to answer as a blanket and great-coat; a sling belt, with cavalry sword; pouch-belt, with pouch for Colt's revolving pistol. The makers of this new uniform are Messrs. Isaac Campbell and Co., of St. James's-street.

THE WILD SHEEP AND HUNTING DOGS AT THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

The beautiful specimen of the Indian Wild Sheep (*Ovis Vignei*), which forms the subject of our Illustration, is the first which has reached Europe alive, and is, consequently, a most interesting addition to the Society's collection. They are indebted for it to the liberality of Brigadier Hearsey, C.B., who, having had the command of one of our divisions in the Punjaub for some years, has had frequent opportunities of obtaining illustrations of the zoology of that country. This Sheep has a very extensive range in the Himalaya, and forms one of the most exciting objects of the mountain chase. It is far more deer-like than the European mouflon, and, when full grown, attains a very considerable size. Their activity, courage, and wariness render it by no means an easy task to secure a numerous bag of these animals; and the Himalayan sportsman has many a mile of valley and hill top to scour before he can accumulate a first-rate series of trophies. The habits of this Sheep, of the Burrhil, and the gigantic *Ovis Ammon*, are well sketched by Col Markham in his admirable hunting journal of adventure in the Himalaya, where he traced their steps from their first appearance in the hills to the remotest valleys of Cashmir.

The Hunting Dogs (*Lycaon venaticus*) have been reared from a very early age in the Regent's-park. They were, we believe, brought to this country by an officer in her Majesty's service, on his return from the Kaffir War. The vivid colouring, the singular form, and the perpetual vivacity of these animals, makes them a special subject of interest to visitors; and we have, on that account, selected them for the present niche in our zoological gallery.

Every one who has read Gordon Cumming's account of night-hunting in South Africa, will remember how the sagacious "Wilde Honde" hunt up to their game in packs, and how ruthlessly they ravage the flocks of the Boers, when a nobler quarry is not within their reach.

Kind treatment, and plenty of food, have changed the nature of the Society's specimens, which exhibit marked attachment to their keeper, and allow him to enter their enclosure at all times with no better protection than a switch. The Hunting Dog extends from the Cape northward as far as Abyssinia, and ranges probably for nearly an equal distance on the east coast. Comparatively few examples of this interesting animal are brought to Europe, and the pair which the Society now possess are among the finest we have seen.

WILD SHEEP OF THE PUNJAUB, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

It is impossible to leave the subject of the Society's menagerie without a word on the floral accessories to which the general effect of this ever-charming establishment is so largely indebted. A wonderful display of colour, considering the difficulties created by the atmosphere of London smoke to which they are exposed, has made the Gardens especially delightful throughout the summer; and, owing to the prolonged fine weather, they are almost as attractive now as they have been at any earlier period. The chief objects are the dahlias, presented by the celebrated cultivator, Mr Turner, of Slough. Of these there are nearly 900 plants in one bed—probably the largest mass in Europe; and there are, consequently, we may suppose, somewhere about 12,000 or 15,000 blooms now actually open together. As this great bed is composed of the best varieties now in cultivation, the effect is worth resting a few moments to contemplate. In addition to this, there are eight other large beds, though of inferior dimensions, in which eight fine varieties are grown as homogeneous masses. Of these, "Amazon" and "Sir Charles Napier" are the most conspicuously attractive. That the popularity of this delightful place of recreation is steadily increasing is evident, from the number of visitors during the current year having reached 825,000 at the time of the last monthly report.

NEW CAVALRY CORPS.—THE MOUNTED STAFF.

The Official Despatches from the Crimea.—The earnest solicitude which has been evinced by the Minister of War, from the commencement of the campaign in the Crimea, both to satisfy the public desire for early official information, and to allay the anxieties of those whose friends and relatives are serving in the East, has been strikingly marked in the arrangements made for giving immediate and general publicity to the despatches brought by Lord Burghersh. Although his Lordship only reached London at half-past seven on Sunday morning, a portion of the despatches was ready for the printer by half-past eight. Every arrangement had been made on Saturday night for the purpose of circulating the anticipated *Gazette Extraordinary* of Sunday at all places of public resort, as speedily as possible after its publication. Copies were sent to the churches, the dissenting places of worship, the club-houses, the police-stations, and other public buildings throughout the metropolis and its suburbs. The following notice was issued to the country Post-masters from the General Post-office on Sunday:—

General Post-office, Sunday, October 8, 1854.—Sir,—I forward to you herewith three copies of the *London Gazette* of the day, containing a list of killed and wounded at the battle of the Alma, and I have to instruct you forthwith to affix one of such copies to your office window, or in some other conspicuous place, to cause a second copy to be posted at the Town-hall or Market-place; and to deliver the third copy to the Chief Magistrate or clergyman of the town. You will adopt the same course without further instructions from me on the arrival of any *Gazettes* which may hereafter reach you in the mails under similar circumstances. I rely upon your careful attention to these instructions.—I am your obedient servant, ROWLAND HILL, Secretary

A Clipper.—There is now in the London Dock, recently arrived from Canton, a splendid clipper-ship, called the *Romance of the Sea* (built by Mr. Donald M'Kay, of Boston), 1781 tons register, commanded by Captain Dumaresque. This ship has just made one of the quickest voyages on record, having left Boston for San Francisco on the 17th December last; there she discharged upwards of 2000 tons of cargo, and proceeded to Canton; laid there 28 days, and sailed on the 10th of June; was 22 days beating down the China Sea to Anger; but still was off Cape Natal in 49 days—an unprecedentedly short period; after leaving Java Head, she made, in 16 consecutive days, 4172 miles, in six of which she averaged 302 per day. She made the round from Boston to San Francisco, thence to China, and from thence to London, in nine months and two days, which includes the time of discharging cargo and taking in ballast, and at Canton loading a full cargo of tea for England.

A Comfortable Location.—I got to head-quarters at about eight p.m. Sept. 23; Lord Raglan and staff were dining in a ground-floor room of a very pretty house, with Gothic windows and coloured glass, with the rooms nicely furnished piano, easy chairs, &c.—and the room itself garnished with gilt mouldings round the top. I had some difficulty, but at last I saw an officer with whom I was desirous of speaking, and had a chat with him. Lord Raglan's staff appeared to be very comfortable, and were singing and pianoforte playing as cheerfully as possible. The house was surrounded by an immense number of bullocks' servants, and retainers—the latter being located in the out-houses, or in the beautiful grounds among the noble avenues of trees. Hearing the 68th were on guard, I walked down, and in a few minutes found some of the officers seated under a tree, with a very pretty table and good chairs, but drinking from tin pannikins. After half an hour's chat—they persuading me to stop, saying it was dangerous to pass through the camp—I took a turn among the muleteers to see if I could hire any sort of conveyance. After an unsuccessful ramble of an hour, and meeting some old acquaintances, who offered me a share of all they had (which amounted, generally, to a share of the turf) I set off to the boat, some six-and-a-half miles away.—*Letter from Balaclava.*

Official List of Killed and Wounded

AT THE

BATTLE OF THE ALMA.

NOMINAL RETURN OF CASUALTIES AMONG OFFICERS IN ACTION ON THE RIVER ALMA, CRIMEA, SEPT. 20, 1854.

General Staff.—Lieut. T. Leslie, Royal Horse Guards, Orderly Officer to the Commander of the Forces, wounded severely; Capt. H. E. Weare, 50th Regiment, D.A.A.G., wounded severely.

Engineers. 1 officer wounded.

1st Division.—2 officers, 3 sergeants, 41 rank and file, killed; 16 officers, 21 sergeants, 1 drummer, 304 rank and file, wounded; 1 rank and file missing.

2nd Division. 9 officers, 6 sergeants, 71 rank and file, killed; 25 officers, 26 sergeants, 4 drummers, 355 rank and file, wounded; 3 rank and file missing.

3rd Division.—1 rank and file killed; 2 officers, 15 rank and file, wounded; 3 rank and file missing.

4th Division.—1 rank and file, killed; 1 rank and file wounded, Light Division. 12 officers, 10 sergeants, 2drummers, 183 rank and file killed; 29 officers, 48 sergeants, 12 drummers, 682 rank and file, wounded; 9 rank and file missing.

Grand total 26 officers, 19 sergeants, 2 drummers, 306 rank and file, 26 horses, killed; 73 officers, 95 sergeants, 17 drummers, 1427 rank and file, 1 horse, wounded; 2 drummers, and 16 rank and file, missing.

Adjutant-General.

Head-Quarters, Alma River, Sept. 22, 1854.

GENERAL ORDER.

The Commander of the Forces congratulates the troops on the brilliant success that attended their unrivalled efforts in the battle of the 20th inst., on which occasion they carried a most formidable position, defended by large masses of Russian infantry, and a most powerful and numerous artillery.

Their conduct was in unison with that of our gallant allies, whose spirited and successful attack of the left of the heights occupied by the enemy, cannot fail to have attracted their notice and admiration.

The Commander of the Forces thanks the army most warmly for its gallant exertions. He witnessed them with pride and satisfaction; and it will be his pleasing duty to report, for the Queen's information, how well they have earned her Majesty's approbation, and how gloriously they maintained the honour of the British name.

Lord Raglan condoles most sincerely with the troops on the loss of so many gallant officers and brave men, whose memory it will be a consolation to their friends to feel will ever be cherished in the annals of our army.

(Signed) J. B. B. ESTCOURT.

THE BATTLE OF THE ALMA.

THE MARCH ON THE 19TH.

On the night of the 18th September, orders were given by Lord Raglan that the troops should strike tents at daybreak, and that all the tents should be sent on board the ships of the fleet An advance had been determined upon, and it was understood that the Russian light cavalry had been sweeping the country of all supplies up to a short distance of the outlying pickets. At one o'clock next morning the camp was roused by the reveille, and all the 30,000 sleepers woke into active life. The boats from the ships lined the beach to receive the tents. The commissariat officers struggled in vain with the very defective arrangements at their disposal to meet the enormous requirements of an army of 26,000 men for the transport of baggage, ammunition, and food, and a scene which to an unpractised eye would seem one of utter confusion began and continued for several hours, relieved only by the steadiness and order of the regiments as they paraded previous to marching.

The French, in advance on our right, were up betimes, and the camp fires of the Allied armies, extending for miles along the horizon and mingling with the lights of the ships, almost anticipated the morning. The order of march was as follows:—

Cavalry, 8th, 11th, 17th.		
Light Division.	Artillery.	Second Division.
First Division.	Artillery.	Third Division.
Cavalry.	Commissariat Train.	
Fourth Division.	Fourth Division.	

Rear Guard.

Of Turkish infantry, 7000, under Suleiman Pacha, moved along by the sea-side; next to them came the divisions of Generals Bosquet, Canrobert, Forey, and Prince Napoleon. The order of march of the English army was about four miles to the right of their left wing, and as many behind them. The right of the Allied forces was covered by the fleet, which moved along with it in magnificent order, darkening the air with innumerable columns of smoke, ready to shell the enemy should they threaten to attack our right, and commanding the land for nearly two miles from the shore.

It was nine o'clock in the morning ere the whole of the army was prepared for marching. The day was warm, and much delay was caused by the wretched transport furnished for the baggage—everything not absolutely indispensable having been sent on board ship. The naval officers and the sailors worked indefatigably, and cleared the beach as fast as the men deposited their baggage and tents there. At last the men fell in, and the march of the campaign began. The way led along dreary step es, perfectly destitute of tree or shrub, marked at intervals of two or three miles with hillocks, and long irregular ridges of hills running down towards the sea at right angles to the beach. It is but little cultivated, except in the patches of land around the unfrequent villages built in the higher recesses of the valleys. Hares were started in abundance, and afforded great sport to the men whenever they halted, and several were fairly hunted down among the lines of men. All oxen, horses, or cattle had been driven off by the Cossacks. The soil is hard and elastic and was in excellent order for artillery, but the men suffered severely from thirst, marching under a burning sun, over such a parched and shelterless country.

After a march of an hour, a halt took place for fifty minutes, during which Lord Raglan, accompanied by a very large staff, Marshal St. Arnaud, Generals Bosquet, Forey, and a number of French officers, rode along the front of the columns. The men spontaneously got up from the ground, rushed forward, and column after column rent the air with three thundering English cheers. It was a good omen. As the Marshal passed the 55th Regiment, he exclaimed, "English, I hope you will fight well to-day!" "Hope!" exclaimed a voice from the ranks, "sure you know we will!" The troops presented a splendid appearance. The effect of these grand masses of soldiery descending the ridges of the hills, rank after rank, with the sun playing over forests of glittering steel, can never be forgotten by those who witnessed it. Onward the torrent of war swept, wave after wave, huge stately billows of armed men; while the rumble of the artillery, and tramp of cavalry, accompanied their progress.

The next halt took place at about three o'clock, at the muddy stream of Bulganac, of which the men drank with avidity. At this stage they passed the Imperial post house of Bulganac, just twenty miles from Sebastopol. The outhouses and farm-yard were burning; and the house, though unburnt, had been thoroughly gutted by the Russians. Only a picture of a saint, bunches of herbs in the kitchen, and a few household utensils were left; and a solitary pea-h n, which soon fell a victim to a revolver, stalked sadly about the threshold.

A SKIRMISH WITH THE COSSACKS.

After a short halt for men and horses by the stream, the army pushed on again. The cavalry (about 500 men of the 8th Hussars, the 11th Hussars, and 13th Light Dragoons) pushed on in front, and on arriving about a mile beyond the post-house the Cossack Lancers were clearly seen on the hills in front. Lord Cardigan threw out skirmishers in line, who covered the front at intervals of 10 or 12 yards from each other. The Cossacks advanced to meet them in like order, man for man, the steel of their long lances glittering in the sun They were rough-looking fellows, mounted on sturdy little horses; but the regularity of their order and the celerity of their movements showed they were regulars, and by no means despicable foes. As our skirmishers advanced, the Cossacks halted at the foot of the hill. Their reserves were not well in sight; but from time to time a clump of lances rose over the summit of the hill and disappeared. Lord Cardigan was eager to try their strength, and permission was given to him to advance somewhat nearer; but, as he did so, dark columns of cavalry came into view in the recesses of the hill, and it became evident that if our men charged up such a steep ascent their horses would be blown, and that they would run a risk of being surrounded and cut to pieces by a force of three times their number. Lord Lucan, therefore, ordered the cavalry to halt, gather in their skirmishers, and retire slowly. None of the infantry or artillery were in sight, as they had not yet topped the brow of the hill. When our skirmishers halted, the Cossacks commenced a fire from their line of videttes, which was quite harmless. Few of the balls came near enough to let the whiz be heard. Two or three officers who were riding between the cavalry

and the skirmisher.—Lieutenant-Colonel Dickson, R.A.; Captain Fellowes, 12th Lancers, Dr Elliott R.A. were looking out anxiously for the arrival of Captain Maudes Horse Artillery; when suddenly the Russians, emboldened by our halt, came over the brow of the hill, and slowly descen[illegible] in three solid squares. The English had offered them battle, [illegible] chance, for our cavalry now turned round and rode quietly [illegible] the troops. Our skirmishers, who had replied smartly to the fire of the Cossacks, but without effect, now tired and joined their squadrons. At every fifty paces our cavalry faced about to receive the Cossacks if they prepared to charge. Suddenly one of the Russian cavalry squares opened—a spirt of white smoke rose out of the gap, and a round shot tore over the column of our cavalry behind, and rolled away between the ranks of the riflemen in the rear, just as they came in view of the cavalry. In another instant a second gun bowled right through the 11th Hussars, and knocked over a horse, taking off one of his rider's legs above the ankle. Another and another followed, tearing through our ranks, so that it was quite wonderful so few of the cavalry were hit. Meantime Captain Maude's artillery galloped over the hillock, but were halted, by Lord Raglan's order, at the base, in rear of the cavalry on the left flank. This was done, probably, to entice the Russians farther down the hill. Meantime our cavalry were drawn up as targets for the enemy's guns, and had they been of iron, they could not have been more solid and immovable. The Russian gunners fired admirably; they were rather slow, but their balls came bounding along, quite visible as they passed, in right lines from the centre of the cavalry columns. After some thirty rounds from the enemy, our artillery opened fire. Their round shot ploughed up the columns of the cavalry, who speedily dispersed into broken lines, wheeling round and round with great adroitness to escape the six and nine-pound balls. Our shell were not so successful; but one, better directed than the rest, burst right in the centre of a column of light infantry, whom the Russians had advanced to support the cavalry. Our fire was so hot, the service of the guns so quick, that the enemy retired in about fifteen minutes after we opened on them. While this affair was going on, the French had swept up on the right, and surprised a body of Russian cavalry with a round up on the right, and surprised a body of Russian cavalry with a round from a battery of nine-pounders, which scattered them in all directions. We lost six horses, and four men were wounded. The Russians must have suffered much more, according to all accounts.

THE EVE OF BATTLE.

When the Russians had retired beyond the heights, orders were given to halt and bivouac for the night, and our tired men set to work to gather dry furze and weeds for fuel. As soon as the rations of rum and meat were served out, the casks were broken up, and the staves served to make fires for cooking, aided by nettles and long grass. At night the watchfires of the Russians were visible on the heights. Great numbers of stragglers and arabas came up during the night, and were sent off to their several divisions. The night was cold and damp, but the men were in excellent spirits; looking forward to the probability of an engagement with the enemy with perfect confidence as to the result. Sir George Brown, Sir R. Lacy Evans, the Brigadiers-General, and staff-officers, went about among their divisions and brigades ere the men lay down, giving directions for the following day; and soon after dusk the down, giving directions for the following day; and soon after dusk the down, giving directions for the following day; and soon after dusk the

box, which contains a letter addressed to the Czar, which states that the writer was aware of the approach of the Allies, but that, against the weak artillery possessed by them, he would be enabled to hold the position he occupied at least three weeks, and trusted to be able, within a brief period, to announce to his Imperial Majesty the complete defeat of the Allies.

THE MARCH TO SEBASTOPOL.

On the 23rd the Allied armies left the Alma and proceeded to cross the Kalcuha; on the 24th they crossed the Belbec, where it had been intended to effect the landing of the siege *matériel* with a view to an attack on the north side of Sebastopol. It was found, however, that the enemy had placed a fortified work so as to prevent the vessels and transports from approaching this river; and with extraordinary fertility of resource, strategical judgment, and military daring, the plan of operations was suddenly changed by Lord Raglan, with the concurrence of Marshal St. Arnaud. It was determined to advance at once by a flank march round the east of Sebastopol, to cross the valley of the Tchernaya, and seize Balaclava as the future basis of operations against the south side of the harbour of Sebastopol.

To effect this object it was necessary, after crossing the Belbec, near the village of that name, and also the high road from that place to Sebastopol, to strike off to the south-east across the country, so as to reach the Balaclava road at or near a place called Khutor Mackenzie, or Mackenzie's Farm. The distance from one road to the other is about six miles as the crow flies; but the country is covered with a thick forest or jungle, through which the troops had to make their way by the compass as well as they could, through it was impracticable to the artillery of the Light Division, and in many places the men could scarcely see one another through the dense brushwood. Thus groping their way along, the First Division took at first too southerly a direction, and arrived near the hill on which the Inkerman lights are erected; from this point they turned due east, and, after some hours of extraordinary exertion and difficulty, they reached Mackenzie's Farm—a name and locality singularly welcome to the Highland Brigade. As the Guards approached the border of the forest, firing was heard to the front and, considering the state of confusion into which the whole army had been thrown by so difficult and irregular a march, their position might have become extremely critical, for, on clearing the forest, Lord Raglan's staff, with some batteries of artillery, found themselves on the flank and rear of a Russian division—said to amount to 15,000 men—on its march to Baglicheseral. No sooner, however, had our guns opened upon the enemy—who were wholly unprepared for such an attack—than they fled with precipitation, some in one direction and some in another; leaving in the hands of our army a few prisoners, and an immense quantity of carts, baggage, stores, and ammunition which strewed the road for three miles.

After this adventure, which struck fresh terror into the ranks of the enemy, the army descended by a steep defile into the plains through which the river Tchernaya flows, and bivouacked that night upon its banks, after having been under arms fourteen hours, in a most difficult country, without roads, and almost without water. Nevertheless, it was here that Lieutenant Maxse, of her Majesty's ship *Agamemnon*, volunteered to retrace his steps by night through the forest and across a country infested with Cossacks, to convey to Sir Edmund Lyons the order to bring round the fleet; and, so well was this extraordinary service performed, that Mr. Maxse reached the fleet at four a.m., and before noon the *Agamemnon* was off the port of Balaclava. In the meantime the forces had reached that place by an easy march next morning (23rd), although the old Genoese fort on the rock opened its fire and threw a shell among Lord Raglan's staff, the place surrendered as soon as the heights were occupied.

We are not able to form, from the despatches elsewhere given, a clear idea of the corresponding movement of the French army, except that Lord Raglan states their march to have been even longer and more fatiguing than that of the British troops, and they reached the Tchernaya a day later. There is, however, some reason to infer, from a telegraphic despatch attributed to General Canrobert, that he intended to occupy one of the deep bays between Cape Chersonese and Sebastopol, and to land the French siege train there. The fires of the ancient lighthouse of the Tauric Chersonese, which the Russians had extinguished, have already been rekindled by the Allied troops. Such is the proximity of these positions to Sebastopol, that the place can be reconnoitred with ease. Lord Raglan states that he had himself a good view of it on the 27th, when he moved two divisions to its immediate neighbourhood; and the chief engineers of the English and French armies were employed in a deliberate survey of its defences. A place which can be thus easily approached by an enemy, and reconnoitred from the adjacent heights without molestation, may be considered to be already invested, at least on the south side of the harbour.

DEATH OF MARSHAL ST. ARNAUD.

Along with the news of the glorious victory obtained by the Allied army over the Russians, came the sad intelligence of the death of Marshal St. Arnaud. After having given the necessary orders to pursue the enemy, after the battle of Alma, the French General returned to the tent of Prince Menschikoff, and wrote as follows to the Minister of War: "My health is still the same; it holds up in the midst of suffering, crises, and the performance of my duty. All this does not prevent me from remaining on horseback twelve hours on battle days; but will not my strength give way at last?" The presentiment which dictated these lines was destined to be realised within a very brief period. On the 27th ult. Marshal St. Arnaud, sinking under fatigue and disease, went on board the *Berthollet*; and on the 29th he died. For the last year the life of the Marshal was only one of continual suffering. The disease—which has at last proved a mortal one—was an affection of the mucous membrane of the intestines, from which he has suffered more or less for some years. When the Marshal volunteered to take the command of the army of the East, his physician told him that, if he could abstain from fatigue, the change might be of service; but that if excessive fatigue should bring on an acute attack, his life would be in danger, for the ordinary means of reducing inflammation could not be resorted to with him, in his debilitated state, with much chance of success. The passage from Varna to Eupatoria had brought back the malady with which the Marshal was afflicted, and he had been a prey for two days to dreadful suffering when he got on horseback to attack the enemy. For twelve hours he could not be persuaded to take a moment's rest; he several times rode along the whole line of battle, which was nearly five miles in length, never ceasing to give his orders, and concealing from all, at the price of incredible efforts, his struggle against this malady. At length, when the pain became too severe, when his exhausted force was on the point of betraying him, he got himself held up on horseback by two horsemen. A few days before his death he handed over the command of the French army to General Canrobert. On Wednesday morning last the *Berthollet* arrived at Marseilles with Madame de St. Arnaud, and the remains of the Marshal on board.

OFFICIAL PLAN OF THE BATTLE OF THE ALMA.—DISTRIBUTION OF THE BRITISH TROOPS AT THE COMMENCEMENT OF THE ACTION.

OFFICIAL DESPATCHES.

WAR DEPARTMENT, Oct. 3, 1854, 8½ o'Clock, a.m.

Major the Lord Burghersh arrived this morning with a despatch from General the Lord Raglan, G.C.B., to his Grace the Duke of Newcastle, of which the following is a copy:—

LORD RAGLAN'S ACCOUNT OF THE BATTLE OF THE ALMA.

Head Quarters, Katcha River, September 23, 1854.

My Lord Duke,—I have the honour to inform your Grace, that the Allied troops attacked the position occupied by the Russian army, behind the Alma, on the 20th instant; and I have great satisfaction in adding, that they succeeded, in less than three hours, in driving the enemy from every part of the ground which they had held in the morning, and in establishing themselves upon it.

The English and French armies moved out of their first encampment in the Crimea on the 19th, and bivouacked for the night on the left bank of the Bulganac; the former having previously supported the advance of a part of the Earl of Cardigan's brigade of Light Cavalry, which had the effect of inducing the enemy to move up a large body of Dragoons and Cossacques, with artillery. On this, the first occasion of the English encountering the Russian force, it was impossible for any troops to exhibit more steadiness than did this portion of her Majesty's cavalry. It fell back upon its supports with the most perfect regularity under the fire of the artillery, which was quickly silenced by that of the batteries I caused to be brought into action. Our loss amounted to only four men wounded. The day's march had been most wearisome; and, under a burning sun, the absence of water, until we reached the Isaginak not but welcome stream of the Bulganac, made it to be severely felt.

Both armies moved towards the Alma the following morning; and it was arranged that Marshal St. Arnaud should assail the enemy's left, by crossing the river at its junction with the sea, and immediately above it, and that the remainder of the French divisions should move up the heights in their front, whilst the English army should attack the right and centre of the enemy's position.

In order that the gallantry exhibited by her Majesty's troops, and the difficulties they had to meet may be fairly estimated, I desire it right, even at the risk of being considered tedious, to endeavour to make your Grace acquainted with the position the Russians had taken up. It crossed the great road about two miles and a half from the sea, and is very strong by nature. The bold and almost precipitous range of heights, of from 300 to 400 feet, that from the sea closely border the left bank of the river, here ceases, and formed their left; and turning thence round a great amphitheatre or wide valley, terminates at a salient pinnacle where their right rested, and whence the descent to the plain was more gradual. The front was about two miles in extent. Across the mouth of this great opening is a lower ridge at different heights, varying from 60 to 150 feet, parallel to the river, and at distances from it of from 600 to 800 yards The river itself is generally fordable for troops, but its banks are extremely rugged, and in most parts steep; the willows along it had been cut down, in order to prevent them from affording cover to the attacking party, and in fact everything had been done to deprive an assailant of any species of shelter. In front of the position on the right bank, at about 900 yards from the Alma, is the village of Burliuk, and near it a timber bridge, which had been partly destroyed by the enemy. The high pinnacle and ridge before alluded to was the key of the position, and, consequently, there the greatest preparations had been made for defence. Half-way down the height, and across its front, was a trench of the extent of some hundred yards, to afford cover against an advance up the even steep slope of the hill. On the right, and a little retired, was a powerful covered battery, armed with heavy guns, which flanked the whole of the right of the position. Artillery, at the same time, was posted at the points that best commanded the passage of the river and its approaches generally. On the slopes of these hills (forming a sort of table land) were placed dense masses of the enemy's infantry, whilst on the heights above was his great reserve; the whole amounting, it is supposed to between 45,000 and 50,000 men.

The combined armies advanced on the same alignement. Her Majesty's troops in contiguous double columns, with the front of two divisions covered by light infantry and a troop of horse artillery; the 2nd Division, under Lieutenant-General Sir De Lacy Evans, forming the right, and touching the left of the 3rd Division of the French army, under his Imperial Highness Prince Napoleon, and the Light Division, under Lieutenant-General Sir George Brown, the first line being supported by the 3rd Division, under Lieutenant-General Sir Richard England, and the last by the 1st Division, commanded by Lieutenant-General his Royal Highness the Duke of Cambridge.

The 4th Division, under Lieutenant-General Sir George Cathcart, and the cavalry under Major-General the Earl of Lucan, were held in reserve to protect the left flank and rear against large bodies of the enemy's cavalry, which had been seen in those directions.

On approaching to near the fire of the guns, which soon became extremely formidable, the two leading divisions deployed into line, and advanced to attack the front, and the supporting divisions followed the movement. Hardly had this taken place, when the village of Burliuk, immediately opposite the centre, was fired by the enemy at all points, creating a continuous blaze for three hundred yards, obscuring their position, and rendering a passage through it impracticable. Two regiments of Brigadier-General Adams' brigade, part of Sir De Lacy Evans' division, had in consequence, to pass the river at a deep and difficult ford to the right under a sharp fire, whilst his first brigade, under Major-General Pennefather, and the remaining regiment of Brigadier-General Adams crossed to the left of the conflagration, opposed by the enemy's artillery from the heights above, and pressed on towards the left of their position, with the utmost gallantry and steadiness.

In the meanwhile, the Light Division, under Sir George Brown, effected the passage of the Alma in his immediate front. The banks of the river itself were, from their rugged and broken nature, most serious obstacles, and the vineyards, through which the troops had to pass, and the trees which the enemy had felled, created additional impediments, rendering every species of formation, under a galling fire, nearly an impossibility. Lieutenant-General Sir George Brown advanced against the enemy under great disadvantages. In this difficult operation he nevertheless persevered, and the 1st Brigade, under Major-General Codrington, succeeded in carrying a redoubt, materially aided by the judicious and steady manner in which Brigadier General Buller moved on the left flank, and by the advance of four companies of the Rifle Brigade, under Major Norcott, who promises to be a distinguished officer of light troops. The heavy fire of grape and musketry, however, to which the troops were exposed, and the losses consequently sustained by the 7th, 23rd, and 33rd Regiments, obliged this brigade partially to relinquish its hold.

By this time, however, the Duke of Cambridge had succeeded in crossing the river, and had moved up in support, and a brilliant advance of the brigade of Foot Guards, under Major-General Bentinck, drove the enemy back, and secured the important position of the work.

The Highland Brigade, under Major-General Sir Colin Campbell, advanced in admirable order and steadiness up the high ground to the left, and in co-operation with the Guards, and Major-General Pennefather's Brigade, which had been connected with the right of the Light Division, forced the enemy completely from his position they had taken such pains to defend and secure.

The 95th Regiment, immediately on the right of the Royal Fusiliers in the advance, suffered, equally with that corps, an immense loss.

The aid of the Royal Artillery in all these operations was most effectual. The exertions of the field officers and the captains of troops and batteries to get the guns into action were unceasing, and the precision of their fire materially contributed to the great results of the day.

Lieutenant-General Sir Richard England brought his division to the immediate support of the troops in advance, and Lieutenant-General the Hon. Sir George Cathcart was actively engaged in watching the left flank.

The nature of the ground did not admit of the employment of the cavalry under the Earl of Lucan, but they succeeded in taking some prisoners at the close of the battle.

In the detail of these operations, which I have gone into as far as the space of a despatch would allow, your Grace will perceive that the services in which the general and other officers of the army were engaged,

(*Continued on page 378.*)

THE BATTLE ON THE ALMA.

ENGLISH ENCAMPMENT ON THE COAST NEAR TOULA, IN THE CRIMEA.

We have been favoured by Lieut. Bredin, R.A., with the two accompanying Sketches, and the following details:—

Transport *Gertrude*, off Loukhoul, 22nd September.

I send you a Sketch of an encampment on the coast. On the 18th the French and English marched along the coast towards Zamrouk —our cavalry having slight skirmishes with the Russian outposts— and both armies halted in sight of the Russian position on the heights above the river Alma. The Russians had taken a splendid position on the cliffs, which are at right angles to the shore, and a hill flanking the cliffs and facing the shore; and for two days previously had been employing themselves in throwing up breastworks, measuring the ranges of the fords of the river from their guns, and, in fact, taking every precaution to strengthen themselves. You have no doubt received with this an account of the battle, fought on the 20th, and the splendid way our fellows went up the heights to the mouths of the guns, and charged them; when our fellows (42nd) got up to the Russian artillery, which were just driving off, many of them took hold of the wheels in desperation to prevent their escape. We have lost a good many: the 33rd suffered most—killed and wounded, 260. The Russians were mowed down, they must have lost over 5000 men. They had come out from Sebastopol to keep us at check for three weeks—to save an intercepted despatch: we drove them off in exactly three hours. Captain Monck, of the 7th Fusiliers, was shot by a wounded Russian, to whom he was giving some water. Captain Dew was killed by a cannon-ball—his head cut clean off; Lieut. Cookerell was wounded in the leg by a shot which had passed through his horse; it was amputated, and he died. He was a splendid fellow. Lieut. Walsham, who ascended Mont Blanc, fell most gloriously. A gunner, who was sponging a gun, being shot in the arm, Walsham said to him, "Go at once to the rear—to the doctor;" and not wishing to lose time, he took his place at the gun, and was shot while sponging it.

(*From another Correspondent.*)

Star of the South, Sept. 22nd, 1854.

I enclose two Sketches of the sanguinary action which has been fought at the river Alma. I belong to the siege train, and am, therefore, still on board ship. One of the Sketches represents what we saw of the battle from the ship; I am sure we had a better view of it than any one could possibly have had on shore, as we

A. Position of English before attack.
B. Position of French before attack.
C C C C. Position of Russians on hill facing the sea, four miles inland.
D D. Position of Russians on cliffs at right angles to sea, extending from the shore.
E. Village of Burliuk, on fire.
F. Fort, unfinished, with scaffolding.
G. Town or village of Loukhoul.
H H. Roads up the cliffs, strongly defended.

SKETCH ON THE COAST, OFF LOUKHOUL.

THE BATTLE ON THE ALMA.

THE BATTLE OF THE ALMA, SKETCHED FROM THE DECK OF "THE STAR OF THE SOUTH"

could see the whole field. The action commenced by the French ascending the heights on the right of the Sketch; which they did without opposition, as they were protected by the guns of the fleet. On the top there is a splendid plain, and they drove the Russians before them: the latter retreating from the redoubt on the hill. The English certainly bore the brunt of the battle, and behaved most intrepidly. I have represented them along the ridge of the plain; between which and the Russians on the distant hill, is a deep ravine, fordable only in one place. The Russian position was exceedingly strong, and they supposed it would take us three weeks to get them out of it. They had a very strong breastwork, with eighteen 32-pounder howitzers and 18-pounders, which fired directly on the ford and road leading up from it: besides another battery, and a great number of field batteries. Our troops were tremendously cut up here; and our artillery from the plain could not fire up the hill, the elevation and range being too great, while their heavy guns could easily reach across the valley. This breastwork and the fort were at last taken by the infantry in the most gallant manner; the Russians retreating with all their heavy guns when they saw our troops coming up the hill. Only two guns fell into our hands; but an immense number of Russians were killed, the battery being completely filled with them. Some of our regiments suffered very severely: the 23rd was brought out of action by the junior captain, all the others, with the Colonel, being killed, and the Major wounded. The 7th and 33rd also suffered severely; and the Guards lost 350 men and officers. The Russians, however, seem to have been completely panic-stricken by seeing our infantry charge up to a battery. One immense column came down the hill to charge our troops; but when they got within a few hundred yards, broke, and retreated up the hill in confusion. In the meantime the French, on the right, had driven in the Russians on all sides, and our batteries had got into play; and the Russians commenced their retreat. They formed again on the top of the hill; but Captain Brandling's troop of Horse Artillery, and Captain Barker's battery pouring shot and shell into them, and the cavalry coming on, they threw off their knapsacks turned, and fled in confusion. We knocked them out of their tremendously strong position in three hours. The Allies numbered between 50,000 and 60,000 men, and the Russians 40,000. Most of the troops had lately came down from Odessa, and were the flower of the Russian army. Two Russian Generals were taken, besides a great number of prisoners, two guns, and some colours, &c. It is said their army has retreated into Sebastopol, which we expect to invest in a few days. The spirits of the army are, of course, considerably raised by this success, considering the battle was fought only on the 2nd day of the march. The second Sketch represents a scene in the French camp the day after the battle.

SCENE IN THE FRENCH CAMP, SKETCHED ON THE DAY AFTER THE BATTLE OF THE ALMA.

(Continued from page 373.)

were of no ordinary character; and I have great pleasure in submitting them for your Grace's most favourable consideration.

The mode in which Lieutenant-General Sir George Brown conducted his division, under the most trying circumstances, demands the expression of my warmest approbation. The fire to which his division was subjected, and the difficulties he had to contend against, afford no small proof that his best energies were applied to the successful discharge of his duty.

I must speak in corresponding terms of Lieutenant-General Sir De Lacy Evans, who likewise conducted his division with perfect satisfaction. And I feel it my duty especially to recommend to your Grace's notice the distinguished conduct of Major-General Bentinck, Major-General Sir Colin Campbell, Major-General Pennefather, Major-General Codrington, Brigadier-General Jerome, and Brigadier-General Buller.

In the affair of the previous day, Major General the Earl of Cardigan exhibited the utmost spirit and coolness, and kept his brigade under perfect command.

The manner in which Brigadier-General Strangways directed the artillery, and exerted himself to bring it forward, met my entire satisfaction.

Lieutenant-General Sir John Burgoyne was constantly by my side; and rendered me, by his counsel and advice, the most valuable assistance; and the Commanding Royal Engineer, Brigadier-General Tyden, was always at hand to carry out any service I might direct him to undertake.

I deeply regret to say that he has since fallen a victim to cholera; as has Major Wellesley, who was present in the affair of the previous day, notwithstanding that he was then suffering from serious illness. He had, during the illness of Major-General Lord de Ros, acted for him in the most efficient manner. I cannot speak too highly of Brigadier-General Estcourt, Adjutant-General, or of Brigadier-General Airey, who, in the short time he has conducted the duties of the Quartermaster-General, has displayed the greatest ability, as well as aptitude for the office.

I am much indebted to my military Secretary, Lieutenant-Colonel Steele, Major Lord Burghersh, and the officers of my personal staff, for the zeal, intelligence, and gallantry they all, without exception, displayed.

Lieutenant Derriman, R.N., the Commander of the *Caradoc*, accompanied me during the whole of the operation, and rendered me an essential service, by a close observation of the enemy's movements, which his practised eye enabled him accurately to watch.

I cannot to say that Lieutenant Colonel Lagondie, who was attached to my head-quarters by the Emperor of the French, fell into the enemy's hands on the 19th, on his return from Prince Napoleon's division, where he had obligingly gone at my request, to communicate to him his Imperial Highness. This misfortune is deply regretted, both by myself and the officers of my personal staff. The other officer placed with me under similar circumstances, Major Vico, afforded me all the assistance in his power, sparing no exertion to be of use.

I cannot omit to make known to your Grace the cheerfulness with which the regimental officers of the army have submitted to most unusual privations. My anxiety to bring into the country every cavalry and infantry soldier who was available, prevented me from embarking their baggage animals, and these officers have with them at this moment nothing but what they can carry, and they, equally with the men, are without tents or covering of any kind. I have not heard a single murmur. All seem impressed with the necessity of the arrangement; and they feel, I trust, satisfied, that I shall bring up their bat horses at the earliest moment.

The conduct of the troops has been admirable. When it is considered that they have suffered severely from sickness during the last two months; that, since they landed in the Crimea, they have been exposed to the extremes of wet, cold, and heat; that the daily toil to provide themselves with water has been considerable; and that they have been harassed by cholera to the very battle-field—I do not go beyond the truth in declaring that they merit the highest commendation. In the ardour of attack they forgot all they had endured, and displayed that heroic courage, that gallant spirit, for which the British soldier is ever distinguished; and under the heaviest fire they maintained the same determination to conquer as they had each fell before they went into action.

I should be wanting in my duty, my Lord Duke, if I did not express to your Grace, in the most earnest manner, my deep feeling of gratitude to the officers and men of the Royal Navy for the invaluable assistance they afforded the army upon this as on every occasion where it could be brought to bear upon our operations. They watched the progress of the day with the most intense anxiety; and, as the best way I could point out to them their participation in our success, and their sympathy in the sufferings of the wounded, they never ceased from the close of the battle till we left the ground the morning, for the purpose of bringing in, and to carry them down to the beach, a labour in which some of the officers even volunteered to participate—an act which I shall never cease to recollect with the warmest thankfulness. In no one instance have I had occasion to point out some who ought to be spoken of; but none who were associated with us spared any exertion they could apply to so sacred a duty. Sir Edmund Lyons, who had charge of the fleet, acted, as always, most prominent in rendering assistance, and providing for emergencies.

I enclose the return of killed and wounded. It is, I lament to say, very large; but I hope, all circumstances considered, that it will be felt that no life was unnecessarily exposed, and that such an advantage could not be achieved without a considerable sacrifice.

I cannot venture to estimate the amount of the Russian loss. I believe it to have been great, and such is the report in the country. The number of prisoners who are now in my hands, but the wounded amount to 800 or 900. Two general officers, Major-Generals Kargunoff and Shokanoff, fell into our hands. The former is very badly wounded.

I will not attempt to describe the movements of the French army, that will be done by an abler hand; but it is due to them to say that their operations were eminently successful, and that under the go dance of their distinguished commander, Marshal St. Arnaud, they manifested the utmost gallantry, the greatest ardour for the attack, and the high military qualities for which they are so famed.

This despatch will be delivered to your Grace by Major Lord Burghersh, who is capable of affording you the fullest information, and whom I beg to recommend to your especial notice.

I have, &c., RAGLAN.

P.S.—I enclose a sketch of the field of battle. His Grace the Duke of Newcastle, &c., &c., &c. [*This sketch we have engraved.*]

ADMIRALTY, Oct 8, 1854

The Lords Commissioners of the Admiralty have this day received despatches from Vice-Admiral Dundas, containing intelligence as to the proceedings of her Majesty's fleet in the Black Sea, of which the following are copies:—

ATTACK OF THE RUSSIAN INTRENCHMENTS ON THE ALMA BY THE ALLIED ARMIES.

No. 485.

Britannia, off the Alma, September 21, 1854.

Sir,—In my letter of the 15th, No. 484, I reported to you, for the information of the Lords Commissioners of the Admiralty, that the Allied armies were ready to move, and I now beg you will acquaint their Lordships that, on the morning of the 15th, they encamped in a position about two miles north of the Alma river, where they halted for the night; the French and Turks on the right, close to the sea, and the English to the left, about four miles inland.

The Russians, with some 5000 or 6000 cavalry and artillery, and 15,000 infantry, made a demonstration north of the river, but returned on the approach of the armies, and recrossed the river at sunset.

About noon, on the 20th the Allies advanced in the same order to force the Russian position and intrenchment south of the Alma. This was effected by four o'clock, the Russians retreating apparently to the eastward of the main road to Sebastopol. The Russian le't fell back before the French very rapidly, and their batteries on the right were carried by the bayonet by the latter. Our loss has necessarily been severe, and is estimated at about 1200 killed and wounded; that of the French about 800.

The Russian loss has also been great, two General Officers and three guns were captured by our men; but we have few prisoners beyond the wounded, in consequence, it is believed, of our deficiency of cavalry.

Lieutenant Derriman, of the *Caradoc*, accompanied the staff of General Lord Raglan, during the action; and I also sent Lieutenant Glynn, of this ship, to convey any message to me from his Lordship.

All the medical officers of the fleet (excepting one to each ship), 200 seamen and marines, and all the boats, have been assisting the wounded and conveying them to the transports, that will sail for the Bosphorus as soon as possible.

I believe it is the intention of the Allied forces to move to-morrow; and the *Samson*, which I detached last night, with the *Terrible*, off Sebastopol, has assured the Russians we were there in force at Sebastopol, and that they have burnt the villages on the Katcha. I have, &c.,

(Signed) J. W. D. DUNDAS, Vice-Admiral.

The Secretary of the Admiralty,

DESPATCHES TO THE FRENCH GOVERNMENT.

The *Moniteur* says: The Emperor has received from Marshal St. Arnaud the following report of the victory of the Alma. No one can read without emotion this simple recital of a great victory, where the General-in-Chief speaks of every one except himself. Nevertheless the Government appreciates as it merits the energy and ability displayed by the Marshal under these circumstances. The Emperor has decided that a salute of twenty-one guns shall be fired to celebrate this victory:—

MARSHAL ST. ARNAUD'S ACCOUNT OF THE BATTLE.

Field of Battle of Alma, Sept. 21.

Sire,—The cannon of your Majesty have spoken; we have gained a complete victory. It is a glorious day, Sire, to add to the military annals of France, and your Majesty will have one name more to add to the victories which adorn the flags of the French army.

The Russians had yesterday assembled all their forces and collected all their means, in order to oppose the passage of the Alma. Prince Menschikoff commanded in person. All the heights were crowned with redoubts and formidable batteries. Fifteen thousand infantry, twenty-four thousand bayonets from all the points of the Crimea; in the morning there arrived from Theodosia 6000 cavalry and 180 pieces of heavy and field artillery. From the height which they occupied the Russians could count our every man by man from the 19th to the moment when we arrived on the Bubanach. On the 20th, as early as six in the morning, I carried into operation, with the division of Canrobert, the brigade of Autemarre, Turkish battalions, a turning movement which enveloped the left of the Russians and turned some of their batteries. General Bosquet manœuvred with as much intelligence as bravery. The movement decided the success of the day. I had arranged (*J'avais engagé les Anglais*) that the English should extend their left, in order at the same time to threaten the right of the Russian batteries. The Prince showed himself worthy of the great name he bears. We then arrived at the foot of the heights, under the fire of the Russian batteries. There, Sire, commenced a real battle along all the line—a battle with the episode of brilliant feats of valour. Your Majesty may be proud of your soldiers: they have not degenerated: they are the soldiers of Austerlitz and of Jena. At half-past four the French army was everywhere victorious. All the positions had been carried at the point of the bayonet to the cry of "Vive l'Empereur!" which resounded throughout the day. Never was such enthusiasm seen; even the wounded ran from the ambulances. All the positions had been carried with large masses of the enemy and with great difficulties, but everything was surmounted. The English attacked the Russian positions in admirable order, under the fire of their cannon, carried them, and drove off the Russians. The bravery of Lord Raglan rivals that of antiquity. In the midst of cannon and musket shot he displayed a calmness which never left him. The French lines formed on the heights, attacking the Russian left, and the artillery opened its fire. Then it was no longer a retreat, but a rout; the Russians threw away their muskets and knapsacks, in order to run the faster. If, then, I had cavalry, I should have obtained immense results, and Menschikoff would no longer have had an army; but it was late, our troops were harassed, and the ammunition of our artillery was expended. At six o'clock in the evening we encamped on the very bivouac of the Russians. My tent is on the very spot where that of Prince Menschikoff stood in the morning, and who thought he was sure of bearing us that he left his carriage there. I have taken possession of it, with his portfolio and correspondence, and shall take advantage of the valuable information it contains. The Russian army will probably be able to rally two leagues from this, and I shall find it to-morrow on the Katcha, but beaten, and demoralised, while the Allied army is full of ardour and enthusiasm. I have been compelled to remain here, in order to send our wounded, and those of the Russians, to Constantinople, and to procure ammunition and provisions from the fleet. The English have had 1500 men put *hors de combat*, three officers killed, fifty-four wounded, 263 subalterns and soldiers killed, and 1938 wounded. General Canrobert, to whom is due in part the honour of the day, was slightly wounded by the splinter of a shell, which struck him on the breast and hand, but he is doing very well. General Thomas, at the close of the day, fell severely wounded by a ball in the abdomen. The Russians have lost about 5000 men. The field of battle is covered with their dead, and our field hospitals are full of their wounded. We have captured a proportion of seven Russian dead bodies for one French. The Russian artillery did us harm, but ours is very superior to theirs. I shall all my life regret not having had with me my two regiments of Spahis and Turcos. The Zouaves were the admiration of both armies; they are the first soldiers in the world

Accept, Sire, the homage of my profound respect, and of my entire devotedness. MARSHAL A. DE ST. ARNAUD.

ORDER OF THE DAY OF MARSHAL DE SAINT ARNAUD.

Soldiers,—France and the Emperor will be satisfied with you. At Alma you have proved to Europe that you are worthy descendants of the conquerors of Eylau and of the Moskowa. You have rivalled in courage your allies, the English; and your bayonets have carried formidable and well-defended positions. To-day you have crushed the Russians on your road, and you will conquer them, as you have done to-day, to the cry of "Vive l'Empereur!" and you will only stop at Sebastopol; it is there you will enjoy the repose which you will have well deserved.

Field of Battle of Alma, Sept. 20.

PARIS Oct. 7.

His Excellency the Minister of War has received from the Marshal Commanding in-Chief the Army of the East, the following report and letter:—

Head quarters, at the BIVOUAC on the Alma, Sept. 21, 1854

Monsieur le Maréchal,—My telegraphic despatch, dated yesterday, has made you acquainted summarily with the results of the battle of the Alma. The subjoined sketch, written in haste, will give you a better idea of it; you will judge by this of the difficulties we have had to overcome in order to carry the enemy's position.

The river Alma presents a winding course, with high banks; the fords are very difficult, and few in number. The Russians had posted in the lowest part of the valley, covered with trees, gardens, and houses, and on the village of Burlick, a body of sharpshooters, well protected, armed with rifled carbines, and who received our heads of columns with a very hot and galling fire. The flank movement of General Bo quet, commanding the 2nd Division, which this General Officer executed on the right with much intelligence and vigour, had fortunately removed the difficulties in the way of the march of the two other divisions of the English army. Nevertheless, the position of this General Officer—who for a long time found himself on the heights with a single brigade—might have been compromised in its isolation; and General Canrobert, to support him, had to make a vigorous push in the direction shown by one of the index lines of the sketch. I sent him support in the shape of the Division that was in reserve, while the other brigade of this same division, for which General Bosquet, went to his assistance.

The 3rd Division marched right on the centre of the positions, having the English army at its left. It had been agreed with Lord Raglan that his troops should operate on their left a flank movement analagous to the one General Bosquet was making on the right. Assailed by my masses by the cavalry, and out-flanked by the enemy's troops posted on the heights, the left of the English army was obliged to renounce this part of the programme.

The general movement took place at the moment when General Bosquet, protected by the fleet, appeared on the heights. The gardens, from out of which a murderous fire issued, were carried sharply, and we soon taken possession of by our troops. Our artillery approached in its turn the gardens, and began to cannonade warmly the Russian batteries, who were formed in échelons on the slopes, in order to support the interesting sharpshooters. Ours, closing on them with incredible boldness, followed them on the slopes, and I then directed my first line through the gardens. Each one pushed on to the assault of the batteries under the heights under a fire of musketry and cannon that, nevertheless, did not retard their progress. The crests were gained, and I threw forward my second line to the support of the first, which rushed on to the cry of "Vive l'Empereur!

The artillery of reserve had, in its turn, been carried onwards with a rapidity that was almost incomprehensible when the obstacles of the river and the steepness of the slopes are taken into consideration. The enemy's batteries, driven back on the plateau, exchanged with our lines a cannonade and a fire of musketry that ended by their final retreat in very bad order, which the presence of some thousand horse would easily have enabled me to convert into a total rout. Night arrived, and I had to think of establishing our troops within reach of the enemy. I encamped on the field of battle itself while the enemy was disappearing in the horizon, leaving the ground strewed with his dead and wounded, a great number of whom he had forced carried off.

While these events were passing on the right and at the centre, the lines of the English army crossed the river in front of the village of Burlick, and advanced on the Russian centre and right. The English army, where they had concentrated considerable masses, for they had not supposed that the steep slopes comprised between this point and the sea, and protected by a natural wall, were taken with such ease by our troops. The English army encountered, therefore, a very solidly-organised resistance. The combat that ensued was one of the hottest, and reflects the highest honour on our brave allies.

In fine, Monsieur le Maréchal, the battle of Alma, in which more than 120,000 men, with 180 pieces of cannon, have been engaged, is a brilliant victory; and the Russian army could not have raised its head again, if, as I stated before, I had had cavalry to cut up the broken and disjointed masses of infantry as they were retiring before us.

This battle consecrates in a signal manner the superiority of our arms at the beginning of this war. It has disconcerted in the highest degree the self confidence of the Russian army, and especially their reliance on the positions they had long prepared beforehand, and where they awaited us. This army was composed of the 16th and 17th divisions of the Russian infantry, of one brigade of the 13th, of one brigade of the 14th division of reserve, of the foot chasseurs of the 6th corps, armed with rifles carrying oblong bullets; of four artillery brigades, two of which were horse, and of one battery, taken from the siege park of reserve, comprising twelve pieces of heavy ordnance. The whole was about 5,500 strong, and the whole force may be estimated at [illegible] each, commanded by Prince Mentschikoff in person.

It is difficult for us to compute the losses of the Russian army, but they must be considerable, if we may judge by the dead and wounded they have left remove, and who remain in our hands. In the ravines of the Alma, on the plateaux in front, on the ground forming the position carried by the English army, the soil is covered with more than ten thousand muskets, knapsacks, and different articles of equipment. We have denoted the whole of this day to bury their dead where found, and to tend their wounded, whom I caused to be conveyed alone with our own to the vessels of the fleet, in order to be taken to Constantinople. All the Russian officers, including generals, are clothed with the coarse overcoat of the soldiers, and it is, consequently, difficult to distinguish them either among the dead or the small number of prisoners we have been able to make. However, it remains certain that the English army have captured two general officers.

The battle of Alma, in which the Allied armies have reciprocally given each other pledges they cannot forget, will strengthen the bonds that united them. The Ottoman division, that marched to the support of the Bosquet division in its flank movement, did wonders in speed to get into line, following the while the route along the border of the sea that I had traced out for them. It could not take an active part in the combat that did not long, but it will be seen that troops showed an ardour equal at least to our own, and I am happy at having to tell you all that I expect from the aid of these excellent auxiliaries.

Every one has brilliantly done his duty, and it will be difficult for me to select among the several corps the officers and soldiers that have shown most vigour in the action, and who ought to be the object of especial mention. I have already stated in this report the importance of the part played by the Bosquet division in its flank movement, during which his first brigade, established alone upon the heights, remained for a long time exposed to the fire of five gun batteries. The first division scaled the heights up its steepest slopes with an ardour of which its chief, General Canrobert, set the example. The honourable General Officer was struck on the breast by the splinter of a shell; but he was able to keep on horseback to the end of the action, and his wound will have no dangerous consequences. The Third Division conducted with the greatest vigour by his Imperial Highness Prince Napoleon, took the most brilliant part in the combat fought on the hill plains; and I have been happy to address to the Prince my felicitations in the presence of his troops.

General Thomas, commanding the 2nd brigade of this division, has been grievously wounded by a shot, while energetically leading his troops in the attack of the hill-plain. The second brigade of the Forey Division, marching to the support of the First Division, under the orders of General Aurelle, has figured worthily in the combat. Lieut. Polteyn, of the 39th Regiment of the Line, held on the telegraph building that formed the central point of the enemy's defence, the flag of his regiment; he died there gloriously, killed by a shot

During the whole time the battle lasted, the artillery played a principal part, and I cannot render here too much homage to the spirit and intelligence with which this select corps has fought.

In a later report, the elements of which I am at this moment collecting, I will acquaint you with the names of the officers, sub officers, and soldiers who have deserved being put in the order of the day; I shall append to it a list of all those for reward, which you will certainly find to be deserved.

Deign to accept, Monsieur le Maréchal, the expression of my most respectful sentiments. The Marshal Commander-in-Chief,

DE SAINT ARNAUD.

Head-quarters at Alma.—Battle-field at Alma, Sept. 22, 1854.

Monsieur le Ministre,—My official report gives an account to your Excellency of the details of the splendid victory of the 20th, but I cannot allow the courier to start without saying a few words about our brave soldiers.

The soldiers of Friedland and Austerlitz are still under our colours, Monsieur le Maréchal; this battle of Alma has proved it. There is the same glow, the same brilliant courage. Everything can be done with such men when they have been inspired with confidence.

The Allied armies have carried positions truly formidable. In going over them yesterday, I recognised all the advantages they possessed for offering resistance, and, indeed, if the English and French had held them, the Russians could never have taken them.

Now that everything is more calm, and that the accounts brought in by the deserters and prisoners are more precise, we can probe the enemy's wounds.

The loss of the Russians is considerable. The deserters affirm it to be above 6000 men. Their army is disheartened. In the evening of the 20th it had joined on to Bourliouk. Prince Menschikoff, with the left wing, marched on Bagtcheserai; the right wing proceeded to Belbec. But they were without provisions, their wounded encumbered them, the road is strewed with their dead, and their artillery, more heavy than ever, adds a curious page to our military history, and gives to the army a moral force equivalent to 20,000 more men. The Russians have left on the field of battle 10,000 muskets, almost all of the newest model. It was a regular rout. Prince Menschikoff and his Generals were very vain-boasting in their camp I now occupy, on the morning of the 20th. I think they have now got as distant ahead of the Russians as they had demanded of Aimi provisions for three weeks; I have an idea he will have stopped the convoy on its way

I cannot believe will be able to judge if there is much prospect for the Russians. In three days I shall be before Sebastopol, and I shall be able to tell your Excellency all that is real about that place.

The same courage and up rit of the army are admirable.

The vessels going to Varna for reinforcements of troops of all arms left here on the 18th. They will reach me at Belbec before the end of the month.

My health is as usual; it is satisfactory, despite sufferings, cares, and duty. All that did not prevent me keeping the saddle twelve hours on the day of battle. But my strength not give way?

Adieu, Monsieur le Maréchal; I shall write to your Excellency when I am before Sebastopol

Receive, &c.,

Marshal A. DE SAINT ARNAUD.

The Government has received from Vice-Admiral Hamelin the following report:—

Ville de Paris, Sept. 23, 1854, at the Anchorage of the Alma.

Monsieur le Ministre,—By my letter dated Sept. 21, I hastened to send to your Excellency a telegraphic despatch that related briefly the brilliant victory obtained by our troops over the Russians, whilst forcing the passages of the river Alma. I am now able to add some details to that telegraphic despatch; and, to render them more clear, I enclose two sketches: one of which (No. 1) depicts the plan formed by the combined armies on the evening of the 19th to give battle on the morrow; and the other (No. 2) is a view of the position of the forces of those, for instance, where our troops attacked the left and the centre of the Russian army, under the eyes of the fleet, the steamers of which supported this movement with their shells.

It will be sufficient for you, Monsieur le Ministre, to cast your eyes on the first of these sketches in order to appreciate the excellent military conception it reveals. According to the plan decided on, in fact, the 2nd division was to march along the border of the sea, ford the Alma, which our boats had sounded in the morning, and carry the heights of which the extreme left, under the protection of the eight steamers, that I had stationed over against this extreme left. In the meantime, the 1st and 3rd divisions, under the orders of the Marshal, attacked in front the position of the enemy's centre, and the whole English army moved on its side, to turn his extreme right.

This plan was carried out nearly as it had been conceived, in spite of our troops having had to climb, as soon as they had crossed the Alma, rugged cliffs, and where our African soldiers have solved problems of agility, strength, and perseverance. Thanks to these prodigies of intrepidity and swiftness—thanks, also, to the well-directed fire of the shells of our steamers spread through the enemy's cavalry on his extreme left—the division of General Bosquet succeeded in effecting its movement with the most brilliant success, and it already bore down on the centre an hour after the beginning of the action. On their side, the two divisions of the Marshal, after having sustained a sharp fire of musketry from sharpshooters on the very edge of the bank s studding the Alma, climbed with equal boldness and good fortune the natural walls where the flower of the enemy imagined itself, in sooth, secure from the brunt of an attack

During the time, the English army had given up turning the extreme right of the enemy, and had attacked vigorously the strong intrenched positions of his right. There the Russians had placed not only field-pieces in battery, as on thereat of their lines, but a battery of twelve heavy pieces, which our batteries, not without

a few words, the attack of the positi ns began at half-past t [illegible] half-past three they were carried along the whole line [illegible] army was in full retreat, and many of its corps, which presented nothing more than a confused mass of soldier [illegible] gether, strewing with corpses a portion of the position of which our troops had deprived them. If we had had cavalry, without the least doubt we should have made many thousand prisoners and taken a great number of guns.

As to the losses sustained by the Allied armies, they are serious, from the fact of the difficulties of the positions which they had to carry. We reckon about 1500 killed and wounded. The English have suffered to the amount of 1500 or 2000

As to the enemy, he has strewed the whole length of [illegible] between Katcha'and the Alma with dead bodies, and has left on the field of battle many thousand slain

Three of our steam-frigates have set out to carry our wounded to Constantinople. We have sent with them a portion of the Russian soldiers, who receive the same attention as our own men.

To-day we accompany the army to the Katcha.

I am, with profound respect, &c. HAMELIN.

The punishment inflicted ... so offences included sentences of imprisonment, with hard labour, for terms varying from three months to fourteen days, in four cases, and the following pecuniary penalties:—
Six of £5, three of £3, in one of £2, four of £1 10s., thirty of £1, and the remainder of sums ... to £1, and ... to 5s.
By order of the Committee,
GEORGE ... MIDDLETON, Secretary.
October 9, 1854.

SOLDIERS' FRIEND and ARMY SCRIPTURE READERS SOCIETY.—AMPLE FIELD FOR LABOUR IN TURKEY.—Instituted for the purpose of Diffusing Religious Knowledge throughout the British Army.
Patron—His Grace the Lord ... GROSVENOR, M.P.
President—The Rev. Dr MARSH.
The Committee of the Soldiers' Friend Society have now SEVEN SCRIPTURE READERS engaged with the Army in the East. The ... of these hard-working readers is ... and there is ... but a large increase to their numbers is needed, and which is confidently hoped may shortly be effected.
The need for this kind of agency must be self evident, it being physically impossible for the Military Chaplains to accomplish at the ... all the Battle field the Pastmen, besides the Ordinary Casualties of Military Life, without assistance. The ... character of the Service Reader, being to aid, not to ... for, with the general duties of the Chaplain, commends it to the ... sympathy and liberal support of the Christian public.
The BIBLE DISTRIBUTIONS of the Society are confirmed with the same success ... and with the same pleasing results. ... Readers are continually visiting the barracks in the metropolis, and also in the country.
"I beg ... to express my ... appreciation of all that I have heard of the Society's operations, ... I shall have ... to put into practice."

The locations as the words (by Carpenter) and the beauty of the music of these songs entitle them to immense popularity.
London: DUFF and HODGSON, 65, Oxford-street.

VOCAL DUET from "THE LAMPLIGHTER" Light in Darkness. Words by J. E. Carpenter, Music by S. Glover. Price 3s. Sent postage free.
A vocal duet by the author of "What are the wild waves saying?" always welcome, but in the present case doubly so, as the composition is one of the most charming conceptions we have heard for years.
London: DUFF and HODGSON, 65, Oxford-street.

JULLIEN and CO.'S MUSICAL PRESENTATION and CIRCULATING LIBRARY combined. Subscribers to this LIBRARY can select their music from upwards of 500,000 separate pieces, and 3000 volumes of music. Terms of subscription, three guineas per annum The principal feature which distinguishes the Library from all others is, that the subscribers, besides being liberally supplied on loan during the year with all standard and new vocal and pianoforte compositions, are also presented with three guineas' worth of music every year gratis, which may be selected by themselves during the term of subscription. Prospectuses forwarded (free) on application to JULLIEN and CO., 214, Regent-street.

ST. MARTIN'S HALL SINGING SCHOOL (Established 1841), Director, Mr JOHN HULLAH. The following NEW CLASSES will be formed NEXT TUESDAY EVENING, Oct. 17. For Ladies, at 5s and 6s; for Gentlemen, at 7s and 8s. Fee for a Course of 16 Lessons, 3s.

PIANOFORTES for HIRE, at CHAPPELL'S Two and Three Years' PIANOS, by the great makers, of every description, New and Second-hand, for SALE or HIRE.—50, New Bond-street.

PIANOFORTES.—MOORE and MOORE'S Cheap-class PIANOS, at 21 Guineas; cottage, 25 and 28 guineas; 30, 35, 40, and 45 guineas.—J. B. Moore, 104, Bishopsgate-street-within, London.

TOLKIEN'S COLONIAL PIANOFORTE.—This patent instrument is peculiarly adapted for extreme climates. The woodwork is prepared with a solution impervious to water and destructive to insects; also a metallic binding-plate the length of the wrest-plank, in which are inserted the tuning pins, prevents the possibility of any p rt being affected by heat or damp.—Tolkien, 27, 28, and 29, King William-street, London-bridge.

TOLKIEN'S 25-GUINEA Royal MINUTO PIANOFORTES.—H. T., the original maker of a 25-Guinea Pianoforte, has, by the care he has devoted to all branches of the manufacture, obtained the highest reputation throughout the universe for his instruments, unequalled in durability and efficacy of touch, more especially for their extraordinary power in standing in tune in the varied changes of this climate. In elegant walnut, rosewood, and mahogany Cases packed for abroad for £2 10s extra. H. Tolkien's Manufactory, 27, 28, and 29, King William-street, London-bridge.

KEY and CO., Military Musical Instrument Makers, 20, Charing-cross, beg to announce that, in connection with their Manufactory (established in 1800), they have OPENED a RETAIL DEPARTMENT, for the sale of their celebrated Military Music, [illegible] as well as for Concertina, Harmonic ons Concertina Guitars, and every novelty in Prince Music. Key and Co.'s new metal Clarionet, £10 10s.; new model Cornet, £8 8s.; and their durable drawing-room Concertinas, £12 12s. each.

MUSICAL BOX DEPÔT, 32, Ludgate-hill (opposite Everingham), London.—WALES and M'CULLOCH are direct Importers of Messrs Frères MUSICAL BOXES, playing the best popular Operatic and Sacred music. Large size, four airs, £4; six airs, £6 6s.; eight airs, £8; and twelve airs, finest tone, £12 12s. Second-hand two tunes, 10s. 6d. and 15s.; three tunes, 30s. Twelve special tunes, 8os., gratis, and post-free on application.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE 198, Strand aforesaid.—SATURDAY, OCTOBER 14, 1854.

THE ILLUSTRATED LONDON NEWS.

No. 708.—VOL. XXV.] SATURDAY, OCTOBER 21, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE PATRIOTIC FUND.

THE public of the United Kingdom has been simultaneously called upon for its patriotic subscriptions, by two separate and distinct agencies, and for two separate and distinct purposes. The one appeal is made under the sanction of the Queen in Council, on behalf of the widows and orphans of British soldiers, sailors, and marines, who have been killed in the late glorious successes of the British arms, or who may hereafter die amidst the ravages and casualties of war. The second appeal has been issued without authority or warrant of any kind by a few newspapers that arrogate to themselves the right of the three tailors of Tooley-street—that of speaking in the name of the people of England; and one of which pretends to be better informed than Privy Councillors and Generals—to be able to control the deliberations of Cabinets, and even to summon the Queen from Balmoral to London, before it would otherwise have pleased her Majesty to make the journey. These journals—cursed with too much zeal, and too little discretion—have lustily been calling, during the greater part of a week, for the subscriptions of the wealthy and tender-hearted, to alleviate the misery said to be suffered in the Hospital of Scutari by our wounded soldiers, who, in consequence of the alleged neglect of the Government, have been left without medical attendance, and even without lint and bandages to dress the wounds which they received in the battles of their country. The first appeal will meet with a liberal and cordial response; the second, we hope, will fall dead with the contradiction of the false statements, on the truth of which alone it would have been justifiable either to make or to respond to it.

We made no allusion, in our last publication, to these rumours, though they were profusely circulated. We felt convinced that they were either grossly exaggerated or utterly destitute of foundation. If the allegations had been true, no terms of indignation would have been too strong to apply to the conduct of the heads of the medical department or the War-office, and to all others who were responsible. It would have stirred the heart of the nation to know that men who had risked, in the cause of their country, their own lives, as well as the happiness and well-being of all who were dear to them, were permitted to lie on the battle-field, grievously wounded, without succour. If it could have been believed that brave men had been transported to the hospital only to die a more lingering death than that which they had temporarily escaped in the field; with wounds which there were none to stanch—without lint or bandages—without sufficient medicine—without the ordinary comforts which sick paupers, and even sick criminals, receive at home; and without the word of hope and the smile of encouragement and of good cheer which the wise and humane physician often finds to be of more value than his medicines in the relief of bodily affliction—the nation, as one man, would have resented the disgrace inflicted on its name. A stain so deep would not have been considered removable by pecuniary offerings, however magnificent, unless they had been accompanied by the dismissal of the functionaries, high or low, to whose apathy or stolidity the result was to be attributed. Happily for the equanimity of the people, the story was untrue. The medical officer of the Government has set the calumny at rest by publishing in the daily journals a tabular statement of the medicines and medical supplies which have been sent to the East or the wants of the army—the first consignment of which left England in February, the second in June, and the third in September; and the fourth of which was destined, before the subject was noticed by the press, to be forwarded on the 24th instant. We have not space to enumerate the articles thus provided by the careful foresight of the Government; but we may mention that of lint alone, besides linen and other bandages, there were upwards of 80001bs.—a quantity more than sufficient for the wants of the army in half a dozen encounters as desperate as that of the Alma. All other articles were supplied with similar liberality—a fact of which any reader, whether medical or non-medical, may be convinced who will run his eye down the published list. It also appears that no blame is fairly attributable to the authorities for any deficiency of surgical attendance—there being one surgeon to every ninety-seven men on service; while Wellington, in the Peninsular War, had but one surgeon to every one hundred and fifty-four men. Of course, we shall hear no more of the unpatriotic tale—which, perhaps, owes its origin more to thoughtlessness than to malevolence; but it is earnestly to be desired—for the sake of truth, the interest of the public service, and the national character—that such reports should not be circulated by British newspapers—least of all by those of large circulation, and which claim to speak with the voice of power and authority. There is quite enough of lying in the *Gazette de St. Petersburg*, the *Invalide Russe*, and the bulletins of Prince Menschikoff, to serve the *gobemouches* of the whole world with the pabulum which they love, without any invasion by Englishmen of the Russian monopoly of the article. Of the two kinds of lying, the Russian is the preferable;—for if the Czar and his subjects tell falsehoods, they tell them to the supposed advantage and glory of their country; while British lies of the class alluded to are calculated to create scandal as well as alarm, and to discourage brave men at a time when the country demands not merely the heroic service of their strong right hands, but the sustaining and inspiriting energy of their minds.

British benevolence—or, we may call it, justice—will have ample and noble work before it, in providing a fund for the relief of the widows, and the support and education of the orphans, of the brave men who have already lost their lives on the memorable heights of Alma, or who will lose them before Sebastopol, and in many another battle that will have to be fought before the

THE FIELD OF ALMA, AFTER THE BATTLE, SKETCHED BY AN OFFICER OF THE 21ST N.B. FUSILIERS.—(SEE NEXT PAGE)

wicked disturber of the peace of Europe is brought to the punishment that he deserves. The Queen's appeal will not be made in vain. Her Majesty has headed the subscription-list with a donation of £1000. Her Royal Consort has followed with £500;—and the great and wealthy of the land will each and all be proud to imitate the example. Nor will the duty and the gratification be theirs alone. They will have no monopoly in well-doing in a case which pleads so strongly to the patriotism as well as to the sympathy of all. The trading classes—from the princely merchant who rivals or excels the noble in the magnificence of his expenditure, down to the humblest retail trader—will contribute according to their means towards the payment of the debt of gratitude which Britain owes to the gallant hearts, who maintain her supremacy, and fight—regardless of themselves—for the security of Europe, and the vindication of its public law. And, last of all, the labouring classes—in which we include the learned professions—who have no fortunes but their intellect and education, or the strength and skill of their right hands, and the daily wages which these procure—will contribute (if we do not mistake the signs of the popular feeling) in a still more touching manner to the "Patriotic Fund." Already the example has been set; and working-men in every part of the country are spontaneously offering a day's wages for the support of the widows and orphans of the brave men whose recent deeds have made us all so proud of the privilege of being their countrymen. The shillings thus contributed will swell the subscription list with, perhaps, the very noblest of all the offerings that the occasion will call forth. When Toil, paid barely sufficient for the support of existence, thus voluntarily and heartily renounces the subsistence of a day, the sacrifice is one more affecting than mere wealth can ever make, however largely it may pour its guineas into the tide of a nation's gratitude. One day's income of the British people, placed at the disposal of the Commissioners to whom the task of the collection and distribution of the Fund has been confided, will do more than relieve the distresses of the widow and the orphan. It will cheer the spirit and animate the courage of living men to gain new battles for their country. It will do more even than that—great as it is. It will show all Europe of what devotion the British nation is capable—how mighty are its resources—how large is its heart—and how resolute is its determination. It will also show the Czar how inferior is his strength to ours. It will prove to him that our soldiers are citizens, and not serfs; that they are free men, supported by the sympathy of free men; and that they go forth to battle not unwillingly, at the arbitrary command of despotism for despotic purposes, but freely and cheerfully at the call of duty and honour; and that, supported by an enlightened public opinion, and by a deeply-rooted sentiment of right, they deem no struggle, however arduous, a hardship or a grievance, if it conduce to the honour and independence of their country, and the success and glory of its arms. In such a spirit, we see not only the doom of Sebastopol, but of the Czar.

THE FIELD OF BATTLE.

On the previous page we have given a view of the field of battle, from a Sketch taken on the spot. The village which is seen in the distance, and immediately in front of it Lord Raglan's camp, bounded on the right by the small river so frequently referred to in the various accounts of the battle. The Russian battery, which made so much havoc in the ranks of the Light Division, was placed on the height which rises on the right side. On the left side the French camp may be seen crowning the opposite heights, near which the fleet lay at anchor. The following description of the battle-field, the day after the conflict, gives a vivid picture of the harrowing scene:—

Many of the Russians had small crosses and chains fastened round their necks. Several were found with Korans in their knapsacks—most probably recruits from the Kasan Tartars. Many of the officers had portraits of wives or mistresses, or sisters beside their coats. The privates wore the little money they possessed in purses fas ened below their left knees, and the men, in their eager search after the money, often caused the wounded painful apprehension that they were about to destroy them. Last night all these poor wretches lay in their agony; nothing could be done to help them. The groans, the yells, the cries of despair and suffering, were a mournful commentary on the exultation of the victors, and on the joy which reigned along the bivouac fires of our men. As many of our wounded as could be possibly picked up ere darkness set in were conveyed on stretchers to the hospital tents. Many of the others were provided with blankets, and covered as they lay in their blood. The bandsmen of the regiments worked in the most cheerful and indefatigable manner, hour after hour, searching out and carrying off our wounded. Long after night had closed faint lights might be seen moving over the frightful field, marking the spots where friendship directed the steps of some oth r in search of a wounded comrade, or where the pillager yet stalked about on his horrid errand. The attitudes of some of the dead were awful. One man might be seen resting on one knee, with the arms extended in the form of taking aim, the brow compressed, the lips clinched—the very expression of firing at an enemy stamped on the face and fixed there by death; a ball had struck this man in the neck. Physiologists or anatomists must settle the rest. Another was lying on his back with the same expression, and his arms raised in a similar attitude, the bayonet still grasped in his hands undischarged. Another lay in a perfect arch, his head resting on one part of the ground and his feet on the other, but the back raised high above it. Many men without legs or arms were trying to crawl down to the waterside. Some of the dead lay with a calm, placid smile on the face, as though they were in some delicious dream. Of the Russians one thing was remarkable. The prisoners are generally coarse, sullen, and unintelligent-looking men. Death had ennobled those who fell; for the expression of their faces was altogether different. The wounded might be viewed in those who seemed to have passed away so peacefully. Most of them spoke French; and the entreaties of the wounded to be taken along with us, as the officers moved up the hill, were touching in the extreme. The poor fellows had a notion that our men would murder them if the eye of the officer was removed from them. An old General, who sat smiling and bowing on a bank, with his leg broken by a round shot, seemed principally concerned for the loss of his gold snuff-box. This, I believe, has since been restored to him. The men say they were badly handled, and had no General to direct them. Menschikoff lost his head in a figurative sense. The officers displayed great gallantry; and the men fought with a dogged courage characteristic of the Russian infantry, but they were utterly deficient in *élan* and dash.

The Patriotic Fund Commission.—The Commission for collecting and distributing the Patriotic Fund includes men of all ranks and parties. It is headed by Prince Albert, and it takes into its ranks the Duke of Newcastle, the Minister for the War; the Queen's first Lord of the Admiralty; Lord Hardinge, Commander-in-Chief of the Army; Lord Raglan, Commander-in-Chief in the East; the Duke of Wellington, heir to the great Captain; Lord St. Vincent, heir to the great Admiral; Lord Aberdeen, head of the Cabinet; Lord Derby, leader of the Opposition in Parliament; Lord Shaftesbury, experienced in the administration of charitable funds; with many officers both in Army and Navy, and members of Parliament on both sides, not omitting the trusty and well-beloved Joseph Hume. Any three of these Commissioners attending at their office can act on behalf of the Commission; but they are instructed to appoint a committee for executive and financial purposes. All local authorities, mayors and corporations, county officers, and governors of colonies; in short, district governors of any kind, are, by the Commission, appointed "Commissioners in aid," with power to sanction the appointment of local committees. The local committees will collect subscriptions, and will hand them to the Commissioners in aid for their district, and the local committees will be answerable for the acknowledgment of individual contributions.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(*From our own Correspondent.*)

PARIS, Thursday.

The funeral of the Maréchal St. Arnaud took place on Monday, and as all was conducted according to the official programme, we abstain from entering into the mere details of the ceremony. The state of the weather was perfectly in harmony with the solemnity of the occasion; a misty gloom, with a few drops of rain falling at intervals, hung over the atmosphere, and was singularly in harmony with the aspect of the funeral procession, which was attended by crowds of all ages, classes, and nations.

Madame St. Arnaud, many years the junior of her husband, and whose youth, beauty, and acquirements had, from the period of her marriage, ever been employed to add to his gratification, always and at all times; who had never ceased to be his companion in the midst of his most difficult and dangerous campaigns, as well as in his hours of repose and leisure, fulfilled to the last her dutious and womanly mission, not only with tenderness and devotion, but with the self-command and firmness, without which her cares would have rather embittered than consoled the last moments of her husband. On visiting for the last time the remains of the Maréchal, previous to the closing of the coffin, the sight of blood flowing from the nose of the corpse, made her for a moment imagine that life was not extinct; the re-action of the impression was so great, that she fell senseless, and could with difficulty be recalled to life

Madame St. Arnaud accompanied the remains in the *Berthollet*, and being joined at Marseilles by her brother the Marquis de Trazegnies, followed them, with him, to Paris. It is said that a marble statue of the Maréchal is to be placed in the gallery of the Palace at Versailles.

The visit of Madame Kalergi, the niece of M. de Nesselrode, to Paris, occuring at such a moment, excited much speculation and surmise: her presence, however, being wholly connected with her own personal affairs, and considered in no way dangerous, the Government has authorised her coming, simply on that plea.

Preparations are being made at Compiègne for the immediate arrival of their Imperial Majesties, which was to have taken place sooner, but has been delayed from various motives. The receptions are, we believe, to begin directly afterwards.

Last week the filling of the upper lake of the Bois de Boulogne with fish took place. A quantity of *silures* and trout, brought in tuns by rail, from the establishment at Huningue, where the new system of the artificial production of fish is carried on, arrived in perfect health, and were thrown into the lake on Thursday evening. Some of the *silures* weigh as much as forty pounds; and most of the trout, which are two years old, are very fine.

The manner in which M. Barbès has received his liberation has excited much comment and a good deal of reprehension. The tone of his letter to the *Moniteur* is one of defiance and insult, which we cannot but think ill-judged and undignified. Whatever were his sentiments, they might certainly be expressed in a manner that better suited the reflective advocate of a cause or an opinion, than the bullying opponent of an existing power. Certainly, Louis Napoleon has the *beau rôle* in this affair; and the conduct of M. Barbès is not likely to excite general sympathy; on the contrary, it has gone far to diminish that which already existed, and has strengthened the arguments of those who were disposed to disapprove of the measure of clemency.

The theatrical world is beginning to awake from its lethargy of the last two or three months—or, more properly speaking, to bring to bear the fruits that have been maturing during that period, in readiness for winter consumption. The first representations of the Italian Opéra are of a highly satisfactory nature, and promise an excellent season. Some of the entirely new singers come forth with talents in no wise behind those of some of the best established celebrities, and lead us to hope that the rising generation may not have to lament hopelessly over the departure of the stars that some ten years since reigned in the musical firmament, and have since, for the most part, died out, leaving up to the present no luminaries worthy to succeed them. Among the most remarkable of these rising talents, we must cite Mdme. Gassier, who last week débutée in the "Barbière." To a voice of extraordinary compass (the upper notes are miraculous) Mdme. Gassier unites a flexibility, a clearness of execution, and a power of sustaining her notes, such as we have rarely heard. We are indebted to Spain for this most valuable acquisition; and never could a national type more strongly marked than in her whole person, which produced, as may be supposed, an excellent effect, in the rôle of Rosena. Gassier (a French *Figaro*) and Lucchesi (*Almaviva*), possess considerable merit, both as singers and actors. The ridiculous caprice which induced Mdlle. Cruvelli to break her engagement by taking flight, without notice or explanation of any kind, has not yet been further explained than by the presumption, that the execution of the new rule of putting the names of all the singers at the Opéra in the same type, has wounded her sovereign dignity. We really hope that, if it please Mdlle. Cruvelli to return to her duties, the manager and the public will take means to make her feel the just resentment such insolence merits. The representations of the "Chambre Ardente," by Mdlle. Georges, have, up to the present, had an immense success of curiosity—but alas! The Théâtre-Français has in hand, or is in treaty for, no less than twenty-four new pieces, by the first writers of the day, the list of which we purpose giving next week. The Théâtre Lyrique has a pretty opera, the "Billet de Marguerite," in representation.

THE MINISTERIAL CRISIS IN DENMARK.

Events are marching rapidly towards an important change of affairs in Denmark. On Saturday last the House of Representatives voted, by a majority of eighty to six, the appointment of a committee to draw up articles of impeachment against ministers for the promulgation of the July ordinance. On Monday night the House finally approved of the address to the King, which renews the demand for a free Constitution in the whole State, as in Denmark, and entirely ignores the revolutionary act of July. The address was adopted by 90 to 1. It was expected that the Upper House would adopt the same declaration, and that a deputation therefrom would join the deputation of the Lower House.

AUSTRALIA.

The clipper ship *Red Jacket*, arrived at Liverpool on Sunday morning with advices from Melbourne to the 1st of August, having accomplished the trip home in 72½ days, notwithstanding her having lost some time in the ice. It is the quickest passage on record. She made the run out from the Rock Light to the anchorage at Melbourne in 63½ days, and has completed the voyage out and home in five months and eleven days. She brings 44,943 ounces of gold, and 26,270 sovereigns. The escorts for the week had brought down 38,327 ounces of gold.

Hobart Town advices of the 26th state that in the Legislative Council, on the 25th of July, several messages were received from the Executive and read a first time. £32,000 had been subscribed for a Hobart Town Gas Company. The Lieutenant-Governor had noticed that, under directions from the Secretary of State, male and female ticket-of-leave holders would be required to serve with good conduct only half the period for which they would have had to serve under previous regulations for a recommendation for a conditional pardon. It is also notified that, under the instructions above referred to, pass-holders who have no offence recorded against them since their arrival in the colony, will be allowed a further deduction of one-fourth of the diminished period of service for a ticket of leave.

There was little change in the labour market, beyond the fact that the continued influx of emigrants had kept up a good supply of male and female servan ts. Wages had experienced a slight decline.

THE SIEGE OF SEBASTOPOL.

The telegraphic despatches from Vienna continue of the same contradictory, unreliable character as formerly. One day we are told that nothing of importance had occurred in the Crimea up to the 10th, and the next day it is stated, by the same authority, that the siege operations commenced on the 6th inst. Our authentic information from Balaclava comes no further down than October 3, at which time the preparations for an attack upon Sebastopol were pretty far advanced.

On the 28th of September the Second, Third, and Fourth Divi ions of the English army were ordered at once to move up to the heights about Sebastopol, where they encamped, the First Division remaining at Kadikoi, behind the port of Balaclava, for the protection of that important post, while the Light Division rested on the heights above the harbour, which it had occupied before the surrender of the fort. At the desire of General Brown, however, the Light Division also moved forward on the following day, and has since occupied a position in the line of the besieging army. The Engineers and Artillery proceeded at once to land the siege train; and, by the 1st of October, sixty guns, of the heaviest metal, besides mortars of every description, had been landed and dragged up the heights. From this elevated encampment, which was occupied by our troops without any opposition on the part of the enemy, a view may be obtained of the whole port of Sebastopol, with its harbours, arsenals, ships, and forts, lying within a circle of three or four miles, at the feet of the vast armament which already threatens the devoted city. In the military harbour the Russians had moored a three-decker, so as to direct its fire up the ravine which descends to the arsenal and the docks. They were also busily engaged in throwing up works of earth round the south of the town, which sufficiently denotes the absence of any regular line of fortifications or bastions impassable by an enemy until a breach has been made by artillery. On the east of the town, however, and, consequently, immediately in front of the British lines a strong horse shoe redoubt has been constructed, which is not marked in any of the maps, and this will be the point against which our attack must first be directed.

The Duke of Cambridge's Division, consisting of the Guards and Highland Brigade, remained in the rear of the army near Balaclava until the 2nd of October, in order to cover the base of operations from the possibility of an attack. Meanwhile, the roads and tracks through the hilly country south of Khuter Mackenzie, by which the Allied armies made their flank march on Balaclava, have been broken up and put into a state of defence by the British forces. The right flank of the army is effectually covered by the defile leading into the valley of the Tchernaya, by that stream, and by the marshy ground about it; and so satisfied Lord Raglan (on the 3rd of October) of the strength of this position, that he caused the First Division to advance to the right of the army, and to take up the position it will occupy during the siege.

The valley of Inkerman is a deep ravine about one mile in breadth, formed by the stream of the Tchernaya before it falls into the western extremity of Sebastopol harbour: this valley is, in fact, the continuation of the deep inlet by which the harbour itself is formed. On the eastern side of this valley the ruins of Inkerman still retain traces of the fortifications erected by the Genoese on this position; and, for the defence of Sebastopol against an attack by land, had these heights been crowned with strong batteries, the place would have been almost impregnable, since they would have enfiladed the whole position now occupied by the besieging armies. This precaution appears, however, to have been neglected. Along the course of the valley, and parallel with the stream of the Tchernaya, runs the aqueduct which supplies the docks and part of the town with fresh water; and so abruptly do the rocks rise over the ravine on the western side, that, on turning towards the harbour, this aqueduct is carried through a tunnel in the freestone rock 300 yards in length. Rather more than a mile to the south of this tunnel, and upon a height which rises almost perpendicularly above the valley, the First Division of the British army has taken up its position. It forms, therefore, the extreme right of the whole Allied forces, and it is protected by a steep wall of rock, which is inaccessible to the enemy. The French army occupies the left of our position, and extends to the coast immediately south of Sebastopol, where the deep and navigable bays offer the greatest facilities for landing the siege train and the stores of our allies. Some delay has, nevertheless, taken place in this operation. On the 3rd no regular attack had begun on any part of the place; but the booming of heavy guns from the forts of Sebastopol sounded like the prelude to the tremendous struggle which was about to commence, and showed that the enemy was resolved and prepared to offer a strenuous defence of the place on every side.

On Sunday, the 1st of October, the enemy amused themselves firing shot and shell over the heads of our artillery, and General Cathcart was obliged to move his quarters, as the Russians had found out his range and made a most beautiful practice at them. However, he left his flagstaff, which seemed of much attraction to them, in the same place, and they kept up their fire almost the whole day, firing some 1000 rounds of ammunition. Sir John Burgoyne, who was present, seemed delighted. He laughed, and said, "This is what I like; they show us their range, and waste their ammunition."

Some of our ships have been firing incessantly at Sebastopol, and have quite crippled and destroyed an important fortress which interfered with our siege operations. One of the long-range Lancaster guns had been mounted on the *Arrow*, and for several days had been trying its range upon the fortress. Its success exceeded the most sanguine expectations. Our officers on board were entertained that, had we more of them, we might, in a fortnight, destroy the whole town, shipping, and fortifications of Sebastopol, without the loss of a man on our side. The first few shots fired by the *Arrow*, at three miles, the gun was too elevated, and the ball passed far over the whole place. Afterwards the range was precisely taken, and for three hours shot and shell were thrown into the nearest battery until it was completely destroyed. For the last half-hour of the firing it never returned a shot. But this, it appears, is by no means the sole merit of the gun. It weakens the resources of Sebastopol still more fatally than by knocking up batteries. Under the natural belief that because their works were in range, the vessel which fired must be in range also, the Russians returned a tremendous fire; but every shot sank in the sea at a distance three quarters of a mile distance from the *Arrow*. Unless there are incredible stores of ammunition in Sebastopol, such a mode of fighting must soon leave it without a shot. The screw gun-boat *Beagle* joined the fleet on the 30th instant, but had not yet been engaged. The *Terrible* came in one night and poured five broadsides into Sebastopol before a shot was returned. The enemy appeared to be quite taken up with watching the land side, and it was some minutes before their batteries answered. The *Vesuvius* was not touched.

On the 2nd inst., a reconnicissance of the enemy's position took place by Lord Raglan and staff. Sir John Burgoyne also made an engineering reconnoissance. They enemy fired on them, but without effect. A large body of Russians left Sebastopol on the same day, and marched towards the north-east. General Airey and Major Woodford came upon a body of about 5000 Russian troops marching along on our right flank that morning, and later in the day a French officer rode across to the camp with intelligence that a large body of Russian infantry was being concentrated on the right of the English army. Some firing was heard on the evening of the 1st, which was supposed from the direction to be intended as signals to the beleaguered garrison. It was thought that General Liprandi's division might perhaps have effected a junction with Menschikoff's defeated battalions, or that Osten-Sacken had arrived at Simferopol. The *Soldaten Freund* affirms that, on the 20th inst., the Russian army would be 72,000 strong.

The whole of the aristocracy, and, indeed, all the Russian population of South Crimea, are said to have sought refuge in Sebastopol. So great is the concourse of inhabitants, that thousands sleep in the streets each night. As a preliminary operation, the Allies, have turned aside the little stream of water which supplied the town, so that the garrison must soon begin to suffer. As the siege is pressed, the great mass of the inhabitants will probably be removed by the north side; and with their escape the Allies would not interfere, as they have no idea of starving out the fortresses, but storming them.

The *Simla*, *Trent*, and *Jason*, had arrived from Varna at Balaclava, bringing with them the heavy cavalry, about a thousand horses; they were separated from the other transports in a gale of wind. Two little steamers, the *Brenda* and *Minna*, were employed during the whole of Sunday, the 1st inst., in landing the horses. The 5th Dragoons landed on the 1st, and went out next day with the rest of the cavalry in pursuit of a strong force of Cossacks which had appeared in the rear of the British army. Six thousand Egyptian cavalry were expected to arrive at Balaclava on the 5th inst., and four steamers were to go from Varna to Balaclava to return with transport ships for the conveyance of provisions from Varna to the Allies. Meanwhile, the four steamers set off for Alexandria, to return with 4000 Egyptian artillerymen.

As the troops are gradually drawing nearer to Sebastopol—in order not to leave Balaclava exposed, 1000 marines have been landed from different ships, and pitched their camp on the hills commanding the

bay. They have cut the road on the east side, and thrown up some earthworks. The position is easily defended by infantry, and it shows how little the Russians were aware of the movement of the Allied troops, and the changing of their front, that they left such an important position comparatively unprotected. Besides securing an excellent landing-place for the siege train, the possession of Balaclava makes the Allied troops masters of the ground about Sebastopol, which slopes down gradually towards the town.

In addition to the marines, on Monday morning, the 2nd inst., the *Firebrand* steamed into Balaclava with 1000 sailors, detached from the different sailing-vessels, under the orders of Captain Lushington, of the *Albion*. They were immediately disembarked, and began dragging up the guns of the *Diamond*, with which they are going to set during the siege. The sailors are described as having begun their hard work most merrily. Like schoolboys during play time, they seemed to be delighted at having escaped the paralysing influence afloat, which had condemned them hitherto to inactivity, and appeared elated by the idea that there were something to do on shore. The taking of Inkerman—an idea which most of the crews of the sailing-vessels had nearly given up.

The French have chosen another place for landing their siege train, namely, Arrow Bay, Kamiesh Bay, and another close to Cape Chersonesus. As they are to form, this time, the left wing, near the sea, they thus save a march of some distance. The *Moniteur* of Thursday states that the French army will take the left in the attacks from the sea to the Southern Fort, and that the English will take theirs from the Southern Fort to Inkerman. The French army is divided into two corps. The 3rd and 4th Divisions, under General Forey, is to undertake the siege; while the 1st and 2nd Divisions, under General Bosquet, will form the corps of observation and reserve.

The Light-house of Cape Cherson has fallen into our hands, and is lighted up by English sailors. The Russians had left it in darkness, but a party of blue-jackets dashed at it on the 26th, and compelled the Russian light house keeper to illuminate it. They have kept fast hold of it ever since, for the Russians cannot get at it without coming under the fire of our ships. Jack is in great delight at this little feat.

The following order of the day, prepared by the Allied Generals on the evening of October 3, regulating the commencement of the siege, was issued a few hours before the despatches left. The names of the first detachments at work could not be ascertained. The intrenchments, however, were opened with perfect success, not a shot disturbing the men:—

ORDERS TO THE ARMY BEFORE COMMENCING SIEGE OPERATIONS.

"The trenches will be opened this evening against Sebastopol. A working-party, consisting of ——, furnished by the ——, will be marched to the Engineers' dépôt at — p.m., where they will receive tools and directions from the Engineers' officers and Sappers, who will guide them to the works. They will be without arms and accoutrements. The guard for the protection of the working and ground will consist of ——, furnished by ——, and will parade in their camp at — p.m.; be conducted to their positions, posted, and receive instructions from staff officers who will be assembled for the purpose.

"All the movements of the parties must be, if possible, kept out of view of the place.

"After working from their last place of assembly, which will be after dark, the *utmost silence must be preserved*, and the least possible noise of any kind made. The working-parties will be arranged in proper order by the Engineers, but it will not commence work till ordered, after which it must be carried on *with the greatest energy*.

"The Engineers will be charged with the arrangements, but the officers of the troops must be responsible for the maintenance of order, and attention to the directions given by the Engineers, and for the amount of work done. On diligence and regular conduct of the working-parties will depend more rapid and complete success of the enterprise. The working-party must not quit the works on slight alarms. If the enemy make a sortie, the guard will advance and drive them in, and before they reach the work, if possible. Should the working-party be absolutely obliged to retire, they will take their tools with them, and reform a short distance in rear, to return to the work when the sortie is repulsed.

"The guard will be posted in rear of the working-party, and near to it, if possible, under cover from the fire of the place; if not, they must lie down in order of battle, with accoutrements on, and each man with his firelock close by him—one party, not less than one-third of the forces, absolutely on the alert all through the night, taking it alternately, ready for an immediate rush on the enemy.

"A sortie is out and on the works in a very short time, and therefore the guard must be in immediate readiness to attack it without hesitation; nothing is so easily defeated as a sortie if charged without delay.

"After the repulse of any sortie, the guard will return under cover as soon as possible, and resume their position.

"All working-parties and guards will be composed of entire regiments, or parts, and not of detachments, made up of different corps."

PRINCE MENSCHIKOFF'S DESPATCHES.

The following extract from the *Journal de St. Petersbourg* of the 8th instant, will show that the telegraphic abstract conveys but a faint impression of the extent to which Prince Menschikoff or his Government have misrepresented the movements of the Allies in the Crimea. The *Journal of St. Petersbury*, quoting the supplement extraordinary of the *Invalide Russe* of Sept. 29 (Oct. 7), states:—

General Prince Menschikoff reports to the Emperor, under date of September 18 (30), that, having made his flank movement from Sebastopol on Bagtchesarai, he was preparing to assume the offensive on the first opportunity. This plan promised the most success, inasmuch as the Allies had divided their forces. While the French were approaching some fortifications on the northern shore of the Sebastopol bay, the English troops had squeezed in Balaclava by sea, where they had effected a landing. As soon as Prince Menschikoff was informed of it, he advanced; but the French, avoiding the combat, had also abandoned the north of Sebastopol, and had gone to the south of that city in order to rejoin their allies. Prince Menschikoff had arrived on the 18th (30th) with the greater part of his troops at the fortifications of the north and had established himself there, waiting till the enemy's intentions should be manifested. Up to the 18th (30th) there had been no operation.

THE BALTIC FLEET.

The latest accounts relating to the English fleet were that the twelve screw line-of battle ships would proceed to Ledsund so soon as the state of the weather permitted their leaving the Gulf of Finland. According to present arrangements they will take their final departure from the Russian coasts in eight or ten days from the present time, and may be expected in England about the middle of November. The blockade of the enemy's ports will then be entrusted to Captain R. Watson, of the *Impérieuse* (50), who will have under his orders the *Euryalus* (50), *Arrogant* (46), *Magicienne* (16), *Desperate* (6), *Building* (6), and *Dragon* (6), together with two or three smaller steamers. These vessels will not take their departure from the Baltic until compelled to do so to avoid being frozen in; and if, on further consideration, it should be deemed advisable, they will pass the winter at Kiel, or at some other neutral port, instead of returning to England. The *Amphion*, Captain A. C. Key, was, by the latest advices, cruising off Memel. The *Alban* and *Lightning* steamers had left the fleet, and were on their voyage home; Captain Sullivan, of the latter vessel, remaining on board the flag-ship of the Commander-in-Chief.

The *Leopard*, 18, paddle-frigate, bearing the flag of Rear-Admiral Martin, arrived at Spithead on Wednesday morning, from the Gulf of Bothnia and the Baltic, but she brought no additional news of the movements of the Baltic fleet. She had coasted along the shores of Sweden on her voyage home, calling at several ports on that coast, her last call being at Gottenburg.

On Saturday last two French line-of-battle ships and three French frigates passed Nyborg on their way to France. On Sunday the *Austerlitz*, accompanied by two French frigates, passed in the same direction. The *Inflexible*, the flag-ship of Admiral Parseval Deschenes, has also sailed homewards.

EXPEDITION AGAINST THE RUSSIANS AT SITKA.

The last advices from Hong-Kong state that Admiral Sir James Stirling remained at Shanghai, awaiting the arrival of Admiral de Guerre, in the French frigate *Jeanne d'Arc*. The united English and French force would proceed to New Archangel (Sitka), and co-operate with Admiral Price, of the Pacific squadron, in giving an account of the Russian ships of war and forts in the north.

THE WAR IN ASIA.

A letter from Batoum brings intelligence from Asia Minor up to the 29th ult. Ferik Pacha, who, with 8000 men, was on the Natsuchta, crossed into the Russian territory on the 27th, and reconnoitred as far as Dechumat. The Russians are concentrated at Kutais, and are collecting reinforcements from the fortresses on the eastern coast of the Euxine. The Kars army is being reinforced and re-organised. Ismail Pacha was expected to join it within a few weeks. The present Governor of Kars, Zary Pacha, remains inactive, while the Russians are preparing for future operations. Schamyl sent messengers to inform the leaders of the Turkish army at Kars of his intended descent on the Russian territory, and expected they would co-operate with him; but their petty jealousies, and the demoralised state of their army, prevented Schamyl's anticipations being fulfilled; "and," as the Batoum correspondent says, "as he (Schamyl) found himself unsupported by the Turks, he has lately returned to his mountains laden with Russian booty." The Governor of Erzeroum was engaged in attempting to stop the disorders of the Zeybeks in the interior of Anatolia, and had captured several of the leaders, and restored quiet in the immediate neighbourhood of his Pachalik, "but not till the Zeybeks had murdered several French officers on their journey to Kars." The Russians have recently again withdrawn from Bayasid, and the communication with Persia is re-established.

AMERICA.

The British and North American Royal Mail steamer *Arabia* arrived at Liverpool, on Saturday evening, from New York, after a passage of only ten days; having sailed on the 4th instant.

The *New York Herald* announces that the Executive at Washington has determined on decided measures with regard to the Central American question. The right of Nicaragua to the port of Greytown is to be asser ed, and the Mosquito protectorate treated with marks of contempt. For this purpose the razee *Independence* is to go there, accompanied by a war-steamer, and perhaps other vessels.

Washington remains still quiet on the annexation of the Sandwich Islands to the United States as on the verge of completion; and the very terms agreed upon have even been published by an Albany paper.

The British Minister has issued a circular, warning all British subjects in Mexico from contributing to the loan proposed by Russia. A circular has been issued by the Government, directing the Governors of the departments and territories to keep a book, in which are to be recorded, with all punctuality and exactness, the name, nationality, date of landing, qualifications of passport, and all other information that can be obtained, respecting foreigners arriving at any point within the jurisdiction of the Governors, as well as respecting foreigners who may remain there, or may go into the interior of the Republic.

The non-arrival of the *Arctic* had begun to excite observation; but, as she had been only fourteen days at sea, no doubts as to her safety had arisen.

INDIA AND CHINA.

The papers in anticipation of the Overland Mail from India, vit Marseilles, have come to hand. Letters from the Punjaub mention the dangerous illness of our ally, Maharajah Gaolab Singh. He is not expected to live; and, as his death would probably be followed by a disputed succession and civil war, we shall be under the necessity of interfering with the affairs of his state. Gholab's son and heir, Rumheer Singh, is said to be extremely unpopular, and his nephew, Ja Wahir Singh, much beloved.

The administration of the lately lapsed state of Nagpore has been modelled on the system that has succeeded so well in the Punjaub.

The Indian papers continue to be filled with accounts of petty disturbances in Oude. The most flagrant crimes are committed with impunity in the immediate neighbourhood of the palace and residency, by the eunuchs and other favourites of the King. The country appears to be in a state of anarchy and intestine warfare, owing to the weakness of the Government.

The Nizam's dominions are again disturbed. A Zemindar, named Letchimand Row, at the head of some hundreds of armed followers, is plundering and intercepting remittances to the capital. He carried off, about a fortnight ago, £20,000 in cash, besides jewels, from a single district; and the Naib of the districts in which he is plundering reports that the Government troops are quite unequal to his capture, and requests extensions aid.

Affairs at Canton remain in the same critical state, and the disaffection is extending. The insurgents are in great force in the surrounding country, and three attempts were made to take the city, which, however, failed. Honam, opposite Canton, is threatened, and the latest accounts mention that the people are quietly mustering for an open revolt against the mandarins' authority. They had not molested any one, and will not allow goods or valuables to be removed from the native shops, to prevent any panic.

At Whampoa contributions are being levied under threat. The river between that place and Canton continues to be infested by pirates, interfering with the trade, which can only be carried on by the presence of a steamer or armed convoy. The approaches of the city by land and water are in possession of the insurgents; and the Government seem to confine their operations to the defence of the city.

The transit of teas has been stopped by the heavy exactions demanded in passing; and, inquiry for goods having ceased, the business at Canton has been limited to the shipping off the teas that are on the market.

An attempt has been made to effect a compromise with the insurgents, but was not successful.

NATIONAL SPORTS.

FRIDAY'S rural tryst of Upton, on "the salmon-haunted Severn," and a six days' festival at Newmarket, are the two racing fixtures for next week; and then "horn and hound" will play the leading part in the sports. Those who think, with old Frank Buckle, that no racer ought to be saddled after the Newmarket Saturday.

TATTERSALL'S.—THURSDAY.

CAMBRIDGESHIRE STAKES.—9 to 8 agst Orlando (3 to 1 taken), 11 to 8 agst Raffle (off); 12 to 1 agst Sabora (1). 100 to 8 agst Harviss (1); 20 to 1 agst Stonehenge (1); 25 to 1 agst Barrel (off), 100 to 1 agst Monte Mores off; 500 even between Grinoco and Rattle.

DERBY.—30 to 1 agst Uniform (1); 33 to 1 agst Wild Dayrell (1).

WARWICK AND LEAMINGTON MEETING.

TUESDAY.

Match: 100 sovs Gossip, 1. Apostate 2.
Sweepstakes of 5 sovs.—Duet, 1. Despised, 2.
Great Warwick Handicap.—Rifle, 1. Pantomime, 2.
Sweepstakes of 5 sovs.—Falcon, 1. Apostate, 2.
Two-Y-ear-Old Handicap.—Cock of the North, 1. Priestcraft, 2.
Leamington Welter Cup.—Veteran, 1. Morning Star, 2.

WEDNESDAY.

Handicap Plate.—Falcon, 1. Gaslight 2.
Scurry Handicap.—Florist, 1. The Dandy, 2.
Grand Open Steeplechase.—Tipperary Boy, 1. Star of England, 2.
Hunt Cup Steeplechase.—Odiham, 1. Frank, 2.
Free Handicap Hurdle Race.—Banstead, 1. Tipperary Boy, 2.
Selling Hurdle Race.—Songster, 1. Massaroni, 2.

RICHMOND RACES.—WEDNESDAY.

Richmond Handicap.—Merry Bird, 1. Ellermere, 2.
Easby Stakes.—Pandington, 1. Lord Alfred, 2.
Aske Triennial Stakes.—Fairthorn, 1.
Sweepstakes.—Joan walked over.

PROROGATION OF CONVOCATION.—Yesterday (Friday) morning the Convocation of the Province of Canterbury was prorogued, according to the tenor of a Royal Writ, by the Vicar-General of the Most Rev. the Archbishop of Canterbury and Metropolitan, under a special commission from his Grace to that effect, until Friday, Nov. 17. The meeting on the 17th of November will be merely formal, none of the clergy being expected to attend.

INTENDED VISIT OF THE EMPEROR AND EMPRESS OF THE FRENCH.—I understand from what would appear to be excellent authority, that the visit will take place in the course of the month of November, but I have not heard that the precise day is fixed. I understand that it is expected that Queen Victoria and Prince Albert will return the visit about the middle of May next, when her Majesty will not only be able to see the French Exhibition, which will then be open, but see Paris in all its glory, with the immense improvements now going on, in a state of completion. It is almost needless to say that this exchange of visits is of immense importance. They must not be looked on simply as an exchange of civilities between the Sovereigns of two great countries. They are a great political event, and will do much to cement the alliance which has already been so cordially entered into between the people of both countries.—*Paris Correspondent of the Chronicle.*

THE VINTAGE IN FRANCE.

BORDEAUX AND THE CLARET DISTRICTS.

OCTOBER in France is one of the busiest and most exciting months in the year. As September draws to a close the country people begin to watch with anxiety the changes of the wind and the appearance of the sky, and the talk from morning to night is continually about the weather. Every proprietor of a vintage looks upon the sunlight as a species of boon to himself, and begins already to count his "gold in the sunbeams." The whole country is up and stirring. The idlers and paupers in town and country flock to the vine fields, to lend a hand at the grape-gathering and a foot at the grape-pressing. This year's vintage appears to have commenced under somewhat unfavourable auspices, owing to the ravages of the oidium or grape disease, which has rapidly increased of late years, not only in France, but in the vintages of Spain, Portugal, and Madeira. It is to be hoped, however, that things are not quite so bad as they are represented. The tendency to exaggerate is a general one, and it is possible that the vine-proprietors, in the first shock of the moment, may have exaggerated their misfortunes—especially as the holders of stocks are generally but too apt in their own interest to raise the value of last year's produce at the expense of the future.

The Emperor of the French, with that admission to Free-trade principles which has distinguished his career, has taken advantage of the blight upon the vineyards to modify the duties upon the importation of wine into France.

The following extract from an article of the *Débats* on the decree reducing the import duties on foreign wines and spirits will be read with interest:—

"The news which we received from the most southern of the wine producing departments, where the vintage has commenced, show us what extent the recent decree lowering foreign wines to be imported into France until otherwise ordered, will affect. The price of wine remains at first under the same aspect. In an average year the vintage amounts to several hundred millions; and, if wine be not absolutely indispensable to the subsistence of the population, it is extremely useful. In the southern departments in particular where wine is produced and sold at a very low price, it occupies a great place in the food of the people. In the region known by the Mediterranean, Aude, which is there reached for it usually exceeds 30 francs, or for many times at from ten to fifteen centimes the quart; that is to say, but in these parts it is within the reach of a person, the meanest labourer in fact, can take it at his meals. It is from it that he derives great part of his strength. At present in those parts, a wine inferior to the ordinary quality costs more than treble, namely, from forty to sixty centimes the quart. At that price, it is an article which ceases to be within reach of the poorer classes. Hence it causes great perturbation in the customary regimen of the populations. Under these circumstances, the Government, justly anxious to remedy, so far as depends on it, food at a cheap rate, could not have done better than remove the barrier which prevented the free admission of ordinary wines from abroad. It was a chimerical idea in 1816 to impose heavy duties on foreign wines, in order to protect our production. That production protects itself unaided. We may say of the ordinary wines of France, as well as of her finer sorts, they are unequalled. They are so not only by the quality, the flavour, the just proportion of spirit they contain, but also by the abundance of their production, and the lowness of their prices. This is especially true of the wines in the departments near the Mediterranean. The department of the Hérault, which is the most remarkable of all in this respect, generally produces 4,000,000 hectolitres. That is the tenth of the production of France. The wholesale price for wine a year old is, under ordinary circumstances, 7 fr. the hectolitre, or 7c. the litre; and if kept for an additional year, the wine is much more agreeable and healthy than the wines charged at Paris, in restaurants, 1 fr. 50c. or 2 fr. Even the wine called St. George is generally sold in the country at 7c. the litre, or thereabouts. Now, it is absolutely impossible to import into France at that rate wine which is worth anything at all, on account of the expense of conveyance, of commissions, and of the profit which the importer desires to make. Such a fact suffices to prove that the pretended protection which it was thought right to accord to ordinary wines, by imposing Customs duties on foreign wines, is a fiction.

Our Artist has chosen for illustration the city of Bordeaux, the great wine emporium of France; and the vintages of Château Margaux and Château Lafitte, the most celebrated in the whole Claret district; together with the different processes of wine making.

Bordeaux is situated at the distance of about 600 miles from Paris, on the banks of the river Gironde, seventy miles from its junction with the sea. It contains a population of 110,000 inhabitants, and is the second seaport town in France. The quays and harbours of this ancient city are among the finest in the world. The river is 2800 feet broad, and from 30 to 90 deep, with water sufficient to float vessels of 1200 tons burden. The quays of Bordeaux have been compared to those of Liverpool, which, indeed, they resemble in a remarkable manner, both by the fine frontage they present, the quantity of shipping they contain, and their great extent.

Bordeaux was known to the Romans under the name of Bardigala, and was made the capital of Aquitana under Hadrian. It fell into the possession of the English in 1152, by the marriage of Henry II. of England with Ellinor of Guienne, and remained so till the middle of the fifteenth century. The Black Prince lived in Bordeaux for several years, and made it his head-quarters previous to the famous battle of Poictiers. Here, also, his son Richard II. was born, and hence called Richard of Bordeaux. Among the more modern historical events connected with Bordeaux was its siege during the civil wars of the Fronde, by the youthful King Louis XIV., his mother, and Mazarin. Bordeaux also figured in the Revolution of '89; and many of the greatest and most celebrated members of the Legislative Assembly—such as Ducos, Gaudet, Gensonné, Vergniani, and others—were returned by the Department of Gironde—thence called Girondins. All the commotions that afflicted Paris during those disastrous times found ready response in Bordeaux. Bordeaux also had its Reign of Terror, its guillotine, and its human shambles.

Bordeaux is a fine city, its streets being for the most part long and spacious, and its houses neat and well built. The best part of the town is the northern, or modern quarter, on which formerly stood the fortress of La Trompette, built by Louis XIV., and destroyed during the reign of Louis XVI. Among the principal public edifices in Bordeaux are the theatre, a Grecian building, erected by Louis Combelien, in the year 1780; the Cathedral of St. André, distinguished by its two graceful spires, upwards of 160 feet in height, and built by the English; the Tour de Pey-berland—a fine tower, built, in 1440, by Pierre Berland, Bishop of Bordeaux, and partially destroyed during the Revolution; the Church of St Croix, the oldest church in Bordeaux; the Church of St Michael, distinguished by its belfry, 180 feet high, and built in the middle of the fifteenth century; the Church of St Seurin, formerly the Cathedral, and named after St. Severin, a Bishop of Bordeaux, during the fifth century; the Chapelle du College—a Gothic edifice, chiefly celebrated as containing a monument and statue of Montaigne, the celebrated essayist and philosopher, who was born here and so much admired by Shakspeare, and who is still a favourite author among the learned of all nations. The principal antiquities of Bordeaux are the Palais Julien—a ruined amphitheatre, built by the Emperor of that name, and said to have contained upwards of 15,000 spectators; the Tour de l'Horloge, built in the middle of the thirteenth century, by King Henry III. of England; the Porte de Caillon, built by Charles VIII., in commemoration of the battle of Fornova; and the Bourse, formerly a palace. The other objects of interest are the Museum, the Library, containing 100,000 volumes, the new Bourse, the Château de la Brède, in the vicinity of Bordeaux, celebrated as being the birthplace of the great Montesquieu; and the old Castle of Blanquefort, the fortress of the Black Prince. One of the most splendid cities in the world, and one of the most ancient towns of France, Frenchmen have reason to be proud of Bordeaux; once an English stronghold, and the court of English Guienne, it becomes us also to be proud of it, and to rejoice in its prosperity.

Medoc, a narrow strip of land, said to be so called from the Latin words *medio aquæ*, is one of the finest and most celebrated vine districts in France. It extends northwards from Bordeaux between the sea on the one hand, and the rivers Garonne and Gironde on the other; its average breadth being from one to two miles. To the south and southwest of this valuable tract of country, and contrasting singularly with it, are the Landes, a flat, sandy, thinly-peopled region, with scarcely any vegetation, save here and there a few trees. The appearance of a vine plantation is thus described by Mr. Reach, in his amusing work entitled "Claret and Olives"—"Imagine (says that writer) open and unfenced expanses of stunted-looking bushes rising two feet above the surface, planted in rows upon the summit of deep furrow-ridges, and fastened with great care to low fence-like lines of espaliers, which run in unbroken ranks from one end of the huge fields to the other. These espaliers, or laths, are cuttings of the walnut-trees around; and the tendrils of the vine are attached to the horizontally running stakes with withes or thongs of bark. It is curious to observe the vigilant pains and attention with which every twig has been supported, without being strained; and how things are arranged so as to give every cluster as fair a chance as possible of a goodly allowance of sun. Such, then is the general appearance of matters; but it is by no means perfectly uniform. Now and then you find a patch

THE VINTAGE IN FRANCE.

THE CITY OF BORDEAUX.

of vines unsupported, drooping, straggling, and sprawling and intertwisting their branches like beds of snakes; and again you came into the district of a new species of bush—a thicker, stouter—a grenadier vine—growing to at least six feet, and supported by a corresponding stake. But the low, two-feet dwarfs are invariably the great wine-givers."

Vines attain their full growth at the age of five years. Many produce the most excellent grapes at this early period, and some have been known to bring forth good fruit even at the age of 150 or 200 years. The vine does not, like most other plants, increase in height according as it increases in years, but in depth merely; thus a vine two or three feet high is often known to have roots and fibres thirty, forty, and even fifty feet in length. About three feet below the surface of the soil is a hard impenetrable stratum of conglomerate, known in France by the provincial name of *alios*, which requires to be broken previous to planting the vine. Every season a plough is drawn between the rows of vines, for the purpose of exposing the roots.

A person travelling in a wine country for the first time might be surprised if he were told that the hard gravelly soil of Medoc is more valuable than many of the most loamy arable lands; and still more surprised if told that the hardest parts of it were the most precious of all. The reason why this stony soil, on which scarcely anything else will flourish, is so favourable to the growth of the vine is that the vine lives more by heat and less by moisture than any other vegetable. The gravel acts at once as a sieve to carry away the water from the sinewy roots of the plant, and as an oven to retain the heat of the sun's rays. Most people, if taken to a vineyard, and asked to point out the best vines, would point to the tall, luxuriant plants which over-top their more modest companions by several feet; but the shrewd vintager, after reading you a homily on the folly of taking things by appearances, would tell you that what the dwarfish vines want in beauty they make up for in virtue. The most valuable vines seldom exceed from two to three feet in height.

The day for the commencement of the vintage in France is fixed by the Government authorities, who appoint overseers to make the round of the districts to examine into the state of the crops previous to giving the order for commencing operations. Mr. Keach gives a lively and comprehensive description of grape-gathering in Medoc which may serve as an explanation of the scene represented by our Artist. "There are no idle spectators at a vintage," says that writer, "all the world must work; and so I speedily found myself—after being most cordially welcomed by a fat old gentleman, hoarse with bawling, in a pair of very dirty shirt sleeves and a pouring perspiration—with a huge pair of scissors in my hand, cutting off the branches, in the midst of an uproarious troop of young men, young women, and children—threading the avenues between the plants stripping with wonderful dexterity the clustered branches—their hands, indeed, gliding, like dirty, yellow serpents, among the broad green leaves; and sometimes shouting out merry badinage, sometimes singing bits of strange rhythmed melody in chorus; and all the time, as far as the feat could be effected, eating the grapes by handfuls. The whole thing was very jolly; I never heard more laughing about nothing in particular, more open and unblushing love-making, and more resolute quizzing of the good man, whose grapes were going partly into the baskets, tubs, pots, and pans, carried every few minutes by the children and old people out of the green alleys to the pressing-tub, and partly into the capacious stomachs of the gatherers. At first, I was dainty in my selection of the grapes to be chosen, eschewing the under-ripe and the over-ripe. A damsel beside me observed this: 'Out away, she said; 'every grape makes wine.' 'Yes; but the caterpillars?' 'They give it a body!' * * * * I was talking to the lord of the vineyard, when some one—there were petticoats in the case—dashed at him from behind, and instantly a couple of hands clasped his neck, and one of them squashed a huge bunch of grapes over his mouth and nose, rubbing in the bleeding fruit as if it were a healing ointment, while streams of juice squirted from between the fingers of the fair assailant, and streamed down the patron's equivocal shirt. After being half-barked, the good man shook his fist at the girl as she flew, laughing down the alley: and then, resuming his talk with me, he said, 'We call that *Faire des moustaches*. We all do it at vintage time.' And ten minutes thereafter I saw the jolly old boy go chasing an ancient crone of a pail-bearer, a bunch of very ripe grapes in his hand, amid the delighted harrahs of all assembled."

After the grapes have been gathered, they are placed into a tub called a *cuvier de pressoir*, in which they are trodden, the juice flowing out of a hole at the side of the press into a sieve below, which retains the skins

THE VINTAGE IN FRANCE.

THE VINTAGE, IN MEDOC, NEAR BORDEAUX.

stones, and other extraneous matter, and thence into tubs. The wine-treaders principally consist of strong men that can bear the fatigue of the "wine-dance." Champagne and Rhone wines are generally made by machine pressing — a method which certainly seems preferable, in point of cleanliness, to the ordinary method of treading, which is universal in the claret country. Attempts have been made to introduce this new system into the great vintages of France, but the proprietors insist that no contrivance, however ingenious, can ever compete with the human foot for grape-pressing purposes; and meet the objections of the squeamish, as to the propriety of allowing men to smash the grapes with their feet, by stating that the wine—first by the filtering, and second by the fermentation, which it undergoes is effectually cleansed of all impurity.

The next and final process which the juice of the grape undergoes is that of fermentation. After the vats have stood some twenty or four and-twenty hours, the fermentation commences. The doors of the cellars are then locked, to prevent the approach of children and other inquisitive persons; the atmosphere around the fermenting vats being fatal to human life, from the quantity of gas with which it is impregnated. The stalks, skins, and leaves, which fall to the bottom of the tubs, are taken out and squeezed a second time, when they produce a bad, bitter wine, which is sold cheap to the peasantry. Nor is the residue even of this second distillation allowed to be wasted. It is soaked in water, to produce *piquette*—a vile concoction, sold at one or two sous a bottle, and honoured with the name of wine.

WINE MAKING, AT THE CHATEAU LAFITTE

The wines of France are divisible into the three great varieties of Champagne, Burgundy, and Claret or Bordeaux. Of Champagne, the best white wines are those of Sillery, Ay, Mareuil, Dizy, Epernay, Cramant, Avize, Menil, and several others of the department of Marne—famous for their fine sparkling qualities, and their exquisite flavour when not effervescent. Champagne also furnishes several red wines, equally excellent and celebrated; such as those of Verzy, Verzenay, Mailly, St Basle, Bouzy, St. Thierry, and Cumières, in the department of Marne; and those of Ricoys, Balnot sur l'Ainge, Avirey, and Bagneux la Fosse, in the department of the Aube.

The red wines of Burgundy are distinguished by their brilliant colour, their fine delicate flavour, their strength, and their rich bouquet. Of these, the principal growths are—

THE PRESSOIR OF THE CHATEAU LAFITTE, NEAR BORDEAUX.

Romanée-Conti, Richebourg, La Tâche, Clos Vougeot, Chambertin, Clos St. Georges, Corton, Volnay, Pommard, Beaune, Chambole, Mercurey, Savigny, and Meursault, in the department of Côte d'Or; Pouy, Préaux Chénette, and Migreune, in the department of the Yonne; and Thorins, in Saône-et-Loire. The best white Burgundies are Hermitage, Montrachet, Chevalier Montrachet, Lapyridre, Goute d'Or, Charme, and others in the territory of Meursault, in Côte d'Or; Vau Lor illon, Les Grâces, and Chablis, in the department of the Yonne; and Pouilly and Cuvée, in the department of Nièvre. Burgundy also furnishes a great quantity of ordinary wines.

The different crus or districts of Bordeaux are distinguished by this delightful system of nomenclature. The most celebrated are those of Château-Margaux, [illegible], Château-Haut-Brion, Haut-Hautbrion, St. Julien, [illegible], Palus, Talence, Leoville, [illegible] white wines are Rommes, Rion-[illegible], Barsac, Preignac, and Langon. Bordeaux, like Burgundy, [illegible]es several *vins ordinaires*. The most excellent of these are Médoc, Sarlat, and Adour.

WINE CELLAR OF MESSRS. CRUSE AND HIRSCHFELD, AT BORDEAUX.

The average vine produce of Champagne is estimated in the French statistical tables at 55,500 hectares, or 138,870 acres of vineyards—yielding wines to the value of upwards of 11,000,000 of francs annually; the average vine produce of Burgundy at 89,580 hectares, or 224,300 acres—yielding wines to the value of 52,000,000 francs; and the average vine produce of Bordeaux at 137,000 hectares, or 343,000 acres—yielding wines to the amount of upwards of 49,000,000 of francs.

The composition of natural wines is so variable as to render it impossible to lay down a general analysis which shall apply in every particular to each wine individually. The following substances, however, are to be met with in more or less quantities in all natural wines—viz., water, alcohol, and mucilaginous matter; acetic and carbonic acid; blue and yellow colouring matter; sugar, cenanthine; bitartrate of potash, bitartrate of calcium, and bitartrate of magnesia; sulphate of lime, sulphate of potash; and oil. Attempts have been made to establish general rules, by which the quality as well as the vintage of a particular wine may be discovered, in case of the label on the bottle being incorrect. A *bon-vivant* will tell at once whether his wine be genuine or not by its bouquet, or by its flavour. A writer in the *Monitour Universel* has fanifully divided the wines of France, according to their taste, into the following five divisions:—1st, those of the eastern districts, having a taste of gun-flint; 2nd, those of the south, having a taste of rosat meut; 3rd, those of Bordeaux, having a taste of incense in the case of the superior wines, and of resin in the case of *ordinaires*; 4th, those of Burgundy, having a taste of faded rose-leaf, and a bouquet like the smell of the sprout of the wild eglantine; 5th, those of the interior, from Orleans to Tournine, having a taste of raspberry and violet as regards the red, and of willow-leaf as regards the white wines. When a wine has lost its tone, the mixing it with another will sometimes improve it. Weak wines, previous to being sent on a long journey, should be strengthened with a mixture of some rougher and more spirituous wine. This is often done [illegible] vineyards, but more frequently by merchants whose interest it is to sell strong wines at low prices. Clarets intended for the English market are, for the most part, mixed with Rhone wines, principally Hermitage. The use of brandy for that purpose, which many persons consider to be universal, is very rare. A perfect knowledge of the tastes of the different wines is only the result of a long experience; and even then it requires an extraordinary delicacy of palate to distinguish the several wines in one mixture.

It appears to be an undisputed fact that more wine is drunk in France than in any other country. The annual consumption of wines at Paris alone is estimated at upwards of 1,000,000 hectolitres; the number of proprietors and cultivators of the grape in France being no less than 5,000,000, and the average value of wines sold annually throughout the Empire amounting to upwards of 1,000,000,000 francs (about £42,000,000). The extent of the French vintage is estimated at nearly 2,000,000 hectares; and yields to the revenue an income of 200,000,000 francs (or £8,000,000). More than one-half of the *premiers crûs* are made into wines for English consumption; most of the second growths are consumed in Holland; and, of the third, in France. Very little *ordinaire* is imported into England. The cost price of a hogshead of the finest claret is estimated at about £50 in Bordeaux; and in England, at about £80, which includes freight, carriage, duty, &c. The annual average of wine produce in Medoc is estimated at from 158,000 to 170,000 hogsheads, of which only 6000 are exported to England.

CHATEAU MARGAUX, AND CHATEAU LAFITTE.

Château Margaux, one of the most celebrated vintages in Medoc, is situated at the distance of about 20 miles from Bordeaux. The Château itself is a large villa, built after the Italian school, and belongs to M. d'Agundo, a Spanish banker of eminence, who owns the surrounding vineyards. "Passing along a narrow sandy road, amid a waste of scrubby-looking bushes," says the excellent authority from whom we have already quoted, "you pass beneath the branches of a clump of noble oaks and elms, and perceive a great white structure glimmering garishly before you. Take such a country-house as you may still find in your grandmother's samplers, decorated with a due allowance of doors and windows. Clap before it a milplaced Grecian portico; whitewash the whole to a state of the most glaring and dazzling brightness; carefully close all outside shutters—painted white likewise—and [illegible] Château Margaux rising before you like a vast, ghastly [illegible] case, amid stately terraced gardens and trimmed, clipped, [illegible] trees." About half a mile from the Château is the [illegible] with its spruce, white-washed houses, and its [illegible] The soil of the Margaux estate is [illegible] and [illegible] yields an annual produce of about [illegible] about 120 are first growths. The grapes of Château Margaux are said to have a disagreeable taste, although the wines they produce are among the most splendid productions of the French vintage. Very little prime Margaux ever reaches England; [illegible] those of nearly all the other great vintages [illegible] bought up by Kings and Emperors, or by the Pope, who either reserve them for their own use and that of their courts, or send them as presents to their Ambassadors. Thus it often happens that the *premiers crûs* of the most celebrated vintages are sold for many seasons in advance.

Château Lafitte, near the seaport town of Pauillac, is a large building surrounded by trees, and standing in the midst of beautiful gardenwalks and terraces. It is the property of Sir Samuel Scott, the owner of the celebrated vintages to which it gives its name. Château Lafitte produces an annual average of 120 tuns of first-rate wines, together with a quantity of inferior sorts. The wines of Lesparre and those of Pauillac are both comprehended under the name of Lafitte; but those of Pauillac are by far the most excellent.

Subjoined is a representation of the cellars of Messrs. Cruse and Hirschfeld, one of the most extensive firms in Bordeaux, and which were visited by the Emperor Napoleon in October, 1852.

MUSIC.

Reunion des Arts.—The Réunion des Arts is a society composed of artists, and lovers of music, the fine arts, and *belles lettres*, who hold periodical evening meetings for the purpose of enjoying the pleasures derived from their favourite pursuits. These meetings are sometimes musical soirées, and sometimes *conversazioni* of a more general character. Many ladies and gentlemen of note in the artistic world are members; and the evenings are social, agreeable, and interesting. The society's rooms, in Harley-street, are furnished with a variety of paintings, engravings, and other works of art; and, during the meetings, many of the literary novelties of the day are to be found on the tables. The first meeting of the season was held on Wednesday evening, and was a soirée musicale. At such an early period, and when so many persons are still out of town, the attendances, of course, could not be so large, or the entertainment so brilliant, as they usually are later in the season. Still there was some classical music, well performed, which gave pleasure to the company; particularly Mendelssohn's Quartet in E flat, performed by Messrs. Ries, De Witt, Goffrie, and Pagre. Several vocal pieces were sung by Mdlle. Cesarini and Mr. Herberle.

The Concordia Society.—A concert was given by this society on Tuesday evening, at the rooms of the Greenwich Society for the Diffusion of Useful Knowledge. The Concordia Society has for its object the cultivation of pure vocal harmony, and its labours are neither inefficient nor unsuccessful. The programme of the concert consisted of an admirable selection of English glees and German part-songs, by Webbe, Callcott, Horsley, Mendelssohn, Weber, and other classical masters, sung by Miss Brantwell, Miss Williams, Messrs Fielding, Ball, Theodore, Distin, M'Davitt, and Percy—the members of the society. The room was filled by an assemblage of nearly seven hundred persons, by whom the pieces were received with the greatest applause—no less than five of them having been encored. The concert was given under the auspices of the Society for the Diffusion of Useful Knowledge; and the Concordians received the thanks and the congratulations of the committee on their excellent and successful performance.

The Perry Testimonial Fund.—Lieutenant Perry's Defence and Testimonial Fund is closed. The total amount subscribed is about £2100, from which sum there will be deducted 300 guineas for law charges, and about the same amount for advertising and incidental expenses. This will leave a balance in hand amounting to about £1700, which sum will be invested in the joint names of Lieutenant Perry and the Mayor of Windsor, to be afterwards expended in the purchase of his promotion in the army should the verdict of the court-martial hereafter be set aside, which it is confidently expected will be the case; but, if otherwise, the money to be placed at Lieutenant Perry's disposal in promoting his best interests as a civilian.

Portrait of Lieut. Bellot.—(Published by T. Boys).—This very interesting memorial of the late Lieut. Bellot, the ill-fated Arctic explorer, has been engraved by Mr. James Scott, from the picture painted by Mr. Stephen Pearce, for Lady Franklin, just before he took his departure for the North. The plate is engraved in Mr. Scott's best manner, and is, by special permission, dedicated to the Emperor of the French, who honoured the painter with an audience at the Tuileries, and as a mark of his high satisfaction, presented Mr. Pearce with an elegant snuff-box, bearing the Imperial crown and cipher on the lid.

New Postage Stamp Affixer.—Mr. Naylor, of Birmingham, has invented a small machine for affixing postage stamps to letters, dispensing with the disagreeable practice of moistening them with the tongue. The corner of the letter is wetted by passing it between a damp spong and roller, it is then placed over a spring box containing stamps, one of which by the depression of a small lever, is securely affixed to the letter. This can be accomplished in two or three seconds.

Testimonial.—On Thursday last, the officers and servants of the East Lancashire Railway Company presented to Mr. Alfred Cremeni, their late audit-clerk (on the occasion of his leaving the employment), a silver tea-service, accompanied by a suitable address, engrossed on vellum, and handsomely bound in morocco.

The Pending Church Controversy.—The Archbishop of Canterbury has issued a Commission to inquire whether there is any ground for proceeding further with the objections that have been [illegible] against the Venerable Archdeacon Denison's doctrinal teaching. The Commission consists of the Right Rev. Dr. Carr, late Bishop of Bombay, but now Rector of Bath; the Rev. Charles Langton, of Queen Camel Vicarage, Ilchester; the Rev. Charles Poe, Rural Dean, Yeovilton Rectory, Ilchester; the Rev. R. C. Phipps, Cuckington Rectory, Wincanton; the Rev. H. Parr, Ship[illegible]

Proposed Return of the Jew[illegible]—[illegible] Jews are endeavouring to obtai[illegible] by Ferdinand and Isabella, which ban[illegible] their persuasion. They have addressed to the [illegible] effect, in which they endeavour to prove [illegible] Spain long before that country was inhabited by Christians. [illegible] quote, in support of their assertion, Strabo, Philo, [illegible] torian Le Nice, who even declar[illegible] services to the Chri[illegible]

CALENDAR FOR THE WEEK.

Sunday, Oct. 22.—14th Sunday after Trinity. Lord Holland died, 1840.
Monday, 23.—Royal Exchange founded, 1567. Battle of Edgehill, 1642.
Tuesday, 24.—Edict of Nantes revoked by Louis XIV., 1685.
Wednesday, 25.—St Crispin. Battle of Agincourt, 1415.
Thursday, 26.—Riots at Bristol, 1831. Hogarth died, 1764.
Friday, 27.—Sir Walter Raleigh beheaded, 1618.
Saturday, 28.—St Simon and St Jude.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 21, 1854.

Sebastopol continues to be the word in everybody's mouth, and the one engrossing thought in every mind. But military affairs do not march with so much rapidity as the public eagerness would desire; and the preparations for the siege have taken more time than people at home were led to anticipate. But the public will feel assured that whatever delays have occurred have been necessary to ensure success. Men at the head of so momentous an enterprise, crowned as they are with the laurels of recent victory, are not likely to hold back at the moment when a greater victory is within their grasp. They will strike at the proper time, we are certain—and with the proper effect, we must confidently believe. If it be possible for the United Armies to surpass the brilliant achievements of the Alma—they are the men from whom the blow may be expected. Reinforcements continue to reach them, and cavalry, of which they were so greatly in need on the memorable 20th of September, will not fail them to follow up the next advantage of their arms. The [illegible] Special Correspondent, dated from Balaclava, on the [illegible]—together with such telegraphic despatches of a later date, as appear to be worthy of credence, communicate to our readers the latest news from the seat of war. They will be found to justify the public confidence, that the city and fortress of Sebastopol are doomed. We have only to hope that the [illegible] of the garrison will not protract a defe[illegible] no effect in saving the place, but which will inevitably lead to a most deplorable sacrifice of life. The Russian people are not aware of the true history of the day of Alma, and sing Te Deums as usual for an imaginary victory; but the Czar himself is fully aware of the facts, and will strain every nerve to wipe out the disaster. Menschikoff—with still more powerful incentives to efface what in his case was not simply a disaster, but a disgrace—will, with the fanatic courage of all Russians in high office, when driven to extremity, sell his defeat as dearly as he can. It is therefore, but too probable that the story of the fall of Sebastopol will be one of the most awful, as well as the most memorable, in the annals of warfare. Russian reinforcements are on the march on every side; although the numerous reports that reach the world, on the not very reliable authority of the German press, are not to be taken as authentic with regard to the exact numbers, or present whereabouts of the commanders. But whatever be their numbers, the few friends that Russia still holds among German writers and diplomatists do not anticipate that they can effect a junction with Prince Menschikoff till the month of November is far advanced. Perhaps, in the meantime, Omer Pacha will find them some other place to defend, of quite as much consequence as Sebastopol.

So much interest is created by these operations, as the probable climax of the campaign, that less attention has their importance deserves is bestowed on the [illegible] of the German Powers. The Czar, who must have long been aware that he has nothing to hope from the friendship or gratitude of Austria, has lately directed a movement which can have no other object than one of proximate hostilities with that Power. The three Russian provinces, or military districts, that abut on the Austrian Empire, have been declared in a state of siege—a tolerably broad hint from the Czar to the Emperor Francis Joseph that he considers a rupture to be imminent. True to his previous policy of affecting towards his subjects the position of an injured Power, and one that acts only on the defensive, the Czar will doubtless leave the initiative of declaring war to the Emperor of Austria; and we do not see—after the lengths to which Austria has already proceeded, not alo ne by formal acts of diplomacy, but by the unstudied expressions of sympathy with Great Britain and France, and of congratulation on the glorious victory of the Alma—how actual warfare between the two States can be much longer avoided. Austria made many sacrifices to obtain the support of Prussia and the Germanic Confederation before she could definitively engage herself with the anti-Russian alliance; but "the petty, pithless, and marrowless" policy of Prussia is so apparent, that Austria can no longer indulge any hope in that quarter. She must cast her lot with the Maritime Powers, or be for ever disgraced; and, to a Power situated as she is, disgrace is fatal. The tide of events is running so strongly, that Austria can no longer temporise, even if disposed. She is in the midst of the current—and if she do not act, will run the risk of being carried into far greater dangers and difficulties than any into which a bolder and honester course might lead her. As for Prussia, it is highly probable that the Allies will immediately take steps to teach her that her present mode of being, or of appearing to be neutral, is a nuisance to Europe that can no longer be tolerated. Such a declaration would have some personal as well as political results, that might please the Prussian nation as much as they would gratify Europe.

It seems to be generally admitted that the operations of the Baltic fleet are at an end for the present year; and that the greater portions of the British and French squadrons are on their way home. The principal reasons alleged are, the prevalence of stormy weather and the commencement of the winter frost. Even so early as the sixth of the present month many of the creeks and harbours of those northern shores were reported to be partially frozen. No doubt, these reasons must be held satisfactory for the discontinuance of operations. Powerful fleets may often escape and defy the Storm; but the inexorable Ice is an opponent

against which courage and seamanship are employed in vain. But, though the return of the fleet may be accepted as a necessity, the public may be excused for the ex pression of a natural disappointment that some enterprise worthy of the strength and splendour of the armament was not sooner attempted. The squalls and cold of the short days of October are not to be accepted as apologies for the inertia of the long days and fine weather of July and August. We shall not impute blame in the matter to the Admirals in command, nor to the respective Governments of the Allied Powers; for it may hereafter appear that no blame is attributable to either. But in the meantime, and while awaiting explanations, which the people of this country, so jealous of their naval power, will most assuredly be impatient to obtain—there is a strong belief that there has been mismanagement somewhere. The Fleet sailed amid a popular ovation. It was the most magnificent armament that the world had ever seen. Never before were so many splendid vessels assembled together for a warlike, or a peaceful purpose; never were the appointments of a navy so complete; never was power so great displayed for a grander purpose, or supported by a more majestic weight of moral sentiment, and of national energy and hope. The very name of its commander was looked upon as a prognostic of victory; and the annihilation of the Russian power in the Baltic, and the destruction or seizure of Cronstadt, were at once the greatest and the least of the achievements that were anticipated. Perhaps the people expected too much; and perhaps the Admirals in command have done all that was possible with the means at their disposal, and with the difficulties—perhaps unknown to the public—against which they have had to contend. But it cannot be denied that the country is disappointed. However satisfactory the reasons that may be hereafter adduced for the inactivity of the fleet during the greater part of its cruise in the Baltic, and for the comparative smallness of the only warlike operation of which it can boast—there will be well-founded regret that so fine an armament was not more vigorously employed. It will, we fear, rival for a time in the popular imagination the famous army of Louis XIV., and people, parodying the well-known distich, will exclaim—

> The Baltic fleet, with fifty thousand men,
> Sailed up the seas—and then sailed home again.

Yet however large the disappointment of the public may be, it is probable that it will be exceeded by that of the gallant sailors under the command of Admirals Napier and Duchesne. Nothing would have better pleased the naval heroes of both countries than to have had a chance of showing their pluck against Helsingfors and Cronstadt. They had stomach for both achievements, and feel something not unlike shame or disgust that the comparatively small affair of Bomarsund is all that they have to boast of. Whatever be the reasons of the failure—whether the want of gun-boats, or the too large draught of water of the magnificent ships that we sent to those shallow seas—it is certain, if the war lasts for another twelvemonth, as it is most likely to do, that amends will be made in 1855 for the inactivity of 1854. If any faults, resulting from a want of forethought or of knowledge, have been committed this season, they will be remedied, the next time that the warm winds of approaching summer shall thaw the ices of the Baltic. A victory postponed is, luckily, not a victory lost; and with the capture of Sebastopol to take the edge off the sharpness of the public appetite, the nation will be the better contented to wait until 1855 for the seizure of Cronstadt and St. Petersburg, and the retreat of the Czar—if at that period he be the Czar—to the inland security of Moscow.

Yet, in recapitulating the successes and failures of the great Baltic expedition of 1854, it should not be forgotten that war does not entirely consist of fighting. The British and French fleets, that neither attacked Helsingfors nor Cronstadt, performed other functions. If they did not, or could not, capture the Russian fleet that skulked behind stone walls, they imprisoned it, and rendered it useless for offence. If there had been no Allied armament in the Baltic, there might have been a Russian armament off Aberdeen or Cork; and the pride and obstinacy of the Czar might have been gratified and augmented by his undisputed supremacy in his northern waters. His trade, too, might have been carried on as usual; while, in a thousand ways, his fleets might have been instrumental in annoyance to his foes. From all these evils and disgraces, the fleets of Admirals Napier and Duchesne have saved the Allies; and if at the present moment they are ordered home, for reasons which it is to be supposed will be satisfactory, they will leave no advantage to the Russians. The ice and storms which impede our operations will prevent those of the Czar. He has lost Bomarsund and the Aland Islands, and has blown up the fort of Hango to save Napier and his men the trouble. Until the thaw of 1855 Russia will be impotent as a naval power. When that genial event takes place, the unanimous demand of England and France will be the capture of Helsingfors and Cronstadt. To make the attempt—with such a fleet, with such sailors, and, we may add, without unduly disparaging the Russians, with such a foe—is to succeed in it.

In one point the wounded heroes of the French Army in the East have had an advantage over their British fellow-sufferers. The "Sisters of Mercy"—women who add to the kindest and most sympathising human charity and benevolence, the purest feelings of piety and religion—have appeared, like "angel visitants," at the bedside of their countrymen—administering to them, not only the cares of the nurse, but the consolations of the priest. Protestantism has no such institution; and there are, therefore, no "Sisters of Mercy" in the British camp or Hospital. But, though the name does not exist, the charity, the benevolence, and the piety, are, fortunately, to be found amongst us. Women who have not taken the monastic vow, and who are not incorporated into a society, religious or secular, but whose sole and sufficient bonds of union are Christian sympathy and feminine tenderheartedness, are to be had when they are wanted in this country. No sooner was it ascertained that the French wounded were, in this respect, better cared for than the English, than the agents of mercy were found to be at hand. The Government has had so many applications from women willing and eager to assist in the good work, that it has deputed the task of making a selection from them to Mrs. Nightingale—late the superintendent of the Ladies' Hospital in Harley-street—who has acquired, by long experience, perfect familiarity with the duties of hospital service. This lady will immediately proceed to Scutari, with a sufficient number of assistants, to compete with the French "Sisters of Mercy" in the generous rivalry of good works. They will not be "Sisters of Mercy" in the Roman Catholic—but in the British and Protestant sense. They will act as watchful nurses of the sick, and as careful attendants upon the suffering. Leaving religion to its proper teachers, they will be Sisters of Charity and Mercy in their own appropriate way. They will thus earn for their sex an honourable place in the History of the War; and, what is of more value, they will merit and receive the gratitude of hundreds of brave men "who were ready to perish."

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, OCTOBER 19.

Month and Day.	Thermometer: Highest in the Day.	Thermometer: Lowest in the Day.	Mean Temperature.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	°	°	°	°			Inches

Note. The sign — denotes below the average.

The reading of the barometer (corrected) decreased from 30.41 inches at the beginning of the week to 29·20 inches by the morning of the 18th; and increased to 29.74 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.341 inches.

The mean temperature of the week was 45·6°, being 4·4° below the average of the corresponding week during 55 years.

The range of temperature during the week was 21·4°.

The mean daily range of temperature during the week was 13·7°.

Rain fell during the week to the depth of rather more than three-tenths of an inch.

The weather throughout the week, with the exception of the 19th, which was fine, was dull; and the sky covered with clouds. *Fog* was prevalent during the beginning of the week.

Lewisham, October 20th, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, the births of 1640 children were registered in the metropolitan districts: of these, 779 were boys, and 753 were girls—these numbers show an increase of 135 boys and 140 girls, upon the respective averages of the nine corresponding weeks of the nine preceding years. The number of deaths during the week was 1394: of which 714 were males, and 680 were females; and furnishes evidence of a steady, if not of a rapid improvement in the public health—the numbers in the two preceding weeks being 2215 and 1533 respectively. The number of deaths from cholera during the week was 249. The returns for the preceding week and this week, show respectively 46 and 46 for the Western districts; 28 and 14 for the Northern; 31 and 24 for the Central; 95 and 50 for the Eastern; and 200 and 115 for the Southern districts. Diarrhœa was fatal in 103 cases: of these, 72 occurred in children below the age of fifteen years; 12 between fifteen and sixty; and 18 above the age of sixty years. Scarlatina prevails to some extent in London; and the mortality from this disease exhibits a weekly increase, the numbers in the two preceding weeks and this being 83, 105, and 113 respectively, which is considerably more than the average. To tubercular diseases, 158 deaths are referred: of these 129 are due to consumption. To diseases of the brain, nerves, and senses, 93. To diseases of the heart and blood-vessels, 48. To diseases of the lungs and of the other organs of respiration, 131. To diseases of the stomach, &c. 69. To sudden deaths, 3. And to violence, cold, and intemperance, 40 deaths are referred.

POLYTECHNIC INSTITUTION.—On Thursday a grand entertainment, in aid of the Association for the Widows and Children of Soldiers, Sailors, and Marines engaged in the war with Russia, was given. A numerous and fashionable audience assembled, and the chair was appropriately surrounded with a conservatory of laurels and other plants. It having been moved by the Hon. Major Powys, and seconded by Mr. J. M. Case, that the Earl of Shaftesbury should take the chair, his Lordship remarked that he was not prepared for so great a gathering—and he scarcely pardonable, since the British public were never wanting to a benevolent appeal made for those who fight in the cause of their country. The Englishmen and patriots, the brave men who had gone out to assert our rights, were not contending for ambition, but for the protection of the week against the strong, the security of nations and the peace of mankind. The appeal now made was to ease their pressure, to console the suffering, and to nerve the heart of the soldier, by providing for his wife and children. The Patriotic Fund and the Government regulations were insufficient for all the purposes required. We had to supply the defects of both: neither embraced all the cases of distress. They made no provision for the wounded, and those ordered on active service only. Surely the wives and children of these should not be suffered to become mendicants or paupers. The association was now relieving 1,900 wives and children, to which more would, doubtless, be soon added. The great and mysterious pestilence had dogged the steps of our army. Moreover, we have refined the feelings of the soldier, and he had at least a tenfold claim on our sympathies in consequence. Major Powys then read a statement of certain alterations in the association, which he stated had already appeared in the papers. After which a vote of thanks was moved by Mr. Pepper, and seconded by the Hon. L. Elliot, to Lord Shaftesbury; who, in reply, moved also one to Mr. Pepper, who had generously given them the means of meeting.

EARLY CLOSING.—MEETING OF HOSIERS.—A meeting of employers in the hosiery trade, and carrying on business in Cheapside and the Poultry, took place at the Cathedral Hotel, St. Paul's Churchyard, on Monday evening last, when the following resolution was carried. —"That the employers constituting this meeting, whilst deeply regretting that one of their trade in the district of Cheapside should persist in keeping open late, determine to maintain the early-closing movement in the case of their own respective establishments, believing it to be a movement, in the success of which principals and assistants are mutually and deeply interested."

PILLAR LETTER-BOXES IN THE METROPOLIS.—Lord Canning and the Secretary of the General Post-office have had a scheme for some time in contemplation to facilitate the posting of letters in London, by establishing "pillar letter-boxes" in the most populous districts in the metropolis, and reducing the number of receiving-houses, which are attended with great expense.

AN EXTENSIVE ROBBERY.—About a fortnight ago three well-dressed men called upon Mr. Baumgart, jeweller and watchmaker, Regent-street, and inquired if they could be accommodated with apartments, and on receiving a reply in the affirmative they engaged the first floor, which is over the shop, and at once took possession. The shop, which is separated from the other parts of the house, has always been strongly secured, and the keys taken away by Mr Baumgart, who, however, unfortunately, had not been in the habit of leaving any person in care of the premises. The three lodgers, who were well-mannered, took advantage of this oversight and arranged their plans accordingly. On the arrival of the shopman, about eight o'clock on Monday morning, he found watches, rings, and jewellery, strewed about in all directions. Policeserjeant Burnett having been called in to investigate the mysterious affair, his attention was attracted to a thick knotted rope hanging from a large aperture in the ceiling, and on proceeding up-stairs to the first floor he found that the thieves had cut away a space in the flooring and ceiling sufficiently large to lower one of their companions to the shop below, where he speedily made a clearance of all that was valuable, and afterwards joined his companions with the plunder, when they all left the house by the street door, leaving several burglar's instruments, consisting of centre-bits, chisels, "jemmies," and a small saw behind them. On looking over the stock, about 150 gold watches, a number of gold chains, rings, and pins, of the value of upwards of £1500, were missing.

PROROGATION OF PARLIAMENT.—Thursday, being the day to which Parliament stood prorogued, the Lords Commissioners met in the House of Lords at half-past three, when, the Commission having been read, the Lord Chancellor declared Parliament prorogued until the 16th of November.

OPENING OF THE NEW TRAINING COLLEGE AT EXETER.—On Thursday the New Training College, erected on the Old Bath-road, about a quarter of a mile from the city of Exeter, was opened with great ceremony. In the morning full choral service was performed in the Cathedral, the sermon being preached by the Bishop. Immediately afterwards a procession headed by the Lord-Lieutenant, the Bishop, and the Sheriff, and accompanied by the band of the 10th Hussars—moved through the town to the new building, which was then formally opened. The Bishop delivered a suitable address.

LATEST INTELLIGENCE.

SIEGE OF SEBASTOPOL.

The arrival of the *Pharamond* at Marseilles has brought despatches from Constantinople to the 10th, and from Balaclava to the 8th inst.; but these will not reach London till this afternoon. The substance of the news brought is, that on the 7th the intrenched parallels and the siege batteries had been completed; and on the 8th, 400 heavy guns were already in position, directed against the doomed city. On the 9th, fire was to be opened from this tremendous armament, manned by sailors from the fleet, as well as by the regular artillery. At the date of the 8th, the besieging force was estimated at between 70,000 and 80,000 men, and reinforcements were constantly pouring in. It was expected that a breach would be made in forty-eight hours. The Russian garrison had not been reinforced, nor the Russian detachments hovering about the Tchernaya River and the valley of Inkerman. The Russians, however, held undisputed possession of the north side of the gulf, and of the strong forts by which its shore is defended.

The *Patrie* of Friday says that the private correspondence by the *Pharamond* announces that the siege batteries were established before Sebastopol on the 7th, and that the bombardment was to commence on the 9th. It was expected that the town would be carried about the 18th.

The *Moniteur* of Friday confirms the intelligence of a sortie having been attempted by the garrison of Sebastopol. It says, the Chargé d'Affaires of France at Constantinople, writing on the 10th, informs the Minister of Foreign Affairs, that the captains of the steam transports had arrived from the Crimea state that the besieged had attempted a sortie against our siege works, and that they had been vigorously repulsed.

The *Copirte Zeitung's Correspondence* has the reliable intelligence from Galatz that the Russian reinforcements advancing to the Crimea will concentrate at Perekop, and there remain. Prince Menschikoff will retreat to Perekop, in case of Sebastopol being taken. After the landing of the Allies at Eupatoria, Prince Menschikoff received instructions from St. Petersburg to hold the position in the Alma for two months. This would have allowed time for fresh troops to come up. The battle of Alma having been lost, the attempt to relieve Sebastopol may be given up. According to advices from Varna of the 6th instant, a despatch had arrived there from Lord Raglan, ordering that no more Turkish troops should be transported to the Crimea, as the forces already in the Crimea were sufficient for every operation. There were then about 8000 Turks at Varna. French and English troops continue to leave Kustendjeh and Bourgas for the Crimea. The above authority estimates the number of the Russian cavalry in the Crimea at 20,000 men. With the reserves, the force of the Allies in cavalry cannot now be much under 16,000 men.

THE CAMPAIGN ON THE DANUBE.

The *Presse* says that the Turkish Ambassador at the Court of Vienna, Arif Effendi, has officially communicated to the Austrian Cabinet, that Omer Pasha will begin offensive operations against Bessarabia shortly, and will arrive at Bucharest in a few days, in order to arrange there his plan of attack with the Imperial generalissimo. It is said that Lord Raglan has called upon Omer Pasha to hasten his movements.

THE COURT.

The Queen and Prince Albert, with the youthful Princes and Princesses of the Royal family, who had accompanied their Royal parents to Scotland, arrived at Windsor Castle at half-past six o'clock on Saturday evening. The other Princes and Princesses had previously reached the Castle from the Isle of Wight.

On Sunday the Duke of Newcastle arrived, and had an audience of the Queen. His Grace took his departure on Monday morning; in the afternoon of which day the Earl of Clarendon arrived, accompanying his Excellency Admiral Virgin, Swedish and Norwegian Minister at the Court of St. James's. His Excellency was presented by the Earl of Clarendon, and had an audience of the Queen, to deliver his letters of recall as Envoy Extraordinary and Minister Plenipotentiary from the King of Sweden. Lord Waterpark and Mr. J. Ormsby Gore were the Lord and Groom in Waiting. In the evening his Excellency Admiral Virgin had the honour of dining with her Majesty.

On Tuesday Prince Victor of Hohenlohe arrived on a visit to her Majesty. His Serene Highness had just landed from her Majesty's ship *Cumberland*, in which he has been serving in the Baltic. The Prince dined with her Majesty in the evening.

On Wednesday her Majesty held a Privy Council, at three o'clock. Present—his Royal Highness Prince Albert; Lord John Russell, Lord President; the Earl of Aberdeen, First Lord of the Treasury; the Marquis of Lansdowne; Viscount Palmerston, Secretary of State for the Home Department; the Duke of Newcastle, Secretary of State for War; the Right Hon. William E. Gladstone, Chancellor of the Exchequer; Sir James R. G. Graham, First Lord of the Admiralty; Sir Charles Wood, President of the Board of Control; Sir William Molesworth, First Commissioner of Public Works: Earl Granville, Chancellor of the Duchy of Lancaster; the Earl of Carlington, Master of the Horse; and Lord Ernest Bruce, Vice-Chamberlain (officiating for the Lord Chamberlain). The Earl of Aberdeen and Lord John Russell had audiences of the Queen. At the Council, Parliament was ordered to be further prorogued from Thursday, the 19th inst., unto the 16th November. Her Majesty having been pleased to appoint Thomas Lloyd, Esq., to be Lord-Lieutenant of the county of Cardigan, Mr. Lloyd took the usual oaths. The Duke of Newcastle, the Marquis of Lansdowne, and Sir James Graham had audiences of the Queen after the Council. Lord Waterpark and Mr. J. R. Ormsby Gore were the Lord and Groom-in-Waiting.

Sir George Grey was prevented from attending her Majesty on her journey homewards through a slight injury he has received by a fall from his horse.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectory*: The Rev. H. S. Anders, to Kirkby-la-Thorpe, with Asgarby annexed. *Vicarages*: The Rev. C. L. Vaughan, to St. Neot's, Hunts; the Rev. H. Caddell, to St. Peter's, Colchester; the Rev. R. G. Batt, to Norton and Lenchurch, near Evesham, Worcestershire. *Incumbencies*: The Rev. R. Gobbings, to Radley, Berkshire; the Rev. W. Prince, to Feshill, near Henley-on-Thames; the Rev. H. J. Graham, to Pudsey, Yorkshire; the Rev. A. C. Petter, to Riddings, Derbyshire.

NEW CHURCHES AT PADDINGTON.—Three new churches are to be forthwith erected at Paddington. The Bishop of London has contributed £1000 towards that object. A new church is fast approaching completion at the point abutting on Paddington-green. The building was formerly used as a Dissenting chapel, but the interior has been made available for the present building. The new church is to be entirely composed of flint-stones, the abutments being of stone; and there is a handsome steeple, which is completed, and gives the church a very pretty appearance.

NEW CHURCH AT HOLYHEAD.—A new church has been erected at Holyhead. The situation of the edifice is lofty, and commands splendid views of the sea. The spire serves as a sea-mark, and the orientation is due east and west. A spacious churchyard inclosures the whole. The entire cost of the erection is about £4000.

THE Lord Mayor elect has appointed as his chaplain, for the year of his mayoralty, the Rev. Edward Graham Moon, M.A., Fellow of Magdalen College, Oxford, and late curate of Bredon, Worcestershire.

NEW CHURCH AT STREATHAM, SURREY.—A handsome new church, recently erected in the parish of Streatham, Surrey, and facing the spacious common in that locality, was publicly consecrated on Saturday, by the Lord Bishop of Winchester (Bishop of the diocese). The entire cost of the building, amounting to above £4000, has been defrayed by private subscription.

PROFESSOR AIRY'S EXPERIMENTS IN A COAL-PIT.—One of the most interesting series of astronomical experiments that has for many years been attempted in Europe, is just being performed by Professor Airy, the Astronomer Royal, at Harton Pit, within two miles of South Shields. In the pit, which is 1260 feet deep, a set of delicate instruments, and a pendulum, have been provided in a room constructed for the purpose. Above, on the surface, exactly vertical to the room below, is another room, its exact counterpart. Here delicate pendulum observations are made day and night, to test the density of the earth, by the number of oscillations above, compared with the number below—with certain connections and adjustments which none but the experimenter himself can explain. Professor Airy has arranged to deliver a lecture in demonstration of these experiments, and their uses, at South Shields, on Wednesday evening next, the 24th inst., when the instruments will be placed *in situ* upon a platform, in the Lecture room. We hope to illustrate there important experiments.

THE BRITISH TROOPS ON THE HEIGHT

MA.—GRAND CHARGE OF THE GUARDS.

THE CHARGE UP THE HEIGHTS OF ALMA.

All accounts agree in representing this bold movement (of wh'ch we have given a large Engraving in to-day's Number) as the grand crisis of the battle of Alma. It was about three o'clock when the Russian General, finding himself completely outflanked, attempted to change his front, and drive the French down the hill. Our artillery had been playing upon the enemy for some time, but the time had now come when the bayonet must be used. With this view, the Light and First Divisions, under Sir G. Brown and the Duke, took ground to the left, and began the advance; while the Second and Third, under Sir de Lacy Evans and Sir Richard England, moved on towards the ford and broken bridge in the centre of the village. The instant the enemy perceived this, every piece of their artillery was brought to play on our men; and as they came into range the effects of the deadly fire was severely felt. The fire directed upon the Duke's division was certainly the heaviest at this time: and the fine forms of our Guards and Highlanders, slain and mangled by round shot, began to dot the broken ground. Yet still the Light and First Division, though distant nearly three quarters of a mile from the batteries, toiled onward over the broken ground, keeping their line as well as they could, and moving as steadily as if on parade. The first obstacle which the division met with on the left was a thick vineyard, to get through which required no ordinary effort, and the line of advance was quite broken. The latter circumstance saved them, in some measure, from the destructive effects of the round shot, though at the same time it much exposed the leading files to the fire of the riflemen who lined a trench on the Russian side of the ravine. The Light Division, which was more to the right, had no vineyard to contend against, so their men were over fire. As they approached the first intrenchment the enemy rose from their cover and commenced a rapid fire, but in vain. With a loud cheer our fellows gave a tremendous volley full into the Russian lines, and, led by Sir George Brown, advanced with the point of the bayonet. The Russian officers attempted to keep their men steady and return our last volley, but the attempt was ineffectual. Although up-hill, the rapidity of the advance, the long light bright row of glistening bayonets, and the irresistible ardour and impetuosity with which our fellows rushed on, were too much for them, and the redoubtable soldiers, flying upon whom the Emperor has defied half Europe, fairly turned their backs and fled. The Light Division gave them no time to rally, but, as they advanced, pressed them close until upon the second trenchedline. Here the enemy made even less resistance. Apparently panic-stricken by the coolness and indomitable courage with which our men pushed forward under the tremendous fire which was now bearing upon the Light Division from the batteries, they abandoned the second trench almost without resistance. Unfortunately, the Light Division had now gone too far to the right, and got exposed not only to the fire of the heavy guns in the redoubt on the hill, but also to that of the double tier of artillery which commanded the road leading from the bridge. All these were now directed on them by the enemy with terrific effect. One terrible discharge of grape and canister almost decimated the 23rd Regiment. Colonel Chester, Captain Sir William Young, Captain Wynne, and about forty non-commissioned officers and privates suffered also very heavily. Yet still the men advanced, though their position was most critical. Every movement against the batteries in advance exposed their left flank more and more to the fire from the redoubt, and the division was in the act of changing its position when, fortunately at this moment, the first division of Guards and Highlanders appeared upon the scene. The instant the magnificent forms of these fellows were seen coming up the hill towards the redoubt all its fire was directed upon them. At the same time the Second and Third Division, after meeting with a sharp opposition, crossed the ford both above and below the bridge, and advanced towards one of the batteries assailing the Light Division, which was thus left free to attack the other.

The Russian regiments behind the battery kept up an incessant discharge of musketry upon our troops as they advanced up the hill, but on the latter were keeping their line, reserving their fire, and filling up gaps as fast as they were made. When within twenty yards of the work, the command was given to fire. The three battalions raised their firelocks, and discharged them with one stunning report; then lowering to the charge, with one wild cheer, dashed over the works, and were inside the battery. The Russians retreated up the hill in confusion; several attempts were made to rally, but in a short time they were flying in confusion towards Sebastopol.

ALMA.

BY MRS. T. K. HERVEY.

O for a voice to utter what the startled lands proclaim;
A voice to reach to heaven like the leaping of a flame!
Like those who breathe the mountain's breath, throned on its starry peak,
Our lifted souls stand thrilled and mute—we gasp, but cannot speak.

We set about the world's dull work with pulses at full beat,
That come and go like messengers with tread of eager feet;
We heed no more how pales the moon, how red the sun departs,
While the throb of this great victory is knocking at our hearts!

It needs not riddled banners borne before the nation's eyes;
It needs not man's exulting shout, nor woman's mournful cries;
Where'er a hill looks up to heaven, where'er a river runs,
There Nature's proud memorial speaks to England of her sons.

O nobly dared—thrice nobly done! we have no words for more
Who watch from far the tempest's rack, safe housed upon the shore;
The Alma waters blind us as they swim before our sight,
And our reeling brain grows dizzy as we picture Alma's height.

In the shelter of our harvest lands, amid the harvest sheaves,
There spread a thrilling whisper through the rustle of the leaves:—
"The hour is born—the peril grows—the drums of war must beat,
The sleeping Glory of the land has started to her feet!"

Uprose she like a Queen once more from out her silent trance:
She marked a kindred smile light up the answering front of France,
As, marshalling her legions, we could trace her steps afar,
By the ground that shook beneath us at the mighty tramp of war.

The loaded teams are borne away, the garner'd grain lies deep;
But She who rose in peril's hour shall know no second sleep.
They rest upon their battered arms, the battle-field their bed;
But Glory wakes, and watches o'er the heroes she has led.

A little pause, a light brief rest, and they, too, must arise:
O, God of Battles, succour them beneath the alien skies!
One more assault as boldly led—one more victorious blow—
And Russia with her legions shall be scattered like her snow.

Her rent and ruined fortress we behold our banners brave;
Like her own abandoned squadron must she sink beneath the wave:
We chafe, and scorn our home delights, who here inglorious wait,
While the war-tide sweeps her bulwarks, and the foe is at her gate.

O, tried and true defenders! England's bravest, bravely led!
Our spirits faint within us as they follow where ye tread:
To every lip one question springs—one shuddering cry rings round—
"Whose sword is yet within his grasp?—whose face is to the ground?"

O, empty breath, and barren speech—how weak ye sound, and vain!
What greeting shall await them who return to us again?
Our straining eyes shall know them not, too dazzled when they come,
And our voice shall sound no welcome, for the joy that strikes us dumb!

Bring back to us no trophies won—lest we should count the cost;
Bring back to us—alas! the word, it knells what we have lost!
Bring back and plant the laurel on the soil where best it flowers;
Bring back the dauntless hearts ye bore—we claim them—they are ours!

There are at present twenty houses in the course of erection at Pinner, Middlesex, for the benefit of the widows of the Army and Navy, at the sole cost of Miss Howard, of Pinner, and York-place Portman-square.

THE BATTLE OF THE ALMA.

OFFICIAL LIST OF KILLED AND WOUNDED.

(From a Supplement to last Tuesday's *Gazette*.)

War Office, Oct. 18.

The following letter, enclosing returns of the non-commissioned officers and privates who were killed or wounded in the late engagement in the Crimea has this day been received at the War-office:—

Headquarters, Sebastopol, Oct. 3.

Sir,—I am directed by the Commander of the Forces to transmit, for the information of the Secretary-at-War, the accompanying nominal returns* of the casualties amongst non-commissioned officers and privates, which occurred at the Battle of Alma, on the 20th Sept., 1854.

I have, &c.,

Thos. Steele, Lieut.-Col., Military Secretary.

Benjamin Hawes, Esq., Esq., &c., &c., War-office.

NOMINAL RETURN OF CASUALTIES OF THE ACTION OF THE 20TH SEPTEMBER.

13TH LIGHT DRAGOONS.—No return received.

(No casualties appear to have occurred in this regiment.—See Extraordinary *Gazette* of October 8.)

MARSHAL ST. ARNAUD.

The Funeral of the late Marshal St. Arnaud took place on Monday last. Our next publication will contain an Engraving and an account of the imposing ceremony. The following letter of condolence from our Ambassador at Paris, and the reply of M. Drouyn de Lhuys, appeared in Tuesday's *Gazette*:—

Foreign-office, Oct. 17.

The Earl of Clarendon, her Majesty's Principal Secretary of State for Foreign Affairs, has received from Lord Cowley, her Majesty's Ambassador at Paris, the subjoined copies of a letter addressed by his Excellency to M. Drouyn de Lhuys, Minister for Foreign Affairs to his Majesty the Emperor of the French, offering the condolence of her Majesty's Government on the lamented death of the late Marshal St. Arnaud; and of a letter, addressed by M. Drouyn de Lhuys to Lord Cowley, in reply:—

Paris, October 10, 1854.

M. le Ministre,—I am desired by her Majesty's Principal Secretary of State for Foreign Affairs, to take the earliest opportunity of conveying to the Emperor the expression of the deep regret with which the Queen's Government have learnt the intelligence of the death of Marshal St. Arnaud. Her Majesty's Government desire to offer to his Imperial Majesty, and to the French people, their condolence on an event which has deprived the Emperor and France of the services of so distinguished and brave a General. If anything could mitigate the sorrow that must be felt by the Governments and people of France and England upon this occasion, it must be the satisfaction—though a mournful one—that the Marshal's last moments were preceded and cheered by the triumph of a victory which will always be glorious in the military annals of both countries. In requesting your Excellency to convey these sentiments to the knowledge of the Emperor, I trust that I may be permitted to add the expression of my personal regret for the loss which the Emperor and the French nation have sustained. I know Marshal St. Arnaud was to me, like him, for the courtesy and affability of his private life were as remarkable as his courage and firmness in the field.—I avail, &c.,

(Signed) COWLEY.

His Excellency M. Drouyn de Lhuys, &c.

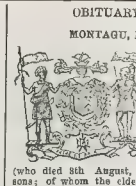
M. L'Ambassadeur,—I have laid before the Emperor the letter that your Excellency did me the honour to address to me on the 10th inst., containing the expression of regret felt by the Government of her Britannic Majesty on learning the lamentable loss which France has sustained by the death of Marshal St. Arnaud. The Emperor has been deeply affected by a proceeding which affords fresh evidence of the union of the Government with that of the Queen, and of the sincerity with which the two countries are henceforth called upon to participate in all that can be for either of them a subject of interest or of joy. In the present circumstances, anything could assuage the grief which the Emperor and France have felt at such a loss, it is truly, as your Excellency has so well said, the satisfaction which Marshal St. Arnaud was enabled in dying to experience, that he had just inscribed his name in conjunction with those of heroic allies, on one of the most glorious pages of the military annals of England and France.

I have no need, my Lord, to add that the terms in which your Excellency has so courteously expressed yourself personally in regard to the Marshal, have been duly appreciated.—I hasten, &c.

Paris, October 12, 1854. (Signed) DROUYN DE LHUYS.

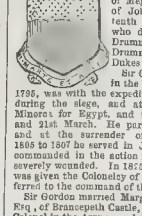
OBITUARY OF EMINENT PERSONS.

MONTAGU, FIFTH EARL OF ABINGDON.



THE death of this nobleman took place at Wytham Abbey, his seat, near Oxford, on the 16th inst. His Lordship was born 30th April, 1784, the eldest son of Willoughby, 4th Earl of Abingdon, by Charlotte, his wife, daughter and co-heir of Admiral Sir Peter Warren, K.B., M.P. for Westminster. He married, 1st, 27th Aug., 1807, Emily, daughter of the late General the Hon. Thomas Gage; and, 2ndly, in 1841, Frederica Augusta, daughter of the late Countess of Antrim. By the former (who died 8th August, 1838) he had two daughters and three sons; of whom the eldest, Montagu, Lord Norreys, M.P., succeeds as 6th Earl. The Barony of Norreys, of Ewotts, which vested in the Earl of Abingdon, was conferred by Queen Elizabeth on Sir Henry Norreys, her Ambassador to the French Court; and passed, through female heirship, to the Hon. James Bertie (son of Montagu, Earl of Lindsey, Lord Great Chamberlain of England), who was raised to the Peerage of Abingdon in 1682. Of his Lordship, the nobleman just dead was great-great-grandson. The late Earl was High Steward of Abingdon and Lord-Lieutenant of Berkshire. He officiated as Cupbearer at the Coronation of King George IV., and was one of the coheirs of the Barony of Williams, of Thame.

GENERAL SIR GORDON DRUMMOND, G.C.B., COLONEL OF THE 8TH (KING'S) REGIMENT.

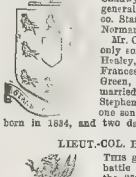


THE death of this venerable officer occurred on the 10th inst., at his residence, 26, Norfolk-street, Parklane, in the 83rd year of his age. Sir Gordon was the fourth son of the late Colin Drummond, Esq., brother of Admiral Sir Adam Drummond, K.C.B., of Megginch Castle, county Perth, and grandson of John Drummond, Esq., M.P. for Perthshire, tenth Baron of Lennoch, and third of Megginch, who derived in direct descent from Sir Maurice Drummond of Concraig, second son of Sir Malcolm Drummond, tenth Thane of Lennox, ancestor of the Dukes and Earls of Perth.

Sir Gordon entered the Army in 1789, as Ensign in the 1st Battalion of the Royals, and in 1794 and 1795, was with the expedition in Holland, being present in Nimeguen during the siege, and at the sortie. In 1800 he embarked for Minorca for Egypt, and took part in the engagements of the 13th and 21st March. He participated also in the battle of Rhamania, and at the surrender of Grand Cairo and Alexandria. From 1805 to 1807 he served in Jamaica under Sir Eyre Coote; and in 1811 commanded in the action near the Falls of Niagara, wherein he was severely wounded. In 1825 he attained the rank of General; in 1829 was given the Colonelcy of the 49th Regiment; and in 1846 was transferred to the command of the 8th Foot.

Sir Gordon married Margaret, eldest daughter of William Russell, Esq., of Brancepeth Castle, county Durham, and had two sons: Gordon, Colonel in the Army; and Russell, Lieutenant R.N., killed at Callao, South America; and one daughter, Eliza, wife of the present Earl of Effingham.

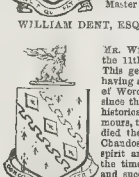
HUGO MALVEYSIN CHADWICK, ESQ., OF NEW HALL, CO. WARWICK, AND MALVESYN RIDWARE, CO. STAFFORD.



THIS gentleman died at Bath on the 12th inst., in his 62nd year. He represented, in the male line, the ancient family of Chadwick, of Healey, co. Lancaster, sprung from Jordan Chadwyke, younger brother of Sir Hugh De Chadwyk, of Chadwyk, living in 1470, and was heir general of the Malveysins, of Malvesyn, Ridware, co. Stafford, Lords thereof, from the time of the Norman Conquest.

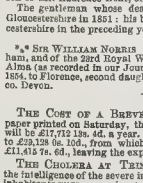
Mr. Chadwick was born November 28, 1793; the only son of the late Charles Chadwick, Esq., of Healey, Rochdale, near Hall, and Mellor, by Frances, his wife, daughter and heiress of Richard Green, Esq., of Leventhorp-house, co. York. He married, in 1826, Eliza-Catherine, sister of Sir Stephen Remnant Chapman, K.C.H.; and leaves one son, John De Heley Malveysn Chadwick, Esq., born in 1834, and two daughters all unmarried.

LIEUT.-COL. HARRY GEORGE CHESTER.



THIS gallant officer fell on the 20th ult., at the battle of the Alma, at the head of his regiment, the 23rd Royal Welsh Fusiliers. Col. Chester's father was the late Major-General Chester, of the Coldstream Guards; and his mother was the youngest daughter of General Sir Henry Clinton, K.B. The family of Chester is a very ancient and eminent one, and was long seated at Royston, county Cambridge. Its lineal representative, Robert Chester, Esq., grandfather of the distinguished soldier whose death we record, married Harriet, daughter and co-heir of Charles Somerset Cæsar, Esq., the descendant of Sir Julius Cæsar, Master of the Rolls temp. James I.

WILLIAM DENT, ESQ., OF SUDELEY CASTLE, COUNTY GLOUCESTER.



MR. WILLIAM DENT, of Sudeley Castle, died on the 11th inst., in the seventy-first year of his age. This gentleman and his brother, John Dent, Esq., having acquired great wealth by trade in the City of Worcester, and having purchased a few years since the ruins of the old Castle of Sudeley—so historically associated with the Botelers, the Seymours, the Queen Dowager Katharine Parr (who died there 5th Sept., 1548), and the noble house of Chandos—commenced at once, with true antiquarian spirit and with excellent taste, the restoration of the time-honoured fabric to its former splendour; and succeeded in rendering it again a noble and attractive mansion, adorning it within with a most valuable collection of paintings and other treasures of art.

The MESSRS. Dent's father was the late John Dent, of Worcester, the son of Mr. Laurence Dent, of Yaden, North Riding of Yorkshire.

The gentleman whose death we record served as High Sheriff of Gloucestershire in 1851: his brother John filled the same office for Worcestershire in the preceding year.

*** SIR WILLIAM NORRIS YOUNG, Bart., of Marlow Park, Buckingham, and of the 23rd Royal Welsh Fusiliers, killed at the battle of the Alma (as recorded in our Journal of last week), was married, March 10, 1854, to Florence, second daughter of Irving Clarke, Esq., of Efford Manor, co. Devon.

THE COST OF A BREVET.—It appears from a Parliamentary paper printed on Saturday, that the expense of the Brevet in June last will be £17,712 12s. 4d. a year. The number of the promotions amounted to £29,128 0s. 10d., from which the half-pay to be deducted amounts to £11,415 7s. 6d., leaving the expense £17,712 12s. 4d.

THE CHOLERA AT TRINIDAD.—A fortnight since we noticed the fatal ingences of the severe irruption of cholera into Trinidad, whereof the inhabitents were presuming on their escape from the calamity which had so terribly visited Barbadoes and other islands. We are sorry to learn that later accounts confirm the worst of the previous news and apprehensions. Towards the end of September the pestilence was carrying off as many as a hundred a day, and universal panic and despair prevailed. Business was still going on; the principal mortality having been as far among the coloured races, though some sad cases had occurred among the Europeans, particularly the aged and very young. The unwearied devotedness of the clergy, medical men, and superior classes had done much to arrest the malady; and it is a remarkable fact, that not a single case had occurred among 3000 Coolies at work in the island.

UNIVERSITY COLLEGE, LONDON.—On Tuesday afternoon, Professor Mason, M.A., opened the department of English Literature by an inaugural address, which was listened to with deep attention by a large number of present and past students of University College. At the close of the lecture a very valuable and costly work on the Portland Vase, by Mr. Thomas Windus, F.S.A., was presented to the College, and placed in the Library. It was accompanied by Wedgwood's description of the Portland Vase, with illustrations by Mr. Windus.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

ONE of the ablest, one of the kindest, and yet one of the most caustic of critics is no more. Mr. Samuel Phillips, so the obituaries inform us, died on the 14th inst., very suddenly, at Brighton, from the rupture of a vessel on the lungs. He was only thirty-nine. To many his name will be altogether unknown; yet he will be remembered when hundreds who have been more ostensibly and ostentatiously before the world shall have sunk into utter oblivion. "Sam Phillips," for by this abbreviation was he best known, and liked, and feared, among au hors and publishers, was the leading reviewer on the *Times*. It was Sam Phillips who was so cruelly hard upon Mr. Dickens's "Christmas Carol:" it was Sam Phillips who was so delightfully bitter about Mr. Disraeli. It was the same pen that wrote so genially about "Southey's Life," and so truly about "Moore's Journals." It was Sam Phillips who originated Murray's "Reading for the Rail," and Longman's "Traveller's Library." It was the same Sam Phillips who contributed so largely, and yet anonymously, to the two volumes of "Essays from the Times;" and it was the same gentleman who declined perpetuating the abbest of his writings (his personal attacks) in his collected essays.

Mr. Phillips was of Jewish extraction, and received his education at the London University and Sidney Sussex College, Cambridge. His first bent was for the stage, to which his father had taught him a liking; indeed he was fond of foot-lights to the last, and so early did he make good his theatrical longing that he is the "Master Phillip;" "—the young gentleman only twelve years of age, whose extraordinary abilities have been much admired at select parties of the nobility"—who figures in the Covent-garden play-bill of the 23rd June, 1829. There was original merit in his *Richard*, but it is right to add that the age on the bill was a decided imposition, he was then fifteen.

Finding, much to his sorrow, that his health disqualified him for an actor's life (he was naturally consumptive) he made literature his calling; and, until he felt himself fit to appear as an author, honourably and ably edited out his means as a private tutor. For a year or so he lived in the family of the Marquis of Aylesbury, and Lord Ernest Bruce may own with pride that Mr. Phillips was his master.

His reading was not extensive—many men of the same age and same opportunities had read much more than Mr. Phillips, but his digestion was excellent, and he had the happy art of recollecting only what was useful, and of turning what he read to good account. In society, few men could be so pleasant. He had ample opportunities of observation. For a time he was proprietor and editor of the *John Bull*; at one time he wrote a novel ("Caleb Stukeley") in *Blackwood*: and, for a session or two, he contributed leaders to the *Morning Herald*. His love of merriment was meant for a stronger body: and, it is to be feared, that he at times allowed fun to carry him into exertions of voice, for which his constitution was unfitted. He has left a widow and five children, and is to be buried on Saturday at Sydenham.

The approaching season is to yield us two works likely to remain permanent additions of value to our art-literature. One is a supplemental volume, by Dr. Waagen, to his 'Treasures of Art in Great Britain'—"including," we are told, "nearly forty new galleries and cabinets existing in London and the provinces," and first visited by the Doctor during the present year; and the other is "Memoirs of Sir Robert Strange, the great Engraver, and of his brother-in-law, Andrew Lumisden, Private Secretary to the Stuart Princes, and an hor of 'The Antiquities of Rome.'" The "Strange" is by James Dennistoun, of Dennistoun, and should contain much that is curious about the history of art in Great Britain and the last of the Stuarts. Strange was so strong a Jacobite that he refused to engrave the portrait of George III. This, no doubt, had something to do with his being kept out of the newly-formed Royal Academy. Lumisden died at Edinburgh, in 1801, aged eighty-one; and Strange in London, in the year 1796.

We have heard a curious story of Strange's copper-plates, which Mr. Dennistoun should either confute or confirm. Long after the great engraver's death, a portion of his stock was sold at Christie's, we believe by order of his son, then a Judge in India. A second sale took place some time after, at equally high prices; and a third soon followed, when the prices fell. The remaining stock was then sold, with the plates, to a well-known firm in Pall Mall, who are said to have made "a good thing" of it, by working the plates till they could stand no more, even tolerable impressions. The plates were then defaced and sold as waste copper, with a condition that they were to be destroyed. This condition was, however, not complied with—the slashes were skilfully removed—the plates were then retouched, and an attempt was made by the party, to whom they had been sold, to supply the market with another portion of the stock. Some law proceedings followed, and the plates in consequence were at length effectually destroyed.

We are also to have an edition of Aragoe's works, edited by four persons of distinction in English science, and who in themselves represent the Army and the Navy, the Church and the Laity. The work is to be published by the Messrs. Longman, and will contain a Preface for the persons, by no less a person than Humboldt. The Army is represented by Rear-Admiral Smyth, the Navy by Lieut.-Colonel Sabine, the Church by the Rev. Baden Powell, and the Laity by Robert Grant, Esq.

The October Numbers of the *Quarterly* and *Edinburgh* are essentially unlike. The former is almost wholly literary; the latter almost wholly political. The eulogium of the *Edinburgh* on Mr. Macaulay (they are reviewing his speeches) is a little overdone. It savours of Whig partiality (not wholly unpardonable), and of gratitude for literary services rendered to the *Review*. The best article in the *Quarterly* is on Samuel Foote, by, it is said (and as we see reason to believe), Mr. Forster, whose Goldsmith studies had qualified him for an article of the kind. It is most pleasantly put together; revives old stories with great tact, gives a correct reading to more than one anecdote too frequently spoiled in the telling; and supplies us, at the same time, with much new matter importantly illustrative of Foote and his very chequered career. One anecdote has escaped the writer. General Smith was the original of the once well-known character, "Sir Matthew Mite." His father had been a cheesemonger; and Foote was so anxious to secure a correct likeness of the General, that he suffered himself to betray the rights of hospitality. He actually stopped in Smith's house: was treated with every civility; and, before he had gone a hundred yards from the house, observed to a friend (who was almost as bad as himself), "I think I can't possibly miss him now, having had such a good sitting."

It would appear from the following letter that the St. James's Hotel, in Jermyn-street (Sir Walter Scott's last London lodging), is not to be pulled down. We were led (not unnaturally) into the error by the sale of the hotel stock, the consequent closing of the doors, and the demolition of the house immediately adjoining, on the east side:—

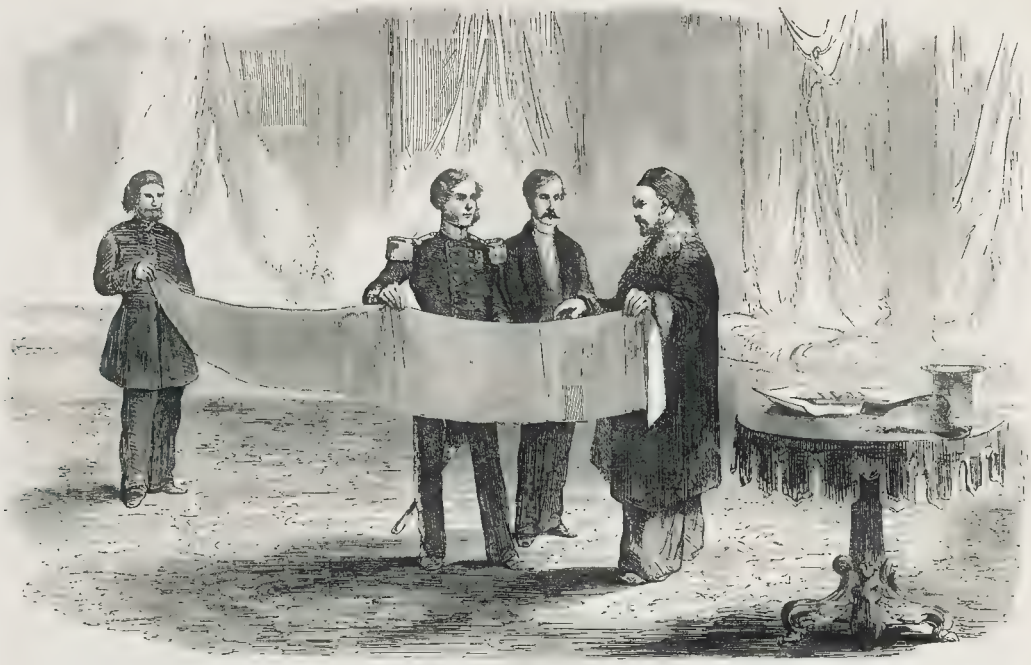
(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

8, Michael's-place, Brompton, October 12th, 1854.

SIR,—Will you permit a constant reader and subscriber to your paper from its infancy to correct a mistake in your impression of the 7th inst., where it is stated that the St. James's Hotel, in Jermyn-street, wherein the great novelist, Sir Walter Scott, lay so long insensible, on his way from Italy to Abbotsford, and where he spent his last day in London," is on the eve of demolition, and has probably gone by this time." The fact is, the hotel is not coming down; but the party wall, together with the adjoining premises, lately occupied by Messrs. Read and Son, the jewellers, has just been taken down, and is about to be rebuilt immediately for those gentlemen, under the direction of

Your very humble servant, JOHN BLORE.

As we love localities connected with men of genius, we are glad to receive Mr. Blore's assurance that this interesting house will be allowed to stand.



LIEUT. MONTAGU O'REILLY EXPLAINING HIS SKETCH OF SEBASTOPOL TO THE SULTAN.

LIEUT. MONTAGU O'REILLY'S PRIVATE AUDIENCE WITH THE SULTAN.

Various had been the occasions upon which the name of Lieutenant O'Reilly, of her Majesty's ship *Retribution*, had been introduced to the readers of the Illustrated London News, by his numerous sketches in the Dardanelles and the Bosphorus—the Castles, Mosques, Palaces, State-barges (*caiques*), Ships, &c.—which appeared in our pages, before the Lieutenant had any official chance of furnishing information of im-

DECORATION OF THE MEJIDIE.

portance about Sinope or Sebastopol, the pictorial results of which have likewise appeared in our Journal. Now that the stronghold of the enemy is invested by the Allied Expedition, and the eyes of the world are fixed upon the grand operation of the campaign, the position so fearlessly gained by the *Retribution* high up in the formidable harbour of Sebastopol, and the baffling politeness which Captain the Hon. James Drummond displayed to the Russian officer, whose wrath was inflamed by this hardy infringement, together with all the circumstances of the visit so "brilliantly carried out," are becoming matters of historical interest.

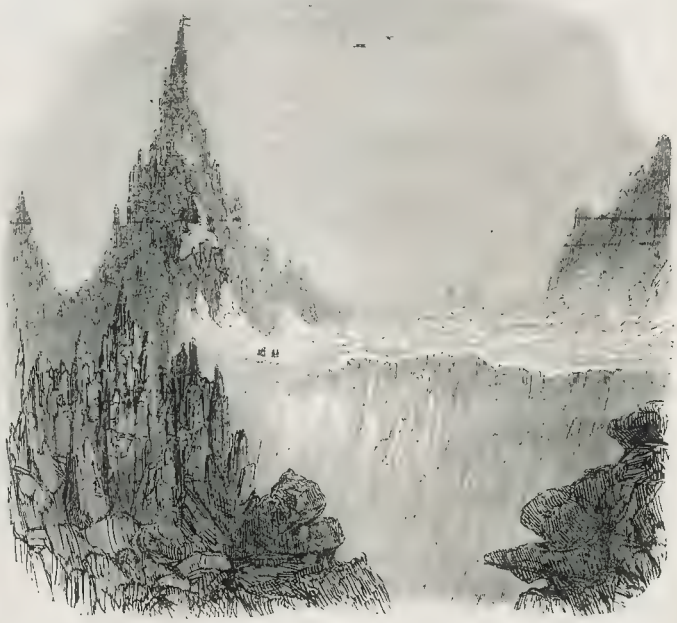
Lord Stratford de Redcliffe, with the discernment of a keen diplomatist, observed that Lieut. O'Reilly seized every opportunity to earn for his Captain and himself "a place in the world's eye;" and, therefore, his Lordship made a passage for the Lieutenant to the Sultan. On the 6th of February last, his Majesty granted to Lieut. O'Reilly, at his palace on the Bosphorus, a private audience, which is thus described by the Lieutenant, who likewise sketched the scene:—

I went there in a *caique* with Mr. Etienne Pesani, first dragoman to the English Embassy, and arrived about 11.30 a.m. We were conducted to a waiting-room, and had coffee, sherbet, sweetmeats, and pipes, in company with Pachas of the highest authority. The view from the windows of this apartment is enchanting. Half-an-hour glided away quicker than usual. We were then summoned, and passed up a spacious staircase, which was lined by a body-guard of young lads, the sons of Pachas, dressed in black, with gold waist-belts, scimitars, and fezes; going through two long galleries and a saloon, elegantly furnished. We stopped a few moments at the large folding-doors of a room, which had also at the entrance within, full curtains of crimson silk, trimmed with gold—two officers guarding this approach. The doors were opened, and the curtains immediately drawn back by attendants. A Secretary of State received us. I advanced, with Mr. Pesani on my left; the Sultan rose with a benign smile; we made two or three reverential bows; his Majesty came towards us, and desired Pesani, in the Turkish language, to say that "He was very glad to see me, and that he had heard of my drawings from Lord Stratford." I acknowledged these expressions by another obeisance, and began to unroll my panorama of Sebastopol, and his Majesty instantly took one end, and the Secretary the other; while I explained, through Mr. Pesani, the harbour, forts, batteries, and shipping in detail: his Majesty frequently asking me such questions as gave proof of a comprehensive mind, and a desire to understand the structure and strength of the fortifications calibre of guns, position of ships, and other relative matters.

I availed myself of a pause, to beg his Majesty would accept a print of the *Retribution*, which was received with bland courtesy and a benevolent *mien*. Taking it out of my hand, he said, "I have always admired the ship, whenever she passed up or down the Bosphorus. I am gratified by your attention, and it will afford me sincere pleasure to hear of your professional talents and great zeal being rewarded in a manner most agreeable to your feelings, and for the benefit of your country."

We returned to the Embassy on horseback properly attended. I rode a valuable steed, which was handsomely caparisoned. Our Ambassador was gratified by the attention I received, and I had the pleasure of dining once more with him.

A short time after this interview the decoration of the Mejidie was sent to Lord Stratford de Redcliffe for Lieutenant Montagu O'Reilly as an acknowledgment "for special service in the Black Sea."



ZUMSTEIN SPITZE. HOCHSTE SPITZE. NORD END.

MONTE ROSA, FROM THE NORTH.—MONT BLANC, DISTANT 45 MILES.—(SEE THE NARRATIVE OF A RECENT ASCENT AT PAGE 399.)

"THE ARCTIC" STEAM-SHIP.

NEW CHURCH AT ABERDARE.

THE recent increase in the population of many towns of South Wales has rendered the existing church accommodation wholly inadequate to the requirements of the people; but in no place has this spiritual want been more evident than in the parish of Aberdare, where the population has, in a very few years, increased from 6000 to 16,000. The necessity of providing additional church sittings for the poor, and schools for their children, was keenly felt by the worthy Vicar of the parish, the Rev. John Griffith, who, with the assistance of the wealthy gentry of the neighbourhood, has been enabled to erect a new Church, at the entrance to the town. Still, this was found inadequate to the requirements of a large number of the working classes, who reside at a distance; and the want has been met by the kindness and munificence of one family, whose property includes that district. During last year, the Lady Harriet and the late Hon. R. H. Clive ordered the building of a Church, which was consecrated on the 31st of July last, by the Lord Bishop of the Diocese.

NEW CHURCH OF ST. FAGAN, LLOL-YI-YELLIN, ABERDARE.

The new Church will accommodate 700 persons. The nave is 68 feet in length by 22 in width; the chancel, 19 by 20 feet; and the aisles are 11 feet wide, and of the same length as the nave. At the east end of the south aisle is a chapel, which will accommodate sixty children. The walls are built of squared Duffryn stone; and the window and door-cases, buttresses, copings, and the bell-turret, are of Bath stone. The chancel is paved with black and red tiles; the roof, which is 47 feet to the ridge, is constructed of the best Memel timber, stained and varnished; as are also the seats. The altar fittings, reading-desk, and pulpit, are of a more ornate character. In the *Cardiff and Merthyr Guardian*, whence we abridge these details, it is stated that the general opinion of those persons who attended the consecration was favourable as regards the edifice. "Unlike many churches in situations more accessible, no part has been sacrificed, either in stability or design, to unduly ornament another, but the correct principles in church building have been properly considered; and the simple beauty of expression, which a sacred edifice should wear, has been the result."

The cost of this Church has been unusually small, when it is considered that the materials are not local. Without the warming apparatus, bells, and some fittings, the amount expended is under £1800. The work has been well executed by Messrs. Jones and Price, of Cardiff. The architect is Mr. Talbot Bury, of Wellbeck-street, Cavendish-square, London.

We regret to add that the Hon. R. H. Clive was not spared to witness the opening of the Church, towards the erection of which he had so munificently contributed.

GANNET, SHOT IN LINCOLNSHIRE.

THIS fine specimen of the Solan Gannet (a young one of the first year), was shot, a few days since, by Mr. Goodacre, near "the Roman bank," Skeldyke, in the neighbourhood of Boston, where the bird is rarely seen.

We abridge the following description from Mr. Gould's valuable work on "The Birds of Europe":—"The seas bordering the European shores are the natural *habitat* of the Solan Gannet (*Sula bassana, Briss.*), and nowhere is it more common during summer than on the rugged and precipitous coasts of Scotland, especially the Bass Rock, the isles of Ailsa, St. Kilda, &c., where they breed in vast multitudes: these situations, in fact, appear to be the principal nursery for this race. On the approach of autumn they leave their rocky breeding-places, and go further out to sea—the greater number passing considerably to the south—feeding on herrings, pilchards, and other fishes. The flight of the Gannet is extremely rapid, and capable of being long sustained; hence it traverses the wide surface of the ocean with comparative ease. It is seldom found in flocks out at sea, but mostly alone, dispersed apparently in search of food. On the approach of spring they return to their accustomed rendezvous, which is generally preserved from molestation and farmed by persons who make a profit of the feathers and the young birds. While sitting on their nest, which is composed of sea-weed and other similar materials, they are so absorbed in the task of incubation, that they will sometimes permit themselves to be approached, and even handled, without quitting it; they lay but a single white egg, which in size is between those of a cormorant and a common goose. From the time it is hatched till it arrives at maturity, no bird undergoes a more marked change in the colour of its plumage. Mr. Selby was informed by two persons who rent the Bass Rock, that the Gannet is four years in attaining a permanent state of plumage, and until this period has elapsed it is not known to breed. The first year's plumage (as that of the accompanying specimen) is characterised by the head, neck, and all the upper surface being blackish grey, inclining to brown, each feather tipped with a triangular spot of white; the breast and under surface white, each feather being edged with greyish black; the quills and tail greyish black, the shafts of the latter being white; the bill blackish grey tinged with brown; the irides pale brown; the legs and feet deep grey.

THE WRECK OF "THE ARCTIC."

IN our last publication we gave a short notice of this sad disaster. The following additional particulars relating to it have been taken from various sources.

On Wednesday, the 27th ult., about noon—Cape Race bearing S.W. by W., 65 miles distant—the *Arctic* steam-ship, on her passage from Liverpool to New York, while running in a very thick fog, was struck on the starboard bow, about 40 feet abaft the cutwater, by an iron steamer, which made three large holes in the ship—two below water, one of which was about 8½ feet in length, and 1 or 1½ feet in depth—leaving the whole outwater and stern of the iron steamer clean through the *Arctic's* side. So dense was the fog that the vessel could not be seen a minute before the collision.

The passengers were at lunch in the cabin when the shock took place, and, upon rushing on deck, a steamer was very indistinctly seen, through a dense fog, broad off the starboard bow, which turned out to be the *Vesta*. At first no danger was apprehended on board the *Arctic*, and the chief officer was sent with a boat to the rescue of the crew of the *Vesta*. It was soon discovered, however, that there was little chance of saving the *Arctic*; and the wife, daughter, and son of Mr. E. K. Collins, with several ladies, were put on board a boat—in the act of lowering which one of the tackles gave way, and all, except one lady, who clung to a sailor holding fast to the boat, were precipitated into the sea and lost. Another party of ladies and a few gentlemen were put on board the other boat, with some provisions; but, as it was not manned by sailors, there was little chance of their reaching the land. The ship could not be stopped to lower the boats, the pumps being attached to the engine for the purpose of keeping the vessel clear of water, which was rushing furiously into her from an injury done on the fore side of the starboard wheel. She was then headed for Cape Race; but, after having gone some fifteen miles, the water had so far gained as to extinguish the fires, and the wheels, consequently, ceased to work—at which time the boats saved left the ship. A large boat, capable of containing 60 persons, was on deck; but there not being sufficient hands on board to launch her, it is supposed that she would be filled with persons, in the hope that she might float off when the ship sunk.

Mr. Baahlam, second officer of the *Arctic*, gives the following account of what took place when the vessel began to sink:—

In about thirty minutes all the lower fires were out, and at the least there were six feet of water in the ship fore and aft. By this time the confusion amongst the passengers was very great, but they used all efforts to assist the crew in keeping the pumps going, and in lightening the ship forward, for the purpose of endeavouring to get at the leak from the inside; which was found to be useless, and numbers of them got into the boats, which were still hanging to the davits. In forty-five minutes after the collision I came up from the forehold, and informed the Captain that the water was on a level with the lower-deck beams, and that it was impossible to get at the leak. I then asked him what he thought would be likely to be the fate of the ship, when he stated his belief to me that there was no hope of saving her. He then told me to see to my boats.

On going to those on the port side I found them completely filled with men and women, and no possibility of getting near them. I immediately went to the starboard side, and ordered two of the crew to lower the guard-boat, and asked the Captain what his intentions were, who replied that the ship's fate should be fair. I then asked him if he would not allow his son to go with me, as I intended to take a boat; but he returned me the answer that he should share his fate. I then jumped into the boat and was ordered by the Captain to cut away the tackle fa[illegible] under the stern. I did so; at which time about twenty persons [illegible] posed, jumped overboard, of whom seventeen or eight can were picked up. Fell in with another boat which had been lowered from the other side, and lightened her of part of her complement, leaving nineteen in it, and twenty-six in my own boat.

The last sight we had of the ship her guards were level with the water, and the surface of the sea strewed with human beings who had jumped or fallen overboard—to whom, however, it was impossible for us to lend any assistance; and we soon lost sight of all, as the fog continued very dense

SOLAN GANNET, SHOT NEAR BOSTON.

I then asked the boats' crews whether they were willing to be governed by me, which was unanimously approved, and I was put in complete command of both boats. We were then about sixty miles S.E. of Cape Race. Deeming it my duty, for the safety of all, I took the nearest course for the land; and, after pulling forty-two hours, with nothing to guide us but the run of the sea, which I took to be heaving from the south-ward, and in a thick fog, which lasted all the time, we reached Broad Cove, some twelve miles north of Cape Race.

The *Vesta*, which had left St. Peter's on Tuesday, September 26, was going at the rate of eight knots an hour, when it came into collision with the *Arctic*, of New York, whose speed is stated to have been nine knots. The *Vesta* appeared to be striking, but immediately rose again; but no hope was entertained of her ultimate safety, the passengers and crew looking upon the *Arctic* as their only chance of saving their lives. One man was killed, and others were severely wounded. Two boats were put over the side, the first of which was sunk, and the second was immediately boarded by two of the crew and several of the passengers, who, not heeding the order of the Captain to return on board, abandoned the vessel. The fog continuing very thick, they lost sight of the *Arctic* altogether, still hoping, however, that she would not desert them.

A cry of distress was now heard, which was attributed to some men of the *Vesta*, who, it appeared, had swum off to get on board the *Arctic*. Providentially, the bulkhead in the forecastle was not started, which the Captain (Duchesne) noticed as affording a chance of safety. He immediately, with the utmost promptitude, gave orders for lightening the vessel by the head, which was as readily obeyed by throwing overboard all the fish, cargo, luggage of the passengers, &c., which was in the fore part of the vessel, and which raised her bows considerably. This elevation, with the firmness of the bulkhead, contributed much to stop the heavy rush of water. About 115 mattresses, pallasses, and other effects of the crew and passengers, were now placed abaft the first partition; over which were thrown sails, backed by boards and planks; the whole being secured by cables well and firmly wrapped round all.

The foremast, which had received some damage, was cut away—contributing considerably to raise the head still more. This occupied two days. They then ran under small steam for the nearest port (St. John's), which they entered on the 30th ult., most providentially before the raising of a severe gale which blew on that day. Upon mustering the hands, thirteen were missed. The *Vesta* had on board 147 passengers and a crew of fifty men. The conduct of Captain Duchesne is much applauded, and the condition of the vessel, as she now appears, elicits the admiration of all who visit her. Indeed nothing but the most indomitable energy, unwavering perseverance, and most superior seamanship could have succeeded in bringing the vessel into port.

Every exertion was made at St. John's to procure vessels to be dispatched in search of the *Arctic* or her boats, by the American Consul and passengers. They succeeded in obtaining the brigantine *Ann Elliot*, belonging to Messrs. Warren Brothers, which vessel sailed on the 2nd, and was to cruise three days in the vicinity of the catastrophe, free of charge. The Right Rev. Dr. Field promptly offered the use of his yacht, the *Hawk*, for the same service, which was to have been dispatched as soon as a master and crew could be had for her.

The *Arctic* steamer is underwritten to the extent of £40,000 in London, £20,000 in Glasgow, and £55,000 in the United States.

NAVAL AND MILITARY INTELLIGENCE.

MORE OFFICERS DEAD.

Official intelligence was received on Wednesday, at the War-Office, of the deaths of the following officers in the Crimea, in addition to those who fell in the battle of the Alma:—

Lieut.-Colonel William Francis Hoey, of the 20th Regiment.

Captain John A. Freeman, of the Scots Greys; Captain Longmore, of the 4th Dragoons; Captain the Hon. C. L. Hare of the 7th Fusiliers.

Lieutenant and Adjutant Thomas Irwin, of the 13th Light Dragoons; Lieutenant Ramsay Wardlaw, of the 19th Foot.

Ensign Wm. Fred. Phipps, of the 19th Foot; Ensign Wm. Y. Johnston of the 30th Foot.

Quartermaster John Lehay, of the 47th Foot.

THE ARCTIC EXPEDITION.—COURT-MARTIAL ON THE OFFICERS.

A court-martial was held on board the dag-ship, *Waterloo*, off Sheerness, on Tuesday, on the officers commanding the ships employed on the expedition under Sir E. Belcher in search of the *Erebus* and *Terror*. Mr. Hayward officiated as Deputy-Judge-Advocate. The first charge gone into was one against Captain M'Clure, and the officers and crew of the *Investigator*, the charge being for abandoning his ship. After a short investigation, the Captain, officers, and crew were honourably acquitted; as were also Captain Kellett and the officers and crew of the *Resolute*.

The Court then proceeded with the trial of Captain Sir E. Belcher, for his conduct in abandoning the ship *Assistance* and her tender the *Pioneer*, and for directing the abandonment of the ship *Investigator* and *Resolute*, and the tender *Intrepid*. After some evidence for the prosecution was given, the trial was adjourned to the following day (Wednesday), when, the case for the prosecution having closed, Sir E. Belcher read a long written defence, in the course of which he read extracts from various orders issued by the Lords of the Admiralty for his guidance in the conduct of the expedition. In the Deputy Judge Advocate, Sir E. Belcher said he had no witnesses to call. The Court was then cleared, and in about an hour and a half was re-opened. The Deputy Judge-Advocate then read the finding of the Court, which was to the following effect:—The Court is of opinion that the abandonment of H.M.S *Investigator* was directed by Captain Kellett, who was justified in giving such orders. The Court has further of opinion that from the great confidence reposed in Captain Sir Edward Belcher by the Lords Commissioners of the Admiralty, and the ample discretionary powers given to him, he was authorised, and did not err, in exercising his power in abandoning the *Assistance* and her tender, the *Pioneer*; and in authorising the abandonment of the *Resolute* and her tender, the *Intrepid*. Although, if circumstances had permitted, it would have been advisable that he should have communicated with Captain Kellett previously. And the Court adjudges the said Sir Edward Belcher to be acquitted; and he is hereby acquitted accordingly. The President then restored Sir E. Belcher his sword, but without making any observation, and the Court broke up.

MORE SURGEONS FOR THE ARMY.—A reinforcement of medical officers being required for the seat of war, the following have been selected from the medical staff at Chatham to proceed immediately to Constantinople and Scutari:—J. Newton, J. Summers, and F. Rutter, second-class staff surgeons at Chatham Hospital, Fort Pitt, Chatham. The above gentlemen are ordered to proceed to Constantinople; and Assistant-Surgeon Johnstone, 68th Regiment, has proceeded from Chatham to Portsmouth, to embark for the reinforcement of the force for Sebastopol. It is expected that another draught of medical men will be required from the hospitals at Chatham for the seat of war. During the week twelve additional surgeons have been dispatched from Ireland to the East, to attend on the wounded.

FEMALE NURSES FOR THE EAST.—Mrs. Nightingale, who has been for some time acting as superintendent of the Ladies' Hospital, at No. 1, Upper Harley-street, has undertaken to superintend the staff of female nurses, who will at once proceed with her to Scutari, at the cost of the Government, there to act under her directions in the English Military Hospitals—subject, of course, to the authority of the chief medical officer of the establishment. Mrs. Nightingale will herself select the persons who will accompany her, and will recommend them to the War-office for certificates, which, under general capacity requisite for duties so difficult and so responsible, and their willingness to submit implicitly to the regulations of one central authority. The applications made to Government for female nurses would have been exceedingly numerous, and the only difficulty has been to make a proper selection, and to frame regulations securing due subordination to the medical officers.

THE detachment of the 23rd Fusiliers, on duty at the Tower, having received the route for the Crimea, marched from the fortress on Wednesday morning, to reinforce the service companies of their regiment.

THE following officers are under orders to proceed forthwith to the Crimea:—The Hon. Ashley Ponsonby, M.P., Grenadier Guards; Lieut.-Colonel De Paiba, Lieut.-Colonel Forbyce, Captain P. Facet, Captain Lord Adolphus Vane Tempest, Lieut. Gregory, and Lieut. Farquharson, Scots Fusilier Guards, with drafts of those regiments. In addition to the drafts of the Guards, the following detachments were to embark for the Crimea this week:—7th Fusiliers—2 sergeants and 80 men; 19th Regiment—2 sergeants and 80 men; 23rd Fusiliers—2 sergeants and 100 men; 33rd Regiment—2 sergeants and 100 men; 93rd—Ensign Kenny and Preston, and about 80 men; 95th—Lieut. Probart, 2 sergeants, and 80 men.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the amount of business doing in the Consol-market this week has been small, the decline in the quotations has been trifling. The comparative firmness in prices must in some measure, be attributed to an increased supply of money, and the large importations of the precious metals. A few rather heavy *bear* transactions have taken place; yet, in a general way—especially as jobbers are by no means largely supplied with stock—they have failed to have any immediate influence upon value.

Owing to the unfavourable turn in the Exchanges, there has been more inquiry for gold on Continental account; hence, the shipments have been somewhat in excess of last week. We may observe, however, that about £400,000 in gold has been sent into the Bank. The total imports have been little short of three millions, £3,000,000, chiefly from the New York, and Mexico. Amongst the shipments we may notice £72,000 in gold and silver to India and China. From a return just issued, it appears that the arrivals of gold from California, since the first of January to the 20th ult., were £20,720,000; and yet the stock in the Bank is now £3,313,675, less than at the beginning of the year.

Our advices from Australia and California continue favourable respecting the produce of gold. The steady yield of that metal will be of immense advantage to us; but, at the same time, it is evident that we shall draw largely from the United States, arising from the great balance of trade in our that country. Further supplies of bullion are expected by the two next packets.

It may be necessary for us to state that the New Three-and-a-Quarter per Cents are now reduced to a Three per Cent Stock, in conformity with the late Sir Robert Peel's Bill. The Consol-market, on Monday, was dull. The Three per Cents Reduced were done at 93⅜; the Three per Cent Consols, 94⅛; Consols for Account, 93⅝; and the New Three per Cents, 93⅜. Bank Stock was 210, 9. 8½. India Bonds realised 7s. to 10s.; and Exchequer bills, 4s. to 7s. prem. Exchequer bonds were 99⅛. On Tuesday business was restricted. The Three per Cents Reduced marked 93⅝ ⅞; the Three per Cent Consols, 93⅞; the New Three per Cents, 93⅜; and the New Two-and-a-Half per Cents, 84. Bank Stock, 210; Long Annuities, 4 5-16. India Bonds, 10s. to 7s. 5 Exchequer-bills, 7s. to 4s. prem. Exchequer-bonds, 99⅛. The following day's transactions were trifling. The Three per Cents Reduced were 93⅜; the Three per Cent Consols, 94⅛ ⅜; Consols for Account, 94⅛ ⅜; the Three per Cents, 93⅜; Bank Stock, 210; Long Annuities, 4⅛. India Bonds, 7s. to 10s.; Exchequer-bills, 4s. to 7s. prem.; Exchequer-bonds, 99⅛. On Thursday, there was no improvement in the quoted prices were rather declining. The Three per Cents were 94⅛ ⅜; the Three per Cents Reduced, 93½; and the New Three per Cents, 93⅜. Bank Stock, 209½ to 210. Exchequer-bonds, 99⅛; India Bills, 10s. India Bonds, 7s. to 10s. prem.

The average circulation of the Joint Stock Banks of England and Wales during the week ending the 30th ult. was £8,077,876. The circulation of private banks was £1,000,000, showing a decrease of £40,000.

Most Foreign Bonds have ruled dull, yet we have no material change to notice in their quotations. Mexican Three per Cents have been 22½ ex div.; Spanish Three Cents, 34; Turkish Scrip, ½ prem. Venezuela Three-and-a-Half per Cents, 32; Belgian Four-and-a-Half per Cents, 84; Dutch Two-and-a-Half per Cents, 61⅛; Dutch Four per Cents, 92½; Brazilian Five per Cents, 99⅛; Ditto, Four-and-a-Half per Cents, 86; Russian Four-and-a-Half per Cents, 86; Sardinian Five per Cents, 94; Buenos Ayres Six per Cents, 84½ ex. div., Danish Five per Cents, 100. The quotations for Railway Bonds have been tolerably active. Australasian have realised 7½ ex div.; Chartered of Asia, 4¾; English, Scott ish, and Australian Chartered, 13; London Chartered of Australia, 9⅞; Oriental, 43; Union of Australia, 60; Miscellaneous Shares have been very flat, yet prices have kept up remarkably well:—Canada Six per Cent Bonds have realised 110½; Crystal Palace, 3; General Screw Steam Shipping, 1¼; Scottish Australian Investment, 2⅜; Ditto, New, ⅝; Van Diemen's Land, 1⅜; Victoria Dock, 9⅜. Canal Shares have sold as follows:—Ashton and Oldham, 154; Birmingham, 204; Coventry, 209; Derby, 83; Grand Junction, 57; Grand Surrey, 48; Leicester, 68; Leicester and Northampton, 28½; Loughborough, 87½; Neath, 150; Oxford, 110; Peak Forest, 86; Regent's, 8; Rochdale, 46; Staffordshire and Worcester, 425; Stourbridge, 285; Warwick and Birmingham, 274; Worcester and Birmingham, 32. Waterworks Shares have been in demand:—Berlin, 8½; East London, New, 108; Grand Junction, 72; Kent, 80; Lambeth, 97; New River, 55; Southwark and Vauxhall, 82½; West Middlesex, 102; Ditto, New, 15. Gaslight and Coke Companies' Shares have marked:—Bristol, 91; City of London, 100; Equitable, 28; Great Central, 12; Imperial, 37 ex div. and ex new; London Parliamentary Preference, 26; Phœnix, 27¼ ex div.; Ratcliff, 70; United General, 20; Westminster Chartered, 39½; Ditto, New, 6⅝. Insurance Companies' Shares have been firm:—Alliance, 19½ ex div.; Atlas, 18½; Argus Life, 92; County, 135; Crown, 18; European, 19½; General, 6½; Globe, 102; Guardian, 6½; Imperial Fire, 335; Ditto, Life, 18½; Law Life, 55½; London, 29½; Phœnix, 183; Provident Life, 3⅜; Rock, 8½; Royal Exchange, 190; Sun, 31½; Union, 8½; Victoria Life, 1⅜. Dock Shares very little has been done:—Hungerford, 12; Southwark, 9; Waterloo, 4½; Ditto, Old Annuities of £8, 8½; Ditto, of £7, 28; Yaudon, 17.

Railway Shares have been dull, and in most instances prices have ruled lower. The following are the official prices on Thursday:—

ORDINARY SHARES.—Caledonian, 75½; Eastern Counties, 2¼; Edinburgh and Glasgow, 88; Great Northern, 89; Great Western, 71; Lancashire and Yorkhire, 77½; London and North-Western, 101; London and Blackwall, 6¼; Manchester, Sheffield, and Lincolnshire, 31; Midland, 69; North British, 34; North-Eastern, Leeds, 14; South-Eastern, 62½.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire Six per Cent, 136; West Valley, 30.

PREFERENCE SHARES.—Eastern Counties Extension, No. 1, 1 prem.; Great Northern, 5 per Cent, 100; Ditto, 3 per Cent, 100; Oxford, Worcester, and Wolverhampton, Six per Cent, 112.

FOREIGN.—Antwerp and Rotterdam, 6; Dutch Rhenish, 6; Great Western of Canada Shares, 12 prem. Ind. Ext.; Royal Swedish, 1.

Mining Shares have been neglected. Santiago di Cuba have sold at 8. Copiapo, 13½; Eniglish and Australian Copper, 1⅛; Fortuna, 1; Pontiband Silver-Lead, 1½; South Australian, 1.

Friday Evening

We have had a very inactive market for Consols, to-day, yet scarcely any change has occurred since prices. Three per Cents have realised 94⅛ ⅜; and the New Three per Cents Reduced, 93½ ⅝; and the New Three per Cents, 93⅜ ⅝. India Bonds, 10s.; and Exchequer-bills, 4s. to 7s. prem. In Foreign Bonds and Railway Shares, very little is doing

THE MARKETS.

CORN EXCHANGE (Friday).—Very moderate supplies of English wheat have come to hand for our market coastwise and by land carriage. To-day the show of samples, of both red and white, was small. The attendance of millers was not very numerous yet the demand for all kinds was active, and the quotations were fully supported, at from 4s to 5s. per quarter. Foreign wheat, the sale of which was limited was very brisk and 4s per quarter higher than on Monday. The barley trade was firm, and the value of the article had a upward tendency. We had a good sale for malt, and fine parcels were rather dearer. The sale for oats was steady, and prices were somewhat in favour of the buyer. Beans and peas, and flour were very firm.

The top price of English was 68s. per sack

ARRIVALS.—Irish wheat, 1600 qrs.; barley, 2730; malt, 450; oats, 290; flour, 493. Irish: barley, 6300. Foreign: wheat, 5490; barley, 1643; oats, 5712

English.—Wheat, Essex and Kent red, 68s.; ditto, white, 68s. to 70s.; Norfolk and Suffolk, red, 66s. to 68s.; rye, 38s. to 41s.; grinding barley, 29s. to 30s.; distilling ditto, 33s. to 36s.; malting, ditto, 51s. to 54s.; Kingston and Ware, 70s. to 72s.; Chevalier, 72s. to 73s.; Yorkshire and Lincolnshire feed oats 27s. to 30s.; potato ditto, 29s. to 32s.; Youghal and Cork, black, 25s. to 26s.; ditto, white, 27s. to 28s.; Limerick, 25s. to 26s.; Galway, 24s. to 25s.; beans, 42s. to 44s.; white, 42s. to 46s.; bollers, 48s. to 50s. per quarter; town-made flour, 39s. to 40s.; Suffolk, 37s. to 38s.; Yorkshire, 34s. to 36s.; household marks, 42s. to 44s. per sack. American, 34s. to 42s. per barrel.

Seeds.—Canary is in good request, and rather dearer. Tares are producing more money, and all other articles are firm.

Linseed, English, sowing, 66s to —s.; Baltic, crushing, 58s. to 60s.; Mediterranean and Odessa, 56s. to 57s.; hempseed, 40s. to 44s. per quarter. White mustard-seed, 10s.; and winter tares, 11s to 12s. per bushel. English rapeseed, £26 10s. to £27 10s. per last of 24 quarters. Linseed cakes, English, £9 0s. to £10 0s.; ditto, foreign, £9 10s to £11 10s. per ton. Rapeseed cakes, £6 0s. to £6 10s. per ton. Canary, 42s. to 45s. per qr.

Bread.—The prices of wheaten bread in the metropolis are from 8½d. to 9½d.; of household ditto, 7½. to 8d. per 4lbs. loaf.

Imperial Weekly Average.—Wheat, 57s. 0d.; barley, 30s. 6d.; oats, 25s. 4d.; rye, 34s. 8d.; beans, 34s. 6d.; peas, 39s. 0d.

The Gaz Weekly Average.—Wheat, 55s. 8d.; barley, 29s. 9d.; oats, 25s. 8d.; rye, 34s. 0d.; beans, 34s. 0d.; peas, 38s. 8d.

English Cross Bred Sold Last Week. Wheat, 151,870; barley, 35,518; oats, 13,483; rye, 710; beans, 1,727; peas 1314 quarters.

Lynn.—The public sales held this week have gone off steadily, on former terms. Privately, a fair average business is doing, at previous rates. Up to Saturday last duty was paid on 30,799 qrs. against 34,299 qrs. in the corresponding week in 1853.

Sugar.—Our market has ruled somewhat inactive this week. In the quotations, however, we have no change to notice. Grocery, fine, 44s. to 45s.; good ditto, 43s.; middling, 42s.; low ditto, 41s.; bastard grocery, 40s.; fine, 39s.; mid. to good, 38s. 6d. to 39s.; low, 37s. 6d. to 38s.; good grey, 37s.; brown Grocery, 36s.; fine, 35s. 6d. to 36s.; low, 35s. 6d. to 36s.; brown Jamaica, 29s. to 31s.; ord to good yellow, 31s. 6d. to 34s.; mid to good yellow Manilla, 32s. to 33s.; low, 30s. to 31s. 6d.; fine, 35s. to 36s. 6d.; and good to fine grocery yellow, 36s. to 41s. per cwt. Refined goods move off slowly; brown lumps are 42s 6d.; and low to fine grocery, 43s. to 46s. per cwt.

Provisions.—There is a very limited business doing in Irish butter. In prices, however, very little change has taken place. Fine foreign qualities are in good request, at full prices. In other articles, no alteration can be said. Bacon, and most other kinds of provisions are selling on former terms.

Hay and Straw.—Meadow hay, £3 0s. to £4 18s.; clover, £4 0s. to £6; and straw, £1 8s. to £1 17s per load.

Coals (Friday).—Redheugh Main, 17s. 6d.; Tanfield Moor, 17s. 6d.; Hedley, 16s. 6d.; Lawson 16s. 6d.; Haswell, 17s.; Hilton, 17s.; Lambton 17s.; Son & Kel 16, 16s. 3d.; Stewart, 16s. 6d.

Liquid (Friday).—Owing to the large supplies of foreign hops on offer, our market has ruled heavy, and prices have a downward tendency. The week's imports are 321 bales from Ostend, 563 from Hamburg, 100 from Antwerp and 91 from Dunkirk. New hops are selling as under:—Mid and East Kent pockets, £17 10s. to £24 0s.; Weald of Kent, £17 5s. to £18 10s.; Sussex, £16 5s. to £19 0s.

Smithfield (Friday).—To-day's market was but moderately well supplied with beasts, the fine quality of which was very inferior. Prime breeds moved off steadily, at very full quotations, condition of which was very inferior. Prime breeds moved off steadily, at very full quotations, condition of which was very inferior. The trade ruled dull, on former terms. We had a steady inquiry for prices. Otherwise, the beef trade ruled dull, on former terms. We had a steady inquiry for prices. Otherwise, the beef trade ruled dull, on former terms. The trade is was of which was far from extensive—at full currencies The trade is was rather inactive; yet we have no change to notice in value. Pigs were in fair request, at full prices. Milch cows, with their small calf, were selling at from £4 to £5 each.

Per 8 lbs. to sink the offal. Coarse and inferior beasts, 3s. 0d. to 3s. 2d.; second quality ditto 3s. 4d. to 3s. 6d.; prime large oxen, 3s. 10d. to 4s.; prime Scots, &c., 4s. 2d. to 4s. 4d.; coarse and inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime coarse-woolled sheep, 3s. 10d. to 4s 4d.; prime small ditto, 4s. 2d to 4s 6d.; large coarse calves, 3s. 4d. to 4s. 6d.; prime small ditto, 4s. 8d to 4s 6d.; large pigs, 3s. 4d. to 3s. 6d.; neat small porkers, 4s. 6d. to 5s. 0d.; suckling calves, 22s to 28s.; and quarter old store pigs, 21s. to 30s. each.

Per 8 lbs. by the carcase:—Inferior beef, 3s. 6d to 3s 8d.; middling ditto, 3s. 10d to 4s 0d.; prime large ditto, 4s. 2d. to 4s. 6d.; ditto small ditto, 4s. 8d to 4s. 10d.; large coarse mutton, 3s. 8d. to 4s. 0d.; middling ditto, 4s. 2d. to 4s. 4d.; prime Scots, &c., 4s. 6d. to 4s. 8d.; veal, 3s. 8d. to 4s. 6d.; small pork, 4s. 6d. to 5s. 2d.

THE LONDON GAZETTE.

TUESDAY, OCTOBER 17.

OFFICE OF ORDNANCE Oct. 16.

Royal Artillery: First Lieut. J. F. Honeycomb to be Second Captain, Second Lieuts. H. Evans, R. D. Lyle, L. Gardiner, and Sir Peter Lumsdaine.

HER MAJESTY'S VISIT TO HULL AND GRIMSBY.

PRESENTATION OF ADDRESSES TO HER MAJESTY, AT THE STATION HOTEL, HULL.

In the summer of 1853, a loyal and respectful invitation from the Mayor and Corporate authorities of Hull was conveyed to her Majesty, soliciting the honour of a Royal visit on the occasion of the departure of the Court for Scotland. The arrangements of the Sovereign did not at that period permit the carrying into effect this visit; but the late gracious intimation on the part of her Majesty must be a gratifying proof that the invitation was not forgotten, and that the Queen has availed herself of the earliest opportunity of acceding to the wishes of her affectionate subjects resident in Kingston-upon-Hull. The first intimation of the intended honour was conveyed to the Mayor by Sir George Grey, in a letter written from Balmoral, on the 3rd instant. From the moment of its receipt, no time was lost in making preparations to give a worthy reception to her Majesty. The Corporation met, and voted addresses—ordered medals to be struck—a general illumination to be made—triumphal arches to be erected—business to be altogether suspended; and every mark of respect that could possibly be devised was arranged to give due effect to the visit. The intention of her Majesty to pass the night at the magnificent Station Hotel of the North-Eastern Railway having been communicated to the Mayor, it was at once determined to erect galleries, in amphitheatrical form, in front of the hotel, capable of containing nearly 20,000 spectators, indeed, no pains or expense was spared to make a display worthy of the great occasion.

ARRIVAL OF THE ROYAL PARTY AT HULL.

Although prepared to look for entire punctuality in the time of her Majesty's arrival on Friday evening, the Mayor, Aldermen, and Town-councillors might easily have been taken by surprise. Fully twenty minutes before the appointed hour of six the station bell signalled that the Royal train was passing Hessle, only four miles distant, and in a very few moments the gaily-decorated engine which headed the train came in sight. Amid the firing of artillery and shouts of welcome, which were taken up and repeated by ten thousand hearty Yorkshire voices in and around the station, her Majesty stepped upon the platform. Here she was received by the Mayor (Dr. Cooper) and Town-council of the borough, in their robes; the Earl of Carlisle, Lord-Lieutenant of the East Riding; the Earl of Yarborough, Lord Londesborough, Lord Hotham, Sir Harry Smith, Commander of the Northern and Midland districts; Mr. S. Warren, Recorder of Hull; Mr. W. H. Watson and Mr. W. D. Seymour, members for the borough; Sir Cliff and Constable Bart.; the Lord Mayor of York (Mr. Leman), Mr. W. D. Seymour, M.P. for Sunderland, &c. A guard of honour of the 51st Regiment and a strong body of police lined each side of the platform. Preceded by the Mayor and Sheriff, and leaning upon the arm of the Prince Consort, her Majesty advanced towards the apartments prepared for the Royal visitors in the Station Hotel, the entrance to which opens directly on the platform. The galleries erected along the line of approach to the hotel afforded to the privileged spectators who occupied them an excellent view of the procession as it moved along. Immediately following the Queen and Prince were five of the Royal children—the Prince of Wales, the Princess Royal, Prince Alfred, and the Princesses Alice and Helena—attended by the Countess of Dysart and the Hon. Miss Stanley, Ladies in Waiting. The Earl of Aberdeen, Lord Alfred Paget, General Grey with other members of the Royal suite, succeeded, and the representa

THE QUEEN AT THE STATION HOTEL, HULL.

HER MAJESTY'S VISIT TO HULL—THE PROCESSION IN THE MARKET-PLACE.

THE WAR IN THE CRIMEA.

(From our own Correspondent.)

BALACLAVA, near Sebastopol, October 3, 1854.

ABOUT seven miles from Sebastopol is a village with a harbour—you may see it on the charts—into which for centuries no stranger is known to have penetrated. The Russians had written up in front of it "Closed to vessels of all nations;" and, accordingly, all nations seemed to have been ignorant of its extent, its resources, and its beauties, until chance discovered it to them, and force broke through the time-honoured arrangements of Russia. Balaclava, now no longer closed to any but the Russians, is the head-quarters of the British army so ing against Sebastopol. I reached it in safety, in that good ship the *Trent*, Captain Ponsonby, and in company with that regiment of the Enniskillings which suffered so fearfully the other day in the Strait of Gibraltar.

We left Varna on the 26th of September, in company of the *Simla*, the *Emperor*, the *Jason*, and the *City of London*; all towing transports, and convoyed by H.M.S. *Spiteful*—a vessel which is never likely to be dangerous to any one, because of her feeble powers of locomotion. A hard breeze, with squalls and showers, was blowing as we left Varna bay, and it increased in the night to a gale, during which the steamers parted with their tows. The *Trent*, although accustomed for several months past to carrying cavalry, had never taken so many horses and men at once, and she rolled heavily in consequence. The one. But here our commendations must end; for in regard to the spirit of his work nothing can be more servile. He seems to have been thoroughly duped by the plausibilities of Russian manners, and to have been "fooled to the top of his bent" by the authorities. Three weeks after the bombardment of Odessa, on the 12th of May in the present year, the *Tiger* grounded, during one of the dense fogs so prevalent in the Black Sea at that season. The weather was so calm that the shock of the vessel, in striking between two rocks, was so slight as to be scarcely perceptible. Indeed, they imagined that the ship had grounded on a sand bank. When the fog has partly dispersed, they were astonished to find high land on their left. They then also discerned a small boat with two oars pulled across her bows, close along shore towards the city, a Cossack on horseback, and two ladies with pink parasols, promenading in their garden, which reached the edge of the cliff. The latter it is stated, with others, who joined them later, were witnesses of the firing that subsequently took place between our mariners and the Russian troops. The ladies were frequently in danger, but their curiosity was evidently stronger than their fear. The log to a certain extent was useful to our seamen in the combat. The drum of the ship kept at the highest point of tension; and frequently the workers at the capstan were encouraged by the cry "She moves!" but the supposition was a fallacy of expectation; and the vessel continued exposed to the guns of the enemy, which opened fire upon it. Sixteen guns were thrown overboard, still she did not move. Another gun was brought on deck to bear upon the cliff, in re-ponse to the artillery opened on the *Tiger* from above; but in such a situation firing upwards was useless.

The Russians used their prisoners well; and the Lieutenant himself was treated with so much studied kindness and civility that he could not regard his captors as our enemies. The system of espionage and censorship, however, that pervades the social life of Russia occasioned him some irritation. On this topic, he remarks:—

It may be as well here to warn those who have friends in Russia situated as we were, of the disservice they may render them by sending news papers containing political matter. In the box containing the books just mentioned, which had been carried to the capital for examination (at least so we were informed), there were a number of papers, chiefly of the *Times*, and one local periodical; these were fumigated, and delivered to the person to whom the box was addressed, as were the paper, having served merely to fill up the spaces between the books. On pratique being given, the Custom-house officers, when examining effects, discovered these papers, and were disposed to make them the cause of a dispute. Had not the First Lieutenant applied to the quarantine authorities for evidence of his having received these papers through the proper channel, an unpleasant dilemma might have arisen, and it is hoped that one of the scraps contained a severe strieture on the conduct of the Emperor of Russia. Quires on quires would have been wasted in reports on the subject, and much trouble consumed to the persons authorities, as well as to the person in whose possession the paper was found, had not the matter been hushed up.

To this, also, he adds a circumstance in a note, affecting this journal:—

A copy of the ILLUSTRATED LONDON NEWS, which contained a plan of the lorrens of Sebastopol, from the sketch of Lieutenant O'Reilly, of the *Retribution*, had been mutilated by the authorities, one-half being cut off before it was delivered to the person to whom it was addressed.

We have, also, some account of the city of Odessa; which is sufficiently prosperous to be regarded as a rival of St. Petersburg. Outside the gates, the route of the party lay along the shore of the bay. They changed horses several times during the night. When they breakfasted, their tea was made with the assistance of the samovar.

This is one of the most useful of Russian domestic implements, and very superior to our English urn. So common is it in Russia, and in such general use, that at the Exhibition of 1851 it was neglected to be produced among the jeux de verty of nations. A funnel that passes through the centre of the urn serves as a chimney to produce a draught of air, so that three pieces of charcoal, which are lighted outside the apartment, soon burn brightly, and in less than ten minutes the water rolls, and is kept at the boiling point as long as required.

This is much more simple and easy contrivance than our English urn, which requires the water to be boiled, and a large fire to be ready to make the iron red-hot; even then the water is not kept long in a bullition, and the whole requires much time and trouble; to say nothing of the additional advantage of being able, at the same time, to cook an egg, or even a chop, or at least to keep your toast warm on the top of the funnel. It is very desirable that these samovars should be introduced into this country; and I feel sure that people who will undertake to pass them fairly before the public, and within reach of persons of moderate means, will add much to our home comforts, and will be amply repaid for his pains. No danger need be apprehended from the effects of the charcoal, as the smoke of three pieces (all that is required) is very trifling; and besides, as we have already observed, the fire being lighted outside the room, no evil effects can arise from it. The fact of their being in such universal use in Russia speaks volumes in their favour.

As I am on the subject of tea-making, I will remark, that in Russia, where so much tea is consumed, and where the perfection of the article is placed on the funnel of the samovar, to keep the tea as hot as possible; and in some instances, when the samovar was in use in another room of the house, we were two teapots and two cups and saucers on the top of the other, that the lower one, holding hot water, might keep the upper one hot, which contained the tea. Another observable circumstance is the Russian custom of serving tea in glass tumblers. Glass retains the heat better than earthenware, and this, perhaps, is the reason of its being preferred; with us, however, this would really be an objection; many a time have I burned my fingers, and wished I could be accommodated with a teacup—an article I never saw during my stay in Russia, except at an English house.

As milk is not generally used by the Russians, who say that they leave such slops for the women, perhaps they prefer glass because it enables them to see the colour of the beverage they consume. Instead of milk, the juice and small slices of lemon, with an enormous quantity of sugar, are mixed with the tea; to which they occasionally add rum or brandy, so that, after all, it becomes in fact a glass of punch.

We must hasten to St. Petersburg, where the author had an interview with the Czar. But we must first extract all adventures at the residence of the Grand Duke Constantine, at Strelna:—

I was standing, leaning over a chair and looking out of a window, with my back to the door, when I heard these words in a pleasing tone and in good English, with a slight foreign accent:—"Your Royal Highness for the Grand Duke, I suppose?" I turned round, and, a little to my confusion, saw three ladies standing close by me. I bowed respectfully to the lady in advance, and replied that I was waiting for the Grand Duke, the Imperial Highness at eight o'clock. The Grand Duchess, for it was no other who now honoured me with her conversation, was accompanied by two of her ladies-in waiting. Her Imperial Highness then said that she feared I was having been very unwell, and expressed a hope that I was better. I replied that I had only risen from my bed in obedience to the commands of the Grand Duke. Her Imperial Highness then inquired if my wound was uncertain when the Grand Duke would return; and added, in the most polite manner, that I might know who was addressing me, "Even I do not know, and I am his wife!" I again bowed, when she said she should certainly hear if he was detained, and would let me know; she recommended me, in the meanwhile, to wait, saying that she would send me some tea, and the last English newspaper. Both had just come to hand. She then retired, with her attendants, by the door at which she had entered, and soon after returned alone, with a co.y of the ILLUSTRATED LONDON NEWS, which she handed to me, saying, "See! it has not yet been opened, and is the last number received." It was addressed to the Grand Duke, and had not passed under the scrutiny of the Censor; its destination to a member of the Imperial Family being a safeguard from the mutilating scissors of that important functionary.

Her Imperial Highness then retired, and I soon saw her in the garden, dressing with her suite. She is a person of very pleasing appearance, rather above the middle height, of sweet and intelligent countenance, and decidedly pretty and engaging. She appeared to be about three-and-twenty, and was dressed with great simplicity in white, with scarcely any ornament, except a few tasteful flowers in her white bonnet. The ladies who accompanied her were quite than herself; and, although they were certainly beautiful, served to set off her Imperial Highness to advantage, by the gay colours of their dress, in contrast with the simplicity and elegance of hers. They did not speak while in the room; but as soon as they left I heard them say some words in French, and their tone concluded (as I had been assured) that this was the language of the Court.

Presently a servant entered with the usual tea appara us—one teapot and a silver urn, already boiling. I quite enjoyed the refreshing, drink in the thirst which I suffered from the fever; and it was very *a propos*, as I had to wait till ten o'clock. At this hour I heard a stir among the servants in the anteroom, and concluded that the Imperial Highness had just arrived. I looked out of the window, and saw a gentleman in uniform, with a lady, coming through the garden, followed at some distance by an officer in an Admiral's uniform, with another lady on his arm. Presently the Grand Duke entered alone with his Aide de-Camp, and, coming up to me, held out his hand to shake hands. He addressed me in English, hoped I was better, and regretted my having had to wait so long. He then motioned me to enter another apartment, the door of which had just been opened by one of the servants. Here we were left alone, and I was put quite at my ease by his Imperial Highness's affability; he requested me to sit down, and ordered tea and wine, which were brought and set on two small tables placed by us: he took some wine, and asked me to help myself, while he smoked the amber-mouthed pipe presented to him by the attendant.

The above may serve to show the favourable impression made on Lieut. Royer; but it is more strongly indicated in the portrait of the Czar and the doings of the Royal household. The glaring and flattering colours in which it is drawn, preclude us from transcribing it to our columns; and it is certainly curious that any Englishman, feeling at heart the honour of his country, could have suffered himself to have been so completely hoodwinked. Lieut. Royer cannot, indeed, bring himself to look upon the Russian as our enemy; but against the Turk he cherishes a manifest hatred. Lieut. Royer is a bold man to have ventured such a book at such a period. On his way home, he confesses to have been in danger of the spy system, but maintains no indignation, but rather pride, in the attention which he has earned. Even in these particulars, however, it is, that, in spite of Lieut. Royer, his book presents a kind of evidence which proves sufficiently the odious state of despotism of which he might have been the victim had he not so plainly shown to its various agents that he was disposed and ready to be its advocate. He was sent free with an ostent of generosity, that he might magnify the praises of his liberators; and he has performed his part of the contract with that spirit of "zeal" which is said to "confirm discretion." The book, doubtless, will be well laughed at, and then forgotten.

THE WOUNDED AT SCUTARI.

The following letter from Lieutenant Foster, who has recently returned from Constantinople, and who had the best opportunity of knowing how the wounded soldiers have been treated in the medical hospital at Scutari, will show how utterly groundless were the charges brought by the *Times* and other journals regarding the want of medical stores and medical attendance:—

(To the Editor of the Morning Chronicle.)

SIR,—Having just returned from Scutari, on sick leave, I learn with astonishment and regret that reports have been prominently put forward in certain newspapers, to the effect that the sick and wounded of our expeditionary army have been grossly neglected, and that there was a great want of lint, bandages, and dressings for the wounded, as well as of wine and other comforts for the use of the sick.

I hasten to inform you that these reports, to my *certain knowledge*, are utterly false and groundless.

I was myself under treatment for some time at the military hospital at Scutari, and can speak confidently and truly in praise of that establishment, and of its staff. I saw the wounded arrive from the crimea. In my own hearing, more than one officer

ROYAL EXCHANGE ASSURANCE, Incorporated A.D. 1720, by Charter of King George I. Office, Royal Exchange, London. Branch, 29, Pall-mall.

For the facility of reference, and to aid in the selection of a Service of Plate, an Illustrated Pamphlet of Prices has been published, and will be transmitted, post-free, on application
T. COX SAVORY and CO., Working Silversmiths, 47, Cornhill, London, seven doors from Gracechurch-street.

BY HER MAJESTY'S ROYAL LETTERS PATENT (Messrs. S. and B. SOLOMONS, Opticians, 39, Ashmans-street, Piccadilly; observe—Opposite the York Hotel), for valuable and extraordinary improvements in the powerful and brilliant TELESCOPES, CAMP, PERSPECTIVE, RACE-COURSE, and OPERA-GLASSES, by which distinct objects are brought through them—of great importance to the Army, Navy, and others; the Telescopes are also adapted for Naval Officers, Merchants, and such extraordinary powers that some 3½ inches, with an extra eyepiece, will show distinctly objects 15 miles off, and those shown Double States; with the same Telescope can be seen a person's countenance 3 miles distant; and objects from 16 to 20 miles; for the nautical pocket, and are of larger, and all sizes, with achromatic object-glasses exceedingly. The Royal Exhibition, 1851, valuable, newly-invented, very small, powerful, Achromatic Pocket Telescope, which is so constructed by which a person can be seen and known a mile and a half distant. They answer every purpose—in the case of a race, the spectator can instantly ascertain; and ships are clearly seen at 12 to 14 miles. They are invaluable for shooting, deer-stalking, yachting—to sportsmen, gentlemen, gamekeepers, and tourists. Opera, camp, race-course, and perspective glasses with unequalled brilliancy, which can be clearly seen from 18 to 20 miles distant. Invaluable quartzised spectacles, which never require changing for any sight, and are the greatest in use derived from this invention is, that vision becoming impaired is preserved and strengthened by using them. Every one should be enabled to employ their sight at the most remote occupations—as one who has been in the habit of using short-sighted spectacles can see with them the frequent changes to the distant objects, and the eye preserved. Assistance required.

DEAFNESS, NEW DISCOVERY.—The ORGANIC VIBRATOR will effectually restore hearing, however defective, in the most severe cases of deafness, entirely different from all other instruments. Sold by the inventor, Mr. HOWARD, 52, Albemarle-street, Piccadilly, London.

CAUTION.—For above thirty years S. MORDAN and CO. have been before the Public with reference to the various imitations of their EVER-POINTED PENCIL-CASE.
The celebrity which this article obtained when the letters patent were first granted to them has constantly and unanimously increased and the exertion of the Patentees have been unremitting in order to render it perfect.
To counteract each every invention of good reputation, the result has been that numerous imitations have been produced, and the vendors enabled, by the sale of inferior goods, to realise a larger immediate profit.
Under these circumstances, S. Mordan and Co. are induced to issue this notification, and to caution the public against those desirous of purchasing their Pencil-cases to observe that every genuine those on which the words "S. MORDAN and CO." are engraved.
As in every town in Great Britain respectable notices are found who have for a long period [illegible] sell the Genuine Article, it is not necessary to name them.
The Case is of [illegible] and is made in every variety—in Gold, Silver, Ivory, and Pearl. The Pencil is [illegible] to the exact one of the Pencil-case, every one.
Each box of genuine lead pencils is stamped "Warranted, S. Mordan and Co.
CEDAR PENCILS made from the Cumberland Lead, purified by Mr. Brockedon's process, are recommended as the best description to use, being [illegible] softness, and [illegible] quite free from grit, which destroys the point of even the finest pencil.
And

No. 9. Ditto, in a great rosewood case, 45 gs.

No. 10. The New Patent Model, with expression in 5 Mats. The most perfect Harmonium that can be made, 15 stops, elegant rosewood case, 55 gs.

Full descriptive Lists sent on application. 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL PIANOFORTE, Price Fifty Guineas.—This instrument has (unlike the ordinary German Cottage Pianoforte) Three Strings, and the fullest Grand compass of seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand patiently in any climate. Also, a variety of Cottage Pianofortes, in which the tone is round, full, and rich, and the power equal to that of a Richord Grand. The touch elastic, and the repetition very rapid. Every possible care has been taken to insure its standing well in tune. Mr. Chappell especially invites the attention of the public, the profession, and noblemen and gentlemen residing abroad to these New Models, forts, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within twelve months of the purchase.—50, New Bond-street, London.

COUNTRY BOARD and RESIDENCE can be obtained by a LADY or a WIDOW and DAUGHTERS, or TWO or THREE SISTERS, in the family of a Professional Man residing in one of the Eastern Counties. Address H. H., care of Mr. C. S. Stewardson, Stationer, &c., Fakenham, Norfolk.

WOOD ENGRAVING.—Mr. GILKS, Draughtsman, Engraver on Wood, &c., begs respectfully to announce that he continues to execute all Orders entrusted to his care in the best style, with promptness and a due regard to moderation in charges.—London. 170, Fleet-street.

THE ILLUSTRATED LONDON NEWS

No. 709.—VOL. XXV.] SATURDAY, OCTOBER 28, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE RESTORATION OF POLAND.

EVERY week that the war continues adds to the complication of the mighty interests that have been disturbed. Questions that might have been easy of solution before blood was shed, are transported from the domains of reason to those of passion, when the memory of the dead appeals for vengeance to the arms of the living. Both parties to the quarrel are excited by the same stimulant. Blood calls for blood. The defeated army burns to wipe out its disgrace; and that which has been victorious naturally longs to follow up its advantage, to eclipse its previous daring and heroism, and to make the end of the struggle as gallant as its commencement. A few months ago the Emperor Nicholas might have yielded to the demands of the Allies without much loss of character or dignity. To-day, he cannot yield an inch without an act of political *felo-de-se*. A few months ago the Allies might have consented to terms of compromise, the mere mention of which at the present day would be scouted with the universal contempt of England and France. Thus the war grows colossal as it marches onwards. It is no longer a matter of Turkish independence that is in dispute. It is not simply an act of aggression by a strong Power against a weak one, which has to be resisted and punished. It is the equilibrium of a continent that has to be restored. It is the establishment of a state of things calculated to prevent the recurrence of disasters similar to those we now suffer, which demands all the care and attention of the Kings, the statesmen, and the nations of Europe.

People look deeper into the motives and origin of the quarrel than they did at the onset. They feel the desperate nature of the conflict, and are aware that desperate diseases require desperate remedies. They go back to the beginnings of the evil, and inquire how it happened that Russia was allowed to become so overbearing and so dangerous? They have not far to look. A reference to no remote period of history shows them that the first great development of that mischievous policy of aggrandisement, which has in our days brought so many evils upon the world, is traceable to that gigantic robbery and wrong, known under the name of the "Partition of Poland." The proper time for resistance to the aggression of Russia was, when the Czarina Catharine II. and Frederick the Great of Prussia concocted and carried out their scheme, with the sorrowful and reluctant acquiescence of the Empress Maria Theresa of Austria. If the statesman of the other leading nations of Europe had been wise at that day—if they had listened to the warning voices that were heard in France and Great Britain when the wicked project was originally promulgated—they might have saved the world a huge amount of misery. But the statesmen of those times were unwise and short-sighted. Kings, as well as nations, were ignorant of their true interests, and as little inclined to devote their attention to speculative and future dangers, as they were to consider such questions on the broad and immutable basis of Right and Justice. The men of the present see more clearly. They confess the error that was committed by their forefathers; and regret that the proper course was not taken at the proper time, when the wrong might have been redressed with comparative ease, and when a lesson might have been read to the aggressors, which would have acted as a warning to all future ages.

But it is useless to blame our forefathers for the postponement of questions which they did not consider as peculiarly affecting their interests, if we, in the present day, pursue a similar policy of cowardly procrastination. The question for the present generation is—whether the restoration of Poland is not a matter of duty, as well as of obvious self-interest and enlightened policy? No chastisement that our arms could inflict upon the Russian Empire—not even the certain and fast-approaching loss of the Crimea—would weigh so condignly as a punishment, or be so satisfactory as a guarantee for future good behaviour as the re-establishment of that kingdom. However willing Russia might be to invade and annex the territories of her neighbours, she would be prevented from playing the desperate game by the existence of Poland, protected as it would be by the public law of Europe, and by the armies of every State which now or hereafter may become a party to the anti-Russian alliance. The heavier the penalty which we are now paying for our past neglect, the greater care we ought to take that we do not run up another account still heavier against ourselves and our children. We owe it to the scattered people of Poland, but we owe it in even a greater degree to the cause of truth, morality, honour, and religion—all of which were outraged by the fall and partition of that country—to lend a hand in the great work of atonement.

The question may be difficult, but it will never be more easy than at the present time. Austria and Prussia were co-partners in the plunder, and have hitherto been considered as likely to combine in resistance to any project of forced or voluntary disgorgement. But Austria and Prussia have never enjoyed any real peace or security since the unhappy hour when they consented to the wrong. Their Polish provinces have been sources of danger and annoyance to them both. The plunder has added no strength, and conferred no dignity upon either. Its only effect has been to render them the accomplices and "comrogues" of a greater Power in a spoliation which neither of them could approve, and from which neither of them has ever derived the smallest real benefit, though they have drawn an immense amount of embarrassment and obloquy. Were Russia forced to relax her grip of that ill-gotten possession, Austria and Prussia might be well content to relinquish theirs. To Prussia the Allies owe nothing. The

LORD RAGLAN AND GENERAL CANROBERT VISITING THE FRENCH OUTPOSTS OPPOSITE SEBASTOPOL.—(SEE NEXT PAGE.)

Prussian King is the agent and friend of the Czar, and will, sooner or later, share the Czar's fate, whatever it may happen to be. Austria is in a different position. She deplores, has remonstrated against, and will oppose, by force of arms, the pretensions of Russia. It would be wise policy and good management on her part to reject the evil thing, to give up her Polish province, and to aid the Allies in the re-erection of that barrier against Russia, which it was both a folly and a crime ever to have suffered to be removed.

It is, no doubt, a very easy thing (on paper) to slice up the map of Europe, and to assign new limits and possessions to the great States which compose it; but, it is probable, there will, ere long, be few practical difficulties in the way of the re-arrangement suggested. If present justice require and future security demand it, speedy victory will give the Allies the means of enforcing it. If Austria be a true ally, as we continue to hope, her interest and the necessity of her position will all be duly considered at that remote but inevitable Peace, which the efforts of the gallant soldiers and sailors of the Allies will conquer and consolidate. A joint Protectorate over the semi-independent States of Moldavia and Wallachia, and the guaranteed freedom of the Danube and the Black Sea, would more than recompense her for the loss of her Polish province. In addition to this she would enjoy advantages, in common with all Europe, from the restriction of Russia within Russian limits. In the meantime, Prussia counts for nothing. The day may come when the long-suffering people of that country—grown utterly disgusted with the conduct of their King—will take to themselves another Sovereign. The heir to the throne has patriotism and honesty enough to render the change desirable to Europe, and popular in Germany. There would, in that case, be no great difficulty to surmount. The Germans, young and old, would rejoice in the independence of the country of Kosciusko, and Prussia would gain in the increased security of every other portion of her territory, a noble equivalent for the loss of that which ought never to have belonged to her. The restoration of Poland was looked upon as a mere dream a twelvemonth ago. The conduct of the Czar, and the progress of hostilities in the interval, have done much to render it no dream, but an appreciable reality, distant, perhaps, but not unattainable Ultimately, it may become a thing for which Europe will strive, as gallantly, and, perhaps, as successfully, as the English and French armies are striving for Sebastopol.

LORD RAGLAN AND GENERAL CANROBERT
VISITING THE FRENCH OUTPOSTS.

The Engraving on the first page gives a view of the scene of operations, as seen from the extremity of the French lines. Lord Raglan and General Canrobert are represented on a visit of inspection to the French outposts. The English General is accompanied by four officers and two Dragoons. General Canrobert, who has also several officers along with him, is looking at Sebastopol through his telescope. The white Arabian charger, on which he is seated, with its flowing mane and tail, presents a striking contrast to the quiet-looking hunter of Lord Raglan.

In the distance, on the front of the hill, may be indistinctly seen a redoubt which the Zouaves are making, *en silhouette*, on the horizon. The white cliff on the right, at the extreme horizon, is the part of Sebastopol which the French are to attack.

A Constantinople letter of the 10th inst. states that Lord Raglan and General Canrobert had made the last summons to Sebastopol to yield, so as to prevent the effusion of blood. A messenger had also been sent, with a flag of truce, to the commander of the fortress, with the proposition to send away the women, children, old men, and sick, and to hoist a flag on the hospital, in order that it might be spared. The Allied Commanders had resolved to respect the town itself, but to bombard the forts and batteries, the public establishments, and those of the Crown. The last lines of circumvallation approached so near the town of Sebastopol, that the Allies, who occupied the heights, could see the inhabitants walking about.

NAVAL AND MILITARY INTELLIGENCE.

The *Lightning*, steam-vessel, Captain B. J. Sullivan, returned from the Baltic on Tuesday evening, the 17th inst., to Woolwich, in charge of Lieut. Cudlip, Captain Sullivan having been ordered by Vice-Admiral Sir Charles Napier to remain on board the *Duke of Wellington* flag ship until the return of the fleet from that sea. The *Lightning* has been constantly engaged in the most important surveying duties, which have been performed in a manner highly creditable to Captain Sullivan and the able surveying officers employed under him. The brings home Mr. Brierly, who went up with the fleet, and who has been engaged during the summer in making sketches in the Baltic.

The Batteries for the Spring Campaign.—The armament now building to operate against the Russians in the Baltic at the opening of the spring campaign, includes thirty-five vessels -namely, five floating-batteries, the decks covered with iron plates, eight inches thick, and their exterior with 100 plates, four inches thick, rendering them perfectly ball and bomb proof (these vessels will be armed with six of the long-range guns on the Lancaster principle); ten bomb-vessels, to be armed with from two or three mortars of the most powerful description; and twenty gun-boats, drawing about four feet of water—the latter being specially intended for service in the river Neva.

Another Arctic Expedition.—Dr. Rae, of the Hudson's Bay Arctic Expedition, had an audience with Sir James Graham on Tuesday, at the Admiralty, on the subject of his discovery of the probable fate of Sir John Franklin and his companions. The interview occupied a considerable time; in the course of which Sir James Graham announced the intention of the Government to send out, early in the ensuing spring, an expedition, in order to make further search for the remains spoken of by the Esquimaux; and the command of the expedition was offered to Dr. Rae.

The detachments of the Guards under orders for the Crimea left town on Thursday morning, a little before nine o'clock, by the South-Western Railway, for Portsmouth, for embarkation in the *Simoon of the South*. The troops, both officers and men, appeared in the highest possible spirits; and as they passed along the Strand were enthusiastically cheered by the crowds which had collected to witness their departure.

Great Guns.—The large iron works at Low Moor are fully employed. Last week an order was received for 100 of Lancaster's oval guns, which will throw a ball weighing 84lbs. Besides this, the company have another large order for cannon, which they are executing at the rate of eighteen guns per week.

Scotch Soldiers at the Wars.—Thirty men from Forfar, and attached to the Artillery, Scots Fusilier Guards, 42nd, 79th, and 93rd Highlanders, met at Varna on the evening before embarking for the Crimea, and agreed that those surviving the attack on Sebastopol should transmit to their relations at home an account of their fate.

The Wounded at Scutari.—On the 30th of September there were in this hospital 1114 wounded British soldiers, 914 suffering from disease, and 156 wounded Russians. There were 41 British officers wounded, and 38 suffering from disease, with 13 Russian officers; making a total of 2261 patients. Our exact loss at the Alma was 2106 killed, wounded, and missing.

By the death of Lieutenant-General Ewart, which took place on the 23rd instant, the colonelcy of the 67th Regiment has become vacant. There are now three regiments without a colonel—viz., the 8th, 50th, and 67th.

The additional medical staff for the army in Turkey left the metropolis this week, to proceed to Constantinople, viâ Marseilles, where they were to embark on board the *Vectis*. The total number of medical men who go out in this ship is thirty. Among them are Dr. Spence and Dr. Cumming, Inspectors-General of Hospital, and ten staff-surgeons.

The *Moniteur* of Thursday publishes a letter from the Emperor of the French to Madame St. Arnaud, awarding her a pension of 20,000f. as a national recompense.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

The feverish excitement which the delay of the arrival of any satisfactory intelligence respecting Sebastopol, has so long kept up here, seems to be begin, *faute de nouvèaux*, to relax a little among the general public; and the home events of the coming season appear to acquire more interest and obtain more attention, *en attendant* the arrival of the great news so long expected, and so long deferred. The same confidence with respect to the issue of the attack continues to reign; and this confidence renders the suspense infinitely less painful than it would otherwise be. The theatres, the receptions—public and private, the winter fashions, the arts and sciences, the chit-chat of the Boulevards, the clubs, and the salons, therefore, are beginning to claim a little of the notice so long withheld from them; and Paris seems to be entering somewhat more into its normal channel of ideas and feelings than it has been for some time.

The departure of the Imperial family to Compiègne has been hitherto deferred until more satisfactory reports from the seat of war should set the public mind more at ease; it is now stated that the Government has received such satisfactory private intelligence from Sebastopol, and counts with such certainty on the success of the Allied armies, that orders are given to hold everything at the château in readiness for the immediate reception of the Imperial couple and their guests; and that an intimation has been made to the Gymnase that its *artistes* will shortly be called upon to give representations at Compiègne.

The arrival of Maria Christina and the Duc de Rianzares at the Malmaison is expected with some interest by the Government here, which will not be sorry to see her removed from the Spanish frontier, where her presence might become a source of some little embarrassment to the French diplomacy.

A fusion has taken place in the omnibus companies here, of which the first result is the appearance of a number of new carriages, presenting a degree of comfort and luxury hitherto unknown in public conveyances. The construction is good, the seats remarkably well stuffed and easy, the horses handsome and well harnessed, and the coachmen and cads invested with a neat livery. And here let us remark, *en passant*, that with the superiority we possess in our private equipages, we might take some useful hints from the French in certain of their public ones. Their hack carriages are, for the most part, better constructed and better kept than ours; their horses, less fast, perhaps, but stronger, better conditioned, of a class more suited to the constant labour they have to undergo, and the drivers more honest and more civil.

The news of the literary world gives much promise for the opening season. M. Victor Cousin is progressing with the most important work on the Encyclopedists; the Comte Alfred de Vigny is writing an historical novel; M. Villemain is engaged on the second volume of his "Souvenirs;" M. Thiers has sent to press his long-promised pamphlet; M. St. Marc Girardin has also a work in hand; and M. Jules Janin contemplates re-editing "Diderot." The election at the Academy for the vacant place of M. Ancelet, is about to be held: among the candidates we may cite the names of MM. Pommard, Jules Janin, A. de Falloux, Philarète Chasles (one of the *rédacteurs* of the *Journal des Débats*), Emile Augier, and Marcellus. It is believed that the struggle will be principally between MM. de Falloux and Chasles.

The artists are not less active than their literary contemporaries. Paul Delaroche is engaged on a large picture, the subject of which still remains a secret; Eugène Delacroix, on three historical paintings; M. Thomas Couture—whose *Romains de la Decadence* made such a sensation some few years since—is occupied on a modern subject founded on the same idea—*les Parisiens de la Décadence*. The scene represented is a supper in the Carnival: the figures are life-size. M. Ritex is engaged on a statue of General Kleber; M. Préault, on a set of bas-reliefs for the large building Exhibition; and Rude, one of the authors of the Arc de l'Etoile, on an equestrian statue of Napoléon, First Consul.

The principal dramatic event of the moment is the appearance of the "Nonne Sanglante" at the Grand Opera—the music by M. Gounod; the *libret* by MM. Scribe and G. Delavigne. As a whole, the success is decided; but much more merit attaches to the composer than to the writers. The Gaîté and the Ambigu are playing two new pieces—"Les Oiseaux de Proie;" and "Les Amours Maudits" (or "Maudites"?)—here is a question of syntax, which seems not yet to have been resolved—founded so nearly on the same plot, that it is difficult to imagine such a similarity to be wholly accidental. Mdlle. Rachel, who, after requesting M. Legouvé to write a tragedy for her, accepting her part, and inducing him to make in it such alterations as she desired, refused to play it, without any satisfactory cause or reason given, has had and lost a trial with him on the point, is condemned to assist at all the rehearsals, under pain of paying 200 francs for every day's delay and then to play the piece, which is entitled "Médée." The absence of Mdlle. Cruvelli, whose escapade seems to have been caused by a strange combination of motives, dictated by Pietas, Cupid, and another divinity —whose name is not found in ancient mythology, but who might hold a distinguished place in a modern Pantheon—Dapricz, defers, for the present, the representation of a new opera, by Verdi and Scribe, which was put in rehearsal the first of this month. The work has been withdrawn from the hands of the administration.

DISSOLUTION OF THE DANISH PARLIAMENT.

The King's reply to the deputation is a proclamation dissolving the House of Commons for the third time within twenty months. The new elections are fixed for the 1st of December. An address to the Danish people calls upon them to support the whole State plans of the Ministry, and threatens all persons in public employments, especially the clergy, should they oppose or refuse to support the Cabinet. After Orated had read the decree for the dissolution of the House, Lundberg proposed "The Constitution unchanged for ever!" which was rapturously applauded, and nine cheers for the speaker. The galleries then gave enthusiastic cheers for the Danish Parliament, and loud cries of "Down with the Ministry!"

A member of the First Chamber having presented a project, directed, like its predecessor in the Lower House, against the Ministry, and the proposition having great chances of a favourable reception by the majority of the members, it is exceedingly probable that another Royal decree will pronounce its dissolution also.

MM. Monrad, Broberg, Hall, Drewsen, Hansein, Tutein, and Bregendahl are the members charged to draw up the proposition for the impeachment of the Cabinet—respecting the adoption of which there is not the shadow of a doubt.

AUSTRALIA.

By the clipper-ship *Lightning*, which arrived at Liverpool on Monday, after an extraordinary run of only 68 days, we have advices from Melbourne to the 20th of August. The Melbourne commercial accounts were still very unsatisfactory, the markets being glutted with all kinds of goods. Gold is in good demand at £4 per ounce. The shipments of the precious metal during the seven days prior to the 20th, had amounted to nearly half a million sterling.

The Legislative Council of South Australia met for the opening of the session on the 2nd of August. The Lieutenant-Governor read an address, in the course of which he proposed to meet the pecuniary exigencies of the colony by borrowing money. He also suggested that sixteen 32-pounders, which would shortly be sent there, should eventually be distributed amongst the steam-vessels, which, when thus armed, would form an efficient force.

Sir Charles Hotham, the Lieutenant-Governor of Victoria, was very popular with all classes.

THE SIEGE OF SEBASTOPOL.

With the exception of Russian despatches, we have no news from Sebastopol or Balaclava beyond the 15th inst., at which date the impression was that the batteries would open fire, in conjunction with the fleet, upon the 17th. The latest Russian bulletin gives the following details, which may be taken for what they are worth:—

A telegraph of Prince Menschikoff's, from Sebastopol, states that on the 17th the Allies opened their fire.

The bombardment lasted till night.

The Russians had 500 killed and wounded.

Admiral Korniloff was killed on the 18th.

The firing was feebly continued on the land side, and towards the sea the fortifications had suffered very little.

The bare fact of Prince Menschikoff having given the Russian loss as having been no less than 500, without any attempt to soften down the bad news, by adding that he had sunk the Allied fleet and defeated the besieging army, leads one to suspect that the real state of things must be much worse than he describes it. The general impression is, that the bombardment did actually begin on the 17th inst. Should that supposition be correct, we may look for early intelligence of the capture of Sebastopol.

Nothing definite can be ascertained regarding the number of troops under Prince Menschikoff The Constantinople correspondent of the *Lloyd* ridicules the idea of Russian reinforcements having already reached Sebastopol. From the Pruth to Cherson is is full 220 English miles, from Cherson to Perekop it is 76 miles, and from the place last mentioned to Sebastopol, 75 miles. "30,000 or 40,000 Russians may reach Sebastopol in six weeks, but not before." Not the least anxiety is felt by the Commanders of the Allied armies, who have received large reinforcements, and who are so favourably situated that they could resist any number of troops that the Russian commander can bring against them. As to the strength of the garrison, all pretence at accurate conjecture must be vain. From the information given by deserters, as well as the observation of British officers, it was believed that the Russian soldiers within the town and its outworks amounted to nearly 40,000 men. Besides these there were the 10,000 sailors of the fleet, all of whom had been taken out of their ships and employed to man the batteries. Making allowance for exaggeration and for actual losses, the defensive force of Sebastopol may be taken at 45,000 men, a number about equal to the effective of the Allied armies before the reinforcements arrived. Such a force might defend the place for months if actuated by such courage and fanaticism as inspired the Turks at Silistria. It is about thrice as great as is actually required by the extent of the fortifications, and might, perhaps, create only confusion and panic if crowded together within the limits of the town. But a third of it was said to be kept on the northern shore of the bay, to be brought into use as the necessities of the defence might demand.

The eight Russian ships which had been sunk at the entrance of the bay were in two lines, the second line covering the interstices of the first The bay at the point where they lay was about 700 yards across, so that the entrance was effectually barred to ships of the line, though steamers might manage to effect an entrance—the more so as the masts of the sunken vessels still indicate their position. At the head of the harbour, which runs up to the east of the town, the *Twelve Apostles*, a large line-of-battle ship, was moored, and could be used as a battery, but there can be no doubt that it would be speedily destroyed by the fire of the English guns. The enemy had established a steam ferry between the town and the northern side of the bay, by which they could be reinforced by the troops marched down from the interior, or retreat when the town was no longer tenable. The arrival of Lüders was announced as certain, and report said that Gortschakoff himself was present, either in Sebastopol, or with the army which was to operate in the field.

A FORAGING EXPEDITION.

On the representation of the French Generals, communicated to the British Commander-in-Chief, a joint expedition, consisting of the French ships of war *Napoléon*, *Pomona*, and *Mégère*, and the English ships *Sanspareil*, *Tribune*, and *Vesuvius*, was directed on the 2nd of October towards the little town of Yalta, on the south shore of the Crimea, about forty miles to the east of Balaclava, for the purpose of obtaining bullocks and other necessaries, including wine, for use of the French troops. This expedition arrived off its destination at nine a.m. on the 4th, and, meeting with no opposition, landed the detachments of seamen and small-arm men, and took possession of the town—the English taking the right and their allies the left. The former established themselves on a plateau of ground commanding the approaches and overlooking the town, and the French sent out a small body on the roads to explore, &c. Little Government property was found in the town, the Russian *employés* having removed themselves and everything that was portable some days previously. Timber for the construction of platforms was brought off and landed at Balaclava; and thirty-five tons of Government seals were seized and sent on board the *Vesuvius*. Neither wine nor bullocks were to be found, and so far the expedition was a failure. At eight p.m. the detachments were embarked, and on the morning of the 5th were re-landed, under the command of one of the French Captains and Captain the Hon. S T. Carnegie, of the *Tribune*. They marched some distance inland without meeting any of the objects of which they were in search, until they came to a small château of Prince Woronzoff, where they piled arms and rested.

The country through which the detachments marched was marked by a high extent of cultivation, and scenery as beautiful and diversified as any in the world. Tobacco and vines appeared to cover the soil: apple and walnut-trees grew in profusion, laden with fruit—their boughs bending to the ground; and the château itself was placed in a most picturesque situation—the gardens laid out in the English style, with every appurtenance that good taste, aided by great wealth, could devise and execute. On the forest, extending to the sea-side, was the home of many hundred fallow deer; ornamental walks were traced throughout; and the well known liberality of the owner had extended even to the formation of a small detached hospital, containing eight beds, and furnished with all the medical comforts that were required to render it complete

The English had with them a Commissary, sent expressly by Lord Raglan, with a large sum of money, in order to pay for everything that was demanded; but nothing could be found in the shape of provisions worth asking for or carrying off. The troops returned to the town in the afternoon; and finding all solicitations useless to procure either wine or bullocks, re-embarked at eight p.m., and the ships returned to their respective stations.

PROBABILITIES OF ANOTHER BATTLE.

A general impression had begun to gain ground that the besieging army would have to fight a pitched battle against the army of Prince Menschikoff, outside the lines, before the final assault. If the accounts given by the German papers be correct, Prince Menschikoff, although he had gone to Perekop, had only done so for the purpose of hastening the advance of the reinforcements which had arrived at that place, and which were expected to be leading into the Crimea for fear of having their retreat cut off. It is said that, along with the remains of the army defeated on the Alma, Prince Menschikoff would thus find himself at the head of 76,000 men, and that he would at once advance with it to attack the Allied armies, and, if possible, to relieve Sebastopol. It is very probable that this estimate of Menschikoff's force, coming as it does, from Russian sources, is greatly exaggerated; and it is very remarkable, if the garrison of Sebastopol was as formidable as it is represented, that it had not made any serious attempt to interrupt the operations of the besiegers. But, admitting it to be correct, there is nothing in it to create the slightest apprehension as to the result. The forces of the Allies now amount, it is said, to more than 100,000. But, besides this, the position taken by the Allied armies is a most formidable one, and will place the attacking party at great disadvantage. At the battle of the Alma Prince Menschikoff had chosen his own field of battle—had strengthened his position till he imagined himself inexpugnable—and still he was beaten by an inferior force. Now he will find the tables turned. The Allied forces have taken up their position on strong ground, where they have fortified themselves, and provided against surprise. A portion of the besieging army, equal in number to the enemy, and far superior in efficiency, is said to have been detached from the besieging army to make head against the army of Prince Menschikoff, should it really show itself. It has had its position fortified with all the care that Menschikoff showed in fortifying the Alma. It is not for one moment to be supposed that Menschikoff has any chance against such an army thus situated, when he could not make head against it when all the advantages were on his side.

The following letter from an English soldier in the Crimea will be read with interest. The writer, who was one of the actors in the affair described, gives his own account of a striking incident which took place immediately after the Battle of Alma:—

Camp, Russia, near Sebastopol, Oct. 6, 1854.

My dear Wife.—I am now writing to you as we are lying within gun range of Sebastopol, waiting for our siege-gun to get up to play on the town and fort. We have 160 guns, and the French have 120. The town of Sebastopol lies in a hollow, and the fort by the sea-side; and we are now on the top of a hill where we have opportunity of them. If they don't give it up, we shall blow the whole town and fort about them in no time. Thank God, we have had beautiful weather ever since we have been here. Since the first day we have had no rain. Lying out in the open air day and night is very trying; but I don't care what I do so long as I return home to you, my dear wife and child.

I am now, my dear, writing you this as the cannon balls are passing over our heads. We have to keep a sharp look-out. Our siege-guns commence to-morrow, Wednesday, October 8. The firing is to continue both by day and night; and, in two days, we expect to blow them all to pieces. The Cossacks are at us by night; but we have a piquet of ours out, yesterday under the command of Captain Colvill, and they concealed themselves and took thirty of the Cossacks.

I did not tell you what a wounded Russian did to a sergeant of ours, as he was lying on the ground. As I was returning from seeing poor Edward, after the battle was over, in company with a sergeant of ours, the ground was covered with wounded and dead: one fellow asked us, made signs for a drink of water. The sergeant gave it to him; and, as he turned round to leave, the wounded Russian took up his piece and fired at the sergeant, and he fell dead on the spot. I turned round and gave him the contents of my rifle in his head.

Don't make yourself uneasy about me, for I have not been in the rank since the battle of Alma. I told the Major that my leg was very painful, and I should not be able to keep up in the ranks. He told the Colonel, and he let me go into the hospital, and I have continued so ever since.

THE GERMAN POLICY.

On Monday a Council of War was held at Vienna, when General Hess (who has recently returned from a military tour of inspection) gave a report of the condition and prospects of the Austrian army. Nothing is yet known as to what the decision of the Council may have been; but a telegraphic despatch from Vienna states that the garrisons of that city had received orders to be ready to march to the frontiers in forty-eight hours; and that measures had been taken to place the remainder of the army on the war establishment. All accounts represent the popular feeling in Austria as being strongly in favour of the Western Powers. The *Allgemeine Zeitung*, which, till recently, opposed the policy of Austria, has just published an article for the purpose of showing that without being German as far as regards the whole of her population Austria is more so than any other Power by her resolutions and her proceedings.

Austria (says the Leipsic journal) has just made her last remark to the Cabinet of Berlin; and this, it must be avowed, is vigorous, clear, and, in short, truly German. She summons as far as to summon Prussia to say clearly, "yes or no, to declare herself for or against," in the Germanic Diet, in face of the German nation, before the tribunal of public opinion, and under the eyes of Europe. She is about to present herself, no longer in concert with Prussia, but alone, before the Federal body, if the latter does not anticipate it, and come to her, and frankly lay before it the following question:—"If Austria draws the sword for Germany, will Germany cover Austria with her buckler?" We have read this declaration of Austria with pleasure; and our patriotic pride, so deeply humiliated by the inaction of Germany, has been raised at the aspect of this noble attitude.

The answer of the Prussian Cabinet to the note of Austria of the 30th ult., is generally considered as showing that it will be impossible for Austria to make any further concession to Prussia without an utter abandonment of dignity. M. de Manteuffel, says that on the alliance with Austria, Prussia bound herself to give assistance to Austria only in the event of any unprovoked attack upon her territories. There has not been, he says, and cannot be any such attack, and therefore Prussia is not bound in any way to associate herself with the policy of Austria. Whatever may be said, whatever may be done, says M. de Manteuffel, Prussia will persist in this point of view. He attempts also to show that Russia has never departed from a defensive policy.

As marking the mutual disposition of the Russian and Prussian Government, it is noticed in Berlin letters that the communications between Prussia and the Russian provinces of Poland which have been almost completely interrupted since the 20th of June last, have been renewed. An order has just been sent from Warsaw to the Russian custom-houses of Szczypiorno, between Kalish and Ostrowo, that cards serving as passports for eight days shall be granted to the Prussian inhabitants on the frontiers.

The *Presse* of Wednesday evening mentions a report that a treaty of alliance between Austria, France, and England is on the point of being concluded. This treaty, which, says the *Presse*, is to be transitory, will not bind Austria to commence hostilities, but will bind France and England to protect her if she should be attacked. This treaty is to be followed by a convention in the spring, in which Austria will bind herself to take an active part against Russia, if that Power should persist in refusing to make peace upon the terms which shall be dictated to her by the Allies.

THE RUSSIANS IN THE DOBRUDJA.

The fact that the Russians have ventured to recross the Danube in greater numbers, and that they have actually never entirely ceased to occupy the smaller fortresses on the right bank, namely Tultscha, Isatchka, and Matschin, is fully confirmed by an official report which has been received at Vienna from the Turkish head-quarters of Said Assouf Pacha, at Ibrailа, who states that at Matschin there are about three hundred Cossacks, three hundred volunteers, and four battalions of infantry, with eighteen pieces of cannon; whilst at Tultscha there is an equal force of the Russians; and that there are, moreover, two regiments of the enemy at Adgillar, situated about half-way between Isatchka and Babadagh. The Russians have also some artillery at Kacharman. This Ottoman report goes on to say that General Liiders is at Saturoff with his staff and a strong division of infantry; that General Engelhardt is at Reni with fifteen battalions of infantry and a brigade of Hussars; that General Anchakoff is at Ismail with three regiments of infantry, and three regiments of Cossacks; and that the rest of the fifth and a division of the fourth *corps d'armée* occupy the line between the Danube and the Pruth. General Aarop, with Dragoon Lancers and Cossack regiments, is at Chotyn, from whence a cordon is established against the frontiers of Gallicia and the Bukowina. Prince Gortschakoff and General Dannenberg are reported to be at Kissenef with the *état-major*. The Russian flotilla is reported to be partly at Isatchka, and partly at Ismail and Kilia, and attempts are being made to bring it into the Dnieper. The *Copirte Zeitung's Correspondenz* says:—

We are informed by letters from Ibrailа, of the 10th, that about eight days since nearly 80,000 Russians recrossed the Danube, between Tultscha and Isatchka, and occupied several points in the Dobrudja which are of strategical importance. The vanguard of this force is already at Babadagh. Isatchka, Tultscha, and Matschin are in the hands of the Russians, and they are fortifying themselves at Babadagh; they are also constructing a bridge between Isatchka and Tultscha. The Russian troops stationed at Kilia, in Bessarabia, are to take up the position of those that are now on the Danube; which latter, we are sold, are to be pushed forward into the Dobrudja.

The *Lloyd*, of the 12th, says:—

The Turkish troops march by columns in the Dobrudja, and it is probable that there will be some serious conflicts between them and the Russians before the end of this month. All the bridge equipage of the army of Omer Pacha is concentrated at Hirsova. General Lüders has left Ismail for Reni. He has received orders not to weaken his positions at those places, but to continue the fortifications there and remain on the defensive.

MARCH OF THE RUSSIAN GUARDS.

A letter from St. Petersburg thus describes the last ceremony in which the Czar figured in public:—"The reserve of the Imperial Guard, composed of 30,000 men, has just been placed on a war footing. The Emperor has reviewed them, and has availed himself of the opportunity to bless, at the head of his troops, the two Grand Dukes Michael and Nicholas, who, it is said, are to join the active army. The benediction took place with much pomp. The two Grand Dukes went on their knees to receive it, and all the troops also kneelt."

A despatch of the 23rd states that the Czar's eldest son, the Grand Duke Alexander, had left St. Petersburg to join the Guards on their march to Warsaw, their new head-quarters. The same city is also the head-quarters of the Grenadiers, under General Rudiger; and of the active army in Poland under Marshal Paskkewitch. A Vienna journal computes that on the arrival of the Guards at their destination, the troops concentrated on the Austrian frontier will amount to 156,000 men, viz., 80,000 infantry of the line, 48,000 infantry of the Guards, 22,000 Grenadiers, and 16,000 cavalry, besides the usual proportion of artillery.

THE BALTIC FLEET.

The screw steam-ship *St. Jean d'Acre*, 101, arrived at Kiel on the 24th, as the precursor of Sir Charles Napier's squadron. It has been on shore at the island of Fehmern, but is not damaged. Sir Charles Napier was expected at Kiel on the 26th. As regards the movement of the fleet, it was stated that on the arrival of the steam transport *Holyrood*, with stores and provisions, the fleet would take on board a sufficient quantity thereof for their consumption up to the 10th of December; their departure for England must therefore take place the latter end of November. On arriving home the ships will separate, and be sent to the various seaports—one portion going to Portsmouth, another to Plymouth, and a third to Sheerness, and the remainder (probably the sailing ships) to Queenstown. It is said that on the crews being paid up their wages, the respective Admirals of the fleet will strike their flags for the winter.

AMERICA.

The *Atlantic* steam-ship arrived at Liverpool on Thursday, with dates to the 14th instant. The news is not important. The Washington correspondent of the *Herald* says:—"Mr. Perley has succeeded in inducing our Government to agree to propose to Congress a remission of duties on colonial timber imported into the country, pending the acceptance of the reciprocity treaty by the provincial authorities.

The loss of the *Arctic* continued to occupy the attention of all the citizens of New York. 109 were known to have been saved, while a late telegraphic despatch informs us that Captain Luce and forty others, names not given, had arrived at Montreal, having been picked up by the ship *Cambria*. Mr. G. F. Allen, of New York, and Mr. James Smith, of Edinburgh, were among the saved.

Mr. Bartholomew Banco had been arrested by the United States Marshal, charged with having fitted out a vessel for the slave trade. 20,000 dollars' bail was required.

THE OVERLAND MAIL.

The steamer *Bombay* arrived at Trieste on Wednesday, with advices from Calcutta of the 15th September, Madras, 24th September; Shanghae, 26th August; Canton, 9th September; Kong-Hoog, 11th September; Singapore, 13th September; Bombay, 28th September. Trade in India was dull. In China there was much dissension among the rebels. The siege of Canton continues, with great distress. The rebels still held Shanghae.

LOUGHBOROUGH.—On Monday last the foundation-stone of a new Town-hall was laid, with great ceremony, at Loughborough, by C. W. Packe, Esq., M.P.

The name of the Duke de Grammont appears among the list of passengers lost in the *Arctic*. It appears that the title must have been assumed by some person, as the Duke is at present much indisposed at his seat in the south of France.

MESSRS. SCHLESINGER AND WELLS' AMMUNITION WORKS AT NORTHFLEET, KENT.

EXTENSIVE CONTRACT FOR THE SUPPLY OF BALL CARTRIDGES TO THE TURKISH GOVERNMENT.

"Now thrives the armourer's trade," in France and England. There are two classes—one of them large and the other still larger—who should feel a lively concern in understanding the Ammunition Works of Messrs. Schlesinger and Wells, at Northfleet. The first class consists of those who are connected, by some tie, old or recent, with the military calling; and the second, of those who are not. The alternatives of our distinction, it will be perceived, embrace pretty nearly the entire public. Soldiers by profession are, of course, immediately interested in the exhumation of works like these. But the interest which civilians have in them, if less obvious, is not less real. We speak not wholly of the many practical details which attract and reward the liberal curiosity of intelligent minds: we allude to the positive connection between the improved processes practised in such active institutions and the actual state, numbers, and proportion of the peace-enjoying or spectator class in the Europe of our day. It is clearly because modern armies are organised and supplied as they are, that modern communities are not themselves armies like many of the states of antiquity. The number of peaceful homes is, doubled, by doubling the efficiency of the soldier. Such an establishment as that of Messrs Schlesinger and Wells increases the comforts of civilians by its method of manufacturing ball-cartridges at a crisis for one belligerent Government. As an object of curiosity, this great projectile factory is well worthy of examination: a visitor, to whom the scene proves new, will naturally find a hundred details of interest; and, at the same time, the experienced spectator will still be surprised by one particular, viz., the unparalleled rapidity of the producing processes. This, in truth, is the distinguishing feature of the business. It sounds almost like a joke to say that a contractor should undertake to manufacture, and, out of his own establishment alone, to deliver, in five months, thirty-five million ball cartridges.

Let us imagine that we are taking the reader through the busy scene—into the midst of which he rather suddenly comes after passing the quiet village of Northfleet, on the south bank of the Thames, and a few minutes, as Londoners know, this side of Gravesend.

The first point of attraction in the Works is the department where the bullets are cast and clipped. The portion of the premises set apart for this purpose is about a hundred feet long, and contains two large smelting furnaces, which feed fifteen others of smaller dimension. This, like every other compartment of the excited but orderly precincts, swarms with the indefatigable, restless, flitting figures of operatives—a human ant-hill, a theme for Tennyson, or any other bard—type of productive and destructive industry, or rather of the productive industry of armed conflict and organised warfare. Here, in the furnaces, 200 pigs of lead (100 cwt. to each divisional quantity) are daily used, and transformed into bullets by the moulds. The moulds, into which the molten lead is poured, contain, every mould, eighteen bullet-holes—nine on each side; and, when the mould opens, the bullets drop to the ground in clusters, like bunches of white grapes, affrighted out of their pale colour, into a still more blank, sahy, and sinister complexion. Troops of boys are ever busily employed in carrying these airings of bullets to the other part of the room, where sixty other boys are seated before bench-desks: these are so many clipping-machines, for disencumbering the bullets of that spray of lead by which, on issuing from the moulds, they are still attached together. The celerity with which the casting and the clipping of the bullets are managed, has no chance of being believed, save by those who themselves witness the operation. The bullets, thus manipulated, are then collected in barrels, and subjected to a rotary motion by steam, to clean off the burr, and to render them perfectly round.

They are, next, carried across a yard into the main building. Here they mould, sitting at benches, from three hundred to four hundred young women, whose occupation it is to roll on brass tubes slips of cartridge paper, previously cut for that purpose by machines. The bullet, brought to them from the other building, is dropped into the farther end of the tubular paper, which is, at that end, pasted together so as to hold securely its metallic enclosure. Let the reader bear in mind that this is the only manner in which paste is used throughout the whole establishment; because we may have presently to mention the quantity of flour daily consumed in making the paste alone. The girls, as fast as they form the paper tubes, place them tidily and neatly in wooden boxes, which, when full, are forthwith carried into drying-rooms. Here we may remark that the most careful and the most ingenious pains are taken to finish off the cartridges both cold and dry; in a state, indeed, of perfect efficiency for the field, an hour or a minute after they quit the establishment. It is also to be observed, that the whole method in this stage of the cartridge-manufacture differs from that adopted by our Government in the arsenals. There the cartridge is tied up with strings in brown paper. By M. Schlesinger's method, three cartridges, at the very least, are made for two produced by our method, in an equal time; and, when made, are both more secure and less cumbrous. Heat enough exists in such a factory to dry the paste in a hundred places, without any special apparatus. When dry, they receive the powder. We understand that the girls, employed as we have described, roll, on an average, from 1000 to 1500 of these paper tubes per day each. And, indeed, it must be so; for this, again, brings the tale right—400,000 per day. The young women earn, respectively, from 9s. to 16s. a week. It is an immense resource to many a poor family. And, speaking of families, we may mention that between one and two thousand derive sustenance in this new centre of activity. But, how strange the reflections which crowd upon the mind, while contemplating the honest and perfectly laudable labours of those three or four hundred girls. Nature fashioned their tender minds rather to stanch wounds than to make them—rather to nurse the fevered bed—rather to soothe the writhings of anguish, and perhaps even frequently to lure back again the departing life into the tortured and nearly exanimate body—rather for this, than to be the nimble and cunning artificers of deadening implements. They chat and laugh as they adroitly make a weapon, whose mission and destination—little they think of such remote facts—is to send many a gallant soldier in distant and unknown scenes to a sudden and a painful death.

For this paper department of the complicated manufacture of ball-cartridges, women are the most efficient operatives; they do work of that description both more neatly and more rapidly than men could. We were amused by observing that this, though not, perhaps, the fullest, is by far the noisiest room in the whole establishment.

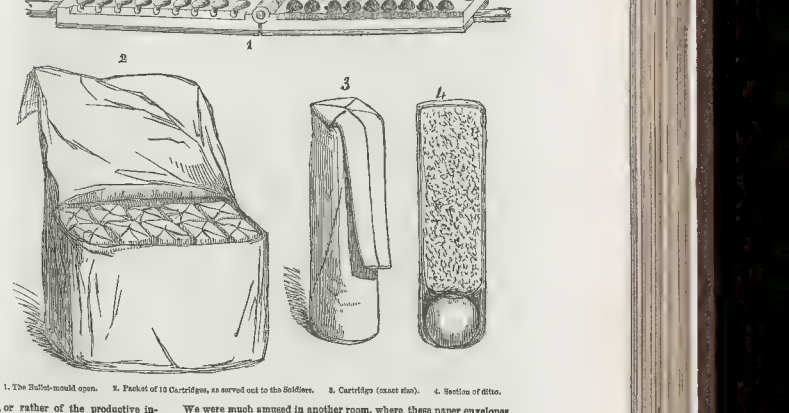
To give an idea of the consumption of paper for these tubes, we may state that Messrs. Millington and Hatton, of Budge-row, have contracted with Messrs. Schlesinger and Wells to deliver 6000 reams during the period of contract; but more astounding still will it appear to our readers, if we tell them that it takes fifty sacks of flour to produce the paste used for the paper tubes—which paste is made in two large coppers built expressly for that purpose. The consumption of flour, in short, amounts to not less than 30 lb. a day.

The tubes, when completed, are stored in racks and carried from the room which we have now examined, through a passage leading into another building apart altogether from the manufactory. In this new building we find about a hundred men and women sitting before copper bowls, which contain the powder. These copper bowls are appropriately fixed for the purpose of filling the tubes with powder, which is done by means of small scoops, measuring 4½ drachme each. The quantity will seem enormous to our military friends; but they must remember that the Turkish musket has still the old flint and steel locks, and are made with very long barrels. The length of the instrument requires a strong charge; and even further provision or allowance must be given for the waste which its structure notoriously entails.

We noticed the extreme care taken in this room to prevent accidents with regard to the powder. Two foremen, who have filled military capacities, are here expressly engaged to open the powder-barrels, and to serve out their contents. The barrels contain one hundred pounds each, and are brought, in proportion as they are needed, from the powder magazine, built purposely for the reception of these barrels, in a remote part of the premises. And even the magazine itself, which is literally a sunken pit under a chalk cliff, properly covered with a slate roof, and constructed of boards fastened with copper nails, over which rises the protecting spear of the lightning conductor—even this magazine we say, never contains more than a few barrels at a time; the great bulk of the powder being stored in a barge on the river.

From the filling-room the filled tubes are passed into another room for the purpose of being folded down. In this room are employed about 200 more young women, who, by a peculiar process fold the bottoms of the tubes so as to prevent the powder from escaping. The place folded down forms a lappet, which is bitten off by the soldier before loading his musket.

Ten of the cartridges thus formed are placed in a paper case, and a hundred of these paper cases, or 1000 cartridges, are packed in an oblong deal box. In this room the constant carriage to and fro of the paper cases containing filled paper tubes, or completed cartridges, forms a scene as busy as any bee-hive.



1. The Bullet-mould open. 2. Packet of 10 Cartridges, as served out to the Soldiers. 3. Cartridge (exact size). 4. Section of ditto.

We were much amused in another room, where these paper envelopes or cases are made by means of ingenious wooden forms. The operatives here are little girls, under the age of twelve, who earn each about 4s. 6d. a week, and who never before earned anything in their lives. Over their new labours presides their former schoolmaster, who has not altogether discontinued his previous instructions. In this envelope-room a cutting-machine is worked to cut up the paper; and here also are stored many hundred reams of paper awaiting the knife.

To reach next the packing-room, we passed through a yard, where lay heaps of lead ready to be moulded into bullets. Thence we entered the packing-room at the extremity of the premises, adjacent to the wharf, on the banks of the river. Here, women are employed to sew a white canvas covering on the deal cases in which the cartridges are finally packed, those deal cases having been previously covered by a waterproof tarpaulin, to preserve the cartridges from damp.

Here also about twenty retired soldiers are employed to pack the cartridges in these deal cases, to nail them with copper nails, and to mark them with a crescent and a star. Four hundred of these white packages are daily put on board a barge, lying always ready to receive them at the wharf, for delivery at Tilbury Fort. There Mr. Knight, storekeeper of the Fort, receives them, and sends them to the inspection of Captain Barrow, appointed for that purpose by her Majesty's Government. Dependently on his approval they will be shipped to the seat of war. His reports have been most commendatory respecting the instalments hitherto delivered.

We have noticed the employment of paste instead of strings for the fastening of the tubular papers of the cartridge. It may be useful to indicate another peculiarity in the finishing off the deal boxes, containing each a thousand of these cartridges—a peculiarity dictated by the caution of Messrs. Schlesinger and Wells. At the top—where they must be opened on the field of battle—they are not nailed down, as they are on the other three sides; but the lid is made to fit by compression: and then, in the lid, there is the convenience of a string handle, by which it can be lifted with a good pull out of the box. The hammering out of the nails hurriedly, in proximity to the foe, if not in his presence, has before now blown a brave sergeant into the air, and sacrificed valuable

SCHLESINGER AND CO'S AMMUNITION WORKS AT NORTHFLEET.—BULLET-CASTING.

ammunition and more valuable lives. We are far from wishing to disguise our admiration of the minutely forethoughtful spirit in which Messrs. Schlesinger and Co. conduct their whole manufacture.

We understand that the original contractors for the execution of the immense order which Messrs. Schlesinger and Wells are carrying into much earlier accomplishment than was at first, in any quarter, deemed possible, were Messrs. Sichel, of Manchester. They felt, probably, that they had not the same facilities as the proprietors of the works at Northfleet for effecting speedily what was so speedily wanted. Those proprietors (Messrs. Schlesinger and Wells) are disposed to show their factory at reasonable hours to any one whom curiosity may tempt to pay it a visit. With our own inspection we were delighted. Good order reigns in the whole establishment; and we were especially struck and charmed with the great care taken to prevent accidents in the management of the powder. All the rooms are thickly strewn with sawdust, which is watered every morning, for the purpose of rendering harmless any loose powder which may have been spilt upon the floor. Thus is the unseen and furtive enemy, where he may possibly lurk, disarmed. Dozens of sacks of sawdust are daily used for this end.

There is a large out-building where the deal cases are made, and where the clatter of the carpenters' hammers quickly drives away an ordinary *dilettante* visitor. Here are piled hundreds of half-finished cases, and thousands of pieces of wood ready cut, in sizes, from the saw-mills, and destocked by a patent process, awaiting their conversion into cases. Here, also, are heaps of iron (used to strengthen the cases), and a machine for cutting the lengths and for punching the holes. In another shed, we observed piles of empty powder-barrels: when full, they would have sufficed to blow up Sebastopol. If but one in a thousand of the cartridges, which will be delivered on the completion of this contract, takes effect, they will cost Russia 35,000 of her soldiers.

The war is a calamity which the nation tried to avoid by prudence, and out of which it must come by valour and endurance. But, as the proverb says, "it is an ill-wind that blows nobody good;" and the inhabitants of Northfleet, at least, may felicitate themselves that, in so poor a village, these enormous works have, in winter, brought abundance or relief to so many indigent families, and raised the siege of the workhouse.

It is said that some of the inhabitants are apprehensive of danger from an explosion; and, after the awful catastrophe at Newcastle, this apprehension is not surprising. But the two cases are not alike. At Newcastle many thousand tons of explosive material were deposited, whereas at the factory of Messrs Schlesinger and Wells there is never, at any one time, sufficient powder to do mischief beyond the sheds in which it is used, even in the hypothesis of an explosion. But, from the careful distribution of powder in the copper bowls, and the many other precautions observed, we should deem the risk of an explosion extremely remote. Even a pipe, a cigar, a lucifer-match—all are strictly relegated from the premises by strong prohibitory notices.

The Messrs. Schlesinger and Wells are likely, we understand, to enter upon an early contract with the Turkish Government for a supply of carbines, on a patent principle, similar to that of the Prussian needle-gun.

SCHLESINGER AND CO.'S AMMUNITION WORKS AT NORTHFLEET.—BALL-CARTRIDGE-MAKING.

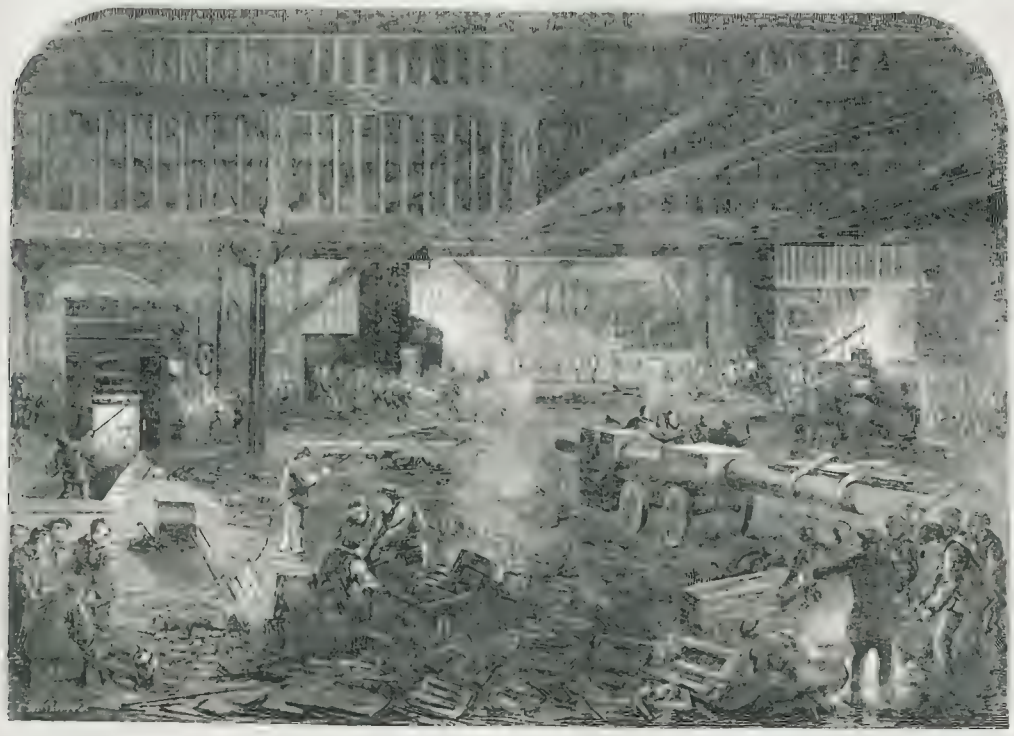
MARE AND CO.'S IRON SHIP-BUILDING WORKS, BOW-CREEK, BLACKWALL.

IRON SHIP-BUILDING AT BLACKWALL.

Now that our army and navy are actively engaged some thousands of miles from home, exposed to risk and danger, a visit to such a scene of industry as that shown in our Engraving is both pleasant and interesting. Here, gathered together, by private means and enterprise, is an industrial army of between 3000 and 4000 hands, busily engaged in the construction of vessels, not only to meet the exigencies of the war, but also the demands of our increased trade.

This scene, which resounds from morning till night with the noises, of so many workmen, has sprung into its present surprising magnitude in less than seventeen years: and some of the persons still employed in the works can remember its small extent and the comparatively small vessels then built. In 1845 a large portion of the Essex side of Mr. Mare's yard was a marsh, which was covered with water at high tides; this has been reclaimed from the river, at a great expense, by piling to the gravel, a depth of twenty feet.

From the small beginning to which we alluded, the works grew and spread, from time to time, over the site; powerful machinery, including a number of Nasmyth's steam-hammers, tilt-hammers, &c., were brought into use. It is difficult to give, in a single view, an idea of the present extent of the works. It will be seen, however, that they spread along both sides of Bow Creek; reaching on one side to the line of the North-Eastern Railway, and on the other side to the Thames. The works may be said to be divided into three sections: viz., one on the Essex side of the Creek, which is now the most extensive; another on the opposite side—shown to the right in the Engraving; and the Little Yard which is divided from it by Orchard street. Each yard is provided with separate stores of tools, general materials, locks, screws, and other kinds of hardware. The keeper of one of these stores has been in Mr. Mare's employment since the commencement of the works. "I have to give an account," he said, "of everything that comes in and everything that goes out: if only so much as a screw, I would keep an account of it all the same as if it were gold-dust." There are stores of valuable woods, copper, iron, plumbers' materials, &c., each presided



MARE AND CO.'S IRON SHIP-BUILDING WORKS.

over by a trustworthy man. In almost every direction piles of wood of different kinds, meet the eye.

There are upwards of 400 joiners employed on the premises; each shop has an office attached to it, in which account is kept of every foot taken into the shop, and of the particular ship or part of a ship for which it is required. The ships in progress are not known by the firm by their particular names; but are entered in the books—A 1, A 2, and so on, until they get to A 100; then B 1 commences, and is continued until they reach B 100; in like manner the C's and D's are continued. At the present time Mr. Mare has nearly got out of his D's, which shows that about 400 ships have already been completed; and, considering the activity shown at present, there seems every probability that Mr. Mare may live to get through the Z's.

It is almost bewildering to pass amongst the numerous punching and shearing machines, moved by steam power, cutting and piercing thick iron as readily as if it were writing paper. The huge ships, in different stages of completeness, are thronged with men fastening the rivets, and in other ways engaged.

The saw-mills and planing-house are served with a steam-engine of 60-horse power. There are also a very large number of hand sawyers; also several blacksmiths' shops in each yard, in which the iron fittings of the ships are prepared. There are shops for the brass-finishers, brass-founders, painters' shops, and sail-makers; the latter are provided with a shop upwards of 200 feet long; the boat-builders and block-makers have large works. Indeed, each division would form of itself a considerable establishment.

A ferry-boat, capable of carrying 200 men, is placed for crossing the Creek. In the Essex Yard several ships, of between 2000 and 3000 tons burden, are nearly completed. These vessels, when finished, are worth from £110,000 to £120,000 each. The *Himalaya*, of 3500 tons, which lately conveyed 2000 troops to the East was built here. One of the ships nearly ready is the *Argent* troop-ship, building for the Government. Four gun-boats have been built here for the Baltic: they were of 500 tons burden each, and some of them built in the almost incredibly short time of eight weeks.

In this yard some of the most powerful machinery is in motion: numerous furnaces are in active operation, heating and melting the masses of iron. The larger piece of iron-work near the foreground of the second Engraving weighs several tons, and has been forged by the steam-hammer. The scene presented here is most striking; and the noise, blaze, and seeming confusion, are bewildering to a stranger. Large wheels whirl round with deafening swiftness. At the long roller in the middle of the picture the hot iron is flattened into plates, and rolled into bars and ribs of various shapes; and, above all the din, the great forge-hammers descend with a noise like thunder, shaking the ground. Close to this busy scene (which is but partly shown in the Engraving) is an immense collection of old iron, which is put into the furnaces, and, when of sufficient heat, faggotted up with other iron. This is a curious medley of articles, and is composed of worn-out frying-pans, gridirons, horse-shoes, hoops, &c. Near here large rollers can be run up to a pier, and the coals unloaded by steam-power: these are conveyed to different parts of the premises by lines of railway. Inland coals are also brought to the works by the North-Eastern line.

In other parts are large boiler manufactories and moulders' shops. At the time of our visit the casters were preparing the piston of an engine, which would weigh six tons. The cranes for lifting these castings are the largest in the country, and are safe at a strain of 20 tons.

In other parts of the establishment are offices in which the drawings and models are prepared; and in another is a surgery. Here, with ample supply of drugs, &c., is a properly qualified gentleman in attendance night and day. In the neighbourhood there is also a superintending surgeon, who, with proper assistance, is constantly at hand. The cost of this medical advice is defrayed by a penny a week, paid by all the men in the receipt of 30s. per week and upwards, and those with a less income, a penny a fortnight. This fund is managed by Mr. Mare, and as much as £10 has been supplied by this means, to families who have lost their support by accident; and a handsome donation made to the London Hospital, to which some serious cases have been removed. This is an excellent arrangement, which might be imitated with advantage in other large establishments.

Mr. Mare has from time to time built here, the fine fleet of the Peninsular and Oriental Steam Company's ships: all of large tonnage. Some small vessels in progress for the Ganges and other Indian rivers; and amongst other matters of interest we noticed a large iron ferry-boat for Australia, which would be taken to pieces and packed in cases for conveyance.

The examination of these suprising works occupied several hours. Our space prevents us from particularising many departments worthy of notice; and we left deeply impressed with the skill, perseverance, and system, which has collected together in so short a space this mass of human industry.

As we have already stated, between 3000 and 4000 hands are employed by Mr. Mare, at Blackwall, independently of numerous bodies at the Saltash-bridge, across the river Tamar, near Plymouth, and at the Westminster-bridge. The wages of the workmen at Blackwall has for the last eighteen months amounted to £5000 a week; some weeks it has been £1600 more; and this independently of the salaries of the heads of departments.

THE AMERICAN BABY SHOW.—According to the Cincinnati papers, received by last American steamer, the "National Baby Convention," which took place at Springfield, Ohio, a fortnight ago, must have rather surprised the projector, who advertised the show more as a joke than a serious affair. The mothers of "Young America," however, were determined to look upon the announcement as sober earnest; and, on the day appointed a large muster of "infantry in arms" took place at Springfield, where a canvas tent had been erected as the depos tory of all babies entered for the show. At eleven o'clock a large circle was formed by a rope around the tent, and outside of this the uninterested adults were made to stand, which they did patiently, under the promise that the babies would soon be exhibited. Nine ladies and six gentlemen were then elected, whose duty it was to enter the tent, examine the babies, and award the premiums. The judges were about to proceed to their task when a telegraph was received, announcing that a number of babies were on the train from Dayton, and would be there at twelve o'clock, and requesting a postponement of the examination until said babies arrived. The request was acceded to, to the great discomfort of the "Convention" then in session. A few minutes after twelve the judges entered the tent, which presented a novel, amusing, and interesting sight. The mothers and nurses were seated, and had the "little darlings" all ready for inspection—that is, as near ready as could be. There sat a mother, her eyes directed alternately on the judges, and on a little cherub which lay in her lap. By her sat another, holding up proudly a lovely little girl, whose waxen curls and sweet blue eyes would soften the heart of the greatest baby-hater in Christendom. Next to her a nurse was endeavouring to quiet a stout, rosy-cheeked "one-year-old," who resisted on pulling the jet-black ringlets of another about the same age. One lady pointed with pride to the chubby legs of her darling boy; while another glowingly referred to the delicate but well-formed features of her sweet babe. One boasted of having the largest of its age; another, of the smallest and smartest. Some of the babies seemed to feel their importance on this occasion; and, in spite of the most earnest entreaties, would be in mischief, and keep up a continued noise. Others appeared unwilling to "believe their eyes," and lay quietly in their mothers' arms, watching the proceedings with apparent interest; while others insisted on hiding their innocent faces in their mothers' bosoms, as if they knew their refuge was there. One hundred and twenty-seven babies were entered for exhibition; and they came from almost everywhere. Several counties, including Hamilton of Ohio, were well represented; and there were babies from Indiana, Louisiana, Pennsylvania, and Massachusetts. Large and fat children seemed to predominate. One from Indiana, only five months old, weighed 27½ lbs.; and another, four months old, weighed 20 lbs. A pair of twins, of Clark county, attracted much attention. They were very pretty, and as near alike as two peas. An elderly lady was present with her seventeenth baby, only two months old. She claimed nothing extraordinary in the child she presented, but thought she was deserving of a premium. The judges were a long time in their investigations. After they retired, the mothers, with their children in their arms, walked into the Floral-hall, where they remained, while the spectators crowded past them to take a look at the babies. This ended the great baby show—the first, but, certainly, not the last, in Ohio. Though the "show" was ended, the excitement was not over. Everybody wanted to know the prize-winning babies, and the judges were not ready to report. Some ladies were sure that "this duck of a child" or that "love of a baby" would carry off the silver cup, while every parent interested was deserving of a premium. The judges, not being able to consult without interruption on the ground, retired to the Anthony-house in the city. There they were followed by hundreds of ladies to learn the result. The discussion regarding the comparative merits of the different babies was not over till six o'clock in the evening, when the following prizes were awarded:—First Prize—A splendid service of silver plate, including a large salver, to the daughter of William Romner, of Vienna, Clark county, aged ten months. Second Prize—A service of silver plate, to the son of William M'Dowell, of Fulton, Hamilton county, Ohio, aged thirteen months. Third Prize—A plain service of silver, to the daughter of Mr. A. Cancn, of Philadelphia. As this is the first baby show which has taken place in the United States, the arrangements have been rather incomplete, or else we should no doubt, have received a sketch of the prize babies.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 29.—20th Sunday after Trinity. Mor and died, 1804.
MONDAY, 30.—Fire at the Tower of London, 1841.
TUESDAY, 31.—Allhallows Eve. John Evelyn born, 1620.
WEDNESDAY, Nov. 1.—All Saints. Sir Matthew Hale born, 1609.
THURSDAY, 2.—Michaelmas Term begins.
FRIDAY, 3.—Sir Samuel Romilly died, 1818.
SATURDAY, 4.—William III. landed at Torbay, 1688.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING NOVEMBER 4.

Sunday	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

WILL BE READY EARLY IN NOVEMBER,

THE ILLUSTRATED ALMANACK for 1855; with Splendid Engravings by GEORGE THOMAS, Esq., and other Eminent Artists. The Astronomical Department by JAMES GLAISHER, Esq., F.R.S., of the Royal Observatory, Greenwich.

Orders received by all Booksellers.
Office, 26, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 28, 1854.

WHEN a Russian makes a statement to the supposed honour and glorification of the Czar, the world is safe in disbelieving him altogether, or in accepting only a possible halfpenny-worth of true bread to an intolerable quantity of lying sack. But when a Russian admits as a fact that he has been beaten and disgraced, the world has reason to believe his story to be true as far as it goes, and to calculate that a still larger amount of truth has been concealed. The *Fremden Blatt*, of Vienna, a paper in the pay of Russia, states that official intelligence has reached it, both from St. Petersburg and from Warsaw, that the bombardment of Sebastopol by the Allies commenced on the 17th inst., and was kept up till nightfall; that the attack was made both by sea and by land—that the Russians lost five hundred men in killed and wounded; that on the 18th the bombardment was recommenced, by land only—that the Russian Admiral, Kornilloff, was slain, and that but little damage was done to the seaward fortifications by the fire of the Allies. If there be any truth whatever in these statements, it may be assumed that the Allies have achieved a marked success—or Menschikoff would not have confessed to so considerable an amount of damage. The official intelligence from the British and French Commanders-in-Chief will, ere long, bring more trustworthy intelligence. In the meantime a despatch from Constantinople, of the 18th, which has been received in London and Paris, brings information from Sebastopol to the 15th, which so far confirms the Russian story as to fix the 17th as the day when the batteries, in conjunction with the fleet, were to open their fire on the fortress and city. In the absence of official news, the people of Great Britain and France will continue to rely that all is going on satisfactorily; that the attack will be worthy, both in its progress and in its conclusion, of the brave men who won the glorious fight of the Alma, and effected the brilliant march to Balaclava.

The position of Austria with regard to the Allies has improved since our last. With true German ponderosity, but yet with true German steadiness, that Power is marching onwards in long-foreseen course of inevitable hostility to Russia. The Cabinet of Vienna, with much less delay than is usual with it in its diplomatic intercourse with other Courts, has returned a decided answer to the last evasive and narrow-minded note of the Prussian Government, and repeated, in unmistakable terms, its intention to adhere to the policy laid down in the note of the 30th of September—a policy, in every respect, anti-Russian, and worthy of the great State which Austria ought to be. Orders have also been issued to the garrison of the capital, to hold itself in readiness to march at forty-eight hours' notice to the Russian frontier. This movement is obviously the answer of the Austrian Government to the defiance of Russia, involved in the establishment of military law, in the three Russian provinces that are contiguous to the Austrian frontier; and betokens that the day of neutrality is rapidly passing away, and that of active hostility commencing. Simultaneously with the news that this strong position has been assumed against the Czar, the satisfactory conclusion of a great financial and commercial operation is announced. The Austrian Government has arranged with a great company, composed principally of French capitalists, the terms of a convention by which it gives to that company the concession of all the principal railways in Austria constructed by, and hitherto worked by, the Government, as well as the lines which are to complete them. The negotiations have been going on for the last six months, and were first commenced in connection with the financial measures since adopted by the Austrian Minister of the Finances; but it was only on the 21st that the convention was signed in Vienna. Finding that the financial position of the Empire was every day growing worse, while all the branches of its industry remained stagnant, the Austrian Government determined on opening a subscription for a loan of five hundred millions of florins, to be raised exclusively within the bounds of the Empire. The Ministry resolved at the same time to support this measure by an operation with foreign capitalists for the sale of all the railways constructed or purchased by the State, and for the concession of various mines, iron-works, and forests having connection with the railways. In the month of May overtures were made with this object to Messrs. Perreire, of Paris; who, after examination, replied that if, in the Eastern question, the policy of the Austrian Government was entirely in conformity with that of the Western Powers, successful negotiations were possible. A satisfactory answer having been given, the affair has been concluded. We gather from this fact, as well as from its military movements, and from its diplomatic language to the Prussian Court, that Austria is prepared to take the irrevocable leap. With Sebastopol and the Crimea lost, and with the whole force of Austria, in addition to those of France and Great Britain, ready to commence and recommence hostilities in the spring, the Czar will have, we think, but an uncomfortable winter.

THE gallant struggle between a patriotic people and a Russianised Court, which is now taking place in Denmark, deserves more attention in this country than it has hitherto received. The Danes are a noble race: they possess in their blood both the Scandinavian and Anglian elements, which are the foundations of the Anglo-Saxon character, as we see it exhibited in Britain, in America, and in Australia. When such a people are engaged in a Constitutional quarrel with their Sovereign; and when their Sovereign is undoubtedly in the wrong, it requires no great sagacity to predicate that they will, sooner or later, carry their point. The questions at issue in Denmark are easy of comprehension. The King—who is imbued with Absolutist principles, and who not unnaturally considers the Czar his model as well as his friend—desires, in the first place, to consolidate the Government of his Danish and his German provinces under one Constitution; and, in the second place, to alter the existing Constitution in an anti-popular sense, by increasing the power and prerogative of the Crown, and, in the same ratio, diminishing that of the Commons. The people—as represented by the Volksthing, or Lower House—have no paramount objection to the proposed consolidation; but resist the King's intention to make a majority of the Commons the mere nominees of the Crown. Schleswig-Holstein itself—which is the German portion of the Danish dominions—prefers, however, to retain its own institutions, and to leave the Danes proper to govern themselves in their own way. The Volksthing declares emphatically that it cannot, and will not, renounce the legislative power reposed in itself, and the consequent control of the public purse. A collateral object involved is the succession to the Danish Crown, to the reversion of which the Czar and his family have a claim to certain contingencies. The feeling of the popular party in Denmark is no less characterised by determination to support the democratic element of the existing Constitution, which the King wishes to destroy, than by its open and cordial sympathy with Great Britain and France in the war against Russia. At a banquet recently given in Copenhagen to the Deputies of the Volksthing, who have made themselves most conspicuous in their opposition to the policy of the Court, one of the toasts proposed, and received with the utmost enthusiasm, was "Success to the Western Powers;—the noble Champions of Freedom and Civilisation against the barbarous enemy of Europe." It will thus be seen that the differences between the Court and the people are many, though simple. The struggle has lasted for twenty months in its present intensity, and now appears to be rapidly approaching its climax. On the 16th inst. an address to the King, respectfully condemnatory of the projects of the Ministry, was carried by a majority of ninety against one. On the following day the Upper House took steps which showed a determination on the part of that Assembly to adhere to the resolution of the Volksthing; but it was defeated by a message from the Crown, summoning the Lower House to an immediate audience to present the address which it had agreed upon. The King received the deputation at Fredericksborg, and almost immediately afterwards a proclamation was issued dissolving the Parliament. This is the third time that the King has played this bold and imprudent game within the short period of twenty months. By so decisive a step, the Ministers have in the meantime escaped a threatened impeachment. Enough is known of the temper of the Danish people to render it certain that a Parliament similar to the last will be returned in the new elections. The combat will then commence *de novo*; and if the King do not yield, he must once again resort to the same desperate expedient of a dissolution. How long the Danes will consent to continue the struggle in the arena of Parliament, it is impossible to say; but, it is quite evident, that either in that arena, or in a more violent one, the King must succumb to the will of his people. No Constitutional Sovereign, who expects to reign in peace or safety, can carry on a war of dissolutions with his subjects. He must either yield or be driven from the throne. There is no possible alternative, when the legality is on the side of a resolute people, and the illegality on that of the Crown. In this crisis of Danish history—influencing so much as it is likely to do the great war in which Great Britain and her allies are engaged—it would be well, we think, if the Danish people received from this country some expression of popular sympathy. Our great towns are fond of assembling to pass resolutions in favour of the Hungarians, and of what are called the "oppressed nationalities." Shall they have no word of encouragement to bestow upon their sturdy kinsmen in Denmark? Independently of the Russian war, the Danish question is one that ought to engage the attention, and excite the sympathy of Englishmen. But, connected as it is with the possible adhesion to our cause of a kingdom which holds the keys of the Baltic, and whose aid might be of the most essential value to Great Britain and France in the conflict which they are waging against the Northern Despot, it has double and treble claims on our good-will. If the King of Denmark could by any possibility succeed, Denmark would be Russian. If the people of Denmark gain their point, Denmark will be the cordial and powerful ally of this country. Surely London, Manchester, Sheffield, Birmingham, Leeds, and our other great towns will have a word to say on the subject?

ALL those who are sensible how much the well-being of society depends on an abundance of food, have witnessed with much disappointment the great rise which has taken place in the price of wheat. No one estimates the yield per acre of the present harvest at less than a fourth more than the average, while a much greater breadth was sown. The rise in price, however, indicates that even this large increase is insufficient to supply the wants of the people, and that the price here depends on the harvests abroad. In the second week of September, when we adverted to the subject, the weekly average price was 52s. 5d.; ever since it has been continuously and simultaneously rising in every market of the kingdom, and of the neighbouring Continent, till it has increased fully 20s. The top price of flour was then about 50s. the sack; last Monday it was 70s. Some writers expected that we should be able to pay the expense of the war out of the reduction in the price of food; others calculated the pecuniary advantage of the large harvest to the nation still higher; and all now find that they were beguiled by a most agreeable but baseless vision. They confined their view to our own present harvest, excluding all consideration of former harvests and the harvests of other countries. Could we have secured this year as much corn from abroad as in former years to add to the produce of our own

fields we should have been indeed well provided, but circumstances forbid it.

Our own harvest in 1852 was short; and we imported in 1853 no less than 10,173,135 quarters of grain of all kinds, flour included. We received of this in the early part of the year 714,242 quarters, chiefly wheat and flour, from France. Large supplies from abroad kept prices here comparatively low, in spite of our bad harvest. The average price of wheat in 1852 was 40s. 9d.; and in 1853, 53s. 3d. The harvest of 1853 here was below the average; so it was in France, Holland, Germany, and Belgium. Some of these countries, particularly France, instead of having wheat to send us, became importers, and France took from the general stock of the world in 1853–4 nearly 4,000,000 quarters. Having imported largely, we had on hand at the end of 1853 considerable quantities of foreign and home-grown wheat. The price, notwithstanding, rose after the harvest; and in the early part of 1854 the average verged on 80s., and remained about that sum till the third week in June. From the prospects of our own harvest it then began to decline, and continued to decline till the second week of September. Orders to purchase wheat abroad were no longer given—to send wheat hither ceased to be profitable; and, from the beginning of July, only a very small quantity came, the bulk of which had been previously ordered. In the meantime, consumption here and abroad continued unabated, if it did not increase. The price in our market was below the price in France, Belgium, and Germany; and more corn was exported in part of August and September than was imported. The demand abroad called attention to the stocks on hand; and it was found that, while abroad absolutely nothing remained from the harvest of 1853, the stock here was exceedingly small. There the harvest of 1854 was immediately commenced on; and to use the new wheat, supplies of old were carried away from us. Our millers, who had naturally declined to buy more than they required when prices were falling, had only enough on hand to keep their mills going, and as naturally wished to increase their stock as soon as the price began to rise. They could get little or none, they bade against each other for what was in the market, and ran up the price to its present height. For the moment, at least, the supply of wheat, notwithstanding our excellent harvest, falls short of the general demand; there is an actual scarcity in England and on the neighbouring Continent, though we hope it is only temporary, and the price has consequently risen in five weeks, fully 20s.

Some persons call it a speculative rise. It may be a little higher than is strictly necessary, to prevent our wheat going abroad, and to bring wheat hither; but the last arrivals from the United States—one source of supply—inform us that the price is yet barely sufficient to bring wheat or flour from that quarter. A supply from abroad we must have, for the excess of the produce of our own fields, over an average harvest, is not equivalent to the 10,000,000 quarters of all kinds of grain we usually import. Everywhere abroad price is high, and it must rise in England above the level elsewhere to attract the corn we require. It there bespeculation, it has not yet carried the price much above the necessary point. Other persons, again, imply that the farmers are holding back their stock; but we know from the *Gazette* returns, published weekly, that in the last four weeks there was sold in our towns, of home-grown wheat, 503,218 quarters, against 397,305 quarters in the corresponding four weeks of last year, there having been more sent to market in the last four weeks than in any previous four weeks. The present great rise is neither speculative nor the result of any design to keep back the supply, but of a scarcity—and whether this be temporary or not is a matter equally doubtful and important. Last year consumption here and on the Continent was unusually large, and so it now continues. To the increased consumption caused by the rapid extension of commerce and manufactures, and an increase both of population and wealth, abroad as well as here—which we all hope will continue—there is now added the increased consumption and waste of war. Our own harvest is truly abundant; the harvest in France, Belgium, and Germany is only partially abundant; in the United States it is not good; whatever it may be in Russia, the war will stop the supply; in no other countries, except Spain, is there an increase to meet the increasing wants of the world. England is now only a part of a producing whole; and, balancing the general increase of consumption against the general character of the harvests—abundant at home, but short in other countries—we fear that the general supply is rather deficient than otherwise, and that the price of wheat will continue relatively high, though not at its present extreme elevation. We regret the circumstance; but, from the great activity of commerce and every branch of non-agricultural business, combined with the waste of war, we can only anticipate a great and an increasing demand for food, which one abundant harvest in one country will not satisfy, and which can only be satisfied by a succession of abundant harvests, and by the extension of agriculture, in many countries.

THE COURT.

The Queen and the Prince Consort have entertained a succession of distinguished visitors at the Castle, during the past week. Their Royal Highnesses the Duchess of Cambridge, and the Princess Mary, took leave on Saturday, and returned to the Cottage at Kew. In the course of the afternoon the Countess de Neuilly, and the Duke and Duchess de Nemours, paid a visit to her Majesty.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Hon. and Very Rev. the Dean of Windsor officiated and administered the Holy Sacrament.

On Monday the Queen and Prince Albert, with the Royal children walked on the East Terrace. The Prince Consort enjoyed the sport of shooting in the Royal preserves.

On Tuesday morning her Majesty paid a visit to the Duchess of Kent at Frogmore. The Prince came to town, and called upon the Duchess of Gloucester at Gloucester house. In the afternoon, the French Ambassador and the Countess Walewska, the Duke of Newcastle, Viscount and Viscountess Hardinge, and the Earl and Countess Granville, arrived on a visit to the Queen.

On Wednesday her Majesty took equestrian exercise in the Riding-house, attended by the Countess of Desart.

Lord de Tabley has succeeded Lord Waterpark, as Lord in Waiting, and Major-General Berkeley Drummond has succeeded Mr. J. R. Ormsby Gore, as Groom in Waiting.

Her Royal Highness the Duchess of Kent has been suffering from a slight cold during the past few days at Frogmore-house

LATEST INTELLIGENCE.

THE SIEGE OF SEBASTOPOL.

A telegraph from Prince Menschikoff was received at St. Petersburg, and transmitted thence through Vienna on Friday (yesterday). It is dated from Sebastopol, the 21st of October. He says—

The Russian fire has successfully answered the fire of the Allies. The damage done to the fortifications was but trifling. The fire from the fleets has not continued. A part of the reserve had arrived. The rest was expected immediately.

As we have no authentic intelligence from the seat of war to a later date than the 15th, it is impossible to say how far the Russian bulletin is true. A telegraphic despatch from Constantinople, of the 19th, *vià* Vienna, states that, up to that time, no news had been received that the bombardment began on the 17th, as was proposed. Lord Raglan had been requested to spare one part of the town where the women and children would be sent; and had replied that could not be, but that they might leave the town unhurt. The British were said to occupy part of the northern shore of the bay, and their guns commanded the harbour.

At the departure of the packet of the 16th from Constantinople, all the disposable troops of the garrison were about to embark for the Crimea. Several steamers had arrived from Balaclava, with men who were wounded in repelling a sortie made by 20,000 Russians of the garrison of Sebastopol. The sortie referred to in the letters from Constantinople, is thus described in a despatch from Balaclava:—

On the 12th inst., Captain Gordon, R.E., commenced the formation of our right attack soon after dark. Four hundred men were furnished from the 2nd and Light Divisions on the works, and strong covering parties were sent out in front and in rear to protect them. The working party was divided into four companies of 100 men each, and they worked on during the night with such good will that ere morning No. 1 parp had completed 160 yards; No. 2, 78 yards; No. 3, 95 yards; No. 4, 80 yards—in all, 385 yards of trench ready for conversion into batteries. These trenches are covered very perfectly. It was intended that a party of similar strength should be employed on the left and centre; but, owing to one of those accidents which unavoidably occur in night work, the suppers and miners lost their way, and got in advance towards the lines of the enemy. They were perceived by an advanced post, which seems to have been the van of a sortie. The Russians opened fire on them at short distances with rifles, and, wonderful to relate, missed them all. The flashes, however, showed our men that strong battalions of Russian infantry were moving silently on towards our works, and the alarm was given to the division in the rear. At 1.35 a furious cannonade was opened by the enemy on our lines, as they had then ascertained that we had discovered their approach. The Second and Light Divisions turned out, and our field guns attached to them opened fire on the enemy, who were advancing under the fire of our batteries. Owing to some misunderstanding, the covering parties received orders to retire, and fell back on their lines—all but one company of riflemen, who maintained the ground with their cavalry, and fired into the columns of the enemy with effect. The Russians pushed on field-pieces to support their assault. The batteries behind them were livid with incessant flashes, and the roar of shot and shell filled the air, mingled with the constant ping-pinging of rifle and musket ball. All the camps were up. The F. each on our left got under arms, and the rattle of drums and the shrill blast of trumpets were heard amid the roll of cannon and small arms. For nearly half an hour this din lasted, till of a sudden a ringing cheer was audible on our right, rising through all the turmoil. It was the cheer of the 88th, as they were ordered to charge down the hill on their unseen enemy. It had its effect, for the Russians, already pounded by our guns, and shaken by the fire of our infantry, as well as by the aspect of the whole hill side lined with our battalions, turned and fled under the shelter of their guns. Their loss is not known; ours was very trifling. The sortie was completely foiled, and not an inch of our lines was injured, while the four-gun battery (the main object of their attack) was never closely approached at all. The alarm over, every one returned quietly to tent to bivouac.

The *Moniteur* of yesterday publishes the following telegraphic despatches:—

GENERAL CANROBERT TO THE MINISTER OF WAR.

Head-quarters, before Sebastopol, 19th.

We opened the trenches in the night of the 9th. The enemy, who did not expect us on that point, has not disturbed us in our operations, which are going on actively. I hope that by the day after to-morrow (the 15th) we shall have sixty-six pieces of artillery in position. Since the morning of the 10th the fortress has kept up a warm cannonade on us at intervals, but without any success. Our losses are next to nothing. The works of the English army proceed equally with ours. The weather, which for a short time was very bad and cold, is now very fine.

THE FRENCH CHARGE D'AFFAIRES TO THE MINISTER OF FOREIGN AFFAIRS.

Therapia, 18th.

Two vessels of war, one French and one English, have just arrived from the Crimea; they bring news from Sebastopol of the 13th. It appears certain that the fire of all our batteries would open on the 17th; the two fleets were to co-operate with the army, and there was every reason to believe that the ships might be usefully employed on an important point. There is no doubt but that the fortress will be promptly reduced by the power of our artillery. The general situation was very satisfactory, and the sanitary condition of the troops excellent.

The *Constitutionnel* of yesterday says:—

We have reason to know that other despatches have reached Paris besides those forwarded from St. Petersburg, announcing the opening of the fire against Sebastopol. It was in the night of the 16th that fire from all the batteries commenced. But, on the 15th, the Allied fleet and the English batteries had tried the range of their guns, which operation was speedily interrupted to enable the besiegers to complete the armament of all the batteries, so as to open their fire simultaneously. We have learned that the officers of artillery and engineers are confident of levelling with the ground, in four days, the fortifications opposed to them.

THE WAR IN ASIA.

In a despatch from Mossoul, dated the 25th, Mushir de Vaux announces that the Ottoman army of Kars has taken signal revenge on the Russians. The Turkish troops attacked a corps which was covering Gumri, and completely dispersed it, capturing tents, baggage, and thirty pieces of cannon. A Russian General was killed. Then the Turks then commenced the siege of the citadel. The Russian army, which had been victorious before at Abagazid, having on the receipt of this news, set out for Erivan to relieve Gumri, was completely repulsed, and shut up in a defile, where it suffered considerable loss.

ADVICES from Munich of the 26th announce the death, on that morning, of the Queen Dowager from cholera.

LORD JOHN RUSSELL AT BEDFORD.—The anniversary of the Bedford Literary and Scientific Institution was celebrated on Friday evening week by a soirée at the Bedford Rooms. The Mayor of the town presided, and among the company were Lord John Russell, Sir Hamilton Seymour, &c. The Mayor, the High Sheriff, and other gentlemen having addressed the members, Lord John Russell proceeded to move the following resolution, which was received with much applause:—"That literary and scientific and mechanics' institutions have greatly tended to the benefit of the people in this country, by cultivating their minds, refining their tastes, and improving their social habits." His Lordship spoke in eloquent terms of the advantages arising from the establishment of societies which bring men together to study—teach them the lessons of history, enrich their minds with poetry, and encourage them to fathom the depths of science: observing, also, that it was very desirable for the purpose of study—for the purpose even of writing—that men should have all those means, all those advantages which libraries and reading-rooms are calculated to confer. He then suggested, as a fit subject for the consideration of societies such as that he now addressed, the rise and fall of nations, pointing out the different channels into which such a question would lead the inquirer. The resolution was carried.

TRING AGRICULTURAL ASSOCIATION.—The annual gathering of this association was held on the 17th inst., when there was a better and more numerous collection of stock to compete for the prizes than on any former occasion. The meeting was attended by most of the leading agriculturists and landed proprietors in the neighbourhood, who afterwards dined together at the Royal Hotel, Tring Station. During the evening, an elegant silver tea-service, was presented to Mr. Wilfred Brown, of Tring, the excellent secretary of the society, as a tribute to his merits and exertions on behalf of the society for the improvement of agriculture. The handsome gift was acknowledged by Mr. Brown, in a speech of some length, couched in modest terms in allusion to his humble though successful exertions on behalf of the association. The meeting passed off most agreeably.

NEW SEWER VENTILATORS.—Mr. Ross, one of the Commissioners of Sewers for the City of London, has proposed a new plan to the court, for the ventilation of the sewers, which consists of a shaft, running to any height that may be required, and containing inside a set of gas lights playing upon a cast-iron box, forming a portion of the shaft, by which a thorough draft is established, and the risk of explosion avoided. There is also, inside the shaft, an arrangement for the absorption and disinfection of the gases by means of charcoal. The plan is simple, and likely to accomplish this most necessary object.

BY THE ALMA RIVER.

WILLIE, fold your little hands;
Let it drop—that "soldier" toy.
Look where father's picture stands,
Father, that here kissed his boy
Not a month since—father kind,
Who this night may—(never mind
Mother's sob, my Willie dear)—
Cry out loud that He may hear
Who is God of Battles—say,
"God keep father safe this day
By the Alma river!"

Ask no more, child. Never heed
Either Russ, or Frank, or Turk;
Right of nations—trampled creed—
Chance poised victory's bloody work—
Any flag i' the wind may roll,
On thy heights, Sebastopol!
Willie, all to you and me
Is that spot, where'er it be,
Where he stands—no other word—
Stands—God sure the child's prayer heard!—
Near the Alma river.

Willie, listen to the bells,
Ringing in the town to-day;
That's for victory. No knell swells,
For the many swept away:
Hundreds, thousands! Let us weep,
We, who need not—just to keep
Reason clear in thought and brain
Till the morning comes again;
Till the third dread morning tell
Who they were that fought and—*fell*—
By the Alma river.

Come—we'll lay us down, my child;
Poor the bed is—poor and hard;
But thy father, far exiled,
Sleeps upon the open sward,
Dreaming of us two at home;
Or, beneath the starry dome,
Digs out trenches in the dark,
Where he buries—Willie, mark!—
Where he buried those who died
Fighting, fighting at his side,
By the Alma river.

Willie, Willie, go to sleep;
God will help us, O my boy!
He will make the dull hours creep
Faster, and send news of joy;
When I need not shrink to meet
Those great placards in the street,
That for weeks will ghastly stare
In some eyes—Child, say that prayer
Once again—a different one—
Say—"O God! Thy will be done,
By the Alma river."—D. M. M.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, OCTOBER 26.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer increased from 29.33 inches at the beginning of the week, to 29.80 inches by the evening of the 21st; decreased to 29.28 inches by the morning of the 22nd; increased to 29.33 inches by the morning of the 23rd, and decreased to 29.28 inches by the evening of the same day; increased to 29.42 inches by the morning of the 24th; decreased to 28.91 inches by the afternoon of the 25th; and increased to 29.65 inches by the end of the week. The mean for the week, at the height of 82 feet, was 29.345 inches.

The mean temperature of the week was 46·9°, being 1·4° below the average of 28 years.

The range of temperature during the week was 24·4°, being the difference between the highest reading of the thermometer on the 22nd, and the lowest on the 26th.

The mean daily range of temperature during the week was 14.4°.

Rain fell, during the week, to the depth of rather more than one inch and six-tenths.

The weather, on the first three days of the week, was fine, and the sky tolerably free from cloud; from the 23rd to the 25th the sky was overcast, and rain fell frequently; on the 26th the sky was partially cloudy, and the weather fine till afternoon.

Hail fell heavily on the 23rd, from 2h. 45m. to 3h. p.m.

Lewisham, October 27, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, the births of 1408 children were registered within the metropolitan districts; being 19 above the average of the nine corresponding weeks of the nine preceding years: of these, 705 were boys, being 9 below the average; and 703 were girls, exceeding the average by 31. The number of deaths during the week were 1321; the average of the ten corresponding weeks of the ten preceding years, corrected for increase of population, was 1042. Therefore, the present excess of deaths corrected than estimated from the experience of former years at the middle of October. The numbers in the two preceding weeks were—1332 and 1294 respectively. The number of deaths from cholera last week were 198. The mortality from the epidemic declines, but not so rapidly as in the same month of 1849. In the three weeks of October in that year the deaths were 288, 110, and 41, respectively; in the last three weeks of the existing epidemic they have been 411, 249, and 198. The fatal cases of diarrhœa and dysentery were 103 and 108 in the first two weeks of this month; this week they declined to 83. The improvement in the public health for the last two weeks is greatest on the north side of the river; and, of the five northern districts, cholera lingers most in Marylebone, though the mortality in it is not so great. To scarlatina 103 deaths are referred, (being 45 above the average); to consumption, 130; to bronchitis, 80 (being 41 above the average); to pneumonia, 94; to old age, 44; and to violence, privation, cold, and intemperance, 19 deaths are attributed.

THE LORD CHANCELLOR'S LEVEE OF THE JUDGES AND THE BAR.—On the first day of the ensuing Michaelmas Term (which commences on Thursday next), the 2nd day of November, the Right Hon. Lord Cranworth, the Lord High Chancellor, will entertain the Master of the Rolls, the Lords Justices, the several Vice-Chancellors, the Lord Chief Justice of England, and the Judges of the several Courts of Queen's Bench, Common Pleas, and Exchequer, as also the leading Queen's Counsel, and Serjeants-at-Law, to breakfast, at his mansion in Upper Brook-street, Grosvenor-square, previous to his Lordship and the Judges proceeding to open their respective Courts at Westminster. His Lordship, at the same time will hold his general levee of members of the bar who have been elevated to the rank of Queen's Counsel or Serjeants-at-Law.

COURT OF COMMON PLEAS.—The following days have been appointed for holding the sittings at Nisi Prius, in Middlesex and London, before the Right Hon. Sir John Jervis, Knt., Lord Chief Justice of the Court of Common Pleas, in and after Middlesex Term, 1854. At these sittings the Lord Chief Justice does not preside, but the puisne judge whose rota it is to act as Chamber Judge. In Term.—Middlesex.—Thursday, 9th November; Thursday, 16th November. After Term.—Monday, 27th November. London.—Monday, 13th November; Monday, 20th November. After Term.—Saturday, 9th December. The Court will sit each day at ten o'clock, and the cause in the list for each of the sitting days in Term, if not disposed of on those days, will be tried by adjournment on the days following each of such sitting days.

MISS NIGHTINGALE.—The Folkestone steamer arrived at Boulogne on Monday, with thirty-seven of the nurses attached to Miss Nightingale's staff. They were accompanied by Mr. and Mrs. Brainbridge, a clergyman, and a courier, who are to see them safe to Constantinople. The authorities had received their orders to afford every facility, and the English Consul, Mr. Hamilton, was in attendance to receive and conduct them to the Hôtel des Bains, where a good dinner was in readiness for them.

HEAVING THE ARTILLERY AT BALACLAVA.

THE heaving of the siege train at Balaclava, of which we give an Engraving upon the next page, has been a much more tedious operation than most people can form any conception of. It is no doubt true that the sailors have given valuable aid: their exertions in dragging the guns up the steep road to the town are described in the most enthusiastic terms by all who have witnessed them. But we must remember that the work is not half done when the guns and ammunition have been landed. *After* that there are still several miles of a rough hilly road to travel, and that, too, with very imperfect means of transit. It may easily be conceived, therefore, that the conveyance of 150 or 200 large guns, with the supplies of powder, shell-cases, and enormous round-shot required for a week's operations, must have taken a long time. If we add to all these the gabions, fascines, and sand-bags, for the trenching parties, and the stores for daily consumption, some notion may be formed of the enormous amount of pre-

SKETCHES AT BALACLAVA.

HEAVING GUNS AT BALACLAVA.

liminary work before a gun can be fired. Fortunately for the English army, the place is admirably adapted for the landing of stores and ammunition. Protected from wind and weather by the surrounding heights, and having deep water quite close to the shore, there are none of the difficulties to contend with which are usually to be encountered in such enterprises.

The town of Balaclava is indebted for its existence to a very small and crooked-shaped bay running into the land. It corresponds with the larger bays of Sebastopol, on the northern side of the Heraclaitic Chersonesus, and is the only good harbour on the almost unbroken extent of the southern coast, being deep, without cliffs, and without any sand bank at its mouth. The heights and rocks on either side are from four to five times higher than the rugged rocks of the creeks of Sebastopol, and in the harbour behind these heights the ships lie in the most perfect security. Balaclava enjoys the same advantages of geographical position as Sebastopol, but is inferior because of the smallness of its harbour, where there is room for only a few ships.

LORD RAGLAN'S HEAD-QUARTERS.

On the 4th inst., Lord Raglan moved forward to a cottage (of which we give a View) situated nearly half-way between Sebastopol and Balaclava. The General's staff has accompanied him to the spot selected, and the Artist, as will be observed, has introduced several of the officers in the foreground, in campaign under-dress, on foot and horseback. A horse, kept constantly in readiness, is also seen near the front of the cottage; and a number of calèches and other vehicles in the yard show the bustle which prevails at head-quarters—despatches and orders arriving or departing from morning till night.

The whole road from the English camp to Balaclava is a busy scene. Near the town the bustle increases. The narrow road is thronged by French and English soldiers; some going in for commissariat supplies, others coming out laden, and stooping under their burdens. Great hunks of salt pork, spitted, as it were, on long poles, and carried between men's shoulders; great bags of biscuit, arabas laden with casks of rum boxes of tea, packages of coffee, sugar, are all in motion towards the camps. Now passes a heavy gun in the same direction, and it is a close squeeze to avoid being crushed to death. Parties are moving to water horses, others seeking wood; and the small plain below the harbour, the sides of the hill—in short, every available spot is alive with soldiers in active employment. All manner of notabilities jostle up against you. The Duke of Cambridge, looking as hale and good-humoured as ever, is asking on all sides for the quarters of the French Marshal. Presently comes along General Canrobert, looking rather haggard and careworn, by no means so brisk and sprightly as when he inspected the Light Division at Aledyn. He is now attended only by a single aide-de-camp, and appears wrapped up in a cloak lined with fur, afraid of exposure to the evening air. Generals on the staff, generals of division, brigadiers, medical officers, and commissaries, soldiers and sailors of every grade—French, English, and Turk—all join in the motley group.

BRITISH OUTPOSTS, NEAR SEBASTOPOL.

THE OUTPOSTS NEAR SEBASTOPOL.

THE letters from Balaclava, received by the *Pharamond* steamer, inform us that our Sappers, while tracing the lines, had advanced within a quarter of a mile of the Russian outposts; but that the latter had made no attempt to interrupt them. This state of things was not likely to last, however. One of the first steps to be taken, when all things were ready, would be the driving in of the Russian outposts, which was expected to take place on the 14th.

In the above Engraving, our Artist gives a distant view of the besieged town, with the English fleet in the background, guarding the approach to the harbour. The English outposts on the heights to the north of Balaclava can see all that is going on in the immediate vicinity of the town. On the left hand may be seen a number of Russian soldiers, and behind them several parties of Cossacks. On the edge of the land, apparently, several of the forts are visible, and midway between the two English outposts, on the left, is the lunette which the Russians have constructed recently, and which has, no doubt, been actively at work upon the Allied army before now.

The Illustration is from a Sketch by Lieut. Bredin, R.A.

The commanding height of the ground on which the Allies are encamped gives them a great advantage over the Russians in Sebastopol, who are completely overlooked by the besiegers. The following description of what may be seen from the heights above Sebastopol, will show how much the town is exposed:—

The Light Division moves forward, crosses the plain winding along the foot of the mountains, and soon begins to ascend in a direction towards Sebastopol. The country becomes more bare, the breeze freshens, the farms are more distant, in little hollows, where a slight protection from the wind can be obtained, and in a short time the blue horizon of the sea is stretched before us. To the right, at some distance, can be seen part of the town of Sebastopol. It appears to be built at the bottom of a deep cavity. Some spacious official buildings, and the roofs some green, some brown of smaller houses can also be seen. The hulls of two line-of battle ships in the harbour, are visible, and the masts of several others. Another hill is crossed, and a better view of the town and sea is obtained. The *Arrow*, with

RUSSIAN PRISONERS, ON THE FIELD OF ALMA.

a Lancaster gun, is throwing shell at one of the forts to the left of the harbour, and the fort is returning the fire; but it is evident that the little steamer has the best of it. Behind a round tower—some of the guns of which are pointed toward the land side—and connected with it, is a building not unlike a church or magazine. It has a double inclined roof. On this, for a minute or two, is seen the white smoke of a bursting shell: the smoke clears away, and the roof is gone. With our glasses a number of persons can be seen running out of the house below. Others shells burst high in the air; some strike the earth, but fall short of the wall. The Light Division forms into line to the left of the Second (General Evans's) Division. While in the act of forming, three Russian horsemen mount on the ridge nearest to the sea and deliberately survey our position

RUSSIAN PRISONERS ON THE BATTLE-FIELD OF THE ALMA.

THIS scene was also sketched by Lieutenant Bredin, R.A on the 23rd ult. It represents a party of Russian prisoners ed by an English escort to the beach on the field of the Alma. The foremost figure between the mounted soldiers is a Russian officer, but dressed as a private. He informed our Correspondent, in French, that the Emperor had given orders that all officers are o wear the same description of coats as the men, in order that they may not be singled out to be 'picked off." He added that he had never been in Sebastopol, but that the army engaged had come from Odessa, but, it subsequently proved that the army was from Sebastopol. The motive of the falsehood was obvious. the interpreter explained that all prisoners had told him the same, but the Russian army had, doubtless, been ordered to say this, in case they were taken prisoners. He inquired anxiously, says our Correspondent, if we were going to Sebastopol. I told him we hoped to take possession of it before long. He smiled, shook his head, and said, "It is very strong, and there are plenty of artillery; you *cannot* take it." I said, "We shall see." He replied "We will see;" and so the conversation ended. He was in very good spirits.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

THE Poet Laureate (Mr. Tennyson) has, it is said, put on his singing-robes and wreath of laurel, and is busy in verse with the Battle of the Alma. If this is true, we are recurring to old times. We shall have something to remind us of former administrations. It was a Whig Lord High Treasurer (one after Mr. Gladstone's own heart) who lamented that the Battle of Blenheim was unsung; and who, on the recommendation of Lord Halifax (that true Mæcenas of English poets), gave Marlborough's great victory as a subject to Addison. To Lord Godolphin we are indebted—not only for the Godolphin, Arabian, and other Newmarket attractions, but for a lasting honour to our literature—the poem of "The Campaign," and to that poem Addison owed a lucrative appointment. Through the reigns of Mr. Macaulay's hero, King William, and that King's successor, no prosperous event passed undignified by poetry. There was, then, ample encouragement for genius. This, however, did not last long. In the Walpole administration, worthless men were unprofitably enriched with the public money, and no care was taken to employ men of genius in literature, whose appearance might do honour to their country. In the great Chatham administration, when France was disgraced and overpowered, in every quarter of the globe—when Spain, coming to her assistance, only shared her calamities—and the name of an Englishman was reverenced through Europe, no poet was heard amidst the general acclamation; the fame of our counsellors and heroes was intrusted to the Gazetteer. In our own time, Talavera was sung by Mr. John Wilson Croker, and Waterloo by Sir Walter Scott. We shall see what the honours of the bays and the attractions of the butt will do for Mr. Tennyson, in the matter of the glorious Battle of "the Alma."

It is sometimes said that the genius of poetry is extinct in England; that this is a practical and not a poetical age—an age of Stephensons, Brunels, and Wheatstones, and not an age of Shakspeares and Miltons. But it is surely untrue that poetry is extinct among us. Men and studies decay, but nature never dies. There are many among us—poets sown by nature; men possessing the faculty divine, and the accomplishment of verse as well. But there is not so much encouragement for poetry as there used to be amongst us. Critics lament that publishers evince little sympathy with poetry, but they forget that the publisher is only a caterer for the public, and that the bookseller of to-day is the same as the bookseller of Ben Jonson's days:—

> Thou that mak'st gain thy end, and wisely well
> Can'st a book good, or bad, as it doth sell.

The best book last season in the Row was "Uncle Tom's Cabin." The best print of the previous season, in the eyes of Messrs. Graves, Gambart, Grundy, and Agnew, was Mr. Barraud's "Prayer."

There is some talk of transmitting a memorial to Government requesting Government aid in favour of drooping poetry. The New Houses of Parliament have been made conducive to the advancement of the Fine Arts, why should not our triumphs in the Alma be made conducive to the progress of true poetry? It has been suggested that Government should offer a premium of 500 for the best poem on the Battle, and that no poem should be allowed to exceed 500 lines. A pound a line would, it is said, offer a temptation beyond anything Dryden received from Old Jacob Tonson, and is just eight times the sum that Byron twits Sir Walter Scott with receiving for "Marmion" and "The Lay":—

> Though Murray with his Miller may combine
> To yield thy muse just half-a-crown per line.

But who are to be the judges, and what post-office bag would be big enough to contain the competing poems? That much good poetry would result from an offer of the kind, we have no doubt whatever—no more than we have that the offer would produce an ample supply of what would prove at a glance, not poetry, but only prose run mad. Addison wrote his poem of "The Campaign" in a garret in the Haymarket; and to that poem he owed his future Secretaryship of State. From the former purlieus of Grub-street and the Mint, a poem might come that would render full honour to the occasion, and would, consequently, take a high position in the great and important body of British poetry.

Of the strange lottery arising from country sales of books (to which we have alluded on other occasions) a curious instance has just fallen under our notice. A few weeks ago, at the sale, at Shrewsbury, of the curious library of the late Sir R. Jenkins, the following lot occurred:—"Tracts, Plays, Poems, &c.—112 volumes." Here is a speculative lot, sufficient in itself to bring a bibliopole from London to Shrewsbury. In this lot might lie a second and complete copy of the first edition of "Hamlet," that would render the Duke of Devonshire's precious volume no longer unique. Concealed in this lot might lurk an unknown edition of Shakespeare, from which new readings might be obtained clearing up passages that still defy Mr. Dyce. In this lot might lie one of the lost plays of Massinger or Marlowe. A well-known antiquary actually hastened to Shrewsbury to learn something about the one hundred and twelve volumes; but was unable to obtain any certain particulars about the fate of the remarkable lot. His visit, however, was not in vain: he was able to gain particulars of another little acquisition—a lot of "Old Plays," bought by a country bookseller for fourteen pounds—from which he was proud to extract a nearly unique quarto play of Shakespeare's for the sum of £16—or £2 more than the country small-dealer had given for the whole lot. Now, what would such a library, with such rare treasures, have sold for in the best auction-room in London? Why, for at least three times the sum it realised in Shrewsbury. The representatives of Sir R. Jenkins have not only lost money, but have been the means (doubtless, the innocent means) of throwing once more into obscurity editions meant for the libraries of the liberal and the curious. Let us add that, at the same sale, a copy of the English "De Bry" was bought for the Miller Library, by Mr. Christie, for £35.

Of the little attention that has hitherto been paid to English biography a curious instance has just come to light. Dr. Johnson, in opening his "Lives of the Poets," laments the penury of English biography; but admits that at least we know something about Cowley. He then proceeds to relate the known events of Cowley's life, and to indulge in an unnecessary sneer at what he presumes to have been the religious leaning of the poet's father. Now, it has just come to light that the great moralist and biographer is wholly wrong (in common with all biographers) about the parentage of the poet, and that the father was anything but a sectary; that he was not a grocer, but a stationer—that he was, in short, as sturdy a Church of England man as Johnson himself.

Of Art, in England, it is not easy to tell anything that is new in the month of October. Our artists are in the chrysalis state—we shall hear more of them in March or April.

SAVOY CHURCH, BLOOMSBURY.—CONVERSION.—On Sunday last, a Roman Catholic lady, after having taken the holy sacrament at the French Protestant Episcopal Church, in Bloomsbury-street recanted, and signed the usual act of renunciation in the presence of two clergymen and one of the ancients of the said church, when she was admitted a member of the Church of England.

BRADFORD MAYORALTY INSIGNIA.—A superb gold chain and badge have just been presented to the Corporation of Bradford, at the cost of about £260. The badge bears the Corporation arms, with the motto, "Labor omnia vincit." It is surmounted with the regal crown, and the Royal cypher reversed, and bears this inscription:—"Presented by the Burgesses and Inhabitants of Bradford to the Corporation of this Borough during the third successive and exemplary Mayoralty of Samuel Smith, Esq., October 24th, 1854." The chain and badge have been designed and manufactured by Mr. Mancah Rhodes, of Bradford.

THE THEATRES.

MARYLEBONE.—Mr. Herauld's tragedy of "Videna"—a work long talked of in literary circles—was produced at this theatre on Monday evening. Its success was entire. Some scenes elicited enthusiasm.

The story, which the author "dolefully pecks" of early Britain, is almost Greek, both in its simplicity and in its spirit. *Gorbudoc*, the King, has removed his second son *Porreo* from his court on account of certain defects of disposition and manner. *Ferrex*, the elder son, has aiding his brother's fate, and for his return—a prayer which is seconded by the yearning love of *Videna*, mother of the twain. *Porreo*, on a sudden, returns unmvited. In his absence study and love have freed him from his outside flaws, and given him the bearing and accomplishments of a Prince. *Gorbudoc*, overjoyed at the change, in a moment of revulsion from his former severity, decrees that *Porreo* shall divide the sovereignty of Britain with his brother *Ferrex*; to whom, as elder, the sole rule should have fallen. To this the generous *Ferrex* consents, and *Gorbudoc* prepares to abdicate in favour of his sons. Unhappily, however, beneath his gallant surface *Porreo* bears a heart wild suspicious, and revengeful. He repays his brother's love by the most frantic jealousy, deeming that the latter has supplanted him in the affection of *Marcella*, a lady to whom he (*Porreo*) had been betrothed in his exile. It is next suggested, rather than shown, that *Porreo* attempts to take off his supposed rival by poison. Suspicion of this, together with his violent and irreverent attitude, awaken in the breast of *Videna*, a dark forboding of the end. She implores her husband to reverse his decrees, and to let the entire sway rest, according to heirship and custom, in the worthier *Ferrex*. But the King will not recall his word. The empire is divided, and *Porreo's* first act is to make war upon his brother and benefactor, whom he personally slays in battle. *Gorbudoc*, seeking his lost son on the field, drinks of the wells which *Porreo* had remorselessly ordered to be poisoned for the destruction of his brother's army, and dies in consequence. The deaths, therefore, of both father and brother lie at the door of *Porreo*, who seems incapable of remorse. Nevertheless, he is ultimately successful, and the populace demand that he shall be sole King. At this point, the stern woe of *Videna*, bereft by *Porreo*, both of husband and son, pleads against the injustice of Fate, and revolts from the parricide and fratricide becoming the guardian of a people. In the struggle between this impulse and lingering affection for her guilty son, reason fails; but one stern idea haunts her like a commission. It is the death of *Porreo*; and he falls by her hand.

The subject, it will be seen, is sufficiently startling. The sacrifice of a son by a mother—even though justice and a nation's weal exact the deed, and misery have erazed the doer—had in it something of peril, especially in days when the amiable rules supreme, and our drama teems with model examples of devoted lovers and relenting parents. Nor has Mr. Herauld's bold treatment of his theme anything in common with the prevailing tendency to soften down a terror until it becomes harmless. The present work, as contrasted with many that are now popular, gives the precise distance between the tragic and the domestic schools. The dangers of the subject have been overcome, not evaded. We sympathise with *Videna* in her fearful act, not because the act itself has been ingeniously divested of its horror, but because we have had access to the mother's heart—to its truth, its love, its mighty desolation, and, above all, to that sense of right, abstract and divine, which alike befits her character and queenly state; and which, working like an instinct through the shattered mind, impels it to the catastrophe.

The diction, in the great crisis of the play, glows with fire and imagination. What might have seemed passionate hyperbole from the mouths of lesser beings, well became the colossal persons of this story. The language has the merit of being in keeping with the argument, and avoids those colloquialisms which are often supposed to be true to *Nature*, or the essential things of the world, when they are, indeed, only true to *fact*, or the accidents of habit and manner. Mr. Herauld's general style, like the conduct of his plot, is stately, to a fault. There were times on Monday, when both verse and action moved with the measured pomp of a procession, when we could have wished rather for the abrupt shock of conflict. The train of thoughts and illustrations, though profound and felicitous in themselves, somewhat arrested the march of events. We learn with pleasure, therefore, that a judicious and effectual compression has since been resorted to. If we state a desire that the motives of the play were in some cases put with greater plainness and breadth, we have nothing left to qualify our admiration. We have presented to us in "Videna" the mightiest passions in conflict, connecting themselves with the Heaven as their bourne, and the earth with the fate of a realm as their issue; involving scenes of riveting interest in their course, and teaching the humbling moral that the noblest impulses may result in actions that wear the hue of crimes. We have a work which, in long years to come, may itself have become a classic, and which should go far to rekindle a true appreciation of tragic genius in our own times.

Mr. Herauld has been fortunate in his chief illustrators. The character of *Gorbudoc*, whose high moral nature is racked to anguish by the dimensions of his offspring, was rendered by Mr. Wallack with equal pathos and majesty. Mrs. Wallack entered into the very spirit of *Videna's* part; giving its every phase—from her first burst of maternal welcome to her double, and thence to revulsion and anguish. In the closing scene Mrs. Wallack was vigorous, impassioned, and effective; but we may doubt whether a more subdued and wrapt demeanour, lit up at times with the fitful gleam of her intention, might not have more completely denoted the woman whom misery has at once consecrated and maddened. However this may be, it is not the less certain that Mr. and Mrs. Wallack, by their assumptions in this play have added as much honour to the reception of the actor as the author has done to that of the poet. Miss Cleveland's *Marcella* was a pathetic, chaste, and satisfactory performance. In other respects the play was fairly acted. The scenes, groupings, and appointments were in many cases most picturesque.

ASTLEY'S.—We must now expect the events of the war to be dramatised, and particularly at this theatre, once famous for its battle-pieces. "The Battle of Alma" gives its name to a spectacle which was produced on Monday, and excited in the audience the utmost enthusiastic feeling. To give the greater effect to the war-scenes, the circle is united to the stage by means of a platform; and the troops enter from the former in their progress to the latter. The embarkation of the troops at Southampton pier was in this manner managed very cleverly—the vessel sweltering them in the distance—and the landing on the heights of the Alma with the Russian soldiers, who are thus attacked by the Allied forces proceeding from the circle; the latter being in turn attacked by a descent of the Cossacks into the ring, while a similar conflict takes place on the stage. Mr. Shoreditch is the author of the dialogue, which was good of its kind; but the military action is of more importance than the words; and, as we have said, the feeling of the audience was wonderfully awakened, and displayed itself by a call for Mr. Cooke and for Mr. West, the stage-manager, at the end of each act. The proceeds of the night's performance were devoted to the relief of the sick and wounded soldiers.

ADELPHI.—"The Summer Storm"—a rustic drama, by the author of "The Harvest Home" and "The Hop-pickers"—was produced on Thursday week, with new scenery and costumes, and all the other paraphernalia usual to ensure success, but without the result that was undoubtedly expected. Mr. Tom Parry has not here been attended with his wonted good fortune, either in the choice or treatment of his subject. His pastoral characters, however, still remain true and living portraits; and *Dicky Dawn* (Mr. Keeley), with whom the play opens, is a veritable moralising bird-catcher, who, if he could have given a tone to the play, might have carried it triumphantly through. There is, too, a bustling farmer's daughter played by Mrs. Keeley, which has nature and incessant activity, and could not fail to interest. But *Clara Westbourne* (Mrs. Leigh Murray) and *Mabel Vincourt* (Miss Wyndham) are a pair of the most uninteresting heroines that we ever encountered. The father of the former, *Ronald Westbourne* (Mr. Leigh Murray), a forger of one-pound notes, on the eve of giving up his craft, and being off with his winnings to America, there to turn over a new leaf and become an honest man, could scarcely be expected much to interest our sympathies. To these we have to add, a faithless lover, *Walter Atherstone* (Mr. Parsell), and a professional gambler (Mr. C. Selby)—the former of whom falls into a trap laid for the latter, and, being arrested, and finding the prosecutor through a practicable floor, is fearfully smashed, though not killed. His misfortune, however, moves no pity, though it makes an effective ending to one of the acts. Such mechanical contrivances abound, and do the bidding of the melodramatist; but we doubt whether the day has not passed for the appreciation of such aids to, or substitutes for, good acting. There was no want of this in the performance; and it might well have stood alone; while the proffered help of the machinist proved to be an incumbrance, not a support. Notwithstanding these drawbacks, the piece is yet suffered to retain the stage—probably until something more felicitous can be got ready.

OLYMPIC.—A new piece called "The Trustee" has been translated from the French, for the purpose of exhibiting Mr. Wigan as a somnambulist, who buries in his garden, during sleep, a deposit left in his hands; and, not recollecting the circumstance when awake, is driven to the necessity of incurring another fit of somnolency, in order to disinter the treasure. The part is well and subtilely interpreted by the manager.

MUSIC.

ALL the eminent performers now in England are engaged in the provinces. The Operatic Company at Manchester, of which the principal members are Mdme Caradori, Mdlle. Bury, Mdme. Rudersdorff, Herr Reichart, Herr Formes, and Herr Zelger, are performing with much success. They have given the "Favorita" and the "Freischütz;" and "Il Seraglio" is announced—an opera in which Mdme. Rudersdorff had a brilliant reception in London.

MISS. WOOD, once celebrated as Miss Paton, and her husband, are now settled in Manchester as teachers of singing. They have lived for many years in retirement in Yorkshire.

MR. HENRY RUSSELL is giving his performances at the Manchester Corn-exchange, and is drawing large and highly-gratified audiences.

NATIONAL SPORTS.

THE certain has at last descended on a good, but not a brilliant, Newmarket season; and a hybrid meeting at Worcester on Tuesday and Wednesday, and a day at Lewes, the poem and Barr on Thursday, form the scanty bill of racing fare for next week. Steeplechasing does not seem likely to supply its place this winter, and, in fact, strikes root so vigorously in France, that its admirers will very soon be obliged to "change the venue" to that country. The coursers are remarkably active. Workington Meeting is fixed for Tuesday and Wednesday; Southminster for Wednesday, &c.; Middle (Salop), for Wednesday; ARTOSIAN, for Wednesday, &c.; Baldock, for Wednesday and Thursday; Stockton (Open), for the same days and Friday; Ridgway, for Thursday and Friday; and Nithsdale and Galloway (Open St. Leger), for Thursday, &c. The spirit of horse matching, which seems to have sadly degenerated, of late years, is still active in the coursing world, as Mr. Borron has challenged Sir James Boswell to run nine of his Biggar puppies against nine of his own, for £20 a course, and £100 the main; and another £200 a side match is said to be on the *tapis* for the Waterloo Champion. We know of no rowing fixture for next week; and cricket has now quite given place to football. The "averages" are, however, still an object of interest; and it seems that the United All England eleven won twelve out of fifteen matches, lost two to Rugby and the Phœnix-park Club, and drew one with Oxford; while "Clark's Eleven" played twenty-three, and won sixteen.

As regards amount and quality of sport, the past racing season has also a good average to show. But the two-year-olds have been no moderate, that the Derby was never a more open question. Nearly every promising one among them has been beaten in its turn. Dirk Hatteraik is no fyer; Bonnie Morn fell before Rifleman; and both that colt and Saraband were considered in very safe form in the Criterion on Monday, when giving only 5lb. each to Para. This latter animal is not a very large, but an improving mare, while Cruiser (who ran her home) is a mere pony. Grecnlin Esquiress has, we hear, been out of training for some time past, and Hungerford, who is guiding the Marquis of Anglesea's hands for 1200 guineas, is very unfavourably spoken of. De Clare is still unbeaten, and so is Lord of the Isles; and Wild Dayrell, who received 3lb. from Para, when he was by no means fully prepared, and beat her in a canter, has really the best right to be at the head of the Derby betting. Para was "off" in the beginning of the year; and, till lately, the stable thought that Habena was the better of the two. Their orders to Rogers were to make the pace severe throughout, which he did in great style; R. Bevan, of whom Nat had formed an immense opinion, not being able to go with her any part of the race.

Dervish showed as much ourishness as ever in his match, where Lord Glasgow gained a point on the Derby at last.

A somewhat small field came out for the Cambridgeshire, and though Kent felt sure that no three-year-old, not even Virago, could run his Rattle, who is an amazingly fine horse, at 9lb., the German horse, Schers out of Prunde (ungiol, Mirth out of Joy) was never headed from end to end, and won by a very clever head. The cheering for the foreigner was very vociferous, and all the stable lads followed his horse off the course, and gave "Shirts," as they termed him, a complete ovation as he went to scale. The objection as to his age soon fell to the ground, as Mr. Barrow pronounced his mouth to be all right, and the requisite pedigree papers were also produced. It will be seen that Rattle, like Nabob last year, ran second for both the great October handicaps. It is said that Scherzo, who went very fast in the Cesarewitch for one mile and a quarter, is now so far below his form that his trainer, who once stood to win £2000, got out at such disadvantageous terms that he lost £100. Nancy ran forward, but she was only the ghost of her old self in the Cesarewitch Orinoco could not get further than seven furlongs, as any one might have known who watched his style of running at Doncaster. The Reiver ran wonderfully well in the £100 Plate, and was very heavily spurred. Grapeshot, on the contrary, hung sadly at the finish, according to his usual custom. Job Marson was not in the "all green" of Mr. John Stanley, and we hear it rumoured that the connection between them ceased at Doncaster. It is also said that Baron Rothschild intends to continue King as his private trainer, as the difficulty about King Tom, who, has or has had, a seton in his hock, is amicably got over. Stookwell is believed to be sound again, but as no one seems disposed to give 2500 guineas for him, the Marquis will most probably train him on. The sale of his Lordship's yearlings, &c., seemed to be a mere cutting process, as we could not hear that more than four out of the twenty-six were sold. One of the yearlings fetched 10 guineas, and another by Flatcatcher out of Glenara, 290 guineas; while 100 guineas was the sum paid for Filbert. It took place in his Lordship's riding-school, and was a very thinly-attended affair. Newmarket, which could ill spare the Marquis, has somewhat brightening prospects, as Messrs. Payne and Greville are coming to the Palace Stables, and Lord H. Vane is about to be pulling down and re-building Queensberry-house, in the main street. Among other *on dits*, we heard that Mr. Disney originally gave only £45 for Knight of St. George, and £40 for her dam; and that Indian Warrior, Gamekeeper, The Knight, and Sweetbriar are at one time owned by the Hambleton party for the year. Kingston is likely to become a very popular sire; and, it is said, that that splendid Yorkshire judge of horse-flesh, Sir Tatton Sykes, is so fond of him, that he has made the party a standing offer of £2000.

NEWMARKET HOUGHTON MEETING.

MONDAY.

Sweepstakes of 10 sovs. each.—Natan, 1. Cinesa, 2.
Sweepstakes of 10 sovs. each. Guy Mannering, 1. New Brighton, 2.
Selling Handicap.—Sding, 1.
Sweepstakes of 10 sovs. each.—Priestcraft, 1. Merry Nun, 2.
Sweepstakes of 10 sovs. each.—Nicotine, 1. Black Swan, 2.
Plate of £50.—Polestar, 1. William the Third, 2.
Criterion Stakes.—Para, 1. Cruiser, 2.
Handicap Plate of £80.—Gamekeeper, 1. Old Rowley, 2.

TUESDAY.

Sweepstakes of 10 sovs each.—Nicotine, 1. Orson, 2.
£50.—High Priest, 1. Ilex, 2.
Handicap Sweepstakes of 15 sovs each.—Pumicestone, 1. Grimalkin, 2.
Sweepstakes of 10 sovs each.—Vauxtress, 1. Robert, 2.
Sweepstakes of 10 sovs each.—Cinnicus, 1. Priestcraft, 2.
Cambridgeshire Stakes.—Scherzo, 1. Rattle, 2.
Handicap Plate of £100.—Candlewick, 1. The Reiver, 2.

WEDNESDAY.

Sweepstakes of 10 sovs.—Cherry Brandy, 1. Cimicuna, 2.
Match 200.—Pyrrhic, 1. Content-on, 2.
Sweepstakes of 10 sovs.—Phœdra, 1. Doralice, 2.
Handicap Sweepstakes of 15 sovs.—Jack Shepherd, 1. Moonbeam colt, 2.
Sweepstakes of 200 sovs.—Habena, 1. Almond, 2.
Sweepstakes of 10 sovs.—Cherry Brandy, 1. Stunning, 2.
Sweepstakes of 10 sovs.—Cinesa, 1. Guy Mannering, 2.
Handicap Plate of £60.—Grand Inquisitor, 1. Gamelad, 2.

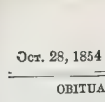
THURSDAY.

Subscription Plate.—Blue Beard, 1. Calepaw, 2.
Sweepstakes of 10 sovs.—Kitefiver, 1. Nicotine, 2.
Sweepstakes of 10 sovs.—Rosaline, 1. Dame Partlett, 2.
Sweepstakes of 10 sovs.—Merry Nun, 1. Donaid, 2.
Handicap Sweepstakes.—Johnny Taft, 1. Rajah, 2.
Sweepstakes of 50 sovs.—Oulston, 1. Professor, 2.
Glasgow Stakes.—Pugnator, 1. Giaret, 2.
Handicap Sweepstakes of 100 sovs.—Ivau, 1. Physalis colt, 2
Handicap Sweepstakes.—Poodle, 1. Ilex, 2.

OBITUARY OF EMINENT PERSONS.

HENRY PRITTIE, LORD DUNALLEY.

THE nobleman, one of the representative Peers of Ireland, died at his seat, Kilboy, near Nenagh, on the 19th inst. He was born March 3rd, 1775, the eldest son of Henry Prittie, Esq., of Dunalley, in the county of Tipperary, M.P., who was elevated to the Peerage of Ireland 30th July, 1800. The founder of the Prittie family, Colonel Henry Prittie, had a grant from Charles II. of Dunalley Castle; and his grandson, Henry Prittie, Esq., sustained a siege of twenty-one days there against the disbanded soldiers of King James's army after the Battle of the Boyne.

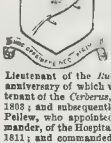


The late Lord Dunalley married, 1st, 10th July, 1802, Maria, only daughter of Dominick Trant, Esq., of Dunkerrin, county Cork, which lady died 18th October, 1813; and, 2ndly, 10th February, 1820, Emily, daughter of Cornwallis, 1st Viscount Hawarden. His Lord-ship has left no issue, and is succeeded by his nephew, Henry Prittie, Esq., of Corville, Roscrea, now 3rd Lord Dunalley.

THE HON. AND REV. FREDERICK HOTHAM, CANON OF ROCHESTER.

THIS venerable clergyman, Canon of Rochester, and Rector of Donnington, died on the 11th inst., aged eighty. He was the second son of Beaumont, second Lord Hotham, and nephew of the celebrated Admiral Lord Hotham, so distinguished in the naval warfare with Republican France. He married, in 1802, Anne-Elizabeth, eldest daughter of Thomas Hallet Hodges, Esq., of Hemsted place, Kent, and has left issue, five sons and five daughters. Of the former, the eldest is the present Sir Charles Hotham, K.C.B., Commodore on the coast of Africa from 1846 to 1849, and subsequently Minister Plenipotentiary to the Argentine Confederation.

REAR-ADMIRAL CLEMENT SNEYD, OF HUNTLEY-HALL, COUNTY STAFFORD.



THE death of Rear-Admiral Sneyd, in the eighty-first year of his age, occurred on the 12th inst., at his seat, Huntley-hall, near Cheadle. The gallant officer was fourth son of the late John Sneyd, Esq., of Belmont, in Staffordshire, by Penelope, his wife, eldest daughter of Thomas Kynnersley, Esq., of Loxley-park, and grandson of William Sneyd, Esq., of Ashton; whose younger brother, Edward Sneyd, of Lichfield, was father of Honora Sneyd, wife of Richard Lovell Edgeworth. The Sneyds of Ashton and Belmont are a branch of the very ancient Staffordshire family of Sneyd, of Keele.

It is officer entered the Navy in November, 1786; served under Commodore Gardner in the Channel and West Indies; and was Second Lieutenant of the *Russell*, 74, in the battle of Camperdown; the 57th anniversary of which victory he survived by one day. As First Lieutenant of the *Cerberus*, he took part in the bombardment of Granville, 1803; and subsequently served in the *Culloden*, flag-ship of Sir Edward Pellew, who appointed him Governor, with the rank of Acting Commander, of the Hospital at Madras. He became Post Captain 3rd April, 1811; and commanded frigates on the Home station from 1806 until June, 1813. He was placed on the retired list, as Rear-Admiral, 1st October, 1846.

Rear-Admiral Sneyd married, 27th October, 1813, Helen, daughter of Roger Swettenham, Esq., of Somerford Booths; and, secondly, Ellen Catherine, daughter of John Cotton, Esq., of Etwall; by the former (who died 16th March, 1821) he leaves issue.

CAPTAIN GEORGE BOHUN MARTIN, R.N., C.B.

CAPTAIN GEORGE BOHUN MARTIN, R.N., C.B., was the third son of the late Henry Martin, Esq., of Colston Bassett, Nottingham, formerly M.P. for Kinsale, by Maria-Elizabeth, his wife, daughter of Frances Edmunds, Esq., of Newborough, York, descendant of the ancient family of Bohun, of Westhall, Suffolk. Captain Martin's family has, for many generations, been connected with the naval service: his rank was the nephew of the late Sir George Martin, Admiral of the Fleet, and Vice-Admiral of England; and grandson of Captain Wm. Martin, R.N., by Arabella, daughter of Admiral Sir William Rowley. Admiral Martin, to whom the King of Naples made his submission in 1742, after half an hour allowed to him for deliberation, was his collateral ancestor.

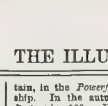
Captain Martin entered the service in 1815, on board the *Impregnable*, bearing the flag of his cousin, Admiral Sir Josias Rowley, Bart. He served afterwards on board the *Spartan*, *Gorgonzola*, *Menander*, *Sappho*, and other ships. In 1821 he was appointed Flag Lieutenant to Admiral Sir James Whitshed, G.C.B.; and in 1824 was promoted to the rank of Commander. He commanded the *Musquito* at the battle of Navarino; and for his services on that occasion was promoted to the rank of Captain, and made a Companion of the Bath. He afterwards commanded the *Volage*, 26, and the *Caledonia*, 120, bearing the flag of Sir Josias Rowley, his early friend and patron. In October, 1851, he was appointed to the *Victory*, bearing the flag of Admiral Sir Thomas Briggs, whose only daughter he married; and, shortly after the death of that officer, was appointed by Sir James Graham to the Superintendency of the Dockyard at Deptford. While enjoying a few days' relaxation from the arduous duties then devolving on him as Superintendent, he was struck by cold, which produced paralysis, and, after a very short illness, he expired at the house of his brother, in Nottinghamshire.

Captain Martin was universally beloved by all who served under him, and his death is deeply deplored; he leaves a numerous family.

CAPTAIN GEORGE MANSEL, R.N.

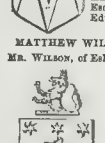
THIS distinguished officer died on the 1st ult., off the island of Anhalt. In the course of his professional career, he had served in three of the most memorable actions in which ships have been successfully engaged against batteries—viz., at Flushing, Algiers, and St. Jean d'Acre—and few had seen more guns fired than Captain Mansel. Captain Mansel, Hanslip of descended from an ancient and honourable family in South Wales, was the second son of Rawleigh Mansel, Esq., a Captain in the British Army, by Prudence, his wife, eldest daughter of George Sproule, Esq., a Captain in the 16th Regiment, Surveyor-General of the province of New Brunswick. He was born, 15th July, 1794; was educated at Reading school, under Dr. Valpy; and entered the Navy, 30th May, 1808, on board the *Venerable*, 74, Captain Sir Home Popham, bearing the flag of Sir Richard Strachan; accompanied the expedition on board the *Monarch*, in 1809; and was present at the bombardment and capture of Flushing. Captain Mansel joined the French Expedition in 1831, in the short campaign which preceded, and was present at, the capture of Algiers, by Marshal Bourmont, and there performed such good service as to lead to his being invested, 14th November, 1831, with the order of the Legion of Honour. At a subsequent period, he joined the French army as a volunteer, under Marshal Clausel, in the expedition against Constantina; and on both occasions he received the warm commendations of the General Commanding-in-Chief. Marshal Bourmont presented him, after the fall of Algiers, with the flag that had waved over the Harem, as a well-earned trophy. On the 20th April, 1840, he was appointed to the *Wasp*, 16, which he commanded at the taking of St. Jean d'Acre; and, previous to this, on 28th September in that year, as a reward for his services at the capture of Sidon, having had honourable mention made of him in the despatches by Sir C. Napier, he had been advanced to post rank. He served a short time with Sir Charles (the Commodore), as his Captain, in the *Powerful*, 84; and, after his departure, commanded that ship. In the autumn he returned to England, in command of the *Britannia*, 120. His last appointment was to the *Powerful*, 84, in April of the present year. While fitting her out, he was selected by the Admiralty, as a graceful compliment to our allies—with whose forces, naval and military, he had served, and whose decorations he wore—to take the temporary command of the *St. Vincent*, 101, to convey French troops to the Baltic. After the fall of Bomarsund, he was returning, with Russian prisoners, to resume the command of his own ship, when he was seized with illness on the 19th August; and died, after much suffering, on the 1st ult., off the island of Anhalt, deeply lamented by his officers and men.

SIR CHARLES HULSE, BART., OF BREAMORE-HOUSE, HANTS.



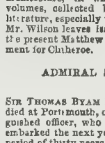
SIR CHARLES HULSE died on the 19th inst., in his eighty-fourth year. He was the fourth inheritor of the Baronetcy, conferred 7th February, 1738-9, on Dr. Edward Hulse, First Physician to King George II. The Right Hon. Sir Samuel Hulse, K.G.H., second son of the second Baronet, attained the rank of Field-Marshal in the Army, and filled the important office of Governor of Chelsea Hospital. Sir Charles, the Baronet just deceased, was Sir Samuel's nephew, and eldest son of Sir Edward Hulse, by Mary Lethieullier, his wife, niece and heiress of Smart Lethieullier, Esq. He married, in 1808, Maria, daughter of John Buller, Esq., of Morval; and leaves as a successor now Sir Edward Hulse, fifth Baronet, and o her issue.

MATTHEW WILSON, ESQ., OF ESHTON HALL, CO. YORK.



MR. WILSON, of Eshton, died at his seat, aged eighty-two. He was a magistrate and Deputy-Lieutenant for the West Riding of Yorkshire, as well as for the county of Lancaster. His family, which is possessed of considerable landed property, was established in Yorkshire about the middle of the seventeenth century, by Matthew Wilson, Esq., a London merchant, who purchased the Eshton estate from Sir Robert Bindloss, Bart. The lineal male representative of this gentleman, Matthew Wilson, Esq., of Eshton-hall, married Frances Clive, sister of the great Lord Clive, and had an only daughter and heiress, Margaret Clive Wilson, who married, first, the Rev. Henry Richardson Currer, and had by him (who died in 1794) an only daughter, the present Miss Richardson Currer, of Burley and Kildwick, so well known as a patron of literature. The heiress of Eshton married, secondly, in 1800, her first cousin, Matthew Wilson, Esq., the gentleman whose death we record. He was second son of the Rev. Henry Wilson, Rector of Slaidburn and Vicar of Otley, who was brother of the Matthew Wilson who married Frances Clive. In 1825 and 1826 he rebuilt the hall at Eshton, a fine specimen of Elizabethan architecture, in which is a splendid library, containing 30,000 volumes, collected by Miss Currer, and embracing every class of literature, especially theology, besides some very valuable manuscripts. Mr. Wilson leaves issue two sons and three daughters: the elder son, at present Matthew Wilson, Esq., of Eshton-hall, has sat in Parliament for Clitheroe.

ADMIRAL SIR THOMAS BYAM MARTIN, G.C.B., ADMIRAL OF THE FLEET.



SIR THOMAS BYAM MARTIN, the senior officer of the British Navy, died at Portsmouth, on the 21st inst., at the age of 82. This distinguished officer, who entered the Royal Naval Academy in 1785, and embarked the next year on board the *Pegasus*, was on active duty for a period of thirty years. The record of his services fill more than two of the closely-printed columns of O'Byrne's "Naval Biography." Suffice it for our limited space to state that, in 1790, he became a Lieutenant; and, in 1793, witnessed Lord Hood's occupation of Toulon. He subsequently co-operated in the reduction of Bastea, and captured *Le Jean Bart*, corvette, of 18 guns, and the *Tomion*, of 40. In April, 1797, he was present at the unsuccessful attack on Puerto Rico; and, during the five following months, had the good fortune to make prizes of nine privateers. In 1798 he captured, after a long and obstinate conflict, the French ship *Diamantide*. In 1800, in general command of the boats of a squadron, he entered the Quimper river, and effected, on its banks, the destruction of three batteries. In 1808, being at that time in the *Implacable*, he brought to close action the Russian 74-gun ship *Seaxlod*, which he would have taken, but for the approach of the whole Russian fleet, which bore up to the *Seaxlod*'s support. In acknowledgment of this gallant exploit, the King of Sweden conferred on Captain Martin the Order of the Sword. In 1811 he attained the rank of Rear-Admiral; and in 1812 took an energetic part in the defence of Riga, and in the support of Bragatim's army against Marshal Davoust. In 1813 he became Comptroller of the Navy; and, from 1818 to 1832, sat in Parliament for Plymouth. In 1849 he was appointed Admiral of the Fleet.

Sir Thomas Byam Martin was third son of the late Sir Henry Martin, Bart., M.P. He married Catherine, daughter of Captain Robert Fanshawe, R.N.; and had three sons—Rear-Admiral William Fanshawe Martin, Rear-Admiral Henry Byam Martin, Lieutenant-Colonel Robert Fanshawe Martin; and three daughters—Catherine, wife of her cousin, Sir Henry Martin, Bart; Elizabeth-Ann, married to Colonel F. J. Davies; and Wilhelmina Mary.

DEATH OF LORD FREDERICK LEVESON GOWER.—Lord Frederick Leveson Gower, second son of the Duke and Duchess of Sutherland, is among the latest victims to the severity of the Eastern campaign. His Lordship died on board H.M.S. *Bellerophon*, now on her voyage back to England. This gallant young nobleman, although suffering severely from illness, previously contracted at Varna, persisted in accompanying his comrades to the Crimea. When the troops landed at Eupatoria, he was so weak that it was found impossible to convey him ashore; and his Lordship was on his way home when cut off thus prematurely.

DEATH OF DR. ROBERT EVANS.—Among the recent deaths by cholera we notice that of Dr. Robert Evans, LL.D., D.C.L., of Bristol, head-master to the City Grammar-school. There are few citizens of Bristol whose loss could be more extensively or deeply felt. Under his able guidance, the Bristol Grammar-school had attained a standing scarcely second to any in the kingdom, while the Doctor's kindliness of heart and unswerving justice had endeared him in an especial manner to the numerous pupils on the foundation. Dr. Evans was late Fellow and Tutor of Jesus College, and former y Vinerian Scholar and Proctor for the University of Oxford. Dr. Evans, who was in his fifty-second year, has left a widow and young family to mourn their irreparable loss.

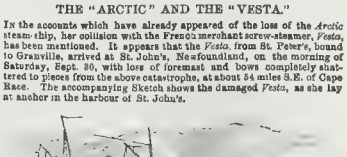
THE LATE EARL OF BELFAST.—On Friday morning (last week) the *Blenheim* steamer arrived at Belfast with the remains of the late young and deeply-lamented Earl of Belfast, who died at Naples, in the full bloom of early life. The body had been interred in the new Protestant burial-ground at Naples; but the widow of the Donegal family, in accordance with the general feeling of the friends of the deceased, having been urgently expressed, with regard to the removal of the remains to the family vault at Carrickfergus, measures were taken for its disinterment and removal; but very great and unexpected difficulty was experienced in obtaining the required permission from the Neapolitan authorities. At length the remains were exhumed, and having been placed in a copper coffin (the original one of lead not being considered sufficiently durable), they were enclosed in a stout wooden case, put on board a steamer, and conveyed to Belfast whence the remains were taken to Carrickfergus church. The coffin was then deposited in the ancestral vault without any ceremonial—therefore present the Very Rev. the Dean of Connor, Richard Davison, Esq., M.P., Thomas Verner, Esq., a few other gentlemen, and Mr. Harrald.

WILLS AND BEQUESTS.—Mr. John Wild, merchant, Martin's-lane, Cannon-street, has bequeathed to the Marine Society and to the *Dreadnought*, 100 guineas each. His personalty was estimated at £120,000.——Miss Christiana Chamberlain, of Compton-terrace, Islington, has left to the Deaf and Dumb Asylum, the London Domestic Mission, and the Carter-lane Daily School, £100 to each. Her effects were sworn under £80,000.——Mr. Edward Cross, formerly of the Surrey Zoological Gardens, died possessed of personalty valued at £14,000.

Sir John Lewes Pedder has resigned his office as Chief Justice of the Supreme Court of Van Diemen's Land, on account of impaired health; the appointment of Valentine Fleming, Esq., to the vacancy, and of Francis Smith, Esq., to the Attorney-Generalship, is gazetted.

THE "ARCTIC" AND THE "VESTA."

IN the accounts which have already appeared of the loss of the *Arctic* steam-ship, her collision with the French merchant screw-steamer, *Vesta*, has been mentioned. It appears that the *Vesta*, from St. Peter's, bound to Granville, arrived at St. John's, Newfoundland, on the morning of Saturday, Sept. 30, with loss of foremast and bows completely shattered to pieces from the above catastrophe, at about 54 miles S.E. of Cape Race. The accompanying Sketch shows the damaged *Vesta*, as she lay at anchor in the harbour of St. John's.



THE "VESTA," DAMAGED BY THE "ARCTIC."

The *Vesta* left St. Peter's on September 26; and on the following day at noon, in the neighbourhood of the Virgin Rocks, in an exceedingly dense fog, steaming eight knots, came into collision with the *Arctic*, of New York, whose speed is stated to have been not less than twelve knots. The *Vesta* appeared to be sinking, but immediately rose again; but no hope was entertained of her ultimate safety, the passengers and crew looking upon the *Arctic* as their only chance of saving their lives. One man was killed, and others severely wounded. Two boats were put over the side, the first of which was sunk; and the second was immediately boarded by two of the crew and several of the passengers, who, not heeding the order of the Captain to return on board, abandoned the vessel. The fog continuing very thick, they lost sight of the *Arctic* altogether, still hoping, however, that she would not desert them. A cry of distress was now heard, which was attributed to some men of the *Vesta*, who, it appears, had jumped overboard, to get on board the *Arctic*. Providentially, the bulkhead in the forecastle was not started, which the Captain (Duchesne) noticed as affording a chance of safety. He immediately gave orders for lightening the vessel by the head, which was readily obeyed, by throwing overboard all the fish, cargo, luggage of the passengers, &c., which was in the fore part of the vessel, and which raised her bows considerably. This elevation, with the firmness of the bulkhead, contributed much to stop the heavy rush of water. About 150 mattresses, paillasses, and other effects of the crew and passengers were now placed abaft the safety partition, over which were thrown sails, backed by boards and planks, the whole being secured by cables well and firmly wrapped round all. The foremast, which had received some damage, was cut away, and contributed considerably to raise the head still more. This occupied two days. They then ran under small steam for the nearest port (St John's) Upon mustering the hands thirteen were missed. The *Vesta* had on board 147 passengers and a crew of fifty men. The conduct of Capt. Duchesne is much applauded, and the condition of the vessel elicited the admiration of all who visit her. Indeed, nothing but indomitable energy, unwavering perseverance, and most superior seamanship could have succeeded in bringing the vessel into port. These details have been collected from a passenger, at St. John's.

THE FROME ELECTION.—The nomination of candidates for the representation of Frome took place on Saturday. The number of aspirants to the vacant seat—at one time half a dozen—had, as the period of trial approached, dwindled down to two—Viscount Dungarvon and Mr. Nicoll. The result of the poll, which took place on Monday, was the return of Lord Dungarvon by a majority of 52, the numbers being—Dungarvon, 181; Nicoll, 129. There was much rioting during the day, and many windows and some heads were broken; but no one appears to have been seriously hurt.

FOREIGN POSTAGE.—Lord Canning, accompanied by Mr. Wm. Fage, the head of the Foreign and Colonial branch of the Secretary's department and the General Post-Office, left London for Paris on Tuesday week, to enter into negotiations with the French Government on the subject of a new postal treaty.

THE following characteristic announcement has appeared in the *St. Petersburg Journals*:—"The department of the Imperial Posts has the necessary to inform the public that the operations of its offices for foreign posts at Yassy, Bucharest, and Galatz, and also of the sections of Giurgevo, are suspended till further orders."

A CONSTANT communication between Ireland and England and Ireland takes place next week in the interchange between Kingstown and Holyhead. On and after Tuesday next, November 1st, during the winter season, the express steamer will leave Kingstown at 8.30 a.m., Dublin time, instead of 9 a.m., as hitherto, and the train from Holyhead will start at 2.10 p.m., English time, arriving in London at 10.40 p.m.

THE 49th anniversary of the Royal Naval Club of 1765, formed to celebrate the battle of Trafalgar, was held on Saturday at the Thatched House Tavern. Earl Nelson, the grandnephew of Lord Nelson, was present as a guest, and Captain Hood, who served as a young midshipman in the *Achille*, the seventh ship of Collingwood's line, was in the chair.

DESTRUCTIVE FIRE AT MANCHESTER.—At about two o'clock on Wednesday morning the shipping warehouse of Messrs. Thode and Co. in Garden-lane, Lower Ridgefield, Manchester, was discovered to be on fire; and the flames spread with great rapidity to the adjoining carriage manufactory of Mr. W. Carr, five stories high, which was completely gutted in less than three hours. The show rooms of Mr. Carr and a large number of carriages in them, were saved with some slight damage. Mr. W. Carr's loss is estimated at about £12,000, and that of Messrs. Thode and Co. at from £10,000 to £12,000. The insurances of Mr. Carr are £3000 in the Phœnix office; £6000 in the Lancashire, and £3000 in the Royal Exchange. Those of Messrs. Thode and Co. are—£2000 in the London and Liverpool, £2000 in the General, and £2000 in the London offices.

CONSECRATION OF ST. JOHN'S CHURCH, RADIPOLE, WEYMOUTH.

THE necessity of providing extended church accommodation for the inhabitants of Radipole has led to the erection of this beautiful edifice, which was consecrated on Thursday week. The Church, although within the limits of Radipole parish, is built at the entrance to the town of Weymouth, at the junction of the Radipole and Preston roads, and is visible the entire length of the fine Esplanade. The architect of the Church is Mr. Talbot Bury, of London, who has selected the style of the Decorated or Second Pointed period. The material is Ridgeway-hill stone for the walling, and Bath and Caen stone for the windows, dressings, piers, string-courses, parapets &c.

The Church is cruciform in plan, and has at the north-west angle a tower and spire nearly 150 feet in height. The entire edifice is 102 feet in length from east to west, and forty-eight feet in breadth from north to south (exclusive of the transepts), and is calculated to accommodate 800 persons. The interior height of the nave is fifty feet. The east and west windows are beautifully executed, the latter being of noble proportions, and its head filled with elaborate "wheel" tracery. The east window tracery is of graceful and flowing character, somewhat approaching the flamboyant style. There is this rare peculiarity in St. John's Church—that two windows correspond. The roof and seats are of deal, stained and varnished. At the east end are a rich stone reredos and sedilia; and the pulpit is elaborately sculptured in Caen stone.

The Church was consecrated by the Lord Bishop of Salisbury, attended by seven chaplains; the sentence of consecration being read by the venerable Archdeacon Buckle, who officiated as Chancellor. At the conclusion of the service, the Bishop preached an excellent sermon from Job xvi., v. 21, "Oh that one might plead for a man with God, as a man pleadeth for his neighbour." Towards the conclusion of his admirable discourse, the Bishop referred to the debt still due upon the Church, amounting to £300, and exhorted the churchwardens of the place to complete the work they had already acknowledged, by what they had done, to be a good work, calculated for the good of the parish and for the salvation of souls.

The offertory was then read, and a collection made, which resulted, including the amount gathered at the Communion and the afternoon

service, in nearly £90. The musical portion of the service was performed most efficiently by a portion of the choir of Trinity Church, kindly accompanied on the harmonium by Miss Laura Upjohn. A very handsome silver service of Communion-plate has been presented to the Church by J. T. Treshard, Esq., of Greenhill.

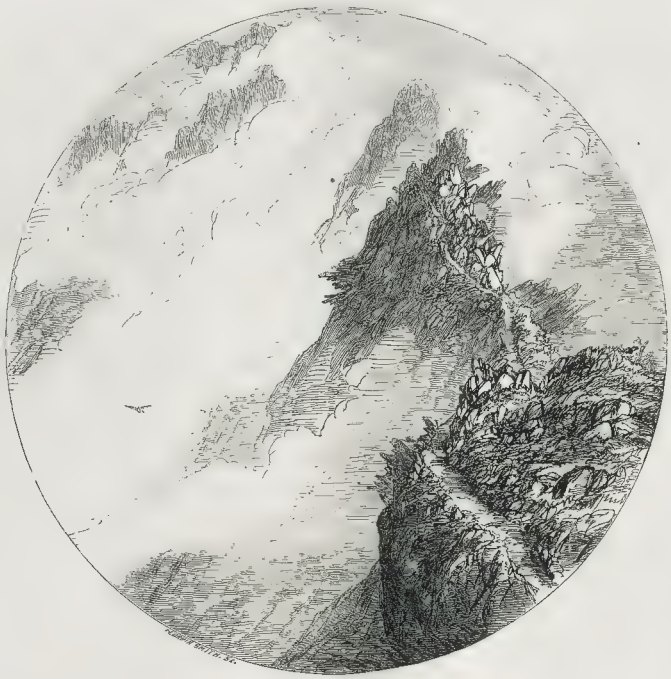
We understand that Weymouth is, in a great measure, indebted for this additional Church (which has cost only £3500) to the Rev. C. Bridges, M.A., Rector of St. Mary's.

SWIRREL EDGE.

Swirrel Edge is one of the two high paths from Patterdale to Helvellyn-top.* The ascent of Helvellyn from Wythburn—the Thirlmere and Grasmere side—is easy enough—long grassy slopes and shoulders up which the most timid father might takes his little family. But, toward Ullswater, Helvellyn presents a fine precipice, with Red Tarn lying below it; and, on either side of Red Tarn, the two great buttresses of Swirrel Edge and Striding Edge; concerning the former of which, and its dangerous character, so many letters have of late appeared in the *Times*. It is perhaps, not very dangerous to any one with good nerves and sure feet; but certainly it is very steep and rugged, and the path narrow—in one part so narrow, that you look down a precipice of some hundreds of feet on each side of you, and could drop a stone down from each hand at once. When the clouds are rolling over the Edge, the place looks sufficiently awful; and the traveller might almost think he had but to climb the sharp edge to some high point, standing up like a needle in the mist. Very little mist will hide the mountain. On the morning we last went along the Edge we saw nothing of Helvellyn till we stood upon it.

Striding Edge is yet narrower than Swirrel Edge, but the path is not so jagged. Let no tourist with any courage miss these Edges; there is nothing finer in the whole mountain district. Even without the "iron railing" which has been recommended—but which certainly would not add to the romantic character of the scenery—there is no danger for any one who will attend to the path; who will take care not to be benighted, through late starting; and who is not liable to turn faint or giddy at looking down a few hundred feet But no one will have any right to claim acquaintance with Helvellyn till he has been up either Swirrel or Striding Edge.

* The summit of Mount Helvellyn is 3055 feet above sea level, and 600 feet above the Red Tarn. The approach to the "Swirrel Edge" is by the mountain Catchedecam.



SWIRREL EDGE, MOUNT HELVELLYN.

DISCOVERY OF THE FOUNDATIONS OF A ROMAN VILLA, AT KESTON, KENT.

Keston is a village, fourteen miles from London, on the road to Westerham, and four miles south from Bromley. It is one of the supposed sites of the Roman station of Noviomagus, which, according to Antoninus and Ptolemy, was the first station from London on the road to Canterbury and the Kentish ports. It was ten miles from London and eighteen from Vagniacæ, which was either Maidstone or Southfleet. Some writers, however, place Noviomagus at Crayford—being about the distance indicated from London, and on the direct line of the Roman road—as the more likely position of Noviomagus.

In the park at Holwood Hill, the seat of the Right Hon. Lord Cranworth, Lord Chancellor, and formerly the residence of the illustrious William Pitt, there still exists a large and strong fortification or camp, supposed to be of Roman construction. This camp stands in an elevated position, commanding an extensive view on every side. It was inclosed with three earthen ramparts of very considerable height, and deep ditches—great part of which defences still remain. Hasted says it is so large as to be nearly two miles in circumference, and that it contains nearly one hundred acres of ground—one side of the innermost vallum being, by measurement, above 700 yards in length from the brow of the hill towards Holwood House.

From this camp are the remains of a plain way down towards the spring-head of the river Ravensbourne, which lies on Keston-common, at a very short distance north-west of the camp, by which the soldiers were no doubt well supplied with water. This spring was, some years before Hasted wrote, formed into a bath; and it is still known as the Roman Bath.

Some foundations of Roman buildings, stone coffins, and other Roman antiquities, which had been discovered at a short distance from the camp, on the south side and across the road to Westerham, were mentioned by the late Mr. A. J. Kempe, F.S.A., in the year 1815, in an Appendix to a "History of Bromley," by the late Mr. A. J. Dunkin, of Dartford. Subsequently, in the year 1828, some excavations were made by the late Mr. Thomas Crofton Croker, F.S.A., and also by Mr. Kempe; the results of which were described by Mr Kempe, in a paper to the Society of Antiquaries, printed in the twenty-second volume of the *Archæologia*.

These remains consist of the foundation of a circular temple, or tomb, thirty feet in diameter, having projecting buttresses at irregular intervals on the outside. The walls are three feet thick, and are composed of flint and Roman bonding tiles. Mr. Kempe cut a section across the interior of this building down to the foundation, but found no pavement nor sepulchral deposit. The work was, however, undoubtedly of Roman construction.

Adjoining to the circular building was a square tomb, which had contained a stone coffin, with a Roman entablature, but no inscription. This coffin had been removed to Wickham court; and two other graves were also found closely adjoining, in one of which another stone coffin was found, at a depth of ten feet, and was left where it was found.

These discoveries were made in a field called the Lower Warbank, being part of Blackness Farm, in the parish of Keston; the property of the Rev. Sir Charles Frances Farnaby, Baronet, of Wickham-court; tenanted by Mr. Abraham Smith, of Keston-court; and the tradition is that, on the Lower Warbank Field and a field adjoining, a large town once stood, which was pillaged and destroyed at some early period of our history: and the numerous remains of Roman tiles and pottery which strew the fields, the coins which have been found,* and the frequent obstructions of the plough by the foundations beneath the surface of the ground, afforded ample indications of the existence of extensive remains of buildings in those two fields.

Permission having been kindly given by Sir Charles Farnaby and Mr. Smith, his tenant, for an investigation of these remains, they have been explored during the last two weeks by some gentlemen belonging to the Noviomagian Society of Antiquaries,† who have discovered and laid open the (almost perfect) foundations of a Roman Villa, in the Lower Warbank Field. These foundations occupy a space of 32 feet by 60 feet. They were found within from one to two feet from the surface of the ground. The principal material is flint (the building material of that part of the country) set in mortar; some of the principal walls being two feet thick, and having a course of Roman bonding tiles through the whole length, with double tiles at the angles, to strengthen the work.

The plan of this building is very similar to one at Stoke, described in the twenty-second volume of the *Archæologia*; it is also very similar in general arrangement to the plan of the villa at Bignor, and to that of the Pompeian house at the Crystal Palace.

There have also been laid open, in the same field, some other Roman foundations of the same character: but, from the greater width and solidity of the walls, supposed to be the remains of some public building. These, with the other foundations dispersed about these fields, will form the subject of future researches.

It is singular that no tesselated pavement, no inscribed stone, nor any sculptured or carved stone, was found. One small brass coin of Valens was all the numismatic result; but vast quantities of tiles of all sorts, for bonding, roofing, flues, and drains, some of them ornamented with various patterns; and numerous fragments of red and black pottery, bones of animals, an iron knife, a flat piece of iron in shape of a crescent or gorget, iron nails, &c., were found. In several places evident marks of combustion were observed: scoriæ of iron and copper, charcoal, and other indications of fire were found.

Although nothing has been turned up to settle the disputed question of the site of Noviomagus, these researches, together with the sepulchral remains previously discovered, have demonstrated the fact, that under the surface of these arable fields are the foundations of a town or place of considerable importance, of the Roman period.

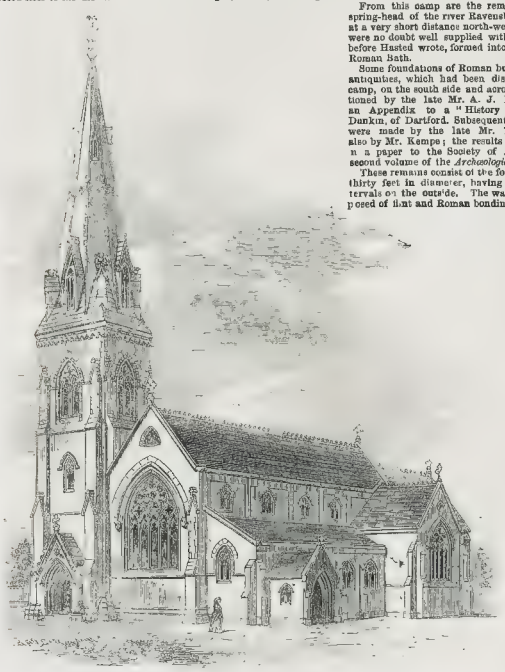
During the excavations the works were visited by the Lord Chancellor and Lady Cranworth, and their friends, the Honourable Charles Bruce, Sir David Dundas, the Rev. Dr. Martin, Rector of Keston, Coles Child, Esq., of the Palace, Bromley, and many other ladies and gentlemen from the neighbourhood, and from London.

Our Artist has given a View of the general appearance of the foundations of the Villa, from the north-west, looking towards Black Ness farmhouse, which lies in the hollow.

Some notices of Keston and its very picturesque and interesting neighbourhood, will be found in "Hone's Table Book."

* Mr. Smith possesses coins of Clodius, Albinus, Claudius Gothicus, Carausius, Allectus, Constantine, &c., which have been found here.

† The Noviomagian Society is an agreeable and friendly club of antiquaries, founded by Mr. Croker, Mr. Kempe, and some other Fellows of the Society of Antiquaries, in the year 1838, in commemoration of their researches at Keston. Mr. Croker continued its President until 1852. (See his Memoir in the *Gentleman's Magazine* for October, 1854.)



NEW CHURCH OF ST. JOHN, RADIPOLE, WEYMOUTH.

ROMAN REMAINS, JUST DISCOVERED, AT KESTON.

THE CHAPEL ROYAL, WINDSOR CASTLE.

SACRAMENTAL PLATE FROM BOMARSUND.

Amidst the ruins at Bomarsund, after the recent bombardment, there was found the Plate represented in the accompanying Illustration. It is of silver, hammered out of the solid metal, of very rude workmanship, and has every appearance of great age. The surface of the Plate, which is gilt, is much defaced by marks which the knife has left, apparently in

SACRAMENTAL PLATE, FROM BOMARSUND.

cutting the Sacramental bread. It is attached to a circular gilt stand, about three inches in height; and formed a portion of a Sacramental service.

THE ROYAL CHAPEL, WINDSOR CASTLE.

The Royal Chapel, in Windsor Castle, has lately been completely altered in its decorations and general character, from its original style, as carried out under the superintendence of Sir Jeffrey Wyatville; and the difference in the principal features, and in all the details, shows, in a remarkable degree, the great advance made in the treatment of Gothic forms in architecture now, as compared with the clumsy, ill-designed attempts at ornamentation which characterised the Gothic of the early part of the present century, down to the period when the New Palace at Westminster first showed that taste and skill in designing had not been quite lost.

The Royal Chapel is placed at the end of St. George's Hall, whence it is divided by a wall, and is also immediately contiguous to the State Dining-room. The apartment was originally destined for a concert-room; it is a six-sided room, with a recess, reaching the whole height, and forming part of the room, serving as the chancel, and in which is the communion-table. As originally planned, two of the walls were nearly blank, having only arch mouldings wrought on them; the ceiling was flat, the angles at the corners being so disposed that the general character of the ceiling was that of an octagon with ribs radiating from a centre, cusped, and having bosses of mean design at the intersections. There was no organ; and the appearance of the whole Chapel was dark and heavy.

The chief improvements lately made are the entire remodeling of the ceiling, and making a lantern in the centre of it; removing one of the side walls so as to admit of an organ; remodeling the arch over the Royal pew; a new altar-screen; and adding a gallery for visitors to the Castle opposite the Royal pew; new reading-desks, &c. Other alterations have also been made—chiefly, however, of detail, but in every case greatly to the enrichment of the Chapel, which now presents an appearance at once regal and appropriate. As will be seen by our View, the ceiling, which is coved all round, and arranged so as to preserve an octagonal form, is of extremely good design; and the octagonal lantern light has, at the corners of its springing, shields crowned, with labels arranged in a very picturesque way about them. The windows of the lantern are filled with stained glass, bearing the crests and monograms of her Majesty and Prince Albert. The chandelier pendent from the centre of the lantern is the original one, after Sir J. Wyatville's design, and is of cast metal. Beneath the beautiful cresting which runs round the walls, close to the coved part of the ceiling, is a frieze, containing, in raised old English characters, part of the "Te Deum." The organ is placed in an arched recess; the organ gallery and the case of the organ are of oak, as indeed are all the wood fittings of the Chapel. In its design the organ-case is very rich and effective; and we should observe that the organ is so built as that another front is shown in the St. George's Hall, in the gallery behind the Royal throne, and is thus of great advantage—the fine full-toned swell of the organ adding considerably to the charm of the concerts which her Majesty gives during the Christmas festivities in St. George's Hall.

The sculptured details over the Royal pew are very beautifully executed, and the pew itself has a groined and vaulted ceiling. At the back of the pew, in the window-like mouldings, the Royal arms of England, Ireland, and Scotland, are painted, with the Cross of St. George, &c. The furniture and appointments of the Royal pew are very rich, and a distinct staircase leads to it.

The seats are arranged part as pews, parallel with the sides; and the rest as open seats, in the body of the chapel; and, from the colour of the oak of the seats, and the dark tint of the carpeting, a good contrast is offered to the light-coloured walls.

The canopies to the pulpit and reading-desk are very nicely designed, and admirably executed; the pulpit itself is but of plain character.

The new altar-screen is of stone, and is exquisitely wrought; it is divided into six compartments, having the Lord's Prayer, Belief, and the Commandments painted in four of them and clusters of lilies, delicately carved, in the remaining two. The arched and pierced canopy over all is of most beautiful execution. The windows to the chancel are filled with stained glass, representing our Saviour and Apostles, symbols of the passions, &c.; diapered-work, Royal arms, &c.; and the ceiling is divided by ribs into compartments, each filled with a boss of delicate workmanship. The chancel-arch is supported by demi-angels.

The alterations to the Royal Chapel have been made, under the directions of her Majesty and Prince Albert, by Mr. John Thomas, of Paddington, and reflect the highest credit on his skill.

ST. MARY'S NEW CHURCH, BRANKSEA ISLAND, DORSET. (SEE NEXT PAGE.)

CONSECRATION OF ST. MARY'S CHURCH, BRANKSEA.

At the entrance of Poole Harbour, on the coast of Dorset, is the small island of Branksea, the population of which has increased, within a few years, from about 12 to 300 inhabitants. The principal edifice is Brankses Castle, the residence of Colonel Waugh, the pre-ent possessor of the island. Upon this sequestered spot, in July, 1853, General Sir Harry Smith had the foundation of a Church of beautiful design, which was consecrated by the Lord Bishop of the diocese on the 18th inst. The island, with its castle, and the Church nestled among the hills and trees, are visible to vessels proceeding up the harbour, and by their picturesque appearance never fail to attract the admiration of the tourist. The island is about seven miles in circumference, is well wooded, and has three fresh-water lakes, the largest being formed by Colonel Waugh, in his intake of reclaimed land from the sea. In Hutchins's "History of Dorset," the island is described from the date of Domesday-book; and here are recorded many visits of Royal and noble personages. The ancient portion of the castle is the central square tower, the walls of which are twelve feet thick. The castle has been entirely remodelled and superbly decorated by Colonel Waugh, and contains a magnificent collection of ancient and modern pictures. The labourers employed by the gallant Colonel reside with their families on the estate, and the pipe-clay pits and kilns afford them abundant employment.

To provide this industrious population, as well as the Preventive Service, and the inmates of the castle, with accommodation for public worship, the Church at Branksea has been erected at the sole expense of Colonel Waugh, who also gave the site and endowment of £18 per annum, to which the Government have added £25 on account of the Coast-guard Station.

The laying the foundation-stone last year was a gala-day for upwards of 1200 persons; but the consecration of the Church, on the 18th inst., was naturally of a more solemn and impressive character. A procession was formed of the numerous school-children of the island, the Coast-guard Service, the visitors, the Bishop of Salisbury and the clergy of the district, Colonel Waugh, his visitors and household—who passed through the Castle-park, attended by banners and music, to the Church. The consecration service was most impressively performed, and was followed by an eloquent sermon preached by the Bishop; after which the burial-ground was duly consecrated. A sumptuous déjeûner was served at the castle to the nobility, clergy, and gentry, on their return from the Church; after which "the Health of her Majesty" was drunk, followed by the "Health of the Bishop of Salisbury," proposed by Col. Waugh; and the Right Rev. Prelate, in his reply, observed with respect to the new Church, that all had been done without stint, with great care, and much taste, by the gallant Colonel and his amiable lady, to prove their devotion and their service to their Heavenly Master. The healths of Sir Harry Smith, and the architect of the church, the Rev. Mr. Lowth, were then toasted, and the party broke up.

The Church is one of the handsomest edifices in the diocese of Sarum. It is built of Purbeck stone, in the Early Decorated style, and has a square embattled tower, with an octagonal turret. The interior is very superb. The nave is fitted entirely with oak; and the roof, and panelling, are finely carved. The tower is appropriated as a seat for the family of Colonel Waugh, and is separated from the nave by a perforated oak-screen. The roof of this tower-pew is from the Council-chamber of Richard III., at Crosby-place. Upon the wall of the pew hangs a fine painting, by Vandyke, of the Crucifixion, above which is a shrine, copied from the tomb of Henry VII., in Westminster Abbey. The pulpit and reading-desk, and altar-fittings, are handsomely carved; the font is of Purbeck marble; and the floor is of this material, and tesselated pavement. The carving has been ably executed by George Gwynne, of Wimborne. The Church will accommodate 250 persons. The several windows are filled with painted glass, tastefully executed by Baillie and Meyer, of Wardour-street. The east window has four scenes from the Life of Christ: the Transfiguration, the Crucifixion, the Descent from the Cross, and the Ascension—all ably grouped, and brilliantly coloured. The south chancel window portrays the four Evangelists, with their devices, in a geometrical pattern of vine-leaves. Over the west window, of three openings, is painted Christ Blessing Little Children: the tracery is filled with the arms of Colonel Waugh. The nave windows have geometrical patterns and emblems. Above the entrance, is a large quatrefoil, of striking brilliancy and richness. To conclude, Colonel and Mrs. Waugh, the founders of the Church, have shown much taste in their great work, and they must feel highly gratified at the universal approbation of the site, the edifice, and the judgment with which the whole undertaking has been carried out.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*; The Rev. E. W. Cottle to Harford, near Ivy bridge, Devon; the Rev. J. W. Kewley to Waterfall, with the Vicarge of Caudon annexed, near Leek, Staffordshire; the Rev. J. W. Irving to Broughton, near Newport Pagnell, Buckinghamshire; the Rev. T. York to Snaresden, Cambridgeshire. *Vicarages*: The Rev. T. H. Britton to Manaccan, near Falmouth; the Rev. I. Nolan to Acton, in the county of Chester; the Rev. R. V. Whitby to Ledbury. *Incumbency*: The Rev. C. Bradley to Margate, Kent. *Incumbency*: The Rev. A. Munro to Woolfardisworthy, Devonshire.

THE Queen has been pleased to appoint John Thomas Abdy, LL.D., Fellow of Trinity Hall, to be Regius Professor of Civil Law in the University of Cambridge.

THREE Scholarships are now vacant at Jesus College—one belonging to the six counties of North Wales, to be supplied out of Beaumaris School, with preference to the kindred of Lewis Owen, Sergeant to the Larder of King Charles I.; another belonging to the seven counties of South Wales, to be supplied by a native of the diocese of St. David's; and the third to be supplied from Cambridge School. The election is fixed for Wednesday, Nov. 15.

OXFORD.—ELECTION OF THE HEBDOMADAL COUNCIL.—The election of the Hebdomadal Council took place on Tuesday, and being the first actual step in the contest for the University Reform Bill, excited considerable interest. The Vice-Chancellor, accompanied by the proctors, and a few heads of houses, took his seat about nine o'clock in the morning, when about twelve Masters of Arts were admitted to their regencies. The Congregation was then opened in the usual form, and the election of six heads of houses to be members of the new Council commenced. The voting papers were delivered personally to the Vice-Chancellor, who was assisted by the proctors and two pro-proctors and registrar. At half-past ten the voting closed, and the numbers were cast up, and about five minutes before the Vice-Chancellor declared the following heads of houses to be elected by the undermentioned number of votes:—The Warden of New College, 136; the Master of Balliol, 108; the Provost of Oriel, 101; the Dean of Christ Church, 93; the Master of Pembroke, 74; the Warden of Wadham, 70. The unsuccessful candidates were the rector of Exeter, who polled 67 votes; the President of St. John's, 56, the Principal of Brasenose, 55. At twelve o'clock Congregation was again opened for the purpose of electing six professors from a portion of the Council. The polling was continued until half-past one, when, after a short delay, the Vice-Chancellor declared that the following gentlemen had been elected by the number stated, viz.:—The Regius Professor of Ecclesiastical History, 146; the Regius Professor of Hebrew, 104; the Professor of Chemistry, botany, and Rural Economy, 106; the Cambden Professor of Ancient History, 89; the Professor of Moral Philosophy, 77; the Savilian Professor of Astronomy, 79. Congregation re-assembled at three o'clock p.m., for the purpose of electing six members of convocation to represent that body in the Council, after a long poll, which continued till half-past four, the Vice-Chancellor declared the choice of the members had fallen on the following gentlemen, viz.:—The Rev. H. L. Mansell, B.D., Fellow of St. John's; the Rev. J. Griffiths, B.D., Fellow of Magdalen, 71; the Rev. Dr. Lightfoot, Rector of Exeter, 64; the Rev. R. Michell, B.D., Public Orator, 63; the Rev. O. Gordon, D.D., student of Christ Church, 60; the Rev. G. Marriot, B.D., late Fellow of Oriel, 56; the Rev. M. Faiteon, B.D., Fellow of Lincoln, 56.

LORD JOHN RUSSELL AT BRISTOL.—The opening the new Bristol Athenæum took place on Wednesday, in the presence of Lord John Russell, the Bishop of Gloucester and Bristol, Sir Robert Peel, Earl Ducie, the Attorney-General, and other public men. At ten o'clock the hour fixed for the *déjeûner*—the Mayor of Bristol, A. G. Osborn, Esq., in robes of office; P. W. S. Miles, Esq., of Kingsweston Park, President of the Institute; the Hon. F. H. Berkeley and W. G. Langton, Esq., members for the city; and the directors and officers of the Athenæum, assembled in the vestibule, where they awaited Lord John's arrival. Upon his reaching the building, the noble Lord was loudly cheered by a vast assemblage which had collected in the street leading to the Athenæum; and, as soon as he had been introduced to the Mayor and President, the acclamations from without were taken up by those within the building. The band of the Royal Artillery was stationed in a gallery of the edifice, and performed various pieces from Verdi, Bellini, and Donizetti. His Lordship having been conducted over the building, the party adjourned to the Lecture-room, where a *déjeûner* was provided. After the cloth had been removed, "The health of the Queen" was drunk. The Mayor then proposed "The health of Lord John Russell." The toast having been drunk amidst long-continued cheering, his Lordship replied at some length. In the course of his speech, he referred to the question of education, and expressed his conviction that the Government will allim ately perform its duty in that respect, by adopting such measures as are required for the thorough education of the people.

The Duke of Hamilton arrived in town from Germany early in the present week, and has since left London for Brodick Castle, Isle of Arran. The Duchess and her Grace's youthful family are still staying with the Grand Duchess Dowager Stephanie.

Lord and Lady Paget have a select party assembled at Broughton Hall. Lady Maleet and Miss Maleet have joined the circle, from the British Legation, at Frankfort.

Two more regiments have arrived from Canada, and will be immediately sent up to the war-steamships of 1200 ran and 800 ns. The transports *William* and *Flora* arrived at Spithead on Monday evening from Quebec, with the 66th Regiment, in charge of Sir William Gordon, Bart., and Lieutenant-Colonel Love. The officers and men are all in robust health, and no accident of any kind has occurred to either during the voyage. They proceeded to Basingstoke in the evening, and started next day for Preston, where they will be joined by the depôt from Liverpool. They left upwards of 150 volunteers behind on their embarkation, they having been transferred to the Canadian Rifles and other regiments in that country.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent).

The dealings in all National Securities, this week, have been devoid of interest. Certainly they have not exceeded the average of several previous weeks; nevertheless, although, in some degree, the same may have a tendency to give way—prices have been fairly supported.

On the whole, the Discount-market has been easy, yet we have no alteration to notice in the rates of discount. Whilst gold continues to leave in large quantities, and the stock in the Bank of England remains at its present amount, it is fall in them to any extent. The imports of the precious metals have amounted to about £240,000 from Australia, £220,000 from New York, and £27,000 from other quarters. Large parcels have been forwarded to the Bank for coinage, owing to the continental demand having fallen off. We have to report a material decline in the value of silver—Mexican dollars having changed hands at 59d. per ounce. This is a reduction since September, of 2d. per ounce, or 3 per cent. Since March last, the prices have fluctuated between 5s. 0¼d. and 4s. 3d. per ounce. The decline in value must be chiefly owing to the disturbed state of China, and the difficulties in effecting an exchange there with a profit.

The Consol-market on Monday was dull. The Three per Cents marked 94⅛ ⅜; the Three per Cents Reduced, 93⅞ ⅜; and the New Three per Cents, 93⅜ ⅝. Bank Stock was done at 212; India Stock, 232. Exchequer-bills, 8s. to 5s.; India Bonds, 1½ prem.; Long Annuit es, 4 1-16-⅛; Exchequer-bonds, 99¾. On Tuesday Bank Stock was 211. The Three per Cents Reduced were 93⅜ ⅞; the Three per Cent Consols, 94⅛; and the New Three per Cents, 93⅜. No change took place in the premiums on India Bonds or Exchequer-bills. There was a dull and heavy market on Wednesday:—Consols were first quoted at 94⅛ ⅜; and left off at 94⅛ ⅜. Bank Stock, 210 to 212; Reduced, 93⅛; Three per Cents (New) 93⅛; Long Annuities, 4⅛; India Bonds, 22s. to 25s.; India Bonds, 6s. to 12s prem.; Exchequer bills, 8s. to 8s. prem.; Exchequer-bonds, 99¾ to par. The fluctuat ons on Thursday were trifling:—Consols were 94⅛ ⅜ for transfer, and 94⅛ ⅜ Reduced. One New (late Three-and-a-Quarters) per Cents were 93⅛ to ⅝ Bank Stock, 211 to 212½.

As regards the Foreign-house, the business done in most securities has been trifling. Holders, however, have not been anxious sellers at recent rates. Austrian Five per Cents have been 86½; Brazilian Five per Cents, 99½; Equador, 2¾; Granada, 16; Ditto, Deferred, 6½; Mexican Three per Cents, 23 ex div.; Ditto, Account, 23½; Peruvian Four-and-a-Half per Cents, 85; Spanish Three per Cents, 37⅜; Ditto, New Deferred, 18⅜; Ditto, Passive, 4⅛; Turkish Scrip, 2¾ prem.; Venezuela Three-and-a-Half per Cents, One per Cent Deferred, 9½; Belgian Four-and-a-Half per Cents, 93; Dutch Two-and-a-Half per Cents, 61⅛; Dutch Four per Cents, 91⅛; Sardinian Five per Cents, 88½.

Although the accounts from the manufacturing districts are rather unfavourable, a good discount business has been done.

Joint-Stock Bank Shares have been tolerably firm as to price, but the business done has been on a limited scale. Conservatives: Australia have marked 79 ex div.; British North American, 63; Commercial of London, 31½; London and Westminster, 40¾; New South Wales, 45; Oriental, 41½; Union of Australia, 69; Union of London, 29¼. Miscellaneous Shares have continued steady:—Australian Agricultural have realised 40¾; Crystal Palace, 3¾; Electric Telegraph, 16; General Screw Steam Shipping Company, 1⅜; London Docks, 34; Peninsular, 1½; Royal Mail, and Oriental Steam, 56½; Scottish Australian Investment, 2. In Canal Shares very few purchases have been made:—Ashton and Oldham have marked 154; Birmingham, 294; Kennet, 20; Leeds and Liverpool, 65; Leicester, 88; Loughborough, 97⅝; Macclesfield, 51½; Neath, 150; Oxford, 110; Severn's, 16½; Rochdale, 63; Stafford and Worcester, 45; Stourbridge, 238; Warwick and Birmingham, 27½; Worcester and Birmingham, 32. Water-works Shares have been:—Berlin, 3½ ex int.; East London, New, 2 prem.; Grand Junction, 77; Kent, 80; Lambeth, 97; Southwark and Vauxhall, 89½; New River, 95; Ditto, New Shares, 102; Ditto, New, 15. Gaslight and Coke Companies' Shares have ruled dull. British Provincial have sold at 21; City of London, 103; Equitable, 5. Great Central Gas Consumers', 87 ex div.; London Electric Supply Corporation, 1½; Ditto, Preference, 25; Phœnix, 27½ ex div.; Ratcliff, 77; Westminster Chartered, 58½; Ditto, New, 48. Insurance Companies' have been tolerably active:—Atlas, at 183; City of London, 24; Guardian, 1½; European, 19⅜; General, 5¾; Globe, 128; Guardian, 55; Imperial Fire, 830; Ditto Life, 18½; Law Life, 58½; Lancashire, 9; London, 39½ ex div.; Phœnix, 183; Provident, 89¾; Royal Exchange, 273; Sun Fire, 202; United Kingdom, 4½; Victoria Life, 9½. Hungerford Bridge Shares have sold at 19; South-wark, 9; Waterloo, 4½; Ditto, Old Annuities of £8, 8⅞; Ditto New, of £7, 28; and Vauxhall, 22.

The Railway Share-market has been dull, and prices have shown a disposition to give way. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 21; Ambergate, Nottingham, and Boston, 45; Caledonian, 88; Great Northern, B Stock, 102¾; Great Western, 70¾; Lancaster and Carlisle, New Stock, 124; Lancashire and Yorkshire, 71; London and Blackwall, 8; London and Brighton, 104½; London and North Western, 100⅜; London and South-Western, 81½; Ditto, New Shares, 81; Manchester, Sheffield, and Lincolnshire, 22½; Midland, 68¾; North British, 33⅝; North-Eastern, Berwick, 76⅜; Ditto, Extension, 14; Ditto, Leeds, 14⅜; Ditto, York, 59⅜; North Staffordshire, 13⅜; Oxford, Worcester, and Wolverhampton, 53.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 138 ex div.; Gloucester and Dean Forest, 26¼; London, Tilbury, and Southend, 19⅜; Manchester, Buxton, and Matlock, 7⅜; Royston, Hitchin, and Shepreth Stock, 138; Wear Valley, 30½.

PREFERENCE SHARES.—Eastern Counties, New 8 per Cent Stock, 15⅜; Great Northern, 4 per Cent, 104; Ditto, New, 3½ per Cent, 94; Ditto, 4 per Cent, 94⅜; Ditto, Birmigham, 72⅜; Ditto, Chester, 8½; London and South-Western Thirds, 73; Manchester, Sheffield, and Lincolnshire, 13½; Midland Consolidated Bristol and Birmingham, 139½; Norfolk, 5 per Cent, 105½; North-Eastern, Berwick, 4 per Cent, 92½; Oxford, Worcester, and Wolverhampton, 112; South Devon, 12½; South-Eastern, 23.

FOREIGN.—Eastern France, 3½; East Indian Extension, 1⅞; Grand Trunk of Canada, 17⅞; Great Central of France, 11½; Great Luxembourg, 3; Great Western of Canada Shares, 18⅜ ex div.; Namur and Liege, 17⅞.

Mining Shares have been dull. Copper Miners of England have realised 58; Agua Fria, 1½; Linares, 8⅞; Mexican and South American, 7.

Friday Evening.

As some of the foreign exchanges have come better, Consols have somewhat recovered to-day. After being done at 94⅛ they advanced to 94⅛ ⅜ for Transfer and time. The Three per Cents Reduced have left off, and the New Three per Cents, 93⅜ ⅞ ⅝. India Bonds, 11s. to 12s. Exchequer-bills, 6s. to 9s. pm. Foreign Bonds and Railway Shares about stationary.

THE MARKETS.

CORN EXCHANGE, (Friday.)—Very moderate supplies of English wheat have been received up to our market this week, coastwise and by land carriage. The show of samples here to-day was small, and a good clearance was effected, at prices rather higher than those current on Monday. The amount of business doing in foreign wheat was comparatively small, but we had very few offers of any kind, and a further improvement in value of from 1s. to 2s. per quarter. The barley trade was firm and fine parcels were 1s. per quarter dearer. There was a good sale for oats, Cornish sorts of which had an upward tendency. Oats were readily at from 6d. to 1s. per quarter more money. Beans, peas, and flour changed hands at fully the late advance.

ARRIVALS.—English: wheat, 1720; barley, 3180; malt, 860; oats, 430; flour, 670 Irish: oats, 1600. Foreign: wheat, 6000; oats, 1000; flour, 1000.

AVERAGES.—Wheat, 38s. 8d.; barley, 30s. 4d.; oats, 23s. 10d.; rye, 31s. 7d.; beans, 34s. 10d.; peas, 35s. 2d.

Mark-lane, Monday, Oct. 23.—The supply of English wheat to this day's market was moderate, and the trade was firm at the rates of last week. Foreign wheat was in good request, and 1s. per quarter dearer. Barley was 1s. per quarter cheaper. Malt was in limited demand, at 1s. per quarter lower. Oats were 1s. per quarter dearer. Beans and peas were quite as dear as last week. Flour was 1s. per barrel cheaper.

Aylesbury, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 34s.; oats, 22s. to 24s.; rye, 32s. to 34s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Newcastle, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Wakefield, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Chelmsford, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Bristol, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Liverpool, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Gloucester, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Norwich, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Exeter, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Gainsborough, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Hull, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Lincoln, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Boston, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Spalding, Saturday.—Wheat, 38s. to 40s.; barley, 30s. to 32s.; oats, 22s. to 24s.; beans, 34s. to 36s.; peas, 34s. to 36s.

Average Prices of Wheat, Barley, and Oats, for the Week ending Oct. 21.

	Wheat.	Barley.	Oats.
	s. d.	s. d.	s. d.
England and Wales	38 8	30 4	23 10
Scotland	38 8	30 4	23 10
Ireland	38 8	30 4	23 10

Quantities of English Grain sold last week.—Wheat, 140,377; barley, 67,811; oats, 15,468; rye, 166; beans, 6974; peas, 1726 quarters.

Tea.—We have on last report, the demand for all kinds of teas has ruled very inactive, yet we have no change to notice in prices. Up to Saturday last, duty was paid on 36,195,790 lbs., against 36,626,961 lb. in 1853.

Sugar.—The amount of business doing in our market, this week, has been very moderate, and prices scarcely supported. Fine white Havannah has sold at 37s. to 38s.; middling to good, 32s. 6d. to 36s. 6d.; low, 30s. 6d. to 32s.; brown Jamaica, 29s. to 31s.; fine yellow Manilla, 34s. to 35s. per cwt. In refined goods very little is doing, at from 42s. 6d. to 43s. per cwt. The total clearances to the 21st were 5,744,296 cwts., against 3,363,835 cwts. in 1853.

Coffee.—All kinds have ruled rather active, and prices have had an upward tendency. Good ordinary native has changed hands at 46s. to 48s. 6d. per cwt.

Rice.—We have a good demand for most descriptions, and the quotations have further improved 2s. 6d. per cwt.

Provisions.—Irish butter is selling freely, at an advance of from 1s. to 2s. per cwt. Foreign qualities are in good demand, and 1s. dearer. Bacon has further improved 2s. per cwt. The bacon market has become active, at 1s. to 2s. per cwt. more money. Lard and most other kinds of provisions are quite as dear as last week.

Tallow.—The demand is steady, and P. Y. C., on the spot, is selling at 67s. to 67s. 6d. per cwt. Town tallow 66s. net cash. Rough fat, 3s. 8d. per 8 lbs.

Oils.—Linseed oil is selling at 37s. 6d. to 37s 6d. per cwt. Cocoa-nut moves off freely, at 40s to 50s. Palm oils are firm. A good business is doing in turpentine, at 44s. 6d. for British, and 43s for American.

Spirits.—The sale has been very brisk, at 2s to 2s. 1d for proof Leewards, and 2s. 10d. to 2s. 11d. for East India. Brandy is dull, and Hollands is doing, at extreme rates. Geneva and corn-spirits are firm.

Hops, and Malt.—Mowdew hay, £4 10s. to £4 12s., clover ditto, £3 0s. to £6 0s., and straw, £1 to £1 10s. per load.

Coals.—Hetton, 20s. 6d.; Lambton, 20s. 6d.; Lambton's Harlaw, 20s. 6d.; Belmont, 20s. 3d.; Haswell, 20s.; Hetton, 20s.; Lambton's Wear, 20s.; Russell, 20s.; Stewart, 20s.; Wylam, 20s.; Wynyard, 21s. per ton.

Hops (Friday).—The old duty has been declared at £17,389 to the 10th inst. There is rather more doing in new hops, as follows:—Mid and East Kent pockets, £12 10s. to £17; Weald of Kent, £10 10s. to £14 10s.; Sussex, £10 to £13 10s. The demand for foreign is steady and the sales are at last week. The imports are large, viz.:—775 bales from Ostend 194 from Rotterdam, 16 from Antwerp, 455 from Hamburgh, 425 from Bremen, 1 cask from Havre, and 60 from New York.

Smithfield (Friday).—To-day's market was but moderately supplied with beasts, in very middling condition. Prices barely moved off steadily, at full prices; otherwise the beef trade was heavy, and the quotations had a downward tendency. Although the supply of sheep was tolerably full, the primest Downs were in request. The trade in a sluggish state, as barely Monday's currency. The inquiry for calves was rather inactive on former terms. The pork trade was extremely firm. In the general trade, which moved off heavily, prices were 2d. lower than last week.

Per 8 lbs. by the carcase:—Inferior beef, 3s. 0d. to 3s. 2d.; middling ditto, 3s. 4d. to 3s. 6d.; prime large ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 4d. to 4s. 4d.; inferior mutton, 3s. 2d. to 3s. 4d.; middling ditto 3s. 6d. to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 6d.; prime large ditto, 4s. 8d. to 5s. 0d.; small pork, 4s. 4d. to 5s. 2d.

Best, and Distin's Floyal Horn Union Bands every evening Hours of Exhibition Morning, Twelve to Five, every evening Hours of Exhibition Morning, Twelve to Five, every evening Hours of Exhibition Morning, Twelve to Five,

KENSINGTON GARDENS.—THE COALBROOKDALE GATES, ROTTEN-ROW.

KENSINGTON GARDENS.

THE improvements of these celebrated metropolitan Gardens, which the poet Crabbe describes as in effect not exhilarating, yet alive and pleasant, have been the work of several years. Well do we remember the guardian spirit in which the late Mr. Loudon gave the benefit of his experience in suggesting these improvements to the authorities; and it would have gladdened his generous heart to have witnessed the erection of the handsome gates within a short distance from his own residence at Bayswater. These, however, are but a portion of one of the most striking alterations—namely, the formation of a grand walk across the Gardens. At the entrance from the King's-road—or Rotten-row, as it is now commonly called—has been placed the Colebrookdale Gates, which decorated the southern transept of the Crystal Palace, in Hyde-park. Thus, they are an interesting memorial of the first Exhibition, within a short distance of its very site. The Gates have, however, been altered to suit the position they now occupy. The wings which, as they stood in the Palace, curved forward and downwards from the centre gates, are now made quite straight, and on the same level, terminated by stone piers, upon which stand the original dwarf piers, with their elaborate vases, of a sporting character, being ornamented with stags' heads, admirably executed. These Gates are, at present, unused; whilst those represented in our second Illustration, give access to the pedestrian from the Bayswater-road, almost opposite the new portion called the Craven-hill-estate. These gates are quite plain—the piers are of white brick, with stone cornices, and the railing of the ordinary kind. The Gates are, however, a great addition to the appearance as well as usefulness to the road, affording facility of egress to the Gardens, long wanted about that portion of Bayswater and the surrounding neighbourhood.

Half a century since part of the Gardens was wilderness and swampy waste, of which we find a singular record in the minutes of the Board of Green Cloth, in the year 1798, granting a pension of £18 per annum to Sarah Gray, widow, in consideration of the loss of her husband, who was accidentally shot, while the keepers were *hunting foxes in Kensington Gardens*.

KENSINGTON GARDENS.—NEW GATES, BAYSWATER-ROAD.

THE FATE OF SIR JOHN FRANKLIN.

THE veil that obscured the fate of Sir John Franklin has been unexpectedly lifted. Dr. Rae, of the Hudson's Bay Company, has reached England, bringing with him from the Arctic Seas a number of articles that belonged to Sir John Franklin and his companions. The story of the recovery of these memorials is most painfully interesting. Dr. Rae's account—which may, of course, be implicitly relied upon—is this:—In the spring he fell in with a party of Esquimaux, who were in possession of a number of articles known to belong to Sir John Franklin himself, and other things, the property of members of his party. These articles included, amongst the rest, some silver plate bearing the arms of the owners. When the Esquimaux were questioned as to the way in which they had become possessed of such valuables belonging to officers of the Royal Navy of England, they said that the vessels of Franklin had been crushed in the icebergs, and their crews forced to set out over the snow on their way towards the territories of the Hudson's Bay Company—that in 1850 the Esquimaux had met forty Englishmen belonging to Sir John Franklin's ships travelling on foot, and dragging a boat over the ice, near King William's Land; that the officer in command of these unfortunates had bought from the Esquimaux for his followers a small seal, being greatly in want of provisions; that at a later period the Esquimaux found the dead bodies of all this party on the ice near Back River; and that the Esquimaux helped themselves to the stores of the dead—taking gunpowder, silver, plate, and whatever else they thought fit to appropriate.

Dr. Rae, whose previous exploits as an Arctic traveller, have already so highly distinguished him, landed at Deal on Sunday, and immediately proceeded to the Admiralty, and laid before Sir James Graham the melancholy evidence on which his report is founded. Dr. Rae was not employed in searching for Sir John Franklin, but in completing his survey of the coast of Boothia. He justly thought, however, that the information he had obtained greatly outweighed the importance of his survey, and he has hurried home to satisfy the public anxiety as to the fate of the long-lost expedition, and to prevent the risk of any more lives in a fruitless search. It would seem, from his description of the place in which the bodies were found, that both Sir James Ross and Lieutenant Bellot must have been within a few miles of the spot to which our unfortunate countrymen had struggled on their desperate march. A few of the unfortunate men must, he thinks, have survived until the arrival of the wild fowl, about the end of May, 1850, as shots were heard, and fresh bones and feathers of geese were noticed, about the scene of the sad event.

The following is Dr. Rae's Report to the Secretary of the Admiralty:—

Repulse Bay, July 29.

SIR,—I have the honour to mention, for the information of my Lord's Commissioners of the Admiralty, that during my journey over the ice and snow this spring, with the view of completing the survey of the west shore of Boothia, I met with Esquimaux in Pelly Bay, from one of whom I learned that a party of "white men" (Kabloonans) had perished from want of food some distance to the westward, and not far beyond a large river, containing many falls and rapids. Subsequently, further particulars were received, and a number of articles purchased, which place the fate of a portion, if not of all, of the then survivors of Sir John Franklin's long-lost party beyond a doubt—a fate terrible as the imagination can conceive.

The substance of the information obtained at various times and from various sources was as follows:—

In the spring, four winters past (spring, 1850), a party of "white men," amounting to about forty, were seen travelling southward over the ice and dragging a boat with them, by some Esquimaux, who were killing seals near the north shore of King William's Land, which is a large island. None of the party could speak the Esquimaux language intelligibly, but by signs the natives were made to understand that their ship, or ships, had been crushed by ice, and that they were now going to where they expected to find deer to shoot. From the appearance of the men, all of whom, except one officer, looked thin, they were then supposed to be getting short of provisions, and purchased a small seal from the natives. At a later date the same season, but previous to the breaking up of the ice, the bodies of some thirty persons were discovered on the continent, and five on an island near it, about a long day's journey to the N.W. of a large stream, which can be no other than Back's Great Fish River (named by the Esquimaux Doot-ko-hi-calk) as its description, and that of the low shore in the neighbourhood of Point Ogle and Montreal Island agree exactly with that of Sir George Back. Some of the bodies had been buried (probably those of the first victims of famine), some were in a tent or tents, others under the boat which had been turned over to form a shelter, and several lay scattered about in different directions. Of those found on the island one was supposed to have been an officer, as he had a telescope strapped over his shoulders, and his double-barrelled gun lay underneath him.

RELICS OF THE FRANKLIN EXPEDITION.—CHESTS OR ARTICLES OF PLATE BROUGHT BY DR. RAE.

From the mutilated state of many of the corpses and the contents of the kettles, it is evident that our wretched countrymen had been driven to the last resource—cannibalism—as a means of prolonging existence.

There appeared to have been an abundant stock of ammunition, as the powder was emptied in a heap on the ground by the natives out of the kegs or cases containing it; and a quantity of ball and shot was found below high-water mark, having probably been left on the ice close to the beach. There must have been a number of watches, compasses, telescopes, guns (several double-barrelled), &c., all of which appear to have been broken up, as I saw pieces of those different articles with the Esquimaux, together with some silver spoons and forks. I purchased as many as I could get. A list of the most important of these I enclose, with a rough sketch of the crests and initials on the forks and spoons. The articles themselves shall be handed over to the Secretary of the Hudson's Bay Company on my arrival in London.

None of the Esquimaux with whom I conversed had seen the "whites," nor had they ever been at the place where the bodies were found, but had their information from those who had been there, and who had seen the party when travelling.

I offer no apology for taking the liberty of addressing you, as I do so from a belief that their Lordships would be desirous of being put in possession at as early a date as possible of any tidings, however meagre and unexpectedly obtained, regarding this painfully interesting subject.

DR. RAE. (FROM A DAGUERRÉOTYPE BY BEARD.)

I may add, that, by means of our guns and nets, we obtained an ample supply of provisions last autumn, and my small party passed the winter in snow houses in comparative comfort, the skins of the deer shot affording abundant warm clothing and bedding. My spring journey was a failure, in consequence of an accumulation of obstacles, several of which my former experience in Arctic travelling had not taught me to expect.—I have, &c.,

JOHN RAE, C.F.,

Commanding Hudson's Bay Company's Arctic Expedition.

List of articles purchased from the Esquimaux, said to have been obtained at the place where the bodies of the persons report.ed to have died of famine were found (*See the Illustration*), viz.:—

1	silver table fork	..	Crest No 1	1	silver table fork, initials H. D. S. G.
2	"	"	do. .. " "	2	" " do. " A. McD.
1	"	"	spoon .. " "	3	1 " " do. " G. A. M.
1	"	"	do. .. " "	4	1 " " do. " I. T.
	Motto: "Spero meliora."				1 " dessert spoon " J. S. P.
1	"	"	fork .. " "	4	1 round silver plate, engraved, "Sir John Franklin, K.C.B."
	Motto: "Spero meliora."				
1	"	dessert fork	.. " "	6	1 star or order, with motto, "Nec aspera terrent," on one side; and on the reverse, "G. R. MDCCCXV."
1	"	table spoon	.. " "	5	
1	"	tea	do. .. " "	6	

Also a number of other articles with no marks by which they could be recognised; but which will be handed over with those abovenamed to the Secretary of the Hon. Hudson's Bay Company.

Repulse Bay, July, 1854.

JOHN RAE, C.F.

We are enabled to add that Dr. Rae's party traced the west coast of Boothia, from the Castor and Pollux river, as to Cape Porter of Sir James C Ross, by which it was proved that King William's Land is a large island. Dr. Rae's extreme north point near Cape Porter was 69 deg. 5 min. N. The width of land from Pelly Bay on the east, and the Castor and Pollux river on the west of Boothia, is 50 statute miles. The "Committee Islands" of Dean and Simpson are small rocky elevations on a low flat part of the continent. Dr. Rae could have easily accomplished a portion of the survey between the Magnetic Pole and Bellot Strait, but the leaving a part undone was nearly as bad as doing none of it; accordingly, he did not make the attempt. The unexpected and unusual obstacles of foggy weather and deep soft snow were among the causes of failure, and the news heard of Franklin's fate put a stop to a half-formed intention of passing another winter at Repulse Bay.

It is now more than nine years since Sir John Franklin left this country on his ill-fated voyage of discovery. The North-West Expedition, which sailed in the summer of 1845, consisted of the ships *Erebus* and *Terror*, under the command of Sir John Franklin and Captain Crozier. Their instructions were to pass through Baffin's Bay to Barrow's Strait, and then endeavour to find an outlet towards the west. Strange to say, although between nine and ten years have elapsed since the sailing of the *Erebus* and *Terror* from Sheerness, that the whole which we know of their adventures, their discoveries, and their misfortunes, may be stated in a few lines. The last communication received through any channel from any member of the expedition was contained in letters written by Sir John Franklin himself, only two months after his departure, and dated from an island in Baffin's Bay. The next point at which we have any trace of the adventurers is a small inlet in the vicinity of Cape Riley, at which point it is proved that they were quartered during the first winter of their absence, and where an inscription on the graves of three seamen shows that none at least of the party must have remained until April, 1846. They had then been more than twelve months from home; and from that time down to the disastrous period indicated by the Esquimaux narrative now brought to light, we have nothing but speculation to guide us as to the course which they took.

ILLUSTRATIONS OF THE FRANKLIN EXPEDITION.

IN several Numbers of the ILLUSTRATED LONDON NEWS we have illustrated this ill-fated Expedition, and the several searches made for the missing explorers. It may be useful and interesting to recapitulate the Numbers wherein the principal of these Engravings have appeared, with a view to aid such readers as are anxious to trace the connected narrative of this most melancholy chapter in the History of Discovery.

No. 180 contains a Portrait of Sir John Franklin; the two ships, *Erebus* and *Terror*; the Cabins of Franklin and Fitzjames; with the account of the sailing of the Expedition, May 19th, 1845.

No. 216 contains a series of Illustrations of the fittings of the Expedition (the *Enterprise* and *Investigator*) under Sir James Ross, in search of Franklin, May, 1848.

No. 373 contains the *North Star* (Captain Sanders) Searching Expedition, with its peculiar fittings and appointments, which left in May, 1849.

No. 393 contains the Esquimaux Sketch of the four Ships in Prince Regent's Inlet, received by the Admiralty, Oct. 5, 1849.

No. 399 contains the *Enterprise* and *Investigator*, on their return, November, 1849; a Chart of the Route of the Expedition; and three scenes of its perils.

No. 401 contains "A Travelling Party in Prince Regent's Inlet."

No. 426 contains Capt. Austin's Expedit on (the *Resolute*, *Pioneer*, *Assistance*, and *Intrepid*), which left in May, 1850.

No. 440 contains a View of the First Iceberg seen by Captain Austin's Expedition, June 3, 1850.

No. 516 contains FOURTEEN PORTRAITS OF SIR JOHN FRANKLIN AND HIS CREW, from Photographs taken by MR. BEARD immediately before the departure of the Expedition.

No. 517 contains an Outline of the Discoveries made by the respective Searching Parties from Captain Penny's Expedit on.

No. 531 contains Twelve Characteristic Sketches from Captain Austin's Expedition.

No. 554 contains the *Isabel* (Capt. Beatson) fitted out for the search at the expense of Lady Franklin and Capt. Beatson. This Number likewise contains the several vessels of Sir Edward Belcher's Expedition:—*Assistance*, *Resolute*, *North Star*, *Pioneer*, and *Intrepid*; and a copy of the Sketch (two vessels), received from Mr. Simpson.

No. 555 contains Portraits of Sir Edward Belcher, Captain Kellett, and Captain Pullen.

No. 556 contains Portraits of Commander M'Clintock, Commander Richards, Lieutenant Osborn, Mr. Allard, and Mr. Pullen.

No. 596 contains five characteristic Scenes and Portraits from the Search of the *Isabel*.

No. 633 contains a Chart of the Arctic Regions, showing the North-West Passage connecting the Atlantic and Pacific Oceans.

No. 640 contains Portraits of Capt. Inglefield and the late Lieut. Bellot.

No. 650 contains Four Views taken during Capt. Inglefield's Expedition (*Phœnix* and *Breadalbane*), including the Loss of the *Breadalbane*.

No. 651 contains three Views from the sketch-book of Lieut. Creswell, illustrating events in the search of the *Investigator*, and described in Captain M'Clure's despatches.

No. 652 contains Portraits of Captain M'Clure and Lieut. Creswell.

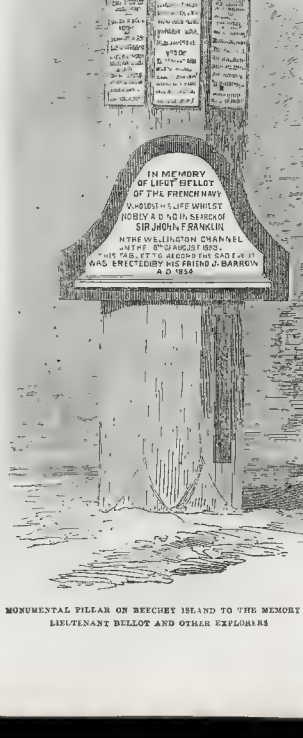
Next week we hope to engrave the several other memorials of Franklin, and his companions.

MEMORIAL PILLAR ON BEECHEY ISLAND.

IN the ILLUSTRATED LONDON NEWS for July 29 we engraved the Tablet taken out by Captain Inglefield, in the *Phœnix*, to be erected upon Beechey Island, in memory of Lieut. Bellot. This Tablet has been placed upon a pillar, nine feet high, in the base of which is a letter-box for the receipt of communications from such voyagers as may touch at the island. Above the Bellot Memorial are other inscriptions upon the several faces of the pillar; and we are certain that each of these records of enterprise and peril will be read with the deepest sympathy.

Sacred to the memory of MESS. BELLOT, Lieutenant in the French Navy, and Chevalier of the Legion of Honour, who accompanied Mr Kennedy and Captain Inglefield, on their respective visits to the Arctic Regions. While attached to H.M.S.V. *Phœnix*, under Captain Inglefield, he gallantly volunteered to convey despatches to Captain Sir E. Belcher, with a sledge crew from H.M.S. *North Star* in a heavy gale of wind on the 15th August, 1853, he was drowned by the disruption of the ice, near Cape Grinnell, much lamented by the Arctic squadron and by all who had the pleasure of knowing his value and noble spirit.

Sacred to the memory of WILLIAM CRIBUCH, Private Royal Marine, H.M.S. *Assistance*, a native of Northam, Sussex, who died on board H.M.S. *Assistance* 14th, after a protracted illness from disease of the lungs, aged 24 years. He served with credit in his station for upwards of 5 years and 4 months, during which period his good conduct procured him the Silver Medal. During the whole of the above period he served in H.M.S. *Assistance*, gaining the respect of Captain and officers, and beloved by all who knew him, and died



IN MEMORY
OF LIEUT BELLOT
OF THE FRENCH NAVY
WHO DIED HIS LIFE WHILST
NOBLY AND NOBLY SEARCHING
FOR SIR JHON FRANKLIN
IN THE WELLINGTON CHANNEL
ON THE 18TH AUGUST 1853
THIS TABLET TO RECORD THE SAD FACT
WAS ERECTED BY HIS FRIND J. BARROW
A.D. 1854

MONUMENTAL PILLAR ON BEECHEY ISLAND TO THE MEMORY OF LIEUTENANT BELLOT AND OTHER EXPLORERS

deeply lamented by his shipmates. "Happy are they who die in the Lord." He was interred in Scotchmoor land Sound

Sacred to the memory of ISAAC BARNETT, Captain of the Maintop, and GEORGE HARRIS, A B Seamen of H M S Investigator, the latter transferred to H M S Tender Pioneer. Isaac Barnett departed this life on 26th January, 1854, aged 36 years. George Harris, departed this life on 8th January, 1854, aged 34 years. Both fell victims to scurvy although the former laboured gallantly under the affliction of the ankle. The remains of the former were at Dundas Bay, where H M S Assistance and Tender wintered '53, '54.

"Blessed are they that die in the Lord."

Sacred to the memory of JOHN AMES, A.B., who died on board H.M.S. *Investigator*, at Harrig Island, August 11th, 1853, aged 28 years

Sacred to the memory of JOHN MORGAN A B., of H M S. *Investigator*, who died on board H M ship *North Star*, at Beechey Is and May 22, 1854 aged 24 years.

Sacred to the memory of Mr. H H SAINTSBURY, Master's Mate, late of H.M. ship *Investigator*, who died on board H M ship *Resolute*, off Cape Cockburn, November 14, 1853, aged 26 years.

Relieved from earthly sorrows, which on my heart hath prest'd,
I thank the gentle hand Divine which lays this breast to rest

Sacred to the memory of THOMAS MORLEY, Private Royal Marine, who died suddenly on board H M S. *Resolute*, at Dealy Island, October 31, 1853 aged 42 years. Also to the memory of GEORGE DENYER, Captain of the Foretop, who died on board H.M.S. tender *Intrepid*, at Dealy Island December 12 1852, aged 38 years

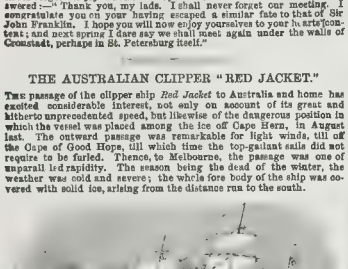
Sacred to the memory of JAMES CHURCH, Stoker, H.M.S. tender *Intrepid*, who died suddenly while travelling near Point Nias, Melville Island, May 12, 1853, aged 34 years. Also to the memory of THOMAS HOOD, Private Royal Marine, who died on board H.M.S. tender *Intrepid*, off Cape Cockburn January 2 1854, aged 26 years

Sacred to the memory of CHARLES BAYLY, Captain's Clerk, who died on board H M ship *Investigator*, at Harrig Island April 13, 1853 aged 21 years. Also to the memory of JAMES WILKIE, Ice Quarter Master, who died on board H M S tender *Intrepid*, off Cape Cockburn, February 2 1854, aged 38 years.

TESTIMONIAL TO DR. ARMSTRONG.—While the *Investigator* was in the Arctic Sea, the surgeon of the ship was Dr. Armstrong. Through his zeal and assiduity the men were kept in general good health. On Tuesday the crew was paid off. In order to mark their sense of his exertions in their behalf, they subscribed the handsome sum of seventy guineas, and immediately on being paid off a deputation of ten of their number proceeded to the Ship Hotel, and presented to Dr. Armstrong, in the presence of a number of his brother officers, a gold chronometer and gold chain, valued at seventy guineas, as a testimony of their sincere respect and affection during their five years' arduous service while discovering the North-West passage. The gift was handed to Dr. Armstrong with an appropriate address, signed by each individual, which was answered by Dr. Armstrong in a neat speech. The men then turned round to Lieutenant Bedford Pim, and said, "If it had not been for you, sir, many of us now present would never have seen Old England again. All of us look upon you as a deliverer, and we shall never forget the joy we felt when you reached us." Lieutenant Pim answered:—"Thank you, my lads. I shall never forget our meeting. I congratulate you on your having escaped a similar fate to that of Sir John Franklin. I hope you will now enjoy yourselves to your hearts' content; and next spring I dare say we shall meet again under the walls of Cronstadt, perhaps in St. Petersburg itself."

THE AUSTRALIAN CLIPPER "RED JACKET."

THE passage of the clipper ship *Red Jacket* to Australia and home has excited considerable interest, not only on account of its great and hitherto unprecedented speed, but likewise of the dangerous position in which the vessel was placed among the ice off Cape Horn, in August last. The outward passage was remarkable for light winds, till off the Cape of Good Hope, till which time the top-gallant sails did not require to be furled. Thence, to Melbourne, the passage was one of unparall leled rapidity. The season being the dead of the winter, the weather was cold and severe; the whole fore body of the ship was covered with solid ice, arising from the distance run to the south.



THE "RED JACKET."

"The homeward passage" (writes a Correspondent, who was a passenger) "promised well, until we had crossed the equator eight or nine degrees—the time occupied in making 9.52 north being only forty-two days. We confidently anticipated a passage of sixty days; but it was frustrated by head-wind and calms. The *Red Jacket* was not in such good trim for sailing on the homeward as on the outward passage, being too light and much deeper aft than forward; she, however, often logged seventeen or eighteen knots in a stiff breeze, and fourteen and fifteen close hauled. No extraordinarily rough weather was experienced in either passage. We had a number of severe gales. On the 18th of August we were running under close-reefed main and foretop-sails, and fore-topmast-staysail being the least canvas under which she was ever placed. A high sea on. She never shipped any water worth speaking of, except on the 31st of the same month, while running before another heavy squall or gale, when she took water in, in one sea, at three places. She was carrying a good deal of canvas, having fore-sail and fore and main topgallants set—no sail on the mizen mast. The log shows the extraordinary amount of calms we had north of the line—a whole week at one stretch; and even after, we had only a few days with anything like a breeze; the wind being adverse, after the first week of calms, until the 7th October, driving us away to the westward as far as 43 deg. 3m. west.

"Regarding the ice in which she was bound, I send you a few particulars. On the morning of the 24th August, I was roused out of sleep by the noise of shorting sail, and the look-out singing out "Land!" The ice had been seen some time before, but the solid masses were supposed, in the dark, to be land. On getting out, I found we were in smooth water, and large masses of ice floating about us. As the day broke, we found ourselves sailing in a lake of water, not unlike a canal.

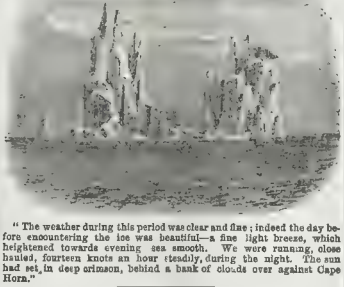
"The ice seemed to extend on every side, in solid fields, as far as the eye could reach, without any prospect of getting out, so that we had to follow this channel. All sail was clewed up, except the topsails; and, as there was a good breeze, we proceeded along at about four or five knots. Our situation at this time seemed most appalling, as we appeared to be getting further into the ice, so that by ten or eleven o'clock, we were almost making up our minds to remain for weeks in this fearful situation.

"About noon the Captain and second mate, who had been on the fore-topsail-yard all morning, discovered clear sea again; to gain which we had to force a passage through dense masses of ice (the Sketch shows this scene. It was here she sustained the principal damage to her stem and copper.

"We soon got clear, and the rest of the day we saw no traces of ice, and were very thankful we had got off it so easy. But, to our dismay, at eight p.m. we again fell in with it. The ship was put about, and sail shortened for the night, and we ran back to the clear water in which we had been sailing. At day break sail was made; and at seven a.m. we came up to the ice. At first, it was only large pans, much melted; the water having all the appearance of brine, and quite thick round them. Afterwards, large masses of broken icebergs presented themselves. In guiding the ship through these, great difficulty was experienced. When it is considered that these solid masses have three times as much of their body under water as above, the danger can easily be imagined, it being almost as bad as sailing among rocks. Very large icebergs were also interspersed here, and visible all round. This day we cleared it again about noon. Icebergs were still, however, seen, both near and in the distance. Their appearance is most grand. The Sketch shows one

of the largest of these bergs, which was thought to be about two miles in circumference and one hundred feet high. It was passed about four or five miles distant, on our starboard and lee side. We have too again at night. Next day, Saturday, was, for the most part, a dead calm, and we were carried back with the current; not a breath of wind; the day most beautiful; clear sky and pleasant, only the air sharp. Icebergs were, however, still seen.

"Next day, Sunday, we passed a number more, which was the last ice seen. One of these was most grand, which we cleared on our port and windward side about one mile, or less, distant. The Sketch shows this berg, about 200 feet high.



"The weather during this period was clear and fine; indeed the day before encountering the ice was beautiful—a fine light breeze, which heightened towards evening sea smooth. We were running, close hauled, fourteen knots an hour steadily, during the night. The sun had set, in deep crimson, behind a bank of clouds over against Cape Horn."

MONTE ROSA.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—Seeing my name mentioned in your last Number, as having been the first traveller, since the ascent of M. Studeo, to explore the northern side of Monte Rosa, permit me to add a few observations to the interesting narrative of Mr. Kennedy. The name of the guide who first attained the summit of the Höchste Spitze is neither Tungwald nor Durchwald, but Tauchwald. He is the best guide I have ever known in the Alps; having a strength and endurance truly marvellous. He carried, without apparent effort, the whole provisions of my expedition—the two other guides being quite exhausted by the rarity of the air, and the fatigue of walking through snow up to the hips on a very steep incline. He also enjoys the reputation of being the best cobbler in the valley.

I may mention, for the advantage of future ascenders, the reasons that prevented my attaining the highest point. Contrary to my suggestions, the guides all asserted that two o'clock would be soon enough to leave the Ryffelberg, though the fall usually rose two hours earlier. The consequence was that, when we arrived at the steepest part of the ascent, the sun had surmounted the crest of the mountain, and soon rendered the snow so soft that we sunk up to the knees, or even hips, at every step, which made our progress excessively laborious. Mr. Kennedy, being a month later than myself, avoided this inconvenience. We were also delayed for an hour or more in attempting a short cut up a slope of ice, where every step had to be made with the hatchet, and which proved so steep that further progress was out of the question, and we had to retrace our steps and try another route. This was, no doubt, avoided in subsequent ascents. The heat, after the sun rose, was most oppressive, though it froze hard in the shade—the snow getting softer; so, on our arrival at the plateau, Tauchwald strongly advised me not to attempt the ascent of the cone, as this would delay us from one and a half to two hours; and that, by that time, the state of the snow on the glacier lower down would be such as to render the return highly dangerous. The last climb, at the time of my visit would have been very hazardous, as the great heat of the sun, during ten days of fine weather, had melted the snow in the crevices of the rock, and formed a little cascade of water, not unlike a canal. Frosts thus converted into an almost continuous sheet of polished ice, so that no foot-hold was perceptible on it.

On our return, I found that Tauchwald's advice was wise; as we had a good deal of difficulty in passing the snow bridges over the crevasses, which frequently gave way with one or other of the party, whose fall into the chasm was only prevented by the rope with which we were tied together.

Let me advise future travellers, if they attempt the ascent in July or August (which is considered the best season for the high Alps), to profit by my experience, and start from the Ryffelberg at midnight, at the latest, so that they may reach the plateau while the snow is yet hard; and the fatigues of the climb will be thus diminished by one half.

I may mention to those who wish to explore the snowy solitudes of these mountains, without the fatigues and dangers of an ascent of Monte Rosa, that to the N.W. of that mountain there is a peak 13,000 feet in height, called the Curia di Tazzi, to the right of the redoubtable pass of the Weiss Thor, which may be easily reached in four hours, from the Ryffel, the whole ascent being on a gentle slope. There is no mountain, to my knowledge, in the Alps, of such elevation, that may be so easily attained. The view is much the same as that from Monte Rosa, except the part shut out by the mass of that mountain, comprising the Joy sea of Swiss, Savoyard, and Tyrolese pinnacles, to the north and east; to the south, the valleys and lakes of Italy, the vast plain of Lombardy, bounded by the maritime Alps, whose dim blue outline alone prevents a glimpse of the Mediterranean.

S. D. BIRD,
King's College, London.

CORN STATISTICS.—From a recent parliamentary return, it appears that, in the year 1853, there were imported into the United Kingdom 6,236,806 quarters of wheat and wheat flour, of which 1,148,545 quarters were re-exported. In the same year, France imported 749,492 imperial quarters of wheat and 301,820 cwt. of wheat flour; and exported 54,491 quarters of wheat and 366,613 cwt. of wheat flour. The average *Gazette* price of wheat in England in the year 1853 was 53s. 2d per quarter; and the average price for the three years 1851, 1852, and 1853—was 44s. 2d. per quarter. The average price of wheat in France, during the same three years, was 43s. 3½d.; in Belgium 38s. 1½d.; and in Prussia, 29s. 2½d.

VARNA.

(From our Special Correspondent.)

September 24, 1854.

[BY some unaccountable delay in the Post-office, the following letter from our Special Correspondent, now at Balaclava, from whom we have received communications of sixteen days later date, was only delivered at our office on Wednesday. Though it has thus lost some portion of its interest, we, nevertheless, present it to our readers, as every scrap of information that comes direct from the seat of War is of value to the public.]

Perceiving that all chance further offensive operations in the Danubian Principalities was gone, and thinking that the chief interest of the remainder of this campaign was concentrated in the direction of Sebastopol, I left Bucharest for Varna, in a post caroutza, or araba, of which I recollect giving you once a description in a letter from Kalafat. On the first occasion, if my memory serves me, the chief source of annoyance was mud flying about in all directions; on this it was not mud, but dust, which nearly smothered me. The speed with which the postilions drove their four horses to Kalarasch did not avail to prevent the choking shower from surrounding the vehicle; for the wind, which came from behind, blew it right on. It was not without a certain sense of pleasure, therefore, that I saw the end of my journey approaching. The road had become less dusty, and I had sunk into a doze, when the shouts of the postilion awoke me, and I discovered an Egyptian close by quietly taking aim with his musket. This was what in France is called *un réveil désagréable*. The Egyptian, having given up the idea of using his weapon, was proceeding to search the vehicle and my pockets, when a vigorous oath in Turkish, and a request to know where the sergeant was, brought our friend to a sense of his duty as a sentry, and he desisted from further search, and handed me to the next vidette without violence. It is somewhat dangerous to enter a camp in night without the password: it subjects one to various delays and suspicions. The soldiers on this occasion awoke the sergeant, the sergeant awoke the Lieutenant, the Lieutenant his Captain, the last his Major; and I was about to be handed over to the Colonel, who, doubtless, would have sent me to Achmet Pasha, when, fortunately, a patrol came up, whose Captain knew me, and I was allowed to proceed unmolested into Kalarasch; and it was not without a certain sense of pleasure that I found myself secure in the village which a few weeks before Paskiewitsch had had for head-quarters. The entire distance from Bucharest to Kalarasch is 64; and from Kalarasch to Silistria, a distance of about nine miles, there is likewise not a hillock. From Silistria to Varna the road led through a much more picturesque scenery. It ran constantly through the Delli Orman (literally translated, the Mad Forest), over hills and through vales clad with bright autumnal vegetation, and interspersed with villages, or remains of villages, in great number. No one who has not passed through the country can have the slightest idea of the extent of devastation caused during the last spring by the Bashi-bozouks. Most of the villages have suffered more or less. In some, half the houses were burnt down; in others, a third; but, in one or two instances, the whole village has disappeared. Thus, the spot where stood Buyuk Kamardjik is marked by heaps of ruins and solitary chimneys—the only solid piece of masonry that ever resists fire in these countries. This cruel destruction of the homes of peasants is the more extraordinary, from the fact of its having been perpetrated, not upon Christians, but upon Turks—a proof that it was not fanaticism, but mere wantonness, that caused the act. About a third of the inhabitants have returned to their villages, the rest having migrated to Asia, and removed their household gods to a safe shelter from the attacks of the Russians. This depopulation of Bulgaria, which has taken place not merely in the villages between Silistria and Varna, but throughout the whole of the Dobrudscha, and even to Schumla, and Trnova, is likely to have some curious effects, which may be marked in the future history of this province; especially when the question arises as to the relative positions which the Christians and Mohamedans are to hold towards each other. The few inhabitants that were to be found in the villages and farms were all exceedingly busy in taking in the crops of barley and wheat, which this year had given a plentiful harvest; and there was not a yard which did not contain five or six enormous stacks. The vast number of wild ponies which overran this country and Wallachia, had often been to me a source of wonder. I could not conceive the use of them: they appeared not to serve for riding, nor for carriage, for the only beasts of draught are bullocks and buffaloes. Now the wonder ceased. In every farm yard, were herds of these wild ponies serving as flails to beat corn from the ear. A wide circular pound surrounded by palisades is prepared for this purpose. The ground is first hardened by sprinkling and beating; the corn is laid thickly over, and a troop of horses is driven in. A boy with a long whip follows them, and drives them round and round, till the entire mass is reduced to something very like powder. Two or three men then come in and throw up the straw with forks. The light particles fly off in the air, the grain falls in a heap, and so is winnowed. Such is the mode of preparing wheat and barley for the market all over Bulgaria, Roumelia, Wallachia, and Moldavia. Horses costing nothing to feed, for they roam wild, are a substitute for machinery and human labour. It is almost needless to remark that a great part of a crop is lost in this way; but the quantities grown are so great that the loss is not seriously felt.

On reaching Varna, I heard the joyful tidings of the successful landing of the Allied army at Old Fort, in the Crimea. The operation was performed on the 14th, without accident, and was completed in eight hours. Old Fort is a ruin, about twenty-eight or thirty miles from Sebastopol, and separated from it by three streams, one of which is of a respectable breadth. It is supposed that by this time the three streams have been crossed, notwithstanding the op, osition which may be offered by a corps of 25,000 men, which is prepared to arrest the passage. News received here up to the 17th inst. notices some slight skirmishes with Cossacks, and the loss of several straggling Zouaves while in quest of plunder. In one instance, the capture of some of these men had something in it of the ludicrous. They were engaged in the chase of ducks, and were swimming stark naked in a pond, when a number of Cossacks surrounded them and made them prisoners. The Russians, we are told, have been taken by surprise, and did not expect the expedition to start this campaign. Prince Menschikoff had heard that the armies were so decimated by sickness as to be unable to leave Varna, and he had countermanded the march of reinforcements destined to the Crimea. The result, according to general belief, is that there are not more than 50,000 men to oppose us, 25,000 of whom are on the rivers which separate the Allies from Sebastopol, and 25,000 in the town itself. The Tartars are said to be by no means unfavourable to us and to have offered all kinds of provisions and means of carriage. The troops are all standing in the plains, and will therefore afford a rich supply.

About 1500 English remain here, but are embarking to-day to join their corps in the Crimea; as for the French, they are still encamped here to the number of 22,000.

The lowering of the French duties on wines and spirits is beginning to exercise a positive influence on the wine trade in the south of Germany. This measure of the French Government has greatly pleased the wine growers there.

FUNERAL OF MARSHAL ST. ARNAUD.

In conformity with the official programme, the obsequies of Marshal de St Arnaud were solemnised in the chapel of the Invalides, on the 16th inst. The remains arrived on Monday morning at the Lyons Railway Terminus, where they were deposited in a *chapelle ardente*, under the guardianship of a detachment of select troops. So early as seven o'clock the bands of the various corps were heard as they descended the Boulevards in the direction of the Bastille. The weather was not ill suited to the solemn occasion. The morning was chilly and dark, and though no rain fell, yet the low thin clouds covered the sky as if with a funeral pall, and completely intercepted the beams of the sun. About half-past eight two squadrons of Cuirassiers proceeded in the same direction, and were followed by some detachments of Light Cavalry, and about nine, Marshal Magnan, wearing the full costume of his rank, with the Grand Cordon of the Leg on of Honour, and mounted on a fine charger, rode down the Boulevards followed by a numerous staff of General Officers, and Aides-de Camp, and attended by an escort of Chasseurs. The troops destined to form the cortége were massed at half past nine at the railroad station; and soon after, these were to precede the hearse, defiled before it. It was past ten o'clock when a salute of thirteen guns from a battery stationed on the Place de la Bastille, gave notice that the hearse containing the body was in movement. The line marked out for the procession was the following:—The Rue de Lyon, the Boulevards, the Rue Royale, the Place de la Concorde, the Pont de la Concorde, the Quai d'Orsay, the Esplanade of the Invalides. At the head of the cortége were two General Officers of the Army of Paris, with their staffs, preceded by the full band of the 4th Regiment of Mounted Chasseurs. They were followed, at a short distance, by a squadron of light cavalry, with the colours of the regiment unfurled; two squadrons of Cuirassiers, also with full band and colours; and a battery of artillery. These were followed by a battalion of Chasseurs; and the effect produced by the contrast of their dark uniforms, as the sombre mass appeared in the distance, was remarked by every one. Two battalions of infantry, one of light troops, the other of the line, with their drums muffled and their colours covered with crape, came next. A Brigadier-General of the new Imperial Guard, with his staff, was followed by two squadrons of Guides, whose graceful uniforms relieved the monotonous appearance of the line; a battalion of Chasseurs of the Guard, with their vests, wide blue pantaloons, gathered in below the knee, and the lower part of the leg enclosed in leather greaves, and terminating in white gaiters, somewhat in the fashion of the Zouaves; a battalion of the Voltigeurs of the Guard, dressed as nearly as possible like those of the first Empire, the shakos wound round with white cordons, and terminating in large tassels, and facings to match. The staff of Marshal Vaillant, Minister of War, and the Commander-in-Chief of the Army of Paris, also with his staff, the Generals, and other superior officers not in actual command in Paris, occupied the space between the Imperial Guard and the hearse.

The hearse, which was not encumbered with excessive ornament, was drawn by six horses, with housings of black cloth, adorned with white lace; and the coffin was covered with a large pall worked with various devices. The corners of the pall were held by Generals Bourgon, Regnault de St. Jean d'Angely, Levasseur, De la Rue, who rode close to the funeral car. The Aides-de Camp of the deceased Marshal, who had followed his remains from the scene of the battle in which he had taken so distinguished a part, followed immediately behind. Next came his charger, covered with dark housings, embroidered with colours of the same, and led by grooms in mourning; and followed by four mourners, in full costume, bearing the Marshal's staff and other insignia. The carriage of the Grand Equerry (the office filled by the deceased in the household of the Emperor), the carriage containing the clergy and the members of his family, two state carriages, drawn each by six horses, with the Duke of Cambaceres as Grand Master of the Ceremonies; General Rolin, Adjutant-General of the Palace; the Marquis de Toulongeon, Orderly Officer; Lannes, the Count of Montebello, Colonel de Reville, and Captain Merle, Aides-de-Camp and Orderly Officers of the Emperor, came after. The carriage of the Turkish Ambassador closed the file. The gentlemen-at-arms of the Guard, the grenadiers of the Guard, the artillery of the Guard, a detachment of seamen belonging to the steamer, with an officer, two companies of Sappers, three battalions of the line and Light Infantry, one of Cuirassure, a squadron of the gendarmerie of the Seine, and one of the mounted Municipal Guard, followed; while two fine squadrons of Carabineers, preceded by their band, and carrying their colours, closed the imposing procession. Of these, various corps, composing the élite of the French army, those of the new Imperial Guard, appearing, as they did, for the first time in their new uniforms, attracted the greatest attention. The squadrons of Guides the Foot Chasseurs of the Guard, with their uniforms half Zouave, half Chasseur d'Afrique, the batteries of Horse Artillery, the Voltigeurs, and Grenadiers, brought the mind irresistibly back to the days of the Empire in all its glory. As the Grenadiers passed every one was struck with the resemblance not merely in costume but in person to those with which the engravings and pictures of that period have made us familiar.

On arriving the Invalides, the car was stationed in front of the gates, and a salute of thirteen guns was fired by a battery placed near the Quai d'Orsay. That part of the cortége which had followed the car then filed off before it. After the filing off, the body was received by the Governor of the Invalides, and conveyed into the chapel by the decorated sub-officers. Then it was placed on a catafalque in the middle of the nave before the altar. At the corners of the catafalque were the English Ambassador, Marshal Magnan, Admiral de Mackau, and General de Lawoestine, holding the cords of the pall; and with them were the four Generals who had held the cords during the procession. There were besides present, the Ministers; the Presidents of the Senate, the Legislative Body, and the Council of State; and deputations from those and other constituted bodies. Among the English officers present were General Sir Harry Smith and his Aides-de-Camp, Colonels Taylor and Hoddich, sent especially by the Queen; and Lord Arthur Hay, Aide-de-Camp to Lord Raglan.

The interior of the Chapel of the Invalides was hung with black cloth, embroidered with silver. Over the catafalque there was a splendid canopy of black cloth, lined with ermine. The body was carried to the catafalque through two lines of grenadiers of the Invalides, carrying their flags enveloped in black crape. The galleries were filled with ladies in deep mourning. The two long lines of black bonnets above the embroidered black hangings produced a very singular effect. As the corps passed up the side many of the ladies were audibly. The interior of the chapel, though well filled, was not crowded. The greater part of the seats were occupied by the *corps diplomatique*, generals, and superior officers, senators, deputies, councillors of state, the presidents of the different courts of justice, and deputations from various constituted public bodies

When the body entered the chapel the solemn chanting of the priests and the choir of the organ commenced, and the magnificent and moving service for the dead, ordered by the Catholic Church, was proceeded with in the usual form. When the absolution was pronounced there was another salute of artillery. The sprinkling of the coffin with holy water by the officiating persons at present took place in the usual way. The body was then lowered into the vault. As this was being done the cannon again roared, and the troops which were drawn up outside presented arms, and their flags were lowered.

And now, when the last prayer was uttered, the last hymn chanted, and the last blessing given, the coffin was lowered into the vault behind the chapel by the same sub-officers who had deposited it on the catafalque. The thunder of artillery announced that Marshal St. Arnaud was laid in his last resting-place, and the same troops drawn up outside the walls and that lined the alleys surrounding the Invalides, presented arms, and lowered their flags as a last salute to their chief. Soon after, the troops began to leave the ground, and about half-past two the various corps were on their way to their respective barracks. The spectacle, on the whole, was as imposing as can well be imagined. The crowd was immense both in the environs of the Invalides and on the whole line of the procession. All that military pomp could present to the inhabitants of the capital of France as a last tribute of honour to the chief whose energy enabled him to subdue to the last moment of existence the pangs of a cruel and incurable malady, or rather a complication of maladies, was this day done. Less honour could scarcely be paid to one who so largely participated in the first great victory gained by the Allies against Russia, the forerunner of those other conquests which will speedily follow.

NATIONAL LIFE-BOAT (LATE SHIPWRECK) INSTITUTION.—We are glad to observe that by the will of the late Mr. Samuel J. Lowe, of Chapman-street, the sum of £1000 has been left to this old and valuable institution. In consequence of the many applications for additional life boats on dangerous points of the coast, the society is in much need of funds, to enable it to comply at once with such demands. The cost of a life-boat, carriage, and boat-house, is about £300. The 6o other gales have already set in with unusual violence and destruction, and many a poor fellow might probably have been saved from a watery grave had succour been at hand.

CHESS

TO CORRESPONDENTS.

BOOKWORM.—The French and Engl'sh translations of "Greco" which have come under our observation each give, at the termination, five Problems, or End-games. *Of these there is not one of Greco's own inventing.* We have described them at length in an earlier volume of the Greco MS., lately found at Florence, there are nine positions at the end: one of them is the same as one of the five just mentioned; and we have discovered four to have been published before Greco's time. The following is new to us, and looks very like the actual finish of a game:—

White K at K 8 sq., R at K B 2nd, B at K B 3rd, Ps at K 4th 2nd and K R 2nd
Black. K at K 8th sq., R at Q R 2nd, B at K 2nd, P at K 5th.
Black to play, and draw the game.

LEX.—The word "stalemate" in the notice to Philo-Chess, was an obvious misprint for "last." Your method to "force a result" is the celebrated Master Add'. who lived in the time of Harun (the old friend of our boyhood, Haroun Alraschid!), Caliph of Bagdat.—Ed.

A SUBSCRIBER.—The annual meeting of the Provincial Chess Association is appointed to be held at Leamington in June next, and the committee of management comprises the names of Lord Lyttelton (President), the Rev W. Towers, Mr. Staunton, Mr. Bignell, and Captain Gowan.

AMERICUS.—It is not equal to, though founded on, the following, which appears both in Carrera and Cozio:

White: K at Q Kt 7th, Ps at K B 4th, K Kt 3rd and Q R 7th.
Black: K at Q 3rd, R at Q 8 sq., P at K 8 4th.
Black to play, and make a drawn game.

ENIGMATIPUS.—When a Chess Problem is given in our page, the conditions of which are that White is to play and Mate in three moves, it is not to be understood that three moves, neither more nor less, must be made, but that White undertakes to give checkmate *against the best possible defence* in three moves at most

J. SCHLOSSER, H.—The diagram sent shall be examined. 2. Your Solution or No. 555 is wrong

A. R. C. Gosbrecht.—The game, though not critically sound, has some points of interest, and affords premiss of better things from both players.

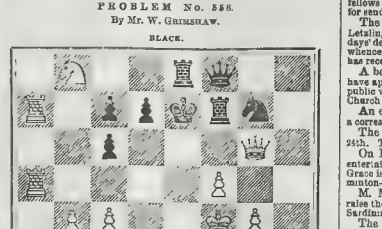
SOLUTION OF PROBLEM No. 557.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to Q Kt 4th	P moves	3. B to K B 3rd	K moves
2. K to Q B 2nd	K to Q 5th, or (a)	4. R or B mates.	
(a) 2.	K to K 7th	4. B mates.	
3. B to Q 2nd	P moves		

PROBLEM No. 558.

By Mr. W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN THE PROVINCES.

Mr. STAUNTON gives the odds of the Pawn and two moves to the leading player of the St. George's Halifax Chess-club.

(Remove White's K B Pawn from the board.)

18. R to K B sq	B to K 2nd	And wins.	

THE MANCHESTER CHESS-CLUB.—ANNUAL SUPPER.—The annual meeting of this flourishing club was held on Wednesday evening last, at the Star Hotel, and was very respectably attended. The club owes its origin, in its present form, to the amalgamation of two previously existing societies, one formed some fifteen years ago within the Manchester Athenæum, and the other the old Manchester Chess-club. In this, as in most other cases, "union is strength," for the Manchester Chess-club now numbers upwards of eighty members. After being for a time in somewhat unsettled and migratory condition, the strong desire of the members to ensure quiet and privacy for the due enjoyment of the Royal game, led the club to locate itself in very eligible quarters in Ridgefield, where some of the members may be found, usually from two to ten p.m. every day; but the chief days for play are Monday, Wednesday, and Friday, especially in the evenings, when the muster is usually very good. The room is abundantly supplied with all the chess periodicals, with a good library of works on chess (which it has been suggested should circulate amongst the members), and journals which devote a portion of their space to chess notices. Nor is the club flourishing only in its members, but equally so in the prowess of many of its members. In the metropolis, we think it is regarded as a chess phraseology, "the strongest club in the provinces;" and without at once appropriating that title, we must say that it has done what it could to win and deserve it. On Wednesday evening the members met for play at six o'clock, and the chief game of the evening was one played by consultation—Messrs. J. Kipping, Jun., Wood, and King, having been obliged to leave, Mr. Kipping fought singly against his three antagonists, and succeeded in wresting the victory from them, and in winning the game; which, when all present had assembled, appeared to be in favour of those who eventually lost. We may probably publish this game hereafter. Amongst the guests was Mr. Spreckley, the President of the Liverpool Chess-club, who came over expressly to attend the meeting, on the invitation of the club. At supper, Mr. C. A. Du Val, President of the Club, filled the chair; and Mr. Hans Hasche the vice-chair. On the cloth being drawn the usual loyal toasts were given from the chair, and received with musical honours. In proposing "the Army and Navy," the President coupled with our own united service that of our gallant allies the French, and observed that, although some of the journals said otherwise, the present war was by no means the first in which they had fought together as allies. In the reign of Charles II., our own Churchill (afterwards Duke of Marlborough) was a Captain in the British force, some 8000 or 10,000 strong, that served under Turenne, in his last struggle with the Imperialists on the Rhine, about 1672. At the battle of Solhay, or Southwold Bay, the Duke of York (afterwards James II.) and the Marechal d'Etrees commanded the English and French fleet against the Dutch, under De Ruyter. There were several other battles in which the English, under Prince Rupert, and the French, under the Marshal just named, fought as allies. The other toasts of the evening were "The Strangers," acknowledged by Mr. Spreckley, President of the Liverpool Chess-club; "Our allies in the club, its German and Greek members," which was acknowledged by Mr. Hans Hasche, on behalf of both nationalities—there being six German and two Greek members present. The other toasts were, the President, the Vice-President, the excellent Treasurer, and Honorary Secretary, Mr. J. Kipping, Jun.; who, in acknowledging the compliment, congratulated the club on its satisfactory financial position. A number of other toasts, including "The Press" (acknowledged by Mr. Harland, of the *Manchester Gazette*), were drunk and responded to; and the party broke up after spending a most agreeable and intellectual evening

EPITOME OF NEWS—FOREIGN AND DOMESTIC

The Lord Mayor of London has received a complimentary address from the Municipal Chambers of Lisbon respecting the reception of the King of Portugal in London.

The Duke of Argyll has purchased the elegant villa so many years occupied by the late Duchess Dowager of Bedford, on Campden-hill, called Bedford Lodge.

A monument to Sir William Wallace is about to be erected on the hill of Barnwirl, between Kilmarnock and Ayr.

The line of electric telegraph, which is being established between Vienna and Bucharest, will be completed by the 1st December.

The Sultan has granted the widow of Marshal de St. Arnaud a pension of 25,000 piasters per month.

The *Manner-gesang Verein* of Cologne has again entered into an engagement with Mr. Mitchell, and will, probably, sing in London early in the year 1855.

The Polish refugees in Paris have lost a distinguished countrywoman and a munificent patroness. Princess Czartoryska, Duchess of Wurtemburg, the sister of Prince Adam Czartoryski, died on Saturday, at the age of 80.

One gentleman in Herefordshire will realise £3000 by the sale of this year's growth of hops; while numbers of other hop-growers there will not get a hop to sell.

The *Giornale di Roma* publishes an edict by Cardinal Antonelli, increasing the duties on hams, sausages, fruit, and groceries, in order to meet the exigencies of the Treasury, and facilitate the conversion of paper money into metallic currency.

Lord and Lady Haddo and family were to leave Alexandria on the 2nd instant, for Upper Egypt, for the winter. The Viceroy placed a Government steamer at the disposal of the noble Lord, to convey him and family up the Nile.

Her Majesty, out of respect to the memory of Captain Hyde Parker, has been pleased to adopt the two little Russendish orphans, whose father has lately stood so much commiseration. The little fellows are to remain on board the *Firebrand* until a suitable opportunity for sending them to England shall occur.

The King of Prussia arrived at Sans Souci on the 21st, from Letzlingen, where his Majesty has enjoyed the pleasure of three or four days' deer-shooting. The Prince of Prussia has also returned to Berlin, whence he was to proceed to Mayence, of which place his Royal Highness has recently been appointed Governor.

A body of the Chinese immigrants at the Australian gold-fields have applied to the authorities for permission to erect a building for public worship, according to the Chinese version of the liturgy of the Church of England.

An emissary has been arrested in Dusseldorff, having on him a correspondence in English and German from Kossuth and Kinkel.

The King of the Belgians was expected in Brussels on October 24th. The Chambers are to be convoked for the 7th of November.

On Monday their Graces the Duke and Duchess of Beaufort entertained the Mayor and Corporation of Bristol—of which city his Grace is Lord High Steward—to a grand banquet at the ducal seat, Badminton-house.

M. Menotti, the nephew of Ciro Menotti, who was the first to raise the standard of revolt at Modena in Italy, has been appointed by the Sardinian Government Professor of French at Cassie.

The *Great Britain* screw-steamer arrived at Melbourne on the 28th of August sixty-seven days from Liverpool.

It is reported at Brussels that Prince Napoleon, the heir-presumptive of the French throne, is about to espouse the daughter of King Leopold, a grandchild of Louis Philippe.

The directors of the Caledonian Society, London, have agreed to admit 150 children to their hospital school, the offspring of soldiers, sailors, or marines killed in the war.

The King of Denmark is about to visit the Duchy of Schleswig and Holstein. His Majesty was to arrive at Kiona on the 20th.

On the 7th of October, Mrs. Susan Ablett died at Weybread, Suffolk, aged 104 years. She was born on the 4th of June, 1750, and baptised on the 13th of October, 1754. Her burial took place on Friday, the 13th of October, 1854, just a century after her baptism.

The laying down of the cable containing the electric wires has commenced between Elsinore, in Denmark, and Helsingborg, in Sweden. When completed, Stockholm will be in direct communication with Milan, and with all the electric lines of Denmark, Germany, Belgium, and France.

The Congress of American Ministers, held lately at Ostend, with the object of adopting in future a common action (it is said) with respect to the Governments of Europe, has terminated its sittings, after having addressed a joint report of its proceedings to the Government of the United States.

A flock of about fifty sheep lately strayed on to a level crossing of the Ipswich railway, and were run into by a goods' train. Seventeen were killed, and two so much injured as to render their slaughter necessary.

The circulation of the Vienna *Lloyd's* newspaper is forbidden throughout Prussia and Saxony.

A number of sailors of the French Baltic fleet will receive leave of absence for four months, with the privilege of engaging during that time in the fishing or coasting trade. This favour will be granted in preference to those who have families to maintain.

Mr. Smith O'Brien has arrived in Italy from Van Diemen's Land; and Mr. Martin, one of the other Irish political convicts, who also received a pardon, is at present in Paris.

It has been intimated to those French actors and actresses who are upon the Czar's pension list that their pensions will be regularly paid, notwithstanding the war.

A number of Sisters of Mercy from Ireland are about to proceed to the East.

On the 12th instant, Count Chambord and the Duke of Levis arrived at Trieste, from Parma, and went on to Frohsdorff.

The distillers of Cork have again raised the price of whisky 4d. per gallon. The price is now 8s. 2d. to 8s. 3d.

A lady, named Zwynboll, of the Hague, who died recently, has bequeathed 700,000 florins for the purpose of defraying the expense of educating ten young men for the offices of preachers of the Gospel. The deceased has also left large legacies to the poor.

The Belgian journals announce the arrival of M. Guizot at Brussels.

The subscription for the relief of the sufferers by the Newcastle fire, up to last week, reached £7000.

Nothing further is known at Warsaw relative to the reported visit of the Emperor or Hereditary Grand Duke, although the palace is always ready for their reception.

The *Augsburg Gazette* was seized a few days ago in the coffee-houses and other places of public resort at Berlin, for containing an article on the dangers which threaten Prussia in the Eastern question.

A mackerel-boat, of about 20 tons, is at present undergoing the necessary repairs and alterations at Newlyn, in Cornwall, for the purpose of conveying a crew of five men to Australia.

Government has granted a contract to Messrs. James Baines and Co., of Liverpool, for the conveyance of the entire emigration from England to Van Dieman's Land, under the bounty system; in accordance with which arrangement a regular line of vessels will be placed on the berth for Hobart Town direct.

The Copenhagen Liberal daily paper, *Morgenposten*, is to be prosecuted by the Attorney-General for inserting an article on Danish affairs from an English daily paper; and for making some observations thereon, to the effect that Denmark should hold with its free brethren lands, England and the Scandinavian States, and not with its Russian and German foes.

Cholera has made its appearance at Vienna. One of its first victims was the young Princess Josephine Lichtenstein, niece of the reigning Prince of that name.

A numerous meeting was held at Leicester last week, and an association formed, for the protection of persons keeping swine. Upwards of 100 members paid their subscriptions and joined the association, with a full determination of resisting the proceedings of the Local Board of Health.

The extensive factory of the Irish Beet Sugar Company, at Mountmellick, and all the patents and the charter of the company, have been purchased by a gentleman of large property in that neighbourhood.

The Radcliffe Library, Oxford, was, for the first time, lighted on Monday with gas. The object of lighting the library with gas is with a view to make it available for readers and scientific meetings.

We are sorry to have to report that the steamer *E. K. Collins* was destroyed by fire at Detroit; 23 lives lost, and 15 missing.

The *Portland Bay Guardian* states that new gold diggings have been discovered about twelve miles from that town.

An electric telegraph at the Cape of Good Hope is in contemplation, between Simon's Bay and Cape Town.

The nuptials of Prince Frederick Charles with Princess Anna of Prussia will be celebrated on the 29th of November.

The total receipts of specie and bullion last week were to the amount of £1,250,000. The shipments were under £150,0.0.

FUNERAL OF MARSHAL ST. ARNAUD, AT PARIS.

INTERMENT OF MARSHAL ST. ARNAUD IN THE VAULT OF THE MARSHALS OF FRANCE BENEATH THE CHURCH OF THE INVALIDES AT PARIS.—SEE ENGRAVING.

BATTLE OF THE ALMA.

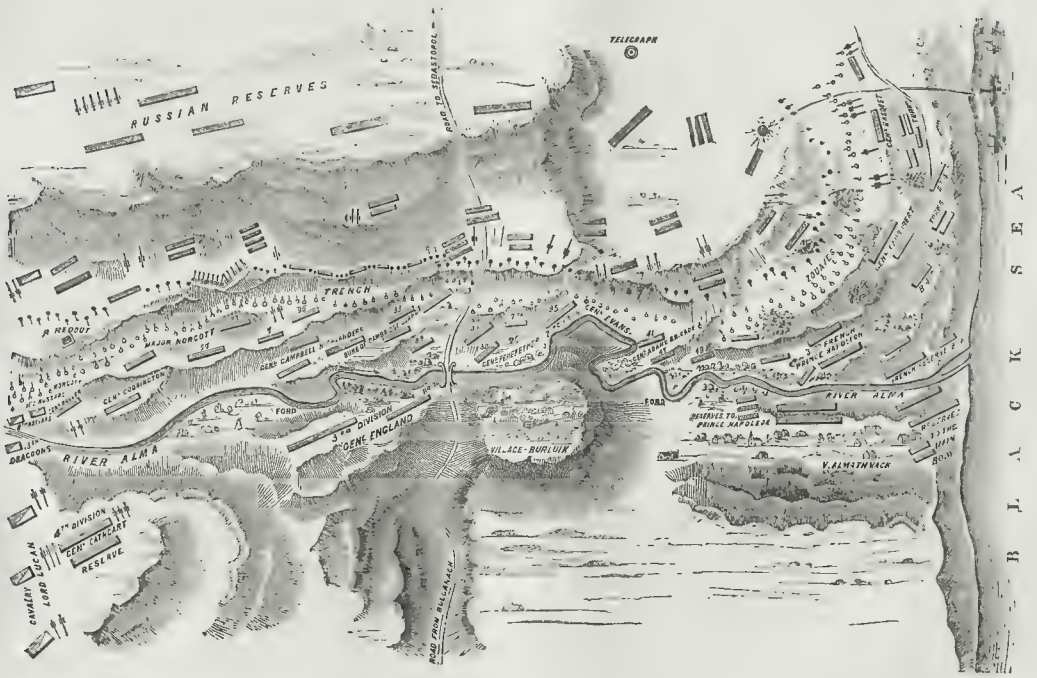
THE BATTLE OF THE ALMA.

We this week engrave a View of this important action, from a Sketch by Lieut. E. C. Gordon, R.E. In this View, the point on the left is the retrenched camp of the Russians, who are also stationed on the heights to the right. On the left the British troops are advancing, as are the French troops. On the left of the picture is the large village; and, in the centre, the burnt village at the mouth of the Alma.

Our Correspondent adds a few details:—"You see how well the Russ'an reserve was placed, to help either the right or the left of their position. Their reserve was comprised chiefly of the Imperial Guard, and they eventually came to the assistance of the retrenched camp. Many of the Russian prisoners were quite footsore, having but just arrived from St. Petersburg. When the Russians were driven from their first position on the heights, they fell back on a second. They were driven from that, and tried to take up a third position; but in this they failed. They say the Imperial Guard had fine kits: many of our fellows got a good clean shirt from them. One drummer took two Russian prisoners: he caught them sneaking off under a hedge, ran up, took a dead man's musket as he passed, and made these fellows 'change direction for the rear'—making them 'move on' with a bayonet. Our troops halted at the Boulgama, to breakfast. The French crossed at the two bridges to the right, some British at the left, and the remainder forded. It was at the bridge that three of our regiments got jammed up, and suffered severely in consequence. The trench that the Russians cut in the hill-side was a sad thing for our poor fellows, keeping them so long under fire."

PLAN OF THE BATTLE OF THE ALMA.

The accompanying plan has been drawn by Major Hopkins, K.H. The different armies are represented by the variety of lines of shade. Thus, for the *English*, shaded lines parallel to the front of the battalions and divisions. For the *French*, perpendicular lines from the front to the rear of the divisions, battalions, &c. *Russians*, diagonal lines of shade for the reserves, battalions, &c. *Turks*, without shade. The small circles shown in front of the armies, represent the Rifles, Zouaves, and Light Troops, as skirmishers in advance. The skirmishers of the Allied armies are without shade, inside the small circles. The line in front of and joining the small circles shows the direction of the fire of the Light Troops. The small circles, representing the Light Troops of the Russians, are shaded dark, preserving the line presented to their opponents in their front.



PLAN OF THE BATTLE OF THE ALMA.

PARIS FASHIONS FOR NOVEMBER.

THE winter Fashions have scarcely taken any decided direction, if we except the materials, which have wide stripes placed lengthwise, and are often of two different textures. Robes with a stripe of moiré antique, alternated with one of reps, are much worn. The shades that are most frequently seen blended are black, with almost all other colours; then blue, greenish grey, crimson, &c. Next to this disposition of wide stripes come large squares and Scotch plaids, with fresher and clearer shades.

Robes à fleurs and *à bouquets* are not yet seen, and must not be expected until the winter is considerably advanced. When we have long been deprived of real flowers, robes and toilets begin to be ornamented *à fleurs*. The shapes of the corsages is not yet decided; they are always worn pointed.

The recent opening of the Italian Opera presented nothing very remarkable. The *robe à volant*, which we engrave, is the only novelty we have been struck with. Manicletsare worn *à la Talma*; they are round, and rather short—the shape expected to be worn this winter; but when out in this way, they offer little protection from the cold. The wintry chills will cause an alteration in the form of mantelets. The materials in use to the present time are the *genre d'agneau*—a sort of woollen cloth, rather thick, though supple; *la peluche frisé*; *la peluche* double face has the two sides of different colours; it is worn without lining; the inside is turned over at the collar and at the sleeves, and thus forms the trimming. All materials of a grey shade are at this moment much sought after; they have a simple band for trimming, and are fastened in front by plain buttons.

Manche Pompadour.—This sleeve is formed by two large bouillons, separated by a smaller one, through which a ribbon is passed; they are terminated by two lace flounces; the *bouillonnés* are traversed by the ribbons, which are finished by two bows in the middle of the arm.

Manche Eugénie.—This sleeve is patronised by the Empress. It is composed of a *bouillonné*, through which a ribbon is passed. Next are three flounces *en guipure*, English lace, or *point d'Alençon*. A ribbon, which forms a bow at the extremity, is passed through the *bouillonné*. Under each flounce are several similar ribbons left fluttering. The shade worn at Court is the *nuance Hortensia*.

Caps of white blonde, place upon little ribbons of white gauze; each piece of blonde trims the edges of the ribbons, and, with a bow behind, makes a charming afternoon head-dress.

Manchettes en percale, worked *au plumetis*, and held in by little metal buttons of precious stones.

THE ILLUSTRATIONS.

Lace Cap, with trimmings of rose-coloured ribbons; and a long fringe of Mechlin lace. *Robe de Reps*, with three flounces, ornamented with a *ruche* of plaited ribbons, near the border of the flounce; the corsage has the same ornament on the border. The sleeves also are trimmed to correspond; and the two extremities are held in by a similar trimming, which is placed upon a ribbon of the same colour. Mechlin lace sleeve, similar to the cap, and the collar.

Dinner or *petite soirée* dress of taffetas, of a clear colour, with seven flounces bordered with a *ruche à la vieille*, with one little ribbon transparent, and another gathered. Upon the extreme edge of each flounce are three rows of ribbon bows, standing out from the flounces; one in the centre, upon the skirt of the robe, and the two others upon the sides. The corsage is cut square, and a trimming to match the flounces projects on each side, from the seam of the corsage, passes over the breast and shoulders, and, following the seams, forms a sort of brace behind. Sleeves of double puffs, trimmed like the corsage; and beneath, other sleeves of black lace.

LITERATURE.

DIARY IN TURKISH AND GREEK WATERS. By the Right Hon. the Earl of CARLISLE. Longman and Co.

Everybody justly respects the character of the Earl of Carlisle, both in what regards the head and in what regards the heart; and his name on the titlepage of a work had we not prescribed to ourselves a stringent and impartial law—would almost disarm our criticism. This is likely to prove to him an unsatisfactory avowal; but we can safely qualify it to his complete contentment, and to the ease of any other sensitive or tender conscience. An inclination is not always obeyed; it is disregarded twenty times a day in business; and to us, on these deliberate, slow, second-thoughted occasions of reviewing the works which come before us, it is absolutely of no account by itself. However, the Earl of Carlisle has here produced pages which may stand on their own merits; and perhaps our remark may be intended more as an apology for the predetermined strictness of our examination, than as any token of its intended amiability.

The author is an able, amiable, and good man—taking, in general, too low a view of his own powers, but conscious of their possession, and anxious to use them for the refinement and elevation of his fellow-creatures—a man who is constantly on the watch to promote, by all the means within his reach, a portion at least of the immense good which is the too Utopian goal of his hopes, and the almost exclusive object of his wishes.

In no particular is his work just published, unworthy of his established reputation. As usual, from the first page to the last, there breathes a spirit of amenity. Careful, conscientious, accurate, observant,—he so modestly states his views, so scrupulously respects hostile convictions, so tenderly deals with personal character, that the reader forgets for a time the instruction and pleasure which he has derived from the perusal of the book, to think of its author; and the reflection occurs, "how good a citizen this man must be, how staunch a friend, and how fair an enemy!"

Towards the conclusion of a modest preface, this occurs:—

> I came in contact with several of the public men, the historical men they will be (of the country.) I shall think myself at liberty to depart occasionally, in their instance, from the rule of strict abstinence which I have otherwise prescribed to myself, and to treat them as public property, so long as I say nothing to their disadvantage. On the other hand, the public men (of these countries) are not created faultless beings any more than the public men of other countries; it must not, therefore, be considered, when I mention with pleasure anything which redounds to their credit, that I am intending to present you with their full and complete portraits.

He who cannot discern Lord Carlisle in these kindly and judicious words must be a dull reader of character.

Determining to throw the chronicle into the shape of a diary, and full of a startling but profound conviction that the East is now the seat of the long-deferred fulfilment of ancient Scripture prophecy, and "of a commencing new dispensation of events"—Lord Carlisle left London in June last year, and proceeded overland across Europe to the immediate theatre of momentous transactions. "I may, at the same time," he adds, "assure the reader that nothing is further from my intention than to pork this topic (Scripture prophecy) in his face during my future progress. . . . And it will involve no departure from my present purpose if the subject should never be again mentioned in these pages."

Works of travel form a peculiar but well known department of literature; so well known, indeed, as not to need any very special description. The law of such works is not exactly that the heels of an author command his head, or run away with it, but that his footsteps at least should guide his pen, and dictate his remarks. He writes, like some of the Chinese, with his feet, though not certainly in the same sense of the term. Such productions are, in general, considered to belong to "light" literature. But this classification is not exacted by their contents, which may be scientific, may be serious (as we have found it to be in the present), or, we believe, to the necessary advantages of their construction itself. They are the early delight of most boys, are consulted for a thousand varied references in the busy middle of life, and become frequently one of the latest, most lingering, and most agreeable literary consolations of old age. Yet, with all the diversion and the excitement which they afford, is mingled, for the most part, a fund of miscellaneous information which may prove useful to the reader in the most practical moments of his active career. It is, as we have shown, quite evident that if "travels" be, in general, accounted "light" literature, this reputation or designation cannot be ascribed either to their subjects or to their intention; for both may assume any character. They are called "light literature," because, in truth, they are *light reading*. They are "light in hand" to the reader. There is the pleasure of continual surprise, joined (at least during perusal) to the sobriety of sustained belief—a combination of attractions, the perpetual doubt of what shall come next, dignified by the expectation that, whatever it is, it will be true; the charm of uncertainty about the incidents, with the consciousness that there must be regularity in the plan—an inherent regularity, dependent on events, and based upon the very nature of things. In one respect, the reader thinks such a work as good as a history; and, in another respect, as good as a novel; he justly hopes that the facts may often be useful, for he assumes that they will always be authentic; and he calculates, at the same time, that they must be entertaining, on account of the immense diversity of individual experience; one person's course being different from another's, and everybody's story, if truly known, being a romance to everybody else. Thus, the reader, if we may be pardoned the apparent contradiction of the words, *expects the unexpected*, and yet flatters himself that his mental excursion is no loss of time, and that he is reposing upon authority—borne along by the wings, not of the mocking and malignant sprites, but of some friendly genius.

That is the ideal of travel-writing; but how different is the reality! So different is it that of all authors, travellers have been, as a body, by far the least worthy of confidence. "Travellers' tales" are proverbial for their matchless mendacity; and, if we turn from this point, and consider the literary execution of their works, we shall find reason, in a majority of instances, for equal disappointment. In fine and in brief, this is but a new illustration of a curious fact, at which we have often silently wondered—that whatever is peculiarly easy to do is almost always peculiarly ill done. Where perfection is intrinsically difficult of attainment, there alone, as a general rule, is it ever attained. When Horace said "*Nil arduum mortalibus*," he must have mentally added, "*Nisi planum, leve, et perfacile*."

Lord Carlisle is too intelligent and too honest to fall into the grosser defects of his literary brethren. The scenes through which he takes us are engrossingly attractive at this solemn crisis. His observations are exact. His opportunities of seeing the chief actors in the giant struggle subsisting were larger than a man of meaner mark could have commanded. The reflections suggested to his accomplished mind are often valuable; and, altogether, this Diary, on account at once of its subject, of the author, and of its execution, possesses great and unusual right to public attention.

Lord Carlisle has seen, in his tour, almost all the characters on whom, at this moment, the anxious eyes of the world are bent; and almost all the scenes where its destinies are soon to be decided. He went to Cologne, and up the Rhine; then to Dresden—where the beauty of the site, and the wonderful Picture-gallery, detained his admiration; and so, by Prague—having viewed the Elbe—to Vienna. Now we are already in the midst of his adventures, which are told with great freshness, and which succeed each other to the end of his book.

At Vienna he enjoyed capital opportunities for observing the young Emperor Francis Joseph, of whom he says:—

> What I collect about his character is this: I believe him to be spotless in morals, very conscientious in the performance of duty, determined to do all himself, very simple, and without any turn for display. This is all on the promising side. On the other, he, as yet, seems almost exclusively devoted to his army. It is natural, indeed, for him to feel that he and the monarchy owe every thing to them. Those who surround him are thought to be narrow and harsh, and there have been some symptoms of hardness in his own character. On the whole, hitherto, the good appears to predominate.

In Constantinople, afterwards, he had equally good views of Abd-ul-Medjid Khan—though, perhaps, not equally good or easy access to him. From a commanding position he witnessed the Sultan come forth to celebrate the festival of the Bairam. First passed richly-caparisoned horses, led; then a mounted procession of Pachas, Ministers, and Officers of State; then, immediately preceding the Sultan, pedestrian pages, with glittering feathers of the white ostrich, and a stiff green cone—relics, it is said, of the Imperial wardrobe of Byzantium; lastly, the Sultan-Grand Seignor-Khan, in plume, diamond agraffe, fez, and long blue cloak (the true purple for "kings of men"): he appeared to our noble traveller pale, and, for his age, old—thirty-one. He is beginning "to fill out"—to use a slang phrase—for it is still a slang phrase, though current in high places. Now, mark the words of Lord Carlisle:—"The impression his aspect conveys is of a man, gentle, unassuming, feeble, unstrung, doomed; no energy of purpose gleaned in that passive glance—no augury of victory sat on that still brow. How different from the mien of the Emperor of Austria as he rode at the head of his cohorts!" . . . . "The Sultan looked like Richard the Second riding past; Bolingbroke, however, has not yet arrived.

This is a fine passage; but the dubious, shimmering light of a moral mirage, common in the East, possibly clouded the seer's vision, and warped the directness of the prophetic hint. We are in 1854; and we know what "the sick man" can do; we know the value of that "passive glance," the fortitude and expectancy of the "still brow." The very least that we or history can ever say is, that *the Khan has done his part*.

After boating about for some time on both shores of those storied waters, and seeing much that was worth seeing, and after recounting, sketching, or chronicling each particular with his well known ability, Lord Carlisle returned home through the most memorable spots of Greece, Italy, and Switzerland. Before closing our inadequate notice, we must make one remark, and must quote a certain passage. The remark is, that Lord Carlisle has convinced us that Bounar Bachi is the site of "sacred Troy." The passage is exceedingly short: it occurs in the noble Diarist's account of Brousa:—"Brousa is not without its historical dignities: here, probably, Hannibal awaited the waking of the Bithynian King. Whether it derives its name from Prusias, or whether that was an individual or a dynastic name, I do not venture to pronounce. Here, Pliny noted the early progress of Christianity; here, Abd-el-Kader has now his assigned abode."

We value these allusions, these magical approximations (*rapprochements*) of remote memories, this gorgeous, Gothic richness and profusion of suggestive thought.

Lord Carlisle gives a most interesting account of his evening with Abd-el-Kader.

It would be repugnant to us to criticise with minuteness the style of a hasty Diary, which has, besides, interested us so much. Some of the expressions are wonderfully graphic: he paints the Germans of the Elbe "carousing mildly under the trees to the sound of music." Some, again, of the reflections are profound. Altogether, this work of Lord Carlisle's is one of the most fascinating and one of the most profitable which we have read for years among English books "of travel."
